JOHNSON ANNOUNCES HEARING ON CHILD WELFARE PROGRAMS

Congresswoman Nancy L. Johnson (R-CT), Chairman of the Subcommittee on Oversight of the Committee on Ways and Means, today announced that the subcommittee will hold a hearing to examine whether federal child welfare programs could be streamlined to better help children. This hearing will supplement the Subcommittee on Human Resources' welfare reform responsibilities under the *Contract with America.* **The hearing will be held on Monday, January 23, 1995, in room B-318 of the Rayburn House Office Building, beginning at 10:00 a.m.**

In view of the limited time available to hear witnesses, the subcommittee will receive testimony from invited witnesses only.

BACKGROUND:

Child welfare services are intended to help improve the conditions of children and their families or to provide substitutes for functions parents have difficulty performing. The primary responsibility for child welfare services rests with the states. Each state has its own legal and administrative structures and programs that address the needs of children, and there are many differences among the states.

The Federal Government also provides funding to the states for a broad range of child welfare services. For example, the Federal Government provides funds to states for, among other things, family preservation and family support services, foster care, independent living, and adoption assistance programs. Federal child welfare and foster care programs are intended to operate in concert to help prevent the need for out-of-home placement of children and, in cases where such placement is necessary, to provide protection and permanent placement of the children involved.

Congress enacted legislation in 1980 (Public Law 96-272) designed to encourage states to use child welfare funds to help keep families together and prevent the placement of children in substitute care. The 1980 legislation required that if the federal appropriation for the child welfare program exceeds a set amount in any year, states would lose funds above this amount if they failed to put into place a number of child protections. Over time, these "incentive funds" have grown in importance.

In response to Public Law 96-272, the Department of Health and Human Services (HHS) identified a total of 18 child protections required by section 427 of the act. Under what came to be known as "427 reviews," the caseload of each state receiving incentive funds is examined to determine compliance with these child protections. Among the reviews HHS requires states to perform for each child are:

(1) a description of the type of home or institution in which the child is to be placed;

(2) a discussion of the appropriateness of the placement;

(3) a plan to achieve placement in the least restrictive (most family-like) setting;

(4) a plan for placement in close proximity to the parents' home, consistent with the best interest and special needs of the child;

(5) a statement of how the responsible agency plans to carry out the voluntary placement agreement or judicial determination;

(6) a plan for ensuring that the child will receive proper care; and

(7) a plan for providing services to the parents, child, and foster parents to improve conditions in the parents' home and facilitate the return of the child to the home, or into a permanent placement.

FOCUS OF THE HEARING:

The hearing will focus on our nation's 14 years of experience with "427 reviews" to determine whether they have served to improve the lives of children. Over the past several years, a consensus has been developing that the 427 reviews impose a costly and burdensome workload on the states without providing any discernible benefit to the children in need of child welfare and foster care services. The subcommittee will hear testimony from state child welfare administrators and other interested parties to examine whether elimination of 427 reviews and block granting federal child welfare services and foster care programs back to the states will strengthen the states' abilities to deliver these important services to children.

DETAILS FOR SUBMISSION OF WRITTEN COMMENTS

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement by the close of business on Tuesday, February 7, 1995, to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filing written statements wish to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Subcommittee on Oversight office, room 1136 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

Each statement presented for printing to the Committee by a witness, any written statement or exhibit submitted for the printed record or any written comments in response to a request for written comments must conform to the guidelines listed below. Any statement or exhibit not in compliance with these guidelines will not be printed, but will be maintained in the Committee files for review and use by the Committee.

1. All statements and any accompanying exhibits for printing must be typed in single space on legal-size paper and may not exceed a total of 10 pages.

2. Copies of whole documents submitted as exhibit material will not be accepted for printing. Instead, exhibit material should be referenced and quoted or paraphrased. All exhibit material not meeting these specifications will be maintained in the Committee files for review and use by the Committee.

3. Statements must contain the name and capacity in which the witness will appear or, for written comments, the name and capacity of the person submitting the statement, as well as any clients or persons, or any organization for whom the witness appears or for whom the statement is submitted.

4. A supplemental sheet must accompany each statement listing the name, full address, a telephone number where the witness or the designated representative may be reached and a topical outline or summary of the comments and recommendations in the full statement. This supplemental sheet will not be included in the printed record.

The above restrictions and limitations apply only to material being submitted for printing. Statements and exhibits or supplementary material submitted solely for distribution to the Members, the press and the public during the course of a public hearing may be submitted in other forms.

*****

Chairman JOHNSON. Good morning. It is a pleasure to have you all here today for the initial hearing of the Oversight Subcommittee. The Oversight Subcommittee operates as a watchdog to ensure that the laws and programs which Congress has enacted are being carried out properly. While Congress passes laws, it is the executive branch that carries them out. Thus, one goal of congressional oversight is to ensure that the executive branch is administering the laws in a way that Congress intended.

Another goal is to review whether or not the original law is still relevant to today's problems. I can think of no other area where this oversight role is more critically important than in reviewing the effectiveness of Federal child welfare and foster care programs. The children served by Federal and State welfare programs are the most vulnerable members of our society. All too often they are the victims of neglect, abandonment, and physical and sexual abuse. No other segment of our society needs the protection of vigilant oversight more than these children.

Under our system of government, the primary responsibility for providing child welfare services rests with the States. Each State has its own legal and administrative structures and programs to address the needs of abused and neglected children and there are significant differences among the States. However, the Federal Government also has provided funds to the States for a broad range of child welfare services, including family preservation and family support services, foster care, independent living, and adoption assistance services, and this subcommittee has a long and honorable history in helping to develop those Federal programs that are then implemented through a partnership of enormous importance to the well-being of the children of America.

In 1980, Congress enacted the Adoption Assistance and Child Welfare Act, which was designed to encourage States to use child welfare funds to help keep families together and prevent the placement of children in substitute care. After the legislation's passage, the Department of Health and Human Services identified a total of 18 separate child protections required by section 427 of the act. Under what became known as the 427 reviews, the foster care caseload of each State is examined to determine whether the State has complied with these child protections.

Our hearing today will focus on our Nation's 14 years of experience with section 427 reviews. Clearly, there was some improvement in State child welfare and foster care programs in the years immediately following passage of the 1980 act. By 1983, foster care caseloads had dropped to 262,000 children from an estimated high in 1977 of almost 500,000 children. However, that progress has reversed and in recent years the number has been on the rise again. Many child welfare experts attribute this increase to the crack cocaine epidemic which began in the mideighties and the rapid growth of out-of-wedlock births over the past decade.

One of the fundamental underpinnings of the 1980 act was family preservation. In other words, the act was premised on the belief that it is generally in the best interest of children to live with their own families. To ensure that the States were using Federal funds as Congress intended, tight strings were attached to their receipt, including the possible loss of so-called "incentive funds" if the

States failed to put into place the child protections created under section 427 of the act.

While family preservation is certainly a worthwhile goal, we must also recognize that in too many cases today there is no family left to be preserved. A large percentage of the children now in substitute care in the United States have been neglected, physically or sexually abused, or abandoned by drug addicted parents. We need only recall the horrible pictures we saw on our television sets last year of the 18 children found abandoned in a roach-infested Chicago apartment—crawling in dog feces, many were in diapers that hadn't been changed for days—to understand that family preservation isn't always in the child's best interest.

The question we must ask today is whether the structure of current Federal child welfare programs and regulations continues to best serve the interests of abused and neglected children or, as some believe, has it evolved into a system which merely protects growth in the welfare bureaucracy?

Over the past several years, a consensus has begun emerging that while section 427 reviews impose a costly and burdensome workload on the States, they do not provide any discernible benefit to the children in need of child welfare and foster care services. The irony is that a State may pass its section 427 reviews with HHS but a court still may rule that its child welfare programs are so mismanaged that it will place the programs under court receivership and that is exactly what is happening around the country in many States today. Sadly, this is happening even in my own State of Connecticut, which has been a leader in children's services.

This naturally leads to the question if a State's child welfare programs are to be found in compliance with Federal child protections yet the programs are mismanaged and aren't protecting the children, what steps should be taken to improve the situation?

For years, the States have been telling Congress they need more flexibility to decide how to target Federal child welfare funds to where their particular needs are greatest. The time has come to listen to what the States have been telling us. Child welfare resources must be refocused to serve the fundamental purposes of protecting children.

Today, the subcommittee will consider whether elimination of the 427 reviews and block granting Federal child welfare services in foster care programs back to the States will strengthen the States' abilities to serve children in crisis.

We also want to hear the witnesses' reviews about whether certain Federal standards and data gathering and reporting requirements will be necessary to ensure that the States use Federal block grant funds to serve the best interests of America's children.

We will receive testimony from the administration, from State and child welfare administrators, and from advocacy groups and individuals on the frontline helping to serve abused and neglected children.

I want to welcome all the members to our first Oversight Subcommittee hearing, all the members of the committee, as well as the witnesses and others who have joined us today. Our first witness is Mary Jo Bane, Assistant Secretary for Children for the Department of Health and Human Services.

Before I welcome Ms. Bane, let me yield to my ranking member, the gentleman from California, Mr. Matsui.

Mr. MATSUI. Thank you very much, Madam Chairwoman. I appreciate very much the fact that you are yielding to me for an opening statement.

I would like to commend you on the chairmanship on this very important Oversight Subcommittee. Many of you may not know this, but Chairwoman Johnson chaired the oversight subcommittee in the Connecticut Legislature and did a great job, from what I understand, in talking to other people in terms of the oversight of many of the programs. We look forward to working with you and obviously the other members of the subcommittee, as well.

If I may just be very brief in my remarks, some are talking at this time about block granting many of the child welfare and AFDC and other social programs of the Federal Government. There is just no question that the child welfare programs themselves, IV–E, IV–B and others, are probably the ultimate safety net for our young children in America. If we block grant, for example, AFDC benefits and we have very strict time limits in those benefits and if, in fact, they are discretionary programs rather than entitlement programs, this will undoubtedly put many young women and children at-risk in America. We will then need a safety net. And of course that safety net will become and always has been the child welfare system. To block grant those programs and put those under a discretionary program would even create more danger to our children. So we, obviously, must look at these programs very carefully. And we appreciate the fact that Mrs. Johnson is calling these hearings today for that purpose.

I would like, if I may, just to make a couple more observations. We must make sure that these hearings, and this hearing today in particular, are not the basis legislating a block granting of these programs. It is my hope that the Human Resources Subcommittee will also conduct hearings on these issues since it is primarily in their jurisdiction. And I would not want any of the members on our side of the aisle to lead anyone to believe that we will be satisfied with marking up legislation in this area just on the basis of the hearings we are holding today and perhaps subsequent hearings as well.

This is an oversight subcommittee. It is not one with substantive legislative jurisdiction. So it is my hope and understanding that we will have further hearings in the appropriate legislative subcommittee.

Second, I think what we need to do is not only discuss block granting and possible savings to the State and Federal Government, but also we need to talk about minimum national standards that will be conveyed along with whatever moneys the Federal Government sends to the States under any kind of program, whether it is block granting or whether it is an entitlement program.

We also need to continue to talk about State maintenance of effort. As you know, in times of recession, it is the States that have been the ones to cut back, and obviously their programs are countercyclical. In times of recession, they need more of an effort for their social programs.

States being so close to their constituents, there is no question that the legislature and the Governors have a tendency to go with public opinion rather than go with what is right. Public opinion affects the local government most greatly and State government second and the Federal Government usually can sit back and make informed judgments. It is very, very dangerous to put these programs in the hands of States in times of recessions because normally they will make decisions based upon what is popular, what gets votes, rather than what is in the right interest of the American public, particularly the children of America who don't vote.

And I might just point out, this has been demonstrated recently in the discussions about entitlement programs. We talk about eliminating the entitlement status of AFDC, of social welfare programs, but no one talks about eliminating the entitlement status of Social Security. Well, it is obvious, senior citizens vote and children and poor people don't vote.

I might also mention, too, we need to talk about quality assurance. When money goes to the States, the Federal Government, those of us who are legislators, have an absolute responsibility that the money of the taxpayers is used efficiently. And we have to make sure we maintain quality assurance. We have to make sure we maintain standards. We have to make sure that there are reviews to make sure the States are not misusing our money.

Let me just conclude by making an observation about the state of children in America. There is no question, the Chairwoman mentioned the Chicago situation where 18 children were left abandoned and discussed the problems with the family preservation programs in America. I wouldn't call that family preservation.

When we passed the family preservation legislation in 1993, there were a number of components. One was early intervention, early intervention into that family to make sure that the child and the mother, particularly the mother, understood how to care for that child, how to nurture that child. In fact, we tried to pattern it after a program in Hawaii where the intervention occurs upon the birth of that child.

We also had in that legislation originally programs for the courts so that the judges would learn what is necessary in making sure that the juvenile justice system worked. We went to Chicago, Ill., and we found that the judge, the juvenile court judge was listening to cases every 5 minutes. It is pretty obvious in that kind of a situation the judge was not able to decide what was in the best interest of that child with the 5-minute review. But unfortunately, that program was cut back.

We only have under $1 billion over the next 5 years, $200 million a year for all 50 States. We can't do it with those kinds of resources. So we are not really talking about family preservation. We are basically talking about giving some limited assistance to States. But if you really want to do family preservation, you are going to have to be willing to put the resources in to do early intervention, making sure the justice system works and making sure that ultimately, and I conclude with this, the best interest, the best interest of that child is in the minds of the legislatures when we take action.

Thank you, Madam Chairwoman, for this opportunity.

Chairman JOHNSON. Thank you, Mr. Matsui.

Mr. Ramstad, a new member of the Ways and Means Committee, and a valued member of this subcommittee, isn't able to join us at the very beginning of our hearing but would like his opening statement submitted for the record, and it will so be done.

[The prepared statement of Mr. Ramstad follows:]

STATEMENT OF REPRESENTATIVE JIM RAMSTAD
WAYS AND MEANS OVERSIGHT SUBCOMMITTEE
HEARING ON CHILD WELFARE PROGRAMS
January 23, 1994

Madame Chairwoman, I appreciate you holding this oversight hearing on federal child welfare programs, their effectiveness and how they might be reformed.

Recently, some rather outlandish and inaccurate charges have been made about the Contract with America's welfare reform legislation.

But it should be made clear that it is the states -- not the federal government -- that have primary responsibility for child welfare services. In fact, state and local authorities make the decision thousands of times each year to remove children from their families and place them in foster care or group homes because of abuse and neglect.

The federal government has steadily increased its financial support for a broad range of child welfare services, particularly through the use of "incentive funds." But with this rise in funding has also come more and more federal regulations.

These regulations, known as "427 reviews," require states to report on 18 child protections. While they may be well-intentioned, it is not clear they have improved the quality of child welfare services. What is clear is that compliance with the "427 reviews" has become a real burden on state and local administrators of child welfare programs, diverting needed resources.

By one count, there are currently 38 federal child welfare and child abuse programs for low-income people, with a total of more than $4.3 billion in funding this year. As we explore ways to reform the complex web of federal welfare programs, one of our top priorities must be to give states the flexibility to more efficiently and effectively meet the needs of their residents.

I hope the witnesses before us today -- Administration officials, state child welfare providers and administrators and child welfare advocates -- will offer some valuable suggestions and proposals that will help us meet this goal and better serve the children in these programs.

I thank all of the witnesses for being here today and look forward to their testimony.

Chairman JOHNSON. Are there other members of the committee who would like to make a comment before we proceed with the Assistant Secretary's testimony?

If not, Secretary Bane. Welcome. It is a pleasure to have you.

STATEMENT OF HON. MARY JO BANE, ASSISTANT SECRETARY FOR CHILDREN AND FAMILIES, U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES

Ms. BANE. Good morning, Madam Chairman and members of the committee. I have submitted a longer statement for the record and I would like to summarize my testimony at this point.

I am the Assistant Secretary for Children and Families in the Department of Health and Human Services. My agency has responsibility for the range of child welfare programs that serve the most vulnerable children and families in this Nation, often at times of terrible crisis.

It is a real pleasure to be testifying before you this morning at this very important hearing—I am so pleased you are having it—because of your long history of working for the betterment of child welfare programs. I would like to take advantage of this opportunity to share our vision for strengthening and reforming child welfare services by establishing a strong national leadership role, combined with increased State flexibility. As part of this discussion, I will address the protections under section 427.

A very large and growing number of children have some contact with the child welfare system. In 1992, almost 3 million children were involved in reports of child abuse or neglect. Of these reports, about 40 percent, involving almost 1 million children, were substantiated, that is, found to have some basis. About 17 percent of the children found to be abused and neglected required placement outside their homes in order to assure their protection.

How well we respond to the unique needs and circumstances of these children and their families has enormous consequences for children's safety and for their future development. We believe that there is an emerging consensus in States and communities across the country that child welfare services need dramatic improvement. Ours is a vision where the first priority of child welfare services is to ensure the safety of children and of all family members, where all services build on the resources and strengths of families to help support children's healthy development, where the community is the first line of support for families, and where all communities offer a continuum of services, from informal support services to early prevention, to foster care, reunification, and adoption. To achieve this vision will require both strong national leadership and increased State flexibility.

As a former State child welfare commissioner and now as a Federal official in regular contact with the States, I am personally committed to ensuring that we at the Federal level concentrate our energies where we can have the most effect on high-quality services and outcomes for children and families, rather than on the more narrowly focused enforcement actions of past years.

As you noted, Madam Chairman, I believe that we have in fact made progress since the passage of the landmark Adoption Assistance and Child Welfare Act of 1980, but we still have a long way

to go. One major problem is that the past Federal approach to enforcing the protections under section 427 of the Social Security Act has not been fully effective or fully desirable. Although States made significant progress in the early years after the protections were required, the approach to monitoring has focused both the States and the Department on the literal compliance with procedural requirements, with the content of the paper found in case folders, rather than on the intent of the provisions and the attainment of quality outcomes for children.

Provisions that Congress enacted last year give us new and more flexible tools for working with the States to improve the child welfare system by realizing the vision behind the protections embodied in section 427. We are currently reengineering our approach to monitoring and reviewing State programs, as well as to determining eligibility and assessing the quality of outcomes and practice in State programs.

We will be focusing in new ways on partnerships with the States in development of review plans and protocols; on support for change through technical assistance and corrective action plans; on self-assessment by the States; on the use of automated data and information systems; and on outcomes. We plan to conduct the first pilot tests of these new approaches in the spring and will issue regulations for public comment as required by the legislation in the summer of 1995. We will also be also working in the spring with the States as they develop innovative projects under the new demonstration authority.

We are very eager to work with you as you move forward to consider a variety of approaches to improve program consistency and coherence. As you review approaches involving spending caps, block grants or consolidations, we would like to raise some difficult issues about the potential effects of these proposals that we think we all need to consider. They deal with ensuring basic care and protection for vulnerable children; cushioning the States against unpredictable increases in demand; and achieving national goals for the child welfare system.

Between 1988 and 1993, the rate of reported child abuse and neglect rose 25 percent, partly because of deterioration of the communities where many vulnerable children and families live. The foster care caseload during that period rose by almost 50 percent, reflecting an increased need to ensure the safety of children from the most troubled families, and the numbers of families receiving adoption subsidies nearly tripled.

Chairman JOHNSON. Excuse me, Madam Secretary. I didn't mean for the bell to govern your testimony.

Ms. BANE. I will talk faster.

Chairman JOHNSON. Go ahead.

Ms. BANE. These increases that I have just noted are illustrations of some of the trends that contributed to a tripling of spending on foster care, adoption assistance, and child welfare services over the 1988–93 period. These funds provided basic protections and services to the most vulnerable children in this country. Had a cap on spending been imposed in 1988, these children are likely to have been left at considerable risk, especially since the needs of

these families and children for services are unpredictable and may not diminish.

Federal spending plays an important role in helping States cope with increased demands on their child welfare systems, which vary dramatically across the States. Any block grant that you consider would require the construction of a formula to allocate funds across States.

We did an illustration of the effect that a block grant might have on States by looking at what would have happened if a block grant had been put in place in 1988 using a base of 1987 spending and an allocation formula based on spending in that year. If this type of block grant had been in place, in the aggregate States would have lost two-thirds of what they actually claimed in 1993. Connecticut would have lost 67 percent; California would have lost 66 percent. Only one State would have received more than it actually claimed. The results for all the States are shown in the table attached to my full testimony.

There are, of course, many ways of establishing a level of aggregate spending and many possible ways of distributing it. This illustration is not meant to suggest that that is what this committee or any committee would recommend. But it does illustrate two things. First, it illustrates that demand is unpredictable and States could be seriously disadvantaged by a block grant or spending cap approach. Second, it shows that there are enormous variations among the States which no allocation formula is likely to be able to cope with fully.

Finally, as we consider how best to achieve our national goals for the child welfare system, it is essential to consider the consequences of any proposal in terms of the safety of children and the stability of families, as well as the ability of foster and adoptive families to nurture and raise the children who need them. Given the critical nature of these child welfare services, we must be very careful to construct an approach to change that balances flexibility for the States and communities with the need for a national framework, for accountability for outcomes, and for effective protections for the children and families. We must also assess carefully the likely impact of each approach on States, communities, and families.

We look forward to working with the committee, the Congress, and the States to revitalize these essential services to support the safety and healthy development of children.

Thank you. I am happy to answer any questions at this time.

[The prepared statement and attachments follow:]

TESTIMONY OF MARY JO BANE
ASSISTANT SECRETARY FOR CHILDREN AND FAMILIES
U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES

Good morning, Madame Chair and members of the Committee. I am the Assistant Secretary for Children and Families in the Department of Health and Human Services, with responsibility for the range of child welfare programs. These programs are extremely important because they serve the most vulnerable children and families in our nation, often at times of terrible crisis.

It is a pleasure to be testifying before you, Madame Chair, because of your long history of working for the betterment of child welfare programs. I would like to take advantage of this opportunity to share our vision for strengthening and reforming child welfare services by establishing a strong national leadership role combined with increased state flexibility to meet their particular needs. As part of this discussion, I will also address the protections under section 427 of the Social Security Act, which I understand is of particular interest to this Committee today.

Background

A very large and growing number of children have some contact with the child welfare system. In 1992, almost 3 million children were involved in reports of child abuse or neglect. Of these reports, about 40%, involving almost 1 million children, were substantiated. About 17% of the children found to be abused or neglected required placement outside their homes to assure their protection.

How well we respond to the unique needs and circumstances of these children and their families has enormous consequences for children's safety and for their future development. Let me illustrate with the story of three young siblings, James, Sara, and Mary. They were removed from their birth family due to severe physical abuse and neglect at ages 3 years, 2 years, and 2 months respectively and placed with two separate foster families. Four years later, after placements with three or more families each, the siblings were finally reunited and placed with an adoptive family in another state, identified through an extensive recruitment campaign. The placement is going well, but the children and their new family are coping with the effects of years of disruption on these young lives. By the time of the adoption, James was described as defiant, acting out, and having delayed speech; at least one of the children had been sexually abused; and a psychiatrist had indicated his grave concerns about Mary's future abilities.

James, Sara, and Mary are lucky in the permanent family they found, but they are far from unusual in their unnecessarily long and difficult path getting there. What are the flaws in the current child welfare system?

- Public child welfare systems have been overwhelmed by recent increases in the number of abuse and neglect reports as well as the increasing complexity and severity of family and community problems such as violence, homelessness, and drug abuse. Too often, despite the best efforts of states and communities, child welfare workers are undertrained and stretched far too thin, particularly given the life and death decisions we ask them to make.

- In part as a consequence of this overburdened system, many children - like James, Sara, and Mary - spend too many years in limbo between permanent homes. Two-thirds of the children in foster care in FY 1990 had been away from their home for one year or more, and 10 percent for five years or more. Almost 60 percent had

been placed in more than one setting during their stay in foster care and almost one-quarter in three or more.

- Often, the child welfare system is isolated from the communities and neighborhoods families live in and from the services that are critically needed by families - such as mental health and substance abuse services, health care, and housing.

- And far too few resources are devoted to prevention, meaning that families often don't get help until after children have been abused or neglected.

We believe that there is an emerging consensus in states and communities across the country that child welfare services should work very differently. In many communities and many states, this new vision is emerging bit by bit. It is a vision where:

- The first priority of child welfare services is to ensure the safety of children and all family members.

- All services build on the resources and strengths of families to support children's healthy development.

- The community is the first line of support for families. While a strong public child welfare system exists, families have access to all kinds of informal family support services in neighborhoods and settings that feel comfortable and are easily accessible.

- All communities offer a continuum of child welfare services, from early prevention to foster care, reunification, and adoption. Because children's healthy development is at the center of all decisions, children spend as little time as possible between permanent settings, returning home or to a loving adoptive family as quickly as possible.

To achieve this vision will require both strong national leadership and increased state flexibility. As a former state child welfare Commissioner and now a Federal official in contact with the states, I am personally committed to ensuring that we, at the federal level, concentrate our energy where we can have the most effect on high quality services and outcomes for children and families, rather than on the more narrowly focused enforcement actions of past years.

The Federal Role

As we move ahead together to reform child welfare services, I would like to reflect briefly on the history of the federal role in protecting vulnerable children and families. Until the mid-1970's, states provided the largest share of resources in the child welfare system, and the federal government largely funded foster care for the poorest children in the system. In 1980, through the Adoption Assistance and Child Welfare Act (AACWA), Congress significantly reoriented federal involvement to direct resources and decisionmaking toward preventing inappropriate removal of children from their homes and providing services that promote reunification of children with their families or identification of other permanent homes as quickly as possible. In addition, Congress recently provided new tools and resources for states to use toward preserving families and preventing children from unnecessarily entering the child welfare system. We share the view held broadly by child welfare professionals in the field that implementation of this vision, and the protections for all children which are at its core, fell far short of its promise.

As we focus anew on how to enable the child welfare system to meet the needs of society's most troubled families, we must balance the need for state flexibility with the Federal role of ensuring accountability for high quality outcomes for children and families. On the one hand, I saw during my years in New York how state and local leaders have often brought an extraordinary commitment of resources, creativity, and innovation to child welfare services. Yet at the same time, there is a widespread consensus that performance in today's child welfare systems isn't good enough, that the consequences for children are untenable, and that performance by individual states varies widely.

The failures of some state systems have been so marked that courts in more than 20 percent of the states have found that the state systems violate the constitutional or statutory rights of the children the systems are supposed to protect. In places like Connecticut, Utah, and the District of Columbia monitors have been appointed for the systems.

I believe that the federal government has a very important role in bringing about changes in these systems. In fact, it is widely accepted that the passage by Congress of the AACWA of 1980 served as a major impetus for many of the efforts at state reform that have occurred in the past 12 years. The law required that children receive basic federally mandated child protections (known as "Section 427 requirements") such as: regular case reviews to determine the appropriateness of service and the progress of families and children; a tracking system to identify the number of children in care and their progress toward permanency; and an up-to-date case plan, which is goal oriented, for each child in foster care. There have been strong, positive results. More children are being adopted more quickly, more efforts are being made to prevent unnecessary removals, and states have implemented procedures to improve case planning and to monitor the status of children in foster care.

Yet, as I have indicated, we still have a long way to go. One major problem is, I believe, that the past Federal approach to enforcing these protections has not been fully effective or desirable. Although states made significant progress in the early years after the protections under section 427 of the Social Security Act were required, the approach to monitoring has focused both the states and the Department on literal compliance with procedural requirements - with the content of the paper found in case folders - rather than on the intent of the provisions and the attainment of quality outcomes for children.

The provisions Congress enacted last year separated implementation of the section 427 provisions from the states' receipt of title IV-B funds under the Social Security Act. We are currently reengineering our approach to monitoring and reviewing state programs, as well as determining eligibility and assessing the quality of outcomes and practice in state programs. Regular review of children's cases is vital to the effort to ensure the safety and health of children in the system. We will be focusing in new ways on partnership with states in the development of review plans and protocols; on support for change through technical assistance and the development of corrective action plans; on self-assessment by states; on the use of automated data and information systems; and on outcomes. We plan to conduct the first pilot tests of these new approaches in the spring, and issue regulations for public comment, as required by the Congress, in the summer of 1995.

In addition to this reengineered role in support of quality outcomes for children, three other important Federal roles have emerged from our consultations over the past two years with states, county and local officials, and community leaders:

- Helping state and local programs succeed through training, technical assistance, and dissemination of ideas and models. State and local leaders do not want to have to reinvent the wheel each time they come upon a problem that someone else has encountered and solved, and they want access to the best national expertise. To meet that need, we have revamped and expanded our system of National Resource Centers, sharply increasing funding and reshaping their mandate in response to concerns and suggestions from child welfare practitioners, including state officials. The five Centers, all operated by nationally recognized experts, are required to provide up-to-date on-site consultation, develop resource and training materials, and conduct research and evaluation in response to the particular needs of states.

- Supporting the development and implementation of automated information systems. State officials have repeatedly told us that both funding and technical assistance from the Federal government are critical to the automation of state child welfare service systems. Effective automation in turn reduces paperwork, frees up workers, and allows states to keep track of child and family needs, services, and flow through the system. We have been active in providing technical assistance, including an innovative partnership with five states, a non-profit organization and two foundations to produce a prototype caseworker-driven automated system. Through this activity we are working with the states to design and develop a system which gives states flexibility and reflects their need and priorities, while ensuring performance and accountability.

- Promoting knowledge and improved results through research, demonstration, and evaluation. The Federal government has a unique role to play in supporting and disseminating research and evaluation, so that states can benefit from the best available knowledge in making their individual policy choices. One recent example of the effective use of research is the Multistate Foster Care Data Archive, a federally funded collaboration with federal, state and university partners located at the University of Chicago, which has compiled and analyzed administrative data from seven large states regarding children's entries, exits and stays in foster care as well as the characteristics of children in the system. The information has been useful to the seven states and has provided key national data on nearly fifty percent of the children in foster care in the nation.

Challenges Posed by Consolidation and Block Grants in Child Welfare

We in the Administration share your belief that child welfare programs must be consistent and coherent rather than fragmented. States and communities must be free to respond flexibly to children's and families' needs rather than being hamstrung by narrow categorical programs and rigid funding streams.

We are eager to work with you as you move forward to consider a variety of approaches to improve program consistency and coherence. We understand that among the approaches under discussion are spending caps, block grants and consolidations of various sorts. As you review these approaches, we would like to raise a number of difficult issues about the potential effects of these proposals that should be considered. They deal with

ensuring basic care and protection for vulnerable children; cushioning states against unpredictable increases in demand; and achieving national goals for the child welfare system.

Between 1988 and 1993, the rate of reported child abuse and neglect rose almost 25 percent, partly because of deterioration of the communities where many vulnerable children and families live. The foster care caseload during that period rose by almost 50 percent, reflecting an increased need to ensure the safety of children from the most troubled families, and the number of families receiving adoption subsidies nearly tripled.

These increases are an illustration of what contributed to a tripling of federal spending on foster care, adoption assistance and child welfare services over the 1988-93 period. These funds provided basic protections and services to the most vulnerable children in our country. Had a cap on spending been imposed in 1988, these children are likely to have been left at considerable risk. We all hope that the family and community circumstances that result in increased numbers of children in the child welfare system will be alleviated. And we hope that increased use by states and communities of preventive services, family reunification services, and adoption will allow a slowing of the growth in foster care spending. But the needs of families and children for these services are unpredictable, and may not diminish. Spending caps have the potential for imposing considerable harm.

Federal spending plays an important role in helping states cope with increased demands on their child welfare system, which vary dramatically across the states. Any block grant requires the construction of a formula to allocate funds across states. As an illustration of the effect a block grant might have on states, we looked at what would have happened if a block grant had been put in place in 1988, using a base of 1987 spending and the block grant parameters described for AFDC and other welfare programs in H.R. 4. If this type of block grant had been in place, in the aggregate, states would have lost about two-thirds of what they actually claimed in 1993. Connecticut would have lost 67 percent of what it actually claimed; California would have lost 66 percent; New Jersey would have lost 34 percent. Only West Virginia would have received more than it actually claimed. Results for all the states are shown in the attached table.

There are of course many other ways of establishing a level of aggregate spending and many possible ways of distributing it. This example is not meant to suggest that this particular proposal or any other is on the table. But it illustrates two things. First, it illustrates that demand is unpredictable and that states could be seriously disadvantaged by a block grant approach. Second, it shows that there is enormous variation among the states, which no allocation formula is likely to be able to cope with fully. It is important to think very carefully about the potential implications of any spending cap or block grant formula that might be devised.

It is also important to think very carefully about which programs are combined into any block grant, to ensure that our national goals for the child welfare system are promoted. Our vision for child welfare includes a continuum of high quality services, from services that help families deal with their problems before they become abusive or neglectful, to residential care for the most seriously troubled children.

A rational funding mechanism should encourage states to continue making improvements in their child welfare services, without penalizing states that are slower than others to begin these efforts. A rational funding mechanism should also neither skew the financial incentives toward out of home care, nor deny

states the funds they need to ensure safe placements for children who need them. The Congress last summer authorized a limited number of state demonstrations to use child welfare and foster care funds more flexibly. These demonstrations, with careful evaluations, should provide a good deal of information and experience useful in designing a funding mechanism best suited to the vision.

Finally, as we consider how to best achieve our national goals for the child welfare system, it is essential to consider the consequences of any proposal in terms of the safety of children and the stability of families, as well as the ability of foster and adoptive families to nurture and raise the children who need them. For example, under the Adoption Assistance program, states currently provide support to families who adopt children meeting the criteria developed by that state for special needs, until the child is 18; the Federal government is obligated to provide reimbursement for those expenditures. If adoption assistance were to be blended into a block grant, states could be forced to choose whether to continue payments to current adoptive families or to enroll new ones, and families who had chosen to give their love and support to a child on the expectation that they could receive some modest help in paying for services required to meet the child's need would face a painful dilemma.

Conclusion

Given the critical nature of these child welfare services, we must be careful to construct an approach to change that balances flexibility for states and communities with the need for a national framework, accountability for outcomes, and effective protections for children and families. We must also assess carefully the likely impact of each approach on states, communities, and families. We look forward to working with this Committee, the Congress, and the states to revitalize these essential services to support the safety and healthy development of children.

I'd be happy to answer any questions at this time.

Hypothetical Impact in FY 1993 if a Child Welfare Block Grant Similar to the PRA Welfare Block Grant Had Been Adopted In FY 1988, Using FY 1987 Levels

NOTES:

Programs in the Hypothetical Block Grant Include Foster Care (Maintenence, Administration, and Training). Adoption Assistance (Maintenence, Administration and Training); and Title IV-B Child Welfare Services.

a/ Dollar amounts reflect state claims, adjusted for disallowances.

b/ May not add due to rounding.

Chairman JOHNSON. Thank you, Madam Secretary.

There certainly is a lot of common ground between us, and I am pleased that your testimony does recognize the difficulties of the current system and the degree to which valuable resources are steered into unproductive avenues. Certainly, to redefine a new partnership between the Federal Government and State government in regard to the management of moneys available for child welfare purposes is a challenge that I think we must not fail to meet and it is one that you are well prepared to work with us on and I believe we are well prepared and willing to work with you on.

I do regret your example of the impact on States of a capped block grant, starting with 1987, going back some years. First of all, no one, no one, no Republican has proposed capping spending without any regard for inflation or numbers or institutional care, no one. And I want the record and the audience to understand that. Because if we are going to work together fruitfully to make the very kinds of changes that interest you and that have long interested me, we have to be absolutely clear that we will destroy ourselves, this Congress and our form of government if we can't do politics a little better than that. And I am dead serious about this.

You will remember that I proposed a bill when Tom Downey and I were working on this very subject which would have capped spending in a way that, frankly, States would have more money now than they do because while it would have become a capped entitlement, every year the baseline would have risen for inflation and numbers of children and, frankly, at the time the States would have gotten both flexibility and money. So I just want it absolutely clear that no one is talking in those terms, that what we are talking about is looking at a system that has all too often looked at paper, not children's lives, that has thousands of State employees doing reports when they don't have time to tend to families. So that is our common ground and I am very pleased that your testimony so clearly delineates that common ground.

I want to start with a couple of questions and then I will yield to my colleagues and come back later for those that haven't been covered.

First of all, if we eliminate rigid Federal procedural requirements and reduce the paperwork burden and administrative costs necessary to comply, won't this free up significant resources that the States could use for services and won't it also free up resources in your own department, and have you done any analysis of what that impact would be on either your department or the States?

Ms. BANE. We have done some analyses and are obviously doing more, Madam Chairman.

I know that you have been concerned about the paperwork issue, and when I was commissioner in New York, caseworkers always yelled at me about paperwork. And I, when I was a commissioner, spent a fair amount of time with caseworkers, sitting with them, going through their days and so on to see what we could do about the paperwork. And as best I could tell, there were three types of paperwork that the caseworkers were complaining about.

The first had to do with doing case plans, that is, with writing up their notes, with writing up what they had done and what they

were planning for the children. And although I was sympathetic to the fact that we might be able to do our forms better and that we might be able to make it easier for them to do that paperwork, I was actually convinced that what they were calling paperwork really was an important part of service provision, an important part of dealing with families and children.

A second part of the paperwork that they complained the most about to me and that I observed them doing as I sat with them was the paperwork related to court appearances. It depended a lot on jurisdictions obviously, but caseworkers had to spend a fair amount of time preparing papers for courts and sitting in courts and going through those things, and again, it seemed to me that we could work on ways of doing that more effectively and efficiently. But again, the core of what they were doing was really quite important.

The third thing they complained about was the paperwork that was involved in meeting Federal requirements for eligibility determination and Federal requirements for reporting. That, frankly, was way down on their list of paperwork requirements. And again, we want to work on how to do those more effectively.

But my sense was that we needed to help caseworkers do their jobs more effectively but that it really wasn't in fact either the Federal protection requirements or our State regulations—they, by the way, saw it all as a State problem, not as a Federal problem, which I thought was interesting. We can certainly make some improvements, but it didn't look to me like it was a real large amount of resources.

Chairman JOHNSON. That is interesting, because the last time we held hearings on this subject when Mr. Downey was chairman of this subcommittee, we had testimony from socialworkers that they were using 80 percent of their time on paper with only 20 percent of their time for families. And while that may be an exaggeration, my own experience with the amount of time my own department has spent making reports to the Federal Government, arguing about reimbursement rates, fighting and negotiating, is simply extraordinary. And so I think we do need to find some way to get a more precise and honest understanding of the degree to which the mechanism has become the object. And if you care to submit later on any more precise information by looking at your department, what would happen, whose jobs would be affected, what resources would be freed up, we are at some point going to need that information. I know that is hard to do.

I remember specifically holding these kinds of hearings at the State level and being told afterward by some administrator, I couldn't possibly tell you that and run my department, too. So I understand there is some conflict of interest there.

But we are going to be able to determine that more accurately. Maybe not for our own bureaucracy. But for those kinds of reasons but certainly at other levels so that we can make a more honest determination about what kinds of moneys this will free up.

Ms. BANE. May I speak to that, Madam Chairman?

Chairman JOHNSON. Yes.

Ms. BANE. On the Federal level, we have slightly fewer than 100 Federal employees involved in the child welfare system. And you know, it is hard to make estimates, but the total administrative

budget for my agency is $164 million. I can't imagine that more than a quarter—and I suspect quite a lot less than that, is involved in the child welfare area. So that gives you some idea of the order of magnitude. The resources and personnel involved at the Federal level are a tiny fraction of the total work force in child welfare.

Chairman JOHNSON. Certainly, when you multiply it by the 50 States.

Last, let me just say if we do pursue a block grant of child welfare and foster care programs, what minimal standards would you recommend accompany those or would you like to get back to that subject? Perhaps you can talk about it generally and then in the course of events get back to that more specifically.

Ms. BANE. I think maybe I could talk generally now and then I hope that we will have opportunities to continue this conversation. It does seem to me that any approach to a Federal-State partnership would involve some Federal standards and Federal protections——

Chairman JOHNSON. Of course.

Ms. BANE [continuing]. To ensure the safety of children, to be sure they are oriented toward permanence and to assure they are looking out for the well-being of children. I would hope that we could formulate those more as results and outcomes for the system than as processes, though I think we will always have to have some procedure.

Chairman JOHNSON. Have you begun thinking about those?

Ms. BANE. We have. We have also been working with the States in ways that we are very excited about to try to see if we can't focus those protections more on outcomes and results.

I would also suspect that any approach to child welfare services would want accountability for Federal money to ensure that it was being spent for the purposes and for the children that the Federal money was meant to serve and, finally, that it was being used in very efficient ways. I think that we can work with you, we can work with the States to develop effective approaches in that regard.

[The following was subsequently received:]

In the last session, the Congress changed the section 427 dollars from incentive funds to an allocation based on State assurances that the essential protections were in place. This was a major step toward reducing the time spent in resolving disputes over disallowances. in the future, HHS plans to monitor the State's provision of the protections and to provide technical assistance in those instances where the protections are missing. The time spent documenting, negotiating, and appealing our fiscal decisions will be significantly reduced. That time will be used to develop corrective action plans and provide technical assistance.

Chairman JOHNSON. Thank you. And I will yield to my colleague, Mr. Matsui, from California.

Mr. MATSUI. Thank you, Madam Chairman.

In terms of the issue of flexibility, under current law, do you have the ability to waive requirements under child welfare programs IV–E, IV–B, and others?

Ms. BANE. Mr. Matsui, we don't have general authority to waive requirements as we do for the AFDC program. What we do have as a result of the legislation that was passed last summer is the authority to put in place 10 State demonstrations where we can waive many of the requirements of IV–B and IV–E. I am really excited about that. I think that is going to give us and the States the

opportunity to explore some really creative approaches, and I think that by having a limited number of them we can make sure that the demonstrations that do in fact take place will help us learn and will help children and families.

Mr. MATSUI. In fact, that is Chairwoman Johnson's suggestion, I think, in the legislation, her amendment.

Ms. BANE. I am delighted.

Mr. MATSUI. Let me ask you with respect to that program, obviously it was October I guess of last year so, the implementation is—you are working on that now, is that right?

Ms. BANE. That is correct.

Mr. MATSUI. And identifying some of the potential participants?

Ms. BANE. That is correct.

Mr. MATSUI. And without obviously being too specific, what areas are you looking at? I mean, where are some of the needs that need to be—or problems that need to be addressed?

Ms. BANE. Well, different States, I am sure, are going to come in with different kinds of approaches. I know that some States are looking at ways to have some flexibility in the funding stream so that they can give the agencies that actually deal with children a wider range of approaches. And I think that is the thing that we are going to be looking at, ways that the States can figure out how to use the total amount of funds that are available to them in more creative ways.

Mr. MATSUI. I would imagine some of the administrative cost issues will come up in this as well; is that right? In other words, how you can reduce costs and use the dollars more efficiently.

Ms. BANE. I assume so.

Mr. MATSUI. Let me ask you, last, about the paperwork issue, because obviously that is one that will be discussed more and more, I believe.

I have reviewed the court system in California. I visited our juvenile court system a number of times and have even been to Los Angeles and talked to some of the judges there over the years. And obviously the paperwork involved when the caseworker presents the case—not presents the case, but when the attorney as guardian presents the case, they have to have the backup information.

In your role as commissioner, I guess in New York and also here as the Assistant Secretary, is there some way to find efficiency? Because that seems to be the largest paperwork burden, if you want to call it that, that the caseworker has. We need—they need to make sure the record is complete. They need to make sure their allegations, whatever they may be, are complete.

Ms. BANE. I think the trick here, Mr. Matsui, is to try to distinguish the necessary, useful, and helpful paperwork from the paperwork that we can try to streamline. I believe that using case planning tools and service provision tools is really very important, and that it is important to have written records of contacts with children because caseworkers turn over and need to be able to share with other caseworkers that work.

I do think, though, that we can streamline the process. The family preservation and support legislation that was passed a year ago last summer included some funds and a mandate for grants to the States to try to improve and streamline their court systems. And

again, I think this is a very exciting opportunity for us to see what we can do.

Mr. MATSUI. The reason I asked this line of questioning is because I think what you say, the turnover issue, you see, is a pretty difficult issue to deal with. I mean, it sounds easy when you are sitting here, well, you don't need much paperwork. But the caseworker may change.

I think it was 4 or 5 years ago, the medical records of young children in the foster care system were not transferred from placement to placement. That was a big fight. I think the advocacy groups were very helpful. I didn't even realize medical records weren't transferred with the child. But when the child goes from State to State, five to six foster care families over a 5- to 10-year period, those records don't usually go with the child, or education records. And so you need—you need to make sure that there is an adequate paper trail behind that child because the child usually doesn't have one custodian.

My child—our only son or only child, 22 years old, my wife and I know everything about him. We think we do. We don't anymore but we used to. But the fact is if that child were in the foster care system when he was 2 years old, I don't think anybody would really understand that child's history. And I think we need to make sure we understand that.

So when we complain about paperwork and the bureaucracy, there is another element to it. These kids need a file because most people won't be with that child for an indefinite period of time.

I have no further questions.

Chairman JOHNSON. Thank you and I will recognize now Mr. Hancock.

Mr. HANCOCK. There is just one question that I would like for you to explain for me on page 3 of your testimony. You state that 20 percent of the States have found that State systems violate the constitutional rights of children. Would you define exactly what you mean by "constitutional rights of children" in your testimony?

Ms. BANE. I believe that in most of the cases, they were findings that related to State statute rather than necessarily to the Constitution, though I think there were some equal protection claims explored in some of the cases. In many of the cases, the finding of the court was that the system, the child welfare system, was failing to provide basic physical care, safe care to the children in custody of the State.

Mr. HANCOCK. But you are defining that as a statutorial right rather than a constitutional right.

Ms. BANE. As I say, in some of the cases it was done on statutory grounds, in others it was done on equal protection grounds, and in some it was done on State constitutional grounds. We can get you——

Mr. HANCOCK. Primarily under the equal protection law, the equal protection of the——

Ms. BANE. Mostly under the due process clause, I am told.

Mr. HANCOCK. Under which?

Ms. BANE. Under the due process clause, that is, the children and their families weren't afforded due process. We can get you an analysis, if that would be helpful.

Mr. HANCOCK. I would like to have more information on that, the determination of your department of just what constitutes constitutional rights. I would appreciate it if you would get me some information on that.

Ms. BANE. We certainly will. These were, of course, court determinations, not ours.

Mr. HANCOCK. Thank you, Miss Chairwoman. Thank you.

[The following was subsequently received:]

Litigations have been brought by advocates for children based on State law, Federal law, and the U.S. Constitution. The constitutional grounds have been based on substantive due process rights—specifically the right to freedom from harm while in State custody.

Chairman JOHNSON. Mr. Herger.

Mr. HERGER. Thank you very much, Madam Chair. And it is good to have you with us, Secretary Bane.

My question, you state in your written testimony that Federal funding for child welfare increased by 300 percent since 1987, yet I see on page 5—and I believe you mentioned in your oral testimony the reports of child abuse and neglect increased only 25 percent and foster care placement increased by only 50 percent, indicating that factors other than increase in caseload have resulted in increased Federal spending.

What, in your opinion, were these other factors, the difference between the 300 percent and——

Ms. BANE. Mr. Herger, I think there were a number of things going on and I actually don't think we understand them all fully and we do need to understand them better.

Caseloads were going up. The difficulty and complexity of the cases also appeared to have been going up in many, many States. Madam Chairman mentioned the increase in crack cocaine, along with the increase in the number of children who were coming into the system as infants. So it was not only the increase in caseload but the increase in the complexity of the caseload.

A second thing that was going on was that States were involved in trying to improve the quality of their child welfare systems. They were trying to improve their preplacement services. They were trying to improve their case management services, and they were able to claim Federal funds for that, quite rightly.

A third thing that was going on—and I know this has been a topic of some concern, is that the States were taking advantage of the opportunities in Federal law to claim Federal funding for many of their costs, quite legitimately, I must say.

One thing I think a lot of people don't realize is that the Federal Government funds only about 40 percent of the child welfare system and the child welfare services in this country. And as the Federal spending was increasing, I know for a fact for New York, and I assume this is true in other places as well, that State spending was also going up a lot. So both the States and the Federal Government were responding, I believe, to a tremendous increase in need, as well as an impetus to try to improve the services that they were offering to children and families.

Mr. HERGER. You also state that States and communities should not be hamstrung by narrow categorical programs and rigid funding streams. Specifically, could you tell us what programs and

funding streams you consider too narrow? Which ones you would recommend to be combined?

Ms. BANE. I don't think I am in a position at this point to make any specific recommendations to you. I know that many people are proposing that we look at a number of the programs that deal with child welfare to see if there can't be some flexibility, and as I said to Mr. Matsui, I think the opportunity that is afforded us by the demonstration authority last summer will allow us to work with the States to identify those places where flexibility will be the most useful and helpful in improving the system.

Mr. HERGER. OK. Thank you.

Chairman JOHNSON. Thank you. I would like to emphasize, though, that being more specific about rigid funding streams and narrow categorical programs now is really important, because as important as those demonstration projects were—and I fought many years to get them in line, they will take awhile to put in place. It will be awhile before we understand them.

I don't know whether the teen suicide prevention money is still a separate line item, but that is exactly the kind of thing that is driving my agencies absolutely crazy, because it prevents a holistic approach to family problems. So we really do want to make sure that as we make change, we address some of the very specific needs.

I also would want to point out in followup to Mr. Herger's comment about the chart and about claims, there is a big difference between claims made and claims received, as you in New York know very well. I think your difference one year was $178 million. And your chart does deal with claims made. And that is a problem that I have with it and I would hope that the information that we pass between your department and this committee or other subcommittees of Ways and Means will be a little bit more realistic, because I think it will enable us to work together more fruitfully.

Ms. BANE. I think we did take account of disallowed claims. I will check on that for you and get back.

Chairman JOHNSON. Do check on that. Because the way it is worded both in your testimony and on the chart, it implies that that is not the case.

Ms. BANE. I think we did take account of that. You are quite right that we need to.

Chairman JOHNSON. Thank you.

[The following was subsequently received:]

The answer is correct. We did take into account the claims which were disallowed.

Chairman JOHNSON. Mr. Levin, please.

Mr. LEVIN. Thank you.

Let me pick up on the discussion about the chart, because I think the Chairwoman's discussion provides some ray of hope that we can find some common ground. And I would like to talk to you about the general underpinnings of this discussion. The last couple of weeks, Nancy, actually there have been some proposals to block grant at a set level without regard to inflation or caseload. That came up in the AFDC discussion.

Chairman JOHNSON. If the gentleman would yield. I don't think it has been clear in those discussions exactly what the block grant

cap would be tied to because there is no agreement yet on that issue and there certainly is no legislative language.

Mr. LEVIN. No. Governors were asked whether they would be willing essentially to take the provision in the Contract which is 103 percent of the total amount for each fiscal year for the next 5 years. The response from several Governors was that they would take that bargain, and a number of our colleagues indicated that a block grant might look like that.

And I am very much in favor of much, much more State flexibility. I would have us move to a different kind of Federal-State relationship. But the question is whether there will be any Federal role whatsoever, whether there is room for a Federal role, whether we want to essentially partnership or we want total State responsibility with the only State-Federal function being funding, which eventually might be phased out and replaced with a lower rate of taxation federally and let the States pick that up. That is the consequence, I think, of one position, just block grant it at an absolutely straight level.

So your resistance to that idea I find encouraging, though others have said the block grant might look like that. So I want to ask you——

Chairman JOHNSON. I am merely pointing out in the technical language of the Contract bill, the capped entitlement is adjusted both for numbers and inflation. While there have been conversations with the government, there is no proposal on the table that doesn't allow significant adjustment.

Mr. LEVIN. Well, let me just read to you the option in the Contract. It says in lieu of any payment under any other subsection—this is AFDC—the Secretary shall name payments to the State under this subsection for each fiscal year in an amount equal to 103 percent of the total amount to which the State was entitled under this section for fiscal year 1992. And what this chart said, and a similar chart was presented at the hearing on AFDC, if that system had been in existence in 1988, this would have been the impact in the year 1993. That is what it says.

Now, I am trying to agree with you in your resistance to that idea. I just think it is not fair to say that no one has proposed this approach. And what I am in favor of is a very candid, forthright discussion of Federal-State relationships in AFDC and in the child welfare area.

As someone who for years has been in favor of much more State flexibility, the question is whether you are going to take it to the point where several Governors and others who testified a few weeks ago want to go, that is, the only Federal function is to get out of the way. And I asked the Secretary this question about AFDC last week so I won't ask you the same question here. Because in your testimony, you say—I will quote just a couple portions:

On page 3, the need for State flexibility with the Federal role—excuse me, of ensuring accountability for high-quality outcomes for children and families. And then on page 3, "I believe the Federal Government has a very important role in bringing about changes in these systems." And then on the last page, you suggest "an approach to change that balances flexibility for States and commu-

nities with the need for a national framework, accountability for outcomes, and effective protections for children and families."

So I think this is the question and you bring the experience not only of your role here but your role in New York. Why should the Federal Government be involved at all except perhaps to be a continuing funding source until perhaps that is phased out? But why should there be any balance at all?

Ms. BANE. Mr. Levin, I think the best way to respond to that question may be to think back to the situations in the States that generated the impetus for the Adoption Assistance and Child Welfare Act of 1980.

That act was developed and passed by Congress because of pretty terrible things that were going on in the States and that were coming into public view. I think that act was generated and passed because many States didn't have the capacity to deal with the needs that were being generated by their children and families and the sense that we, indeed, did have a national duty to the children that were involved.

And I think that legislation, although it has not been implemented perfectly and I don't want to defend everything about that legislation, I think the concepts and the ideas behind that legislation—to ensure children were being dealt with in ways that ensured their safety, that State systems were focused on permanence, not on letting kids drift around from one foster care home to another, and that States were pushed to put in place a continuum of services so that they could deal with the needs of families and children—I think that legislation had big effects and I think that we still need that kind of national commitment and national help to the States.

Mr. LEVIN. And you think we still need it because?

Ms. BANE. Because I think the children and families are still in trouble. Because I think the States vary enormously in their capacity for dealing with these problems, and to some extent, in their will for dealing with these problems. And so I think that both national leadership and national funding is real important.

I also think, Mr. Levin, that the States are not in a position each and every time to create everything anew. I think there is a very important role for helping to provide some experience, some information, some national leadership in these really important areas.

Mr. LEVIN. Thank you.

Chairman JOHNSON. I do want to just clarify for the record, Mr. Levin's statement about the 103-percent increase, because the Contract bill has not been widely read. The Contract bill does block grant a lot of programs together, and allows that capped entitlement to grow and accommodate for both inflation and numbers.

There is within the Contract bill an option for States to completely take over just their AFDC program. It is for those States that completely take over their program, remember, thus freeing themselves from all Federal constraints, that would be subject to the 103 percent, the theory being that if they were running this program themselves much more flexibly—in a way that got women into the work force in a much more flexible fashion, that being guaranteed that their grant would grow by 3 percent was really

quite generous, if in fact they were able to do the better job than they say they are able to do.

So the 103 percent does not honestly quote what the bill does in regard to its larger capped entitlement approach, which it does allow to grow for both numbers and for inflation. So I wanted to get that clearly on the record. And I will then——

Mr. LEVIN. Will the gentlelady yield just for 1 second?

Chairman JOHNSON. Yes.

Mr. LEVIN. So there is no misunderstanding, I read and said it was an option. But——

Chairman JOHNSON. It is also in regard to only one program, AFDC.

Mr. LEVIN. That is true, that is true. But in fairness to what went on the last couple of weeks here, this issue of converting to a block grant at a set figure became the focal point of discussion on welfare reform. And a number of people expressed a belief that the option that is in the Contract might well become the model for block granting. And some concerns were expressed, some questions were raised by myself and others, including the issue of what is the national interest.

And so I think it is accurate to say that in the last several weeks we have had a discussion during which one idea has been to essentially turn the option in the Contract into a basic approach for block granting. And I—I am encouraged by your statement that as we look at block granting, we need to look at issues like inflation, like caseload, like needs.

Chairman JOHNSON. I certainly appreciate your concern with how block grants would have to be adjusted in the future. And I also certainly recognize the vitality of the discussion that is going on between the Governors and members of the Human Resources Subcommittee. But I did want to make clear that in the Republican proposal, in the Contract, which is far more conservative, if you will, than the Republican proposal approved by the Republican Conference, that even in that proposal there is no provision for freezing. And that is what the chart that has been presented to us is based on, and I regret that very much.

But I also wanted to make clear that even in that narrow portion of the bill that uses the 103 percent, that is only the part of the bill where the States get to opt, if they choose, to completely take over their AFDC program. So I wanted that clear.

I also want to make clear that in no form of any bill has anyone proposed capping foster care maintenance payments, which of course are the largest dollar amounts of the Federal contributions to the child support programs that we are discussing here today.

Mr. LEVIN. We will be discussing that. If you look at the capping provision in the Contract, it doesn't take into account a number of the factors that you have referred to. It talks about the change in the poverty population. But my point was not to be critical of what you said, but to be encouraged by it, and to say that I think the chart that was presented by HHS does have some relevance and to suggest, further, that as we look at this whole issue of a reworked State-Federal relationship, that we keep in mind what was testified to in the last few weeks.

Thank you.

Chairman JOHNSON. Thank you, Mr. Levin.

Mr. Zimmer.

Mr. ZIMMER. Thank you, Madam Chairwoman. I think that the discussion that has gone on between you and Mr. Levin is very helpful. It may seem technical, may seem abstruse, but it is important that we discuss policy initiatives on the common basis of fact. And I think we are struggling toward that common basis of fact. I don't think we have reached closure on that.

But there is no way we are going to have a useful policy discussion if we continue to deal with strawmen and misleading and sometimes downright phony figures and assumptions. Along that line, I would like to go back to the chart that you presented us.

You used a defined period from 1988 to 1993 as the base for your chart, and could it not be that that time period, which was a period of enormous growth in title IV–E, administrative costs, would distort the picture?

As I understand it, the growth in the title IV–E administrative costs program in the late eighties and the early nineties was due to the fact that the States were aggressively pursuing claims for IV–E administrative cost matching funds for preventive services that should have been covered by IV–B, child welfare program funds.

Ms. BANE. Let me just speak of the chart for 1 minute, and then try to speak to that again.

We did about, I don't know, 25 versions of this chart, you will not be surprised to learn. And my advisers said that we could only submit one with the testimony or it would be too confusing. We picked this one for the reason that Mr. Levin noted, that it was analogous to the one we had presented on AFDC 1 week ago, and the one on AFDC we built from the block grant provision in the Contract bill. Obviously there are many other ways.

We did do one that adjusted for inflation. The State patterns looked the same. It shows in aggregate that the States would have been only 40 percent worse off than they would have been, instead of 60 percent worse off, but shows the same kind of things.

We would be happy to do any other analyses that would be useful for you. In terms of your question, the 1988–93 period was indeed a period of great growth in the foster care caseloads. In the AFDC caseloads it was also a time of growth.

Again, if I might speak back to my experience in New York on this, I was worried about these programs in 1987; I was working in New York at that time. At that point, we were enormously relieved that the foster care caseload and our foster care spending had finally leveled off, and believed that we were actually in a quite good position to face the future.

So I think if I go back and put myself in that position in 1988, I did not in fact predict what was going to happen between 1988 and 1993. I think the thing to keep in mind as we do any of these simulations or look at these is that it really is very hard to predict what is going to happen, and all that says is, let's just be real careful as we try to think about how to construct these.

Mr. ZIMMER. I am all in favor of being careful, but I think we ought to deal from the top of the deck.

Isn't it true that one of the underlying purposes of the Family Preservation Act of 1992 was to restrict the rate of growth of title IV–E administrative costs?

Ms. BANE. The hope of the family preservation and family support approach was that by the provision of services to families before and during placement, States could develop a system in which there would be less need for out-of-home placement, and that there might, as a result, therefore, be less need for maintenance payments in the foster care system and payments to institutions.

I think that there was also some hope that family preservation and support would contribute to the services that the States were able to provide. I don't remember it being specifically focused on administrative costs, but I could be——

Mr. ZIMMER. Well, isn't it a historical fact that there has been a leveling off of the rate of growth of the IV–E administrative costs program in the last few years?

Ms. BANE. Actually, what is interesting about that is that—we looked at it State by State. And what happens is that for each State, there tends to be a 2- to 3-year period where what they are claiming under the preplacement administrative and services piece, that is, the nonmaintenance piece goes up very sharply. And that is the period at which they are expanding their system or realizing that they can get more Federal money. And you see that, and then it does level off.

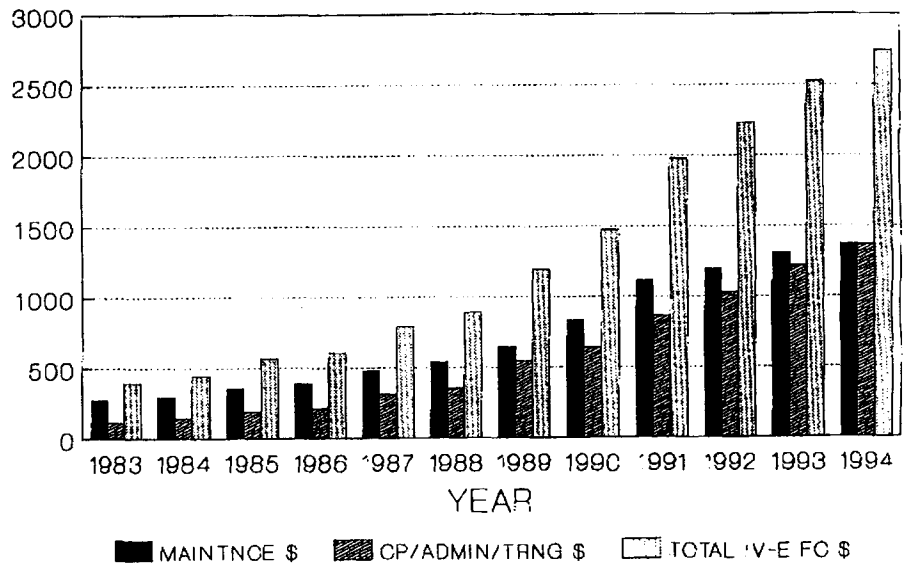
Not all the States have been through that period, however. Not all the States are yet at a point with their child welfare systems where they are taking full advantage of the opportunities they have for Federal participation. So I frankly would continue to anticipate some growth, although perhaps in the future we will see some leveling off.

Mr. ZIMMER. Nationally, since the passage of the 1992 act, has there been a leveling off?

Ms. BANE. I am sorry. We have a chart which I should probably submit for the record, rather than trying to show it to you. It shows continuing growth since 1992 in the nonmaintenance piece, and also continuing growth in the maintenance piece. It is not quite as sharp as in some of the earlier years. I think also, though, that although the Family Preservation and Family Support Act was passed in 1992, the first year was basically a planning year. So we haven't seen any results from that act yet reflected in the operation of State systems or in their claims.

[The following was subsequently received:]

IV-E FC COST ANALYSIS
FROM 1983 TO 1994



CP = CHILD PLACEMENT

TITLE IV-E FOSTER CARE

Funds can be used for:

Payments (FMAP): **Benefits paid on behalf of the child to a foster parent or institution.**

Child Placement Services and Administration (50% FFP):

- **Recruiting foster homes**
- **Licensing foster homes**
- **Preplacement activities:**
  (prior to a child being placed in foster care)
  - **Placing child in home**
  - **Preparing case plan**
- **During placement–Case management activities:**
  - **revising case plan**
  - **preparing for and appearing in court**
  - **arranging for and getting child treatment services**
  - **working with child's parents and foster parents on current and planned future steps and problems**
- **Computer systems (75% FFP enhanced match is available through FY 1996)**
- **Normal Administration**

Training (75% FFP): **State agency staff–related to Title IV-E**
Foster parents and adoptive parents
Member of State-staffed or State-approved institutions

Mr. ZIMMER. So that ought to make an even stronger case for the fact that we ought to expect the growth to be slower in the future, if it hasn't had its full impact yet.

Ms. BANE. Oh, I hope and pray the growth will be slower.

Mr. ZIMMER. So it is very difficult to make predictions on the basis of extrapolation?

Ms. BANE. That is correct.

Mr. ZIMMER. But do you really believe that we are going to see growth in the future at the same rate that we saw it between 1988 and 1993?

Ms. BANE. As I say, I hope and pray that we won't.

Mr. ZIMMER. Do you expect that we won't or do you expect we will?

Ms. BANE. I think we are going to continue——

Mr. ZIMMER. You are the professional here.

Ms. BANE. I know. As I say, I am thinking back to sitting in front of a New York State Legislature in 1988 and confidently predicting that foster care and child welfare expenditures were going to level off, and being proved wrong. So I have become slightly more cautious about making predictions.

As I say, we hope that it will level off. We hope that States will be able to make the improvements that will bring it about. But I am going to be cautious about making predictions.

Mr. ZIMMER. Well, obviously you should be cautious, but I think there is good reason not to use the worst-case time period, with the period of steepest growth, to predict the terrible catastrophe that would happen if there was a freeze of the sort that we have already learned was not proposed.

Thank you very much.

Thank you, Madam Chairman.

Chairman JOHNSON. Thank you, Mr. Zimmer.

We will go now to Mr. Johnson.

Mr. JOHNSON OF TEXAS. Thank you, Madam Chairman.

I have been told that child welfare block grants to States, or grants that are made to States at this time, that we authorize 75-percent Federal matching grants, and according to our information, they are distributed to the States on the basis of their under-21 population and per capita income. Is that correct?

Ms. BANE. That is correct, as it——

Mr. JOHNSON OF TEXAS. Well, I am also told that the reporting requirements are minimal, and there are absolutely no reliable national or State-by-State data on the exact number of children served, their characteristics or the services provided. Furthermore, that there are no Federal income eligibility requirements. Is that true?

Ms. BANE. It is partly true and it is partly not true. The formula to which you refer is the formula by which $300 million in IV–B child welfare money is distributed to the States.

Mr. JOHNSON OF TEXAS. Last year I was told $294 million. Is that right?

Ms. BANE. Yes, that is correct, $294 million.

Mr. JOHNSON OF TEXAS. Let's use real numbers. That is what Mr. Zimmer was talking about.

Ms. BANE. I just was rounding up.

Mr. JOHNSON OF TEXAS. There is a lot of difference between 294 and 300.

Ms. BANE. Thank you.

Mr. JOHNSON OF TEXAS. Go ahead.

Ms. BANE. I am sorry, reporting requirements. It actually has been the case, Mr. Johnson, that we have had very little and not very good information about child welfare systems in the States and about the effectiveness of programs. That is one of the reasons that Congress both required a new reporting system and authorized funding to the States for computerized systems, so that they would be able to do a better job of managing their child welfare systems. All the States now are engaged in computerizing their systems and developing an automated case management approach, and in using those automated systems to meet not only their own but Federal reporting requirements.

So we are coming to be in a position where we will have a lot more information and States will be able to manage their programs much better, because of automation.

Mr. JOHNSON OF TEXAS. Well, I am not sure computerizing is the absolute answer, because you don't always get good input. But concerning section 427, do you favor forgiving States who fail those past reviews?

Ms. BANE. We are actually very pleased that Congress last summer made changes in the legislation so that we would have a more flexible approach for working with States. What you passed last summer allows us to develop corrective action plans with the States, to do periodic reviews and to make sure that any penalty that we assess is commensurate with the degree of failure. And I think that is a more sensible approach than the all-or-nothing approach that was in the earlier legislation.

Mr. JOHNSON OF TEXAS. Well, are you assessing penalties on the States now?

Ms. BANE. We are assessing a set of penalties now for failures which took place in a previous period.

As you know, Congress put a moratorium on our taking disallowances for a couple of years, but last October removed the moratorium. We were told that those disallowances now constitute debts to the Federal Government, which we are required under prudent financial management to collect. And we are proceeding to collect those debts which have been firmly established as being owed. We are trying to do very carefully what the law requires.

Mr. JOHNSON OF TEXAS. So what you are saying is, you are punishing the States and the kids because there is not going to be that money there for them. And you are answering my question that you are not forgiving the States for past reviews.

Ms. BANE. We are not forgiving the States for the past debts that were incurred as a result of those reviews. As I say, our legal analysis is that the law required us to do this.

Mr. JOHNSON OF TEXAS. So you are punishing the States and punishing the kids. That is all I wanted to know.

Thank you, Madam Chairman.

Chairman JOHNSON. Mr. McDermott.

Mr. MCDERMOTT. Thank you, Madam Chair.

Dr. Bane, we appreciate your coming up here and testifying. You share with us, I think, the same difficulty; that is, it is very hard to come up and react to legislation by press release, because there is nothing on paper.

I know why you had to do 25 charts. We hope there is going to be some kind of bill available on February 6 when they start to mark up welfare reform, so we can actually look at some real figures.

But I am mindful of your history, and I thought of George Santayana, who said those who fail to learn from history are doomed to repeat it. And my own career was 15 years in the State legislature before I got to Congress.

Where were you from 1980 to 1985? What was your professional responsibility at that point?

Ms. BANE. That is a good question. From 1980 to 1983, I was at the Kennedy School of Government being an academic; from 1984 to 1987, I was at the New York State Department of Social Services as the number two person.

Mr. MCDERMOTT. OK, good, that is what I want to know.

I was down at the State level as ways and means chairman in the State legislature the last time this government went through the block grant business. We called it "block and chop," because when they blocked, they always chopped off some. And we always wound up with less.

Can you talk a little bit about the history of why the Federal Government first got involved in welfare. Mr. Levin's question prompted you a little bit, but the Federal Government didn't run out there to get involved in the States' business because the States were doing it so well?

Ms. BANE. I believe that is correct, yes.

Mr. MCDERMOTT. I would like to hear a little of the history, so that people understand that we have been through this block and chop business, and anybody who thinks this is going to be just block and not chop simply doesn't understand what the history has been in the past.

Ms. BANE. Right, right. I assume you are referring, Mr. McDermott, to the block granting of the social services block grant and the community services block grant in the early eighties. There were virtually no requirements, including, unfortunately, no reporting requirements, so we have very little information on what actually happened as a result of those.

But it was certainly very clear to us in New York during the period of the eighties that we were spending a good deal more of our State money for those purposes, especially for the purposes that were pulled together under the social services block grant, having to do with day care and child welfare and so on; and that at least from that one State's point of view at that one time, it did seem like the Federal Government was pulling back pretty badly.

Mr. MCDERMOTT. Let me ask you another question, because it seems to me that one of the things that our discussion about various programs is that we act as though they are sort of sitting out there all alone by themselves, not connected to anything else on the horizon. But I really look at this as kind of like a spider web. If you touch it in one place, it moves everywhere.

There is a proposal on the Hill here to reduce or to kick people off AFDC and to do a number of things in that area. Are you willing to talk a little bit about what you think will happen to the child welfare caseloads if you knock all the kids off the AFDC rolls?

Ms. BANE. Well, we all hope that reform of the welfare system will be done in such a way that children will be protected, that there will be a focus on work and parental responsibility and that children will be able to remain with their families and remain in good situations. I think many of us worry that some of the proposals being talked about—and again, I know that the committee has not agreed on a proposal, but that some of the proposals being talked about would indeed deprive AFDC benefits to large numbers of children for pretty long periods of time. And I think we all worry that under those circumstances, there would be more children who come under the child welfare system and come into the custody of the State.

And I think that as we think about that kind of a situation, we really want to be careful because the child welfare system is already terribly strained. It is already struggling with the needs of vulnerable children and families. To soon have to deal with more children, because their families are poorer because their mom can't get a job, seems to us to be a terrible mistake.

Mr. MCDERMOTT. Would you tell me about the turnover rate of your caseworkers? I know this is hard maybe, to remember back, but what was your caseworker turnover rate at the lowest level; that is, the entryworkers who are dealing with welfare cases and with child welfare cases and child abuse and CPS, those various programs?

Ms. BANE. Oh, in general, it was very high. Child protective workers probably had the highest turnover rate; they probably turned over every 2 or 3 years. I think they may have the hardest job that we ask anybody to do in this country, and we pay them terribly and we blame them when anything goes wrong. So I could understand why.

It was a tragedy, though, because, you know, the most important part of this system is a concerned caseworker who is able to make good decisions for children, and I think the extent to which we can put some investment into training for caseworkers, into support for caseworkers, into making their lives easier, is really going to pay off.

Mr. MCDERMOTT. Are you talking about 2 to 3 years as an average, or are you talking, the longest anybody lasted at it?

Ms. BANE. I think it was probably an average. It varied from State to State. It depended on whether there were any alternative employment opportunities as well.

Mr. MCDERMOTT. My experience is that that is true. I think it needs to be emphasized that paperwork, it is easy to rail against paperwork, but when cases are turning over rapidly, from caseworker to caseworker to caseworker every 2 or 3 years, if there is not an adequately done record, there is no way anybody can deal with these.

I, in my professional life, dealt with these cases in court and reviewed records of kids who had been in foster care for 10 years. And it was very often almost impossible to put together what had

actually happened to that kid because people had not recorded what the reasons were why he left one foster placement to go to another foster placement, how he failed, where he succeeded, and all those kinds of issues that are absolutely critical to making any kind of sensible judgment for a kid.

And I think that people need to understand, the paperwork isn't just something you say to people, well, sit over there and write a bunch of stuff down. It really is for the next person who is coming in in a couple of years, who has no idea where this kid came from and is usually handed it in a critical situation when the child's situation has all fallen to pieces. It comes back up on somebody's desk and they go to the file and it is 3 or 4 inches thick, and there is still stuff left out. I think that it is really important to say that.

I appreciate your testimony. Thank you. We will talk to you some more.

Chairman JOHNSON. Thank you, Mr. McDermott.

Mr. Portman.

Mr. PORTMAN. Thank you, Madam Chairwoman. I thank you for your testimony. This has been a very interesting discussion, wide ranging. I appreciate Mr. Levin's candid and forthright assessment of the Federalism issues here. I think that is exactly what is at stake, and I would like to pursue that a little further, and just make a couple of comments.

One, I think it needs to be underlined that part of what we are discussing as a Congress this year is the reality that being $4.7 trillion in debt and having a general consensus that we need to reduce our spending, I think on both sides of the aisle, and specifically facing a likely balanced budget amendment within 7 years, that there will naturally be cuts in all programs, all services on the Federal level, if we are to achieve those very significant cuts, and that the block grant program is in part a response to that.

We have been hearing from members of State legislatures, as Mr. McDermott was and many others on this panel, from Governors and so on, that they would prefer the block grant approach. Part of the reason they are saying that is, they want to keep current services and it is the Federal requirements and the paperwork and so on which takes an increasingly large part of the—of the dollar that they are able to provide for services. And what we are saying here in Congress and what they are saying to us is that there may be a better way to do this, a way to have current services maintained with the Federal budget imperative, which is to cut our spending here, and one way to do that might be to increase flexibility through block grants.

So that has a larger context that I think maybe hasn't been discussed adequately this morning.

I think Mr. Levin is right on target that this is really a much larger issue than just child welfare or just AFDC, and it goes to the role of the States and Federal Government. And maybe at some point we do have a shift back, in a sense reversing the trend of the last century of increasing Federal responsibility, back to more State responsibility.

In that context, I would ask you, we have learned about what you did between 1980 and 1985, but how long have you been in-

volved in child welfare programs in one way or another, either as an academic or as a person involved directly with programs?

Ms. BANE. Oh, longer than I am willing to admit. I don't know, 15 years, 20 years.

Mr. PORTMAN. In those 15 years, you have then seen how the States handle child welfare caseload, foster children, adoptions, and so on; you have seen how the Federal Government has reacted; you followed the developments Mr. McDermott pointed out where we have gone to block grants and back from block grants.

Would you say, in your judgment, that the States are doing a better or a worse job in that decade or two, in terms of providing child welfare services?

Ms. BANE. I am not sure I can speak for all the States. I mean, my perception certainly is that New York is doing a better job now than it was 10 or 15 years ago in providing child welfare services. And it also appears as though the 1980 legislation was a prod, if you will, to the States to make some improvements in their child welfare system; and most especially, to focus more on achieving permanent outcomes for children. That was really the focus of the legislation and the issue that was very much before people.

And I think that we have seen since that time in virtually all the States an improvement in the system so that the States are indeed keeping track of the children in their system, that they are in fact doing some planning aimed at permanence and really trying to achieve that.

Mr. PORTMAN. Is it your view that if we were to change the requirements at the Federal level, vis-a-vis New York State, as an example which you referred to, that New York State would shift back to less permanent solutions? In other words, is it necessary to have the Federal gun, so to speak, at the head of the States, in order to keep them on what you and I think most child welfare experts would agree is a proper course?

Ms. BANE. I think it is very hard to make a prediction about that. My sense is that some States would and some States wouldn't, and that in many States—and I think it would be fair to say that this was true in New York at some points in its history, too—that the fact that there are Federal guidelines and that there is Federal money was an incentive for the State to keep moving in the right direction.

I think it is also fair to say, though, that there are many other States where it appears that it really was the existence of the Federal legislation and it really was the existence of the Federal push that led to some improvements in the system.

Mr. PORTMAN. Earlier you mentioned that we don't have all the answers here in Washington, and I think, given your oral statement, you have a proper attitude with regard to flexibility, that the States are important laboratories of experimentation and that maybe there is a certain advantage to giving States that flexibility beyond all the budget issues we discussed, which is to say that they have got some pilot programs and some ideas that we haven't thought of.

Wouldn't you see that as an advantage to a block grant type program?

Ms. BANE. Oh, absolutely, it seems to me that State flexibility and State creativity are very important; and States have most of the responsibility for the child welfare program even now. I think that we can assess how we deal with the States, I think we can assess our accountability mechanisms. I think that we need to make some dramatic improvements there because our accountability mechanisms need to be oriented to results and they need to be oriented toward genuinely improving performance. There is no question about that.

And as I say, I think the ability of the States to try some things out is really very important. I guess we are all trying to struggle with this question of the proper balance between State flexibility and national leadership. That is the crux of the question that we are going to be going back and forth on as we have this conversation.

Mr. PORTMAN. If I could close, Madam Chairwoman, with one specific question along those lines—and I realize that there are lots of different specific proposals we are going to be hearing about over the next several months, but one in particular would be the separate program for abandoned infants for adoption opportunities.

Does that make sense, to have a separate program for that, or wouldn't it make more sense to block grant that program and give it to the States specifically to give them the flexibility you are talking about?

Ms. BANE. Those are two programs for adoption opportunities and abandoned infants. I think the discretionary grants that have been given under that program have allowed some very interesting things to go on that we have learned from. I think that they have done some good services. I think that may be one you want to look at.

Mr. PORTMAN. Thank you, Madam Chairwoman.

Chairman JOHNSON. Thank you, Mr. Portman.

And thank you very much, Secretary Bane, for your comments.

The Ways and Means Committee has always operated through legislation that has been introduced, reviewed at hearings, and then the chairman submits a mark that reflects not only the legislation that has been introduced and the concerns that it has raised but the input of the hearings. We are not, we never have and we don't intend to legislate by press release. We are proceeding as we always have through the submission of substantive, thoughtful proposals.

Fundamentally, the proposals that we are considering are going in exactly the same direction that your department is considering going; that is, toward reevaluating and rebalancing the relationship between Federal direction and State authority, assuring that together we carry out our responsibilities to the children of America.

There is, however, a sense of urgency; there is no question about that. Whether you vote for the balanced budget amendment or whether you don't vote for the balanced budget amendment, no nation can continue to spend more than it collects decade after decade. So we are now going to take our responsibility seriously, to bring these things back into line. We have given ourselves a time-

frame of 7 years, which is better than our normal 5-year view in this place.

And so there is a sense of urgency, and we are going to need your help and your sharp focus on the issue of, what programs can be appropriately brought together? How can they be governed in a way from Washington that we assure that children's interests will be addressed? How can we move the issue of accountability away from reports and toward the kind of data that we see not only in the private business sector but in the private human service sector doing a far better job of dealing with the issue of accountability and effectiveness than our old way of many, many levels of bureaucratic entanglement that in the end diverts us from the real issue?

So we share the goals that are really important to America's children. And I hope that you will work closely with us as we prepare materials for the committee, that then eventually we'll have concrete hearings on a concrete proposal. But the purpose of this Oversight hearing is to try to draw, as Oversight ought, from our experience, to try to chart a more enlightened path into the future. And I look forward to working with you as we try to chart that path.

And I appreciate the indulgence of the committee in allowing the Secretary to answer fully the members' questions. And I thank you very much.

Mr. MATSUI. Will the gentlelady yield?

Chairman JOHNSON. I will be happy to.

Mr. MATSUI. Are you saying that HHS has been in discussions with the Governors and with the appropriate Republican chairs on this issue?

Chairman JOHNSON. No, no, I am not saying that.

Mr. MATSUI. Well, how do we propose that they get input? Because you were suggesting that suggestions and input be part of this process. I am wondering how we are going to be able to provide that.

Chairman JOHNSON. I have raised the specific issue in my concluding comments about what is going to be the governance language of any children's services block grant, what would be the accountability mechanism; and I raised that through my questions, and I open that to the Secretary and the administration for their full input on those issues.

Mr. MATSUI. And I understand that, and that is great, and it is in the hearing record. But then how does that get into the discussions between Governor Engler, Governor Thompson and those who are negotiating on behalf of your side? Because that is where I think the issue is. And frankly, we don't know yet whether the Contract With America or the block grant proposal that we have been reading about in the newspaper or one of a number of others is going to be on the table.

And as I think Mr. McDermott mentioned, we are going to be marking this up, I would presume, in another 2 or 3 weeks, both in the subcommittee and the full committee. And I mean, I have to say that I appreciated Assistant Secretary Bane's testimony, but she really couldn't respond to a specific proposal. And then when we raised a specific proposal on that side of the aisle, we hear that it is irrelevant, that the chart is irrelevant because that is not what the Republican proposal is.

Chairman JOHNSON. She could respond with a specific proposal that is the subject of this hearing, and that is the 427 reviews. That is the subject of this hearing, and that is what people are here to respond to, and that is what I would expect to get them to respond to.

Mr. MATSUI. If that is what we were supposed to do, that is fine, but then you raised——

Chairman JOHNSON. That is the topic of the hearing.

Mr. MATSUI. You raised the issue of the block grants, though. So at least in your opening statement, we were told block grants were going to be an integral part of this discussion.

Chairman JOHNSON. There is already a proposal on the table out there, that has been introduced, that has a lot of block granting in it; and that is being heard, as we speak, by the Human Resources Subcommittee. We are looking at a special aspect of that. It is my hope that, through this hearing, we will have very concrete, clear input into the form that the chairman's mark will take.

Now, I have certainly spent many years trying to influence chairman's marks before they came out and trying to influence them after they came out. And you know as well as I know that no matter who is in charge, there are legislative initiatives submitted, there is a hearing process, and we all try to influence the chairman's mark.

Mr. MATSUI. I know. Let me say you will have much more influence than I will have.

Chairman JOHNSON. I hope that through good oversight work that we as the Oversight Subcommittee will be able to work with the administration in an honest enough and effective enough way that we will have some significant input into that. It will certainly enable us at full committee, and on both sides of the aisle, to do that work.

Mr. MATSUI. Madam Chairman, I think this hearing is great and I really commend you for holding it; and I think it is necessary. The only issue I raise is the fact that I hope that—and it is not your decision, I know, or partly your decision, but I hope that we get to see what the final proposal will be soon, so we can give the administration, us and everyone else, an opportunity to react. Because at this time we really don't know and we would like to find out.

Because we are talking about revolutionary changes.

Chairman JOHNSON. I hope that you will get to see them more in greater advance than we used to get to see the chairman's marks, either subcommittee or full committee. And we have shown in a number of ways, both by assuring minority input into the setting of this agenda, as has taken place on some other subcommittees, that we are going to try to proceed in a little different fashion than we have in the past.

But I certainly can make no guarantees about what will happen in the future, because we are in a terribly constrained timeframe, because we have combined not only some reform initiatives, but we have combined that reform initiative agenda with, now, also the balanced budget agenda, which creates a slightly different situation than we had anticipated when the Contract was written.

So here we are. It is work we must do. I hope we will do it together, both with your department and in a bipartisan way. There will be limits to that bipartisanness, and of course I understand and accept that, but we will keep you as well informed as we possibly can.

Thank you, Madam Secretary.

The next panel would come forward, please. And now, this panel, we will enforce the 5-minute rule on the speakers and also on the committee members, so that we will get through both panels in a fairly timely fashion.

I do very much appreciate your input. I know from the staff's reports that they have talked with you extensively, and we are going to hear some excellent input on both the benefits and possibilities of greater flexibility and also the difficulties and shoals in those waters.

We will start, please, with Patricia Balasco-Barr, director of the Division of Youth and Family Services, the Department of Human Services, from the State of New Jersey. Welcome, Ms. Balasco-Barr.

STATEMENT OF PATRICIA BALASCO-BARR, DIRECTOR, DIVISION OF YOUTH AND FAMILY SERVICES, NEW JERSEY DEPARTMENT OF HUMAN SERVICES

Ms. BALASCO-BARR. Good morning. I am Pat Balasco-Barr, director of the New Jersey Division of Youth and Family Services, an agency within the Department of Human Services in New Jersey.

I am here on behalf of Human Services Commissioner William Waldman, who is with Governor Christine Todd Whitman this morning, because today is our State budget message.

Chairman Johnson and members of the Committee on Ways and Means, Subcommittee on Oversight, I want to thank you for the opportunity to provide testimony today regarding the current structure of funding available through title IV–B and IV–E of the foster care and adoption assistance.

The Division of Youth and Family Services in New Jersey, commonly called DYFS, is the single organizational unit responsible for IV–B and IV–E; and we take very seriously the mandate of Public Law 96–272 to make reasonable efforts to prevent out-of-home placement. Our child protective and child welfare practices have emphasized meeting the needs of children and their families in their own homes, and when that is not possible, in the most homelike setting and in the place closest to the youngster's home community.

DYFS operates 40 field offices, which serve a caseload of almost 50,000 children and their families on any given day. New Jersey is very proud of the fact that the overwhelming majority of these children, more than 83 percent, reside in their own homes. Only 7,900 children are served in out-of-home settings. The majority of these children, some 5,900, are in foster family care. The remaining children are in group home facilities, residential facilities, or small, community-based group homes. Sixty percent of the children in terms of eligibility for Federal funding—approximately 60 percent of the total child placement population in our State are eligible under IV–E.

New Jersey's use of out-of-home placement has not only remained stable over the past decade, it actually declined some 8 percent between 1989 and 1994. Over the same period of time, the reliance on out-of-home placement has risen dramatically in most other States.

New Jersey participated in the pilot program of the existing section 427 monitoring system in 1981, the initial section 427 compliance review in 1982, and three subsequent triennial reviews. I am pleased to say we passed each of those program reviews. Nevertheless, our experience has been that the task of documenting continuing compliance with the section 427 protections, much more than simply conducting our practice in the way that satisfies these norms, has been cumbersome and time-consuming for casework staff.

Specifically, we believe that the Federal approach to measuring compliance with the principles of Public Law 96–272, has inadvertently evolved to the point that it emphasizes the letter rather than the spirit of the law. In general, section 427 reviews have been more concerned with the tracking of precisely worded statements or process, rather than evidence of the actions themselves. Although New Jersey has passed these compliance reviews, we have come to conclude that this orientation has distorted the original intent of the law.

New Jersey has a case review system specifically designed to meet the requirements of section 427. In fact, New Jersey enacted a child placement review act in 1978, 2 years before section 427 requirements were imposed. The State law essentially requires parents, caseworkers, children, foster parents, guardians ad libitum to participate in the review process. The 427 review is duplicated by the child placement review committee, which works out of the judiciary part of government in New Jersey. We also then have the judicial review, when a child is under the supervision of the court.

So, in essence, there are three kinds of reviews that are monitoring New Jersey's compliance with Public Law 96–272: Compliance with the requirements of IV–E and IV–B eligibility, and the movement of children toward permanency.

One of the things that came to our attention in preparing for this hearing was so many of our children in New Jersey return home prior to the requirement of a section 427 review. And we take great pride in the fact that that family preservation initiative is working much, much better than our 427 review would ever tell anybody.

The budget resources required for 427 review is about $2.5 million. The workload management studies that a minimum of 14 percent of a caseworker's direct service time is expended for children in out-of-home placement is spent in documentation of 427 requirements. In addition, compliance with these standards involves the time of supervisory, management and support staff to fully integrate these section 427 driven actions.

DYFS has a corps of 14 regionally based third-party section 427 reviewers who convene and conduct the placement reviews. We have no doubt that reviews have benefited children in out-of-home placement, but we think that the system—does that mean I stop?

Chairman JOHNSON. Well, you are close to the end because you are summarizing now.

Ms. BALASCO-BARR. The purpose of the law is being met in New Jersey, and the purpose of the law toward good child welfare practice is being met. But when you look at the quality and the numbers of reviews that we are doing in New Jersey, you begin to wonder, how many times does it take you to figure out whether you are on a good case practice basis with each child? Would there be deficiency—would there be efficiencies if we block granted child welfare programs; and would foster children be better served if we plowed overhead into additional resources?

I think there is a misconception when we talk about administrative costs, that you think of whole lots of folks that look like me sitting around and that is how the salary is paid. But administrative costs has to do with cars, has to do with desks and computers and training for staff. It has to do with the other things that support a caseworker's ability to do the work, what we call "good child welfare practice."

I appreciate the opportunity to present the testimony to you today and I am available for questions after the rest of our panelists talk.

Chairman JOHNSON. Thank you very much, Ms. Barr.

[The prepared statement follows:]

TESTIMONY OF
DIRECTOR PATRICIA BALASCO-BARR
DIVISION OF YOUTH AND FAMILY SERVICES
NEW JERSEY DEPARTMENT OF HUMAN SERVICES
BEFORE THE COMMITTEE ON WAYS AND MEANS
SUBCOMMITTEE ON OVERSIGHT

JANUARY 23, 1995

Good morning. I am Pat Balasco-Barr, Director of the New Jersey Division of Youth and Family Services, the child protective and child welfare service agency within the Department of Human Services. I am here today on behalf Human Services Commissioner William Waldman who was not able to appear before the Subcommittee today. Commissioner Waldman is joining New Jersey Governor Christine Todd Whitman as she presents her State Budget Message for fiscal year 1996.

Chairman Johnson and members of the Committee on Ways and Means Subcommittee on Oversight, I want to thank you for the opportunity to provide testimony today regarding the current structure of funding available through the Title IV-B of the Social Security Act for Child Welfare Services and Title IV-E of the Act for Foster Care and Adoption Assistance.

The Division of Youth and Family Services, known in our State as DYFS, is the State's Title IV-B and Title IV-E single organizational unit. We, in New Jersey, take seriously the mandate of P.L. 96-272 to make reasonable efforts to prevent out-of-home placement. Our child protective and child welfare practices have emphasized meeting the needs of children and their families in their own homes, or when that is not possible, in the most home-like setting appropriate to the child's needs in or near the youngster's home community.

A brief overview of the Division's operations and caseload statistics illustrates that this is not simply a statement of philosophy -- rather, it is a matter of practice. DYFS operates 40 field offices which serve a caseload of almost 50,000 children and their families on any given day. New Jersey is very proud of the fact that the overwhelming majority of these children -- more than 83 percent -- reside in their own homes. On any given day, only 7,900 children are served in out-of-home settings. The majority of these children, some 5,900, are in foster family care. The remaining 2,000 children are receiving treatment services in group care facilities, and to the maximum extent possible, small scale, community based group homes are used in lieu of large scale residential facilities. In terms of eligibility for federal funding, approximately 60 percent of the total child placement population in our State are eligible under Title IV-E.

New Jersey's use of out-of-home placement has not only remained stable over the past decade, it actually declined some 8 percent between 1989 and 1994. Over this same period of time, the reliance on out-of-home placement has risen dramatically in most other states.

New Jersey participated in the pilot-test of the existing Section 427 program monitoring system in 1981, the initial Section 427 compliance review in 1982 and three subsequent triennial reviews. I am pleased to say that we passed each one of these program reviews. Nevertheless, our experience has been that the task of documenting continuing compliance

with the Section 427 protections -- much more than simply conducting our practice in a way that satisfies these norms -- has been cumbersome and time-consuming for case work staff. Specifically, we believe that the federal approach to measuring compliance with the principles of P.L. 96-272 has inadvertently evolved to the point that it emphasizes the letter rather than the spirit of the law. In general, Section 427 reviews have been more concerned with the tracking of precisely worded statements or process, rather than evidence of the actions themselves. Although New Jersey has passed these compliance reviews, we have come to conclude that this orientation has distorted the original intent of the law.

I would like now to address the specific questions that I believe are of concern to the Sub-Committee.

HOW DOES NEW JERSEY MEET THE SECTION 427 PROTECTIONS?

New Jersey has a case review system specifically designed to meet the requirements of Section 427. In fact, New Jersey enacted the Child Placement Review Act in 1978, two years before the Section 427 requirements were imposed. State law requires the early and periodic review of children placed into out-of-home settings by the Division of Youth and Family Services The system established by the law is a combination of citizen review boards and a judicial review of the circumstances of a child's placement, including: reasons for placement, current conditions of the placement, the appropriateness and progress of the plan for the child. Parents are invited to participate. Since the 12 month periodicity of the State Child Placement Review system was less frequent than the six month frequency subsequently required by federal law, the Division provided for alternating interim 6 month reviews by conducting independent, third-party placement conferences -- known as "administrative reviews" under Section 427. These conferences meet the standards of the reviews required by Section 427 in that they are conducted by staff not involved in the decision-making or service delivery for the case, parents are invited to attend, formats for documenting and guiding the review are completed by those Division staff attending which record all the assurances required.

The driving purpose of the federal law mandating a review system was noble. The reviews were intended to assure -- through an independent process of monitoring and problem-solving -- that in each case reasonable efforts have been made to prevent placement, that the placement is appropriate, and that reasonable efforts are being made to ensure progress in reuniting the child with his family or in moving towards an alternative permanent living arrangement. What we have found, however, is that an inordinate amount of effort is needed not to ensure compliance with the Section 427 protections but, rather, to ensure that documentation of each of the Section 427 protections is available in a formula statement that precisely mirrors the provision to which it applies. For example, we have found over the course of these triennial reviews that the requirement that efforts be made to place children in close proximity to their homes had to be demonstrated through a discussion of alternative placement sites -- rather than simple evidence that the foster home selected was within the same community. In other words, actual proximity appeared to matter less than a statement in a particular form discussing the efforts to identify other possible placements that did not meet the proximity protection. In some cases, these statements were required even though it was manifestly clear that the State had met the proximity requirement.

WHAT KIND OF BUDGET RESOURCES HAVE BEEN ABSORBED TO COMPLY WITH THE SECTION 427 PROTECTIONS

To meet the principles embodied in the law, New Jersey has made a considerable investment of resources from not only the Division of Youth and Family Services, but also from the judiciary. First, the Division's front-line field staff must conduct their practice in a way that satisfies the federal requirement to make reasonable efforts to prevent placement and that ensures case plans for children and families address the relevant Section 427 protections. In addition, field staff must participate in the third party review of placement every six months, alternating as an in-house placement conference or a review before a citizen-based Child Placement Review Board. We estimate from workload management studies that a minimum of 14 percent of a case worker's direct service time expended for children in out-of-home cases is spent in the documentation of the Section 427 requirements, including writing the case plan and participating in the formal third-party reviews. In addition, compliance with these standards involves the time of supervisory, management and support staff to fully integrate these Section 427-driven actions into the agency's practice and record-keeping.

DYFS also maintains a corps of 14 regionally-based third-party "Section 427" reviewers who convene and conduct placement conferences that are attended by the parents, the supervising case worker, his or her supervisor, the foster parents, and the child, if appropriate. The salary and support costs for these 14 reviewers is approximately $1 million.

In addition, the State's network of Child Placement Review Boards, which serve as arms of the Family Division of the New Jersey Superior Court, operate in all 21 counties. Although staffed by volunteers, the cost to the State Judiciary to support local board operations -- as well as the cost of bench time needed to review and make a judicial determination of each board recommendation -- is considerable.

Clearly, these expenditures exceed the approximately $2.7 million in Title IV-B incentive payments that New Jersey receives in return for complying with the Section 427 requirements. But, the question of whether these efforts are worthwhile is more complex than whether they are simply cost neutral. We believe that the basic intent of the Section 427 protections is sound. New Jersey would pursue them even if they were not mandated by federal law. However, we also believe that the monitoring of Section 427 compliance has progressed well beyond encouraging affirmative outcomes for children in placement. Rather, it has become an end in itself -- instead of focusing on the positive outcomes that we, as child welfare practitioners, owe to the children in our care.

HAVE THE REVIEWS BENEFITTED CHILDREN IN FOSTER CARE?

We have no doubt that reviews have benefited children in out-of-home placement, but we also think that the system as it has developed fails to implement the intent of the law. The prevention of placement -- to allow children to continue living in their own homes -- is the purpose of the law. However, the focus of Section 427 compliance reviews has become the microscopic inspection of statements about the procedures that occurred after a child entered placement -- rather than a common sense examination of the outcomes actually achieved. Although a review of the

circumstances of a child's placement is essential if we are to ensure movement toward permanency, the focus of these reviews should be redirected toward pre-placement events (i.e., prevention of placement) as well as concrete indicators of case progress or movement.

To illustrate this view, we only need to point out that gains on behalf of children in placement -- whether measured by the rate of placement utilization, time in placement, or qualitative measures of placement appropriateness -- have continued in New Jersey well past the point that one would expect through Section 427 protections alone. We believe that our investments in family preservation and family supportive services have yielded substantial additional benefits, far beyond those of the Section 427 protections alone, for the children in our care. Ironically, under the existing 427 monitoring mechanism, a state such as New Jersey that is highly successful at preventing placements and moving children home faster -- concrete outcomes for children -- could nevertheless fail a Section 427 program audit on procedural grounds. In fact, the case sampling methodology employed by the Administration for Children and Families in conducting compliance audits systematically exclude any placement that is of six months duration or less -- ignoring significant numbers of children who have been quickly and successfully reunited with their families.

WOULD THERE BE EFFICIENCIES IF WE BLOCK GRANTED CHILD WELFARE PROGRAMS AND WOULD FOSTER CHILDREN BE BETTER SERVED IF WE PLOWED OVERHEAD INTO ADDITIONAL RESOURCES?

New Jersey initially developed and has since enhanced, an extensive/complex procedural infrastructure to comply with the essential protections currently required under Section 427. The principles of comprehensive case planning, aggressive service delivery, periodic independent reviews and judicial determinations of the continuing need for placement are fundamental elements of good casework practice. Therefore, if child welfare programs were block granted, we would most likely choose to maintain all or most of the current requirements. Maintaining even the basics of the current system would not allow for much direct casework overhead to be freed to reinvest into additional resources.

There could be significant savings, however, to the extent that states were no longer required to conduct continuing periodic reviews of certain categories of cases -- such as permanent placements with relatives or long-term foster care -- that had, in effect, achieved permanent outcomes. Nevertheless, states should have the opportunity to include the principles of the law into their practice and monitor their implementation in a more flexible way. The states should also be encouraged to pursue the state of the art improvements in child welfare service philosophy and practice as they evolve and not be tied to the limits of what was once the best thinking to meet the needs of the time.

Towards that end, we would welcome the flexibility to reinvent the Section 427-type protections that would come with a block granting of Title IV-B. We believe, however, that the potential for achieving economies under a block grant while maintaining the current level of child welfare services would be minimal at best.

With respect to the block granting of Title IV-E, we believe that a fundamental issue has to deal with the widely divergent levels of claims being made by the various states at the present time. Any block grant conversion that limited each state to its current level of Title IV-E claiming would be unfair. As an alternative, we would suggest that a funding formula be used which would base each state's share of national funding appropriation on some statistical measure or demographic proxy of each state's actual need. Of course, this approach would also need to reflect an adequate total appropriation for this purpose. Finally, in keeping with my next point, we also believe that some additional incentive payments should be considered for states that exceed certain normative levels of outcome for children at risk of or in foster care.

WHAT MINIMAL FEDERAL REQUIREMENTS WOULD NEED TO BE RETAINED?

It is appropriate for the federal government to provide the states with guidance, in the form of general requirements, for the expenditure of the child welfare dollars that it provides. More specifically, we do not take issue with the basic requirements of Section 427 for placement prevention, for the selection of the placement that is most appropriate to the child's needs (including close proximity to the child's family and community, when proximity is relevant), for prompt initial review and subsequent periodic reviews of the placement, for judicial oversight, and for efforts to achieve permanency. We have no quarrel with the intent of Section 427 at all. We would, however, like to see the federal government adopt a far more flexible and common sense approach to the determination of compliance, and most importantly, one that emphasizes actual circumstances, events, and outcomes rather than process statements and descriptions.

In a practical way, this would amount to requiring a state to show evidence that the basic Section 427 protections are in place -- through the current "administrative review" that each state must first pass before it proceeds to a case record based field review of compliance. Overall compliance should then be based upon the state's documentation of positive outcomes in terms of placement prevention, length of stay in placement and other measures of movement towards permanency. We believe, after 14 years of experience with the provisions of P.L. 96-272, that simply having the Section 427 procedural safeguards in place in no longer enough. States should be held accountable for success in preventing placements, reunifying families and moving children quickly towards permanency. With the impending requirements of the nationwide Adoption and Foster Care and Analysis Reporting System (AFCARS), the states will be in a position to report outcome/case flow data that can be used towards this end.

In closing, Madam Chairwoman, I would like to thank the Sub-Committee for allowing me the opportunity to discuss New Jersey's experience with the current Section 427 requirements as well as our view of the potential impact of block granting the Title IV-B and Title IV-E programs. We, at the New Jersey Division of Youth and Family Services, join with you in seeking to strengthen our ability to prevent placement, preserve families and to quickly achieve permanent outcomes for children in foster care. Thank you.

Chairman JOHNSON. Mr. Horn, it is a pleasure to welcome you back to the committee.

STATEMENT OF WADE F. HORN, PH.D., DIRECTOR, NATIONAL FATHERHOOD INITIATIVE, AND FORMER COMMISSIONER, ADMINISTRATION FOR CHILDREN, YOUTH AND FAMILIES, U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES

Mr. HORN. Thank you. It is a pleasure to be back after a 2-year hiatus from appearing before this committee.

My name is Wade Horn, and I am the director of the National Fatherhood Initiative, an organization whose mission is to restore responsible fatherhood in America. I also am the former U.S. Commissioner for the Administration for Children, Youth and Families in the Department of Health and Human Services, and served as a presidential appointee on the National Commission for Children. I have submitted a more lengthy statement for the record, and I would just like to summarize my major points.

Child welfare today is not just in crisis, it is at a crossroad. We have to determine whether we want to continue on down the road we are on, toward more micromanagement and regulation of the child welfare system, or whether we want to change directions and provide States and local agencies with greater flexibility to do the job that they want to do. I am here to testify that I think we need to change direction.

There are two major problems with the child welfare system today. The first is that there are far too many funding streams, and they are far too categorical in nature. By my count, there are at least 17 different funding authorities within the Children's Bureau. There are an additional four within the National Center for Child Abuse and Neglect. There are several others scattered throughout the Administration for Children and Families. There are three in the Department of Justice. And I have just learned yesterday that there is one under the jurisdiction of the Banking Committee, a $76 million family unification program that quite frankly I didn't know existed.

Why is it that States should have to negotiate this labyrinth of Federal programs in order to set up one single, comprehensive, seamless system of services to take care of the needs of children? The current system is, quite frankly, lunacy. It doesn't make a lot of sense.

The second problem is that I don't think we can find anybody that says that section 427 reviews are doing what they were expected to do or intended to do. Despite wonderful intentions, what we have is a system where you can pass a section 427 review, and yet be brought to court and found wanting in terms of protecting the welfare of children. I think there are two reasons for this.

First of all, the protections as mandated within the law, are in some cases far too ambiguous and difficult to define so States have to kind of guess at what it is the Feds mean and how it is they are to document that, in fact, a particular protection was met.

Second, as a former homemaker myself in the Department of Child and Family Services in the State of Illinois, way back in 1977, I know that it is far easier to have an understanding about whether a particular case is in fact going well if you are part of

that community. It is simply too difficult for a Federal bureaucrat, either here in Washington or in a regional office, to travel 200 or 300 miles, sometimes many thousands of miles, to get an understanding about what is going on with a particular child by reading the case record.

How can you tell whether a particular service was appropriate if you don't know the full range of services that are available in that community? It just doesn't make sense to ask the Federal Government, with its limited administrative resources, to take on that kind of responsibility and oversight.

I have two major recommendations for the subcommittee.

The first is to reduce the categorical nature and number of funding streams in child welfare. I recommend that you collapse all of the spending within the Children's Bureau that is dedicated toward child welfare, except for foster care maintenance payments and adoption assistance maintenance payments, along with the four programs in the National Center for Child Abuse and Neglect, those child welfare programs within the Justice Department and the one child welfare program under the jurisdiction of the Banking Committee, into one large block grant to allow States to implement a comprehensive, seamless system of services to protect children.

My second recommendation is that we devolve responsibility for oversight at the case level to the States. It seems to me there are some possibilities already being explored by the States to do precisely this. One particularly promising approach is the use of so-called citizen review boards.

There is a recent study of the use of citizen review boards in Douglas County, Kans., that found that their use resulted in significant reductions in judicial and administrative delays, speedier implementation of permanency plans, and most importantly, a significant reduction in time spent in out-of-home placement.

An oversight system that is much more tied to the local community will have a better understanding of the resources and needs of that community, and can therefore respond in a much more aggressive fashion to ensure that children are protected, than you can if you come from Washington, D.C., for a 1- or 2-week visit.

I am not suggesting that the Federal Government has no role to play in child welfare. In fact, I do believe that the child welfare amendments of 1980 were instrumental in helping to improve the child welfare system. The problem is that since that time we have gone down the road toward a much more fragmented and much more overregulated system. What we need to do is reverse course and get out of the business of micromanaging States—micromanaging not only their practice but their budgets—and the best way to do that is through a block grant approach.

[The prepared statement follows:]

Statement by Wade F. Horn, Ph.D.
January 23, 1995

My name is Wade F. Horn, Ph.D. I am the Director of the National Fatherhood Initiative, an organization whose mission is to restore responsible fatherhood as a national priority. Formerly, I served as Commissioner for Children, Youth and Families within the U.S. Department of Health and Human Services, and was a presidential appointee to the National Commission on Children.

The child welfare system is in crisis. Data reported through the Voluntary Cooperative Information System (VCIS) indicate that more than 445,000 children age 0-18 were in foster care at the end of FY 1993, a 65% increase since 1983. The cost of foster care and adoption assistance under Title IV-E of the Social Security Act now exceeds $3 billion, ***nearly ten times*** the amount expended in FY 1981. We are spending more and more money on child welfare, and getting less and less in return. Indeed, despite ever increasing money spent on child welfare, statistics from the National Center for Child Abuse and Neglect indicate that in 1991 there were a total of 992,600 substantiated cases of abuse or neglect, an all time high.

Today is not the first time that a crisis in the child welfare system has made reform necessary. In the 1970's, the system was overburdened with an estimated 500,000 children in foster care. At that time, few states had adequate systems in place for ensuring quick resolution of foster care episodes, through either reunification or placement for adoption. Some states and local agencies could not even readily determine the location of a child once that child was placed in foster care. The result was hundreds of thousands of children in "foster care drift," bouncing from one foster care home to another with no agreed upon long term plan or strategy for resolving the concerns facing children in out-of-home care.

This dire situation changed dramatically with the implementation of the Child Welfare Amendments of 1980 (PL 96-272). This law required states to implement a number of reforms, including a requirement to conduct an inventory of all children in foster care, the implementation of a statewide tracking and information system, and the development of a case review system with an emphasis on permanency placement. The Adoption Assistance and Child Welfare Act of 1980 also created title IV-E, thereby linking child welfare services available through title IV-B with the AFDC foster care program.

States were required by PL 96-272 to self-certify that certain administrative reforms had taken place, and then submit to periodic reviews by the federal government to ensure that these reforms, as well as additional protections specified in the law, were in place for children in out-of-home care. The incentive for states to comply with the law was the inclusion of additional Title IV-B payments if these reforms were implemented and operating to the satisfaction of the Secretary of the U.S. Department of Health and Human Services. The provision in PL 96-272 for on-going system oversight came to be known as Section 427 reviews.

The short-term results of the reforms embodied in PL 96-272 were impressive. The length of time children spent in foster care was sharply reduced and the total number of children in out-of-home care plummeted from over 500,000 in 1977 to approximately 270,000 in 1983. Since that time, however, the number of children in foster care has been increasing, and spending on child welfare has exploded. What happened?

During the 1980's, two crises greatly challenged the capacity of the child welfare system to protect children. First, beginning in the mid-1980's, the crack cocaine epidemic dramatically changed the type of client being served by the child welfare system. Whereas the typical foster care placement in the 1970's and early 1980's involved neglect or highly episodic, and stress related, abuse, the new crack cocaine cases frequently involved much more severe and chronic abuse resulting in longer and repeat stays in foster care. Second, the 1980's saw an acceleration of the trend toward fatherless households. Given evidence that abuse is up to

forty times more likely to occur when the biological father is not living in the home[1], the trend toward increasing father absence greatly increased the number of children interacting with the child welfare system.

The federal government should have been in the forefront encouraging states to respond innovatively to these new challenges. Instead, the rigidity of PL 96-272 necessitated that states spend valuable resources and time trying to negotiate cumbersome rules and regulations in order to maximize federal reimbursement under the Title IV-E administrative costs program, and to submit to burdensome paper reviews required under Section 427. In addition, federal attempts to reform the system have mostly gone in the wrong direction. Instead of increasing flexibility and encouraging experimentation, recent reforms have actually ***increased*** the rigidity and categorical nature of federal funding streams.

A case in point is the relatively recent passage of legislation to provide funds for family preservation services. Although some advocates of family preservation services claim that out-of-home placement is prevented for as many as 90% of children served, the few experimental evaluations of family preservation services to date have not shown substantially lower rates of placement in foster care 4-6 months after the termination of family preservation services. In addition, according to Toshio Tatara of the American Public Welfare Association, the dramatic increase in children in foster care placements is not due to an increase in the rate at which children are entering foster care, but rather to a significant decline in the rate at which children are ***exiting*** foster care[2]. Despite the absence of empirical evidence attesting to its effectiveness, advocates for family preservation services were successful in persuading Congress to legislate a new funding stream which can be utilized ***only*** for family preservation and support services. Consequently, whether or not such services are effective or best meet the needs of a particular community, states are now required to use a substantial portion of federal funds to provide family preservation services.

In addition to the inflexibility and categorical nature of federal funding streams, the legislatively imposed requirements of Section 427 may have also been a hinderance to reform for at least two reasons.

First, the protections mandated in PL 96-272 are highly subjective and difficult to operationalize. For example, one of the case plan requirements is that a child be placed "in close proximity to the parents' home." What does close proximity mean? Does it mean the same thing in New York City as in Utah? What if it was not appropriate, in a particular case, to place a child in close proximity to his or her parents. What should one do then? Lacking clear definitions and unambiguous requirements, states are often forced to "guess" at the documentation required to pass a Section 427 reviews.

Second, many of the protections under Section 427 are highly dependent upon an intimate understanding of the individual case. How would a bureaucrat from Washington, D.C., truly be able to have an opinion as to the "appropriateness of services being provided" to a particular family in rural Kansas or urban Hartford? A much more rational and defensible system of oversight would be locally-based, for a local reviewer is in a far better position to understand local conditions and circumstances than a one or two week visitor from Washington, D.C., or from a regional office often hundreds of miles away. Lacking this intimate knowledge of local conditions and circumstances, the Section 427 reviews have become paper exercises, unable to address the complexities and nuances of the individual case.

[1]Daly, M. and Wilson, M. (1985). Child Abuse and Other Risks of Not Living With Both Parents, *Ethology and Sociobiology*, 6, 197-209.

[2]Tatara, T. U.S. Child Care Flow Data For FY 92 and Current Trends in the State Child Substitute Care Populations, *VCIS Research Notes*, no. 9, August 1993.

What is needed to improve the child welfare system is greater state flexibility, not more specialized funding streams. The current system is simply too categorical, burdensome, and prescriptive on State agencies, resulting in much time and resources being diverted to satisfying federal paper requirements and away from serving the needs of children.

Specifically, I recommend that all child welfare discretionary and state formula grant programs, including those currently housed within the National Center for Child Abuse and Neglect, be combined with monies available under the Title IV-E Administrative Costs program, into one large state formula block grant program. States and localities could then use these funds to build a truly seamless system of comprehensive supports for families without having to satisfy the idiosyncratic and sometimes conflicting requirements of dozens of federal programs. The role of the Federal government would be to foster experimentation in the delivery of innovative services, collect national data, and provide technical assistance in evaluating the impact of innovative services.

I further recommend that oversight of the child welfare system -- excluding fiscal accounting and oversight of Title IV-E maintenance payments -- be devolved to the States. This would mean a transfer of responsibility from the federal government to the States, with appropriate assurances that such oversight is independent of the child welfare agency administering the program, for ensuring a well-functioning, comprehensive child welfare system.

One possibility for ensuring effective state and local oversight of the child welfare system is to make greater use of citizen foster care review boards. According to the National Association of Foster Care Reviewers, citizen review boards are generally created by state statute, staffed by volunteers, and required to make case plan recommendations and maintain ongoing oversight of case planning for children and families in the public child protection system. Because the reviewer is a volunteer with no vested interest in the child welfare system, he or she can instead concentrate on the welfare of children. A recent study in Douglas County, Kansas, demonstrated that the use of citizen foster care reviewers resulted in significant reductions in judicial and administrative delays, speedier implementation of permanency plans, and, most dramatically, a significant reduction in time spent in out-of-home placement[3].

I am not suggesting that the federal government has no role to play in child welfare. Indeed, it was largely due to federal efforts that major positive reforms were instituted in the early 1980's. However, emboldened by initial success, the federal government apparently came to believe that it was the site of ***all*** wisdom, and over the past decade has imposed ever increasing and unnecessary burdens on state agencies.

It is time for the federal government to get out of the business of micromanaging state child welfare budgets and services. The most effective way of accomplishing this is through the use of state block grants. Then let us see whether children are better off living with the decisions of local communities, or with those made by federal bureaucrats here in Washington, D.C.

Thank you.

---

[3]Study by Mary Ann Jennings, MSW, and Thomas P. McDonald, Ph.D., of the University of Kansas School of Social Welfare, as cited in *The Review*, volume 8, no. 2, summer 1994.

Chairman JOHNSON. Thank you very much, Mr. Horn.
Mr. Digre. Sorry, Digre.

STATEMENT OF PETER DIGRE, DIRECTOR, LOS ANGELES COUNTY DEPARTMENT OF CHILDREN AND FAMILY SERVICES, LOS ANGELES, CALIF.

Mr. DIGRE. Chairperson Johnson, members of the committee, thank you very much for the opportunity to be here today. My name is Peter Digre, and I am the director of the Los Angeles County Department of Children and Family Services, an agency which during 1994 responded to more than 165,000 reports of abuse and neglect. Today and every day, I am personally responsible for the care and nurturance and protection of 58,000 children.

Virtually every day, in the media, we hear about children who have been horribly abused. Usually this abuse is at the hands of parents, sometimes it is at the hands of temporary caretakers. Tragically, as we talked about earlier, there are times at which the child welfare system itself fails to live up to the minimum standards required to ensure the safety of children.

All of us agonize for these children, and overwhelmingly, the American people cry out that the safety and nurturance of these children must be the first priority for all of us.

I am deeply concerned that the combined potential of block grants for both welfare reform and for child welfare will have a severely negative impact on children in the child welfare system, for example, if procedures are implemented either federally or at the State level that remove large numbers of families from assistance in the juvenile court statutes throughout the country.

The definition of neglect includes food, clothing, shelter and medical care. Therefore, many of the children removed from assistance would flood into the child welfare system due to the inability of their parents to provide for the basic essentials of life. Our experience with the recession and the California 1992 AFDC cuts indicates that the numbers would be at least in the thousands and conceivably in the tens of thousands in Los Angeles County alone. In short, I truly believe that the Nation's foster care system may well grow geometrically.

This chart that I have attached for you documents the very intimate relationship between the economic well-being of families and children entering the child welfare system. Proposals—and I was very relieved to hear the Chairperson's comment—which would block grant child welfare entitlement programs would put the child welfare situation in the state of being confronted with an open-ended juvenile court mandate which could place countless numbers of new children into foster care. And if there is only a capped block grant to pay for their care, without hyperbole, we can conclude there would of necessity be a drastic decline in the quality of the care and the safety of the children in that system, as capped resources provide less and less adequate care for growing numbers of children.

Second, the issue of the safety of children also demands national standards for child safety. Public Law 96–272 embodied many years of collected wisdom regarding minimal standards. The 427 protections, to my mind, speak to very simple and very basic

things: Having case plans and goals, having cases reviewed by judges and case review boards periodically, and basic protections of parents' rights, like having your child placed close to home so you can be reunified with them.

Most importantly, what these standards have done is created a common vision and a common language which consistently focuses attention on the important outcomes for children, such as safety and all children's needs for permanent homes. As such, I truly believe that the essence of these goals, that the spirit of these goals, has extraordinary value.

I would like to ask the committee to enhance the 427 protections by including requirements that are universally vital to maximize the safety of children. Just a few examples: Children are injured in care and with their own parents if they are not visited; clearly, minimal standards of visitation should be included. Children can be left with child molesters if there are no criminal checks or child abuse background checks. Youth being removed from foster care need training to enter adulthood, or else they become homeless and they enter deprived.

I would like to suggest a number of ways in which flexibility could also be achieved. No. 1, there are numerous small categorical programs which could simply be rolled up and included in IV–B.

No. 2, 10 waivers is hardly enough authority to administer IV–B and IV–E. I think HHS should have the capacity to give at least 50, at least 1 for each State.

No. 3, the concept of tax credits for adoption is very powerful and very important and we support it wholeheartedly.

No. 4, the current rulemaking to consolidate State planning requirements for children's programs should be expanded to include other arenas, such as substance abuse prevention and treatment and housing that families in the child welfare system badly need.

In closing, please analyze all proposals for welfare block grants from the perspective of the safety of children. Second, please enhance the national standards for child safety. Please do not eliminate them. The decisions that we make will affect the safety of millions of children.

Thank you very, very much for the opportunity to be part of the discussion.

[The prepared statement and attachment follow:]

TESTIMONY OF PETER DIGRE, DIRECTOR
LOS ANGELES COUNTY DEPARTMENT OF CHILDREN & FAMILY SERVICES

Congresswoman Johnson, Members of the Committee. Thank you for the opportunity to testify today. My name is Peter Digre and I am the Director of the Los Angeles County Department of Children and Family Services, a public child welfare agency which, during 1994, responded to more than 165,000 reports of child abuse and neglect. Today, and every day I am personally responsible for the protection, care and nurturance of 58,000 children.

CONTEXT

We are confronted today with a myriad of proposals to restructure the program and financing for the nation's welfare and child welfare system - some of the proposals are quite radical. Neither I nor Los Angeles County have completed our analysis of the many variations on the evolving proposals so I would like to focus my comments on some of the crucial questions and issues which I hope Congress reflects on in reaching its decisions.

OUR FIRST PRIORITY MUST BE CHILDREN AND THEIR SAFETY

Virtually every week, if not every day, on our television networks, radio programs and newspapers and magazines, we see, hear and read about children who have been abused and neglected -- children who suffer at the hands of those whom our society has trusted to nurture and raise. Often, these people are the parents who have brought the children into the world; sometimes they are temporary caretakers whom agencies like mine have trusted to provide care for children who have already suffered abuse at the hands of others. Tragically, there are times in which the child welfare system itself fails to live up to the minimal standards required to insure the safety of children.

We, the people, the entire American public, agonize for each and every one of these children and their families. Overwhelmingly and universally, the American people cry out - THE SAFETY AND NURTURANCE OF CHILDREN MUST BE THE FIRST PRIORITY FOR ALL ELECTED AND APPOINTED OFFICIALS. The media knows the depth of this cry and holds us all strictly accountable.

POSSIBLE IMPACT OF SOME REFORM PROPOSALS ON CHILD SAFETY AND NURTURANCE

From the perspective of child safety and nurturance, many questions need clarification regarding proposals to block grant programs such as welfare, food stamps, child welfare and foster care.

I am extremely concerned that data exists which indicates that the combined impact of a block grant for welfare reform and a block grant for child welfare/foster care could have a severely negative affect on the safety of children and the child welfare system.

Block granting itself eliminates the traditional individual entitlement for AFDC and food stamps. During times of recession, capped state block grant resources will be confronted with growing numbers of families with children needing assistance. This will logically lead to significant reductions in the assistance provided to each individual family. In addition, proposals to drop families and children from assistance due to time limits or other reasons may involve eliminating as many as 5 million children nationally from assistance, including several hundred thousand children in Los Angeles County alone.

Since, in Juvenile Court statutes throughout the Country, the definition of "neglect" includes lack of food, clothing, shelter and medical care, many of the children removed from assistance would flood into the child welfare system due to the inability of their parents to provide for the basic essentials of life.

Our experience with the recession and the California 1992 AFDC cuts indicates that the numbers would be at least in the thousands and conceivably in the tens of thousands in Los Angeles County alone. In short, the nation's foster care system may well grow geometrically.

The attached chart indicates the intimate relationship between the economic well being and economic opportunities of families and the reporting of child abuse and neglect. You can also surmise the extreme magnitude of this issue by realizing that 1.8 million adults and children in Los Angeles County today are sustained at least in part by the welfare and food stamps system - this is more than 20% of the total County population.

Given this intimate relationship between economic sustenance and the entry of children into the child welfare and foster care system, it is not speculative to predict that a significant proportion of children for whom assistance is terminated or curtailed will enter the child welfare/foster care system.

Proposals have also been advanced to eliminate the child welfare/foster care entitlement and block grant child welfare related programs including family preservation, foster care, child welfare supervision and support for emancipating foster children to achieve independence. In short, resources would be capped and not need or workload driven.

Obviously, if both the welfare reform block grant and the child welfare block grant are implemented, the child welfare system could be confronted with an open ended Juvenile Court mandate and entitlement that would place countless numbers of new children into the foster care system, while only having a capped block grant to pay for their care.

Without hyperbole, we can reasonably conclude that there would be a drastic decline in the quality of care and safety for children in the child welfare and foster care system as the "capped" resources provide for growing numbers of children. There will be more children per caretaker, less support per caretaker, less training for caretakers, less social work supervision and treatment by less trained children's social workers, less preparation for independence, less adoptions, less family preservation efforts...The consequences may well be tragic.

THE SAFETY OF CHILDREN DEMANDS BASIC NATIONAL STANDARDS

Public Law 96-272, the Child Welfare and Adoption Assistance Act of 1980, was the result of many years of work by child welfare professionals, children's advocates and members of Congress. This measure has enjoyed strong bipartisan support.

PL 96-272 was intended to remedy a number of child welfare systemic problems using a "carrot and stick" approach.

The carrot is the Title IV-B incentive funds each State receives, and the stick is the provision that the State's caseload is in compliance with each of the Section 427 child protections.

The issues before your Committee today are whether these "427 reviews" have served to improve the lives of children; and whether eliminating these requirements and block granting these funds will strengthen the states' abilities to deliver child welfare and foster care services to children.

The 427 protections actually speak to only four dimensions in the foster care arena: case plans, periodic foster care status review; administrative review; and procedural safeguards relative to parents' rights. Each of these dimensions speak to both process and outcome for the children and families in whose lives the state finds it necessary to intervene.

I believe that these protections represent sound practice standards, a common sense approach to assuring that each child and family will be well-served. They represent a logical process for assuring that child welfare services are provided in a deliberate, thought-out fashion; that they are provided with some continuity and consistency across the country and throughout the period of time children are in the government's care.

My problem with the 427 process is that the "protections" are so limited. I would like to ask the Committee to enhance the 427 protections by including requirements that universally are vital to maximize the safety of children.

1. We know that abused children can be injured or neglected by caretakers if they are not regularly visited by children's social workers. Clearly minimal standards of visitation are a basic protection.

2. We know that children can be left in the care of child molesters when criminal and child abuse background checks are not completed. This should be a required protection.

3. We know that reasonable efforts to prevent placement is a meaningless concept, unless comprehensive family preservation services are uniformly available. Family preservation should be highly structured and available.

4. We know that without training, education, housing and employment, emancipating foster youth often find themselves homeless and supporting themselves through prostitution and crime. Basic requirements for preparation for independence are essential.

5. We know that children with complex medical and developmental problems can be adopted with specialized adoption subsidies.

6. We know that children's social workers who are carefully trained in risk assessment are less likely to allow children to remain in danger. This training should be a basic protection.

In addition to these recommendations, I would like to suggest the following:

1. Block Grants of Categorical Discretionary Programs

Some block grants would work and benefit states and counties. For instance, there are 15 categorical discretionary programs under the jurisdiction of the Education and Labor Committee, which I believe should be analyzed as candidates for a block grant. Some, like the Grants to improve the investigation and prosecution of child abuse cases, are small - only $1.5 million appropriated in FY 1995. Others involve highly specialized programs, such as Crisis Support Centers. I believe we can more efficiently and effectively administer such programs and respond to local needs through a single block grant of these items, perhaps through IV-B.

2. Expand the Title IV-B and IV-E Waiver Authority

HR 5252, enacted in 1994, gives HHS the authority to grant ten waivers. This really isn't enough to be really innovative on a national level. I recommend consideration that this waiver authority be expanded to at least 50 or more, at least one for each state.

3. Increased Incentives for Adoption

Adoption is the preferred outcome for the children in foster care who cannot return to their own homes because of abuse and neglect. In Los Angeles County, in the twelve months ending September 1994, we placed more than one thousand children whose parents' rights had been terminated by the court in permanent and loving adoptive homes. Many of these adoptive placements could not have been achieved, however, without the Title IV-E Adoption Assistance Program.

To make this program even more effective, the concept of tax credits for adoption as an additional incentive for permanency for children merits analysis.

4. Program Integration

Last month, the Administration received comments on its Notice of Proposed Rulemaking, which would consolidate state plan requirements for several children's programs. I view this as a good first effort, but I recommend that consideration of it go even further.

As our Family Preservation program experience has shown us, we need an even greater capability for accessing additional programs and services for troubled families. Examples include Substance Abuse Prevention and Treatment programs, Housing, and Title XIX Medicaid to assure a full range of services for multi-problem families.

CLOSING REMARKS

In closing, I would like to re-emphasize that a commitment to child safety, protection and nurturance requires that all welfare block grant and child welfare block grant proposals be carefully analyzed for their effects on the safety and nurturance of children.

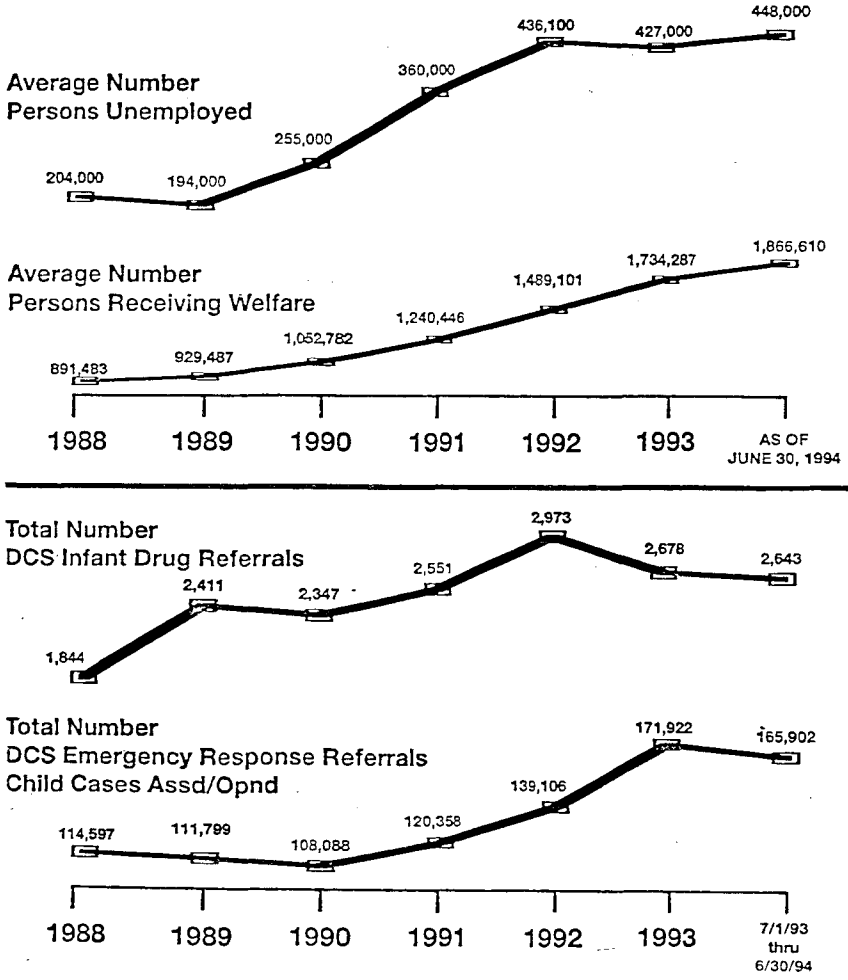
I'd also like to reinforce my conviction that national standards in child welfare and foster care provide the incentives and mandates for good practice, sound programs, and consistency for all children. Please enhance the standards for child safety. Please do not curtail them.

I have recommended a variety of ways for consideration to improve our child welfare policy, which would also provide to states an improved ability to deliver critically needed services.

I am honored to have had the opportunity to contribute to this crucially important discussion. I remain available to work with you in your efforts towards improvements in protecting children and strengthening families.

I am in awe of the magnitude of the decisions you must make since they will effect the well-being of millions of children.

Unemployment, Welfare, Infant Drug Referrals, Emergency Response Child Cases and Child Placement for Los Angeles County



Chairman JOHNSON. Thank you for your very interesting, useful testimony.

Mr. Murphy.

STATEMENT OF PATRICK T. MURPHY, ESQ., COOK COUNTY PUBLIC GUARDIAN, CHICAGO, ILL.

Mr. MURPHY. Since 1968, I have been litigating issues involving abused and neglected children at every level of the State and Federal Judiciary. Since 1987, I have been Cook County Public Guardian running an office of about 135 lawyers and 60 socialworkers and investigators representing primarily abused and neglected children, again at every state and level of the judiciary.

Secretary Bane pointed out that the 1980 Adoption Assistance Act improved the whole system of child welfare in response to a question from Mr. Levin, I think. Based upon my own experience, I testified twice before Senator Birch Bayh's committees leading up to this act and in favor of it. I wrote a book in 1974 where I said we needed more family preservation programs. All I can tell you is, based on my experience, things are much worse today than they were before the 1980 act, and I am not suggesting the 1980 act caused everything to get worse, but indeed they are much worse.

If you look at Chicago in 1986, there were 8,000 kids, neglected and abused kids in custody. Today, there are over 30,000. Nationwide in 1986, there were 262,000; today, over a half million.

Mrs. Johnson referred to the crack epidemic as causing this and 80 percent of our cases in Chicago are crack related. But what causes people to turn on to crack? In our judgment and what we see every day, it is the woman who is 22 years old, who has five children by different fathers, and none of the fathers are dads. She wakes up and she is depressed. She has got no education. It is a reality-based depression and she turns to drugs the same way you and I would if we were in the same situation.

We can get in a plane and go to L.A. or San Francisco or the shore of Michigan. These people cannot. They are stuck in the inner cities. They are stuck with the children without an education and no place to go, so they turn to drugs. Their paramour is the drug supplier and he abuses the kids and abuses the woman and that is what we see in the system.

The simple fact is that you cannot look at the child welfare system in our major cities without looking at what causes it. And what causes it is the underclass and that is what we see feeding into it. Ninety percent of the cases we see, probably closer to 100 percent some weeks, are the children of the underclass.

And again, Mrs. Johnson referred to the case in Chicago of the 18 children. Actually, it was 19 kids and these 5 women had 23 kids amongst them. We represent them. We are their lawyer. And the 23 kids had 17 fathers. And each one of these mothers had their first kid when they were between the ages of 14 and 16 because we have a welfare system which encourages irresponsible behavior.

If you look at the family preservation program, who do we reward? The 95 percent of the people in the underclass who do a good job under difficult circumstances of raising their kids? No. They don't get a farthing. But if you abuse your kid, we will run out with

a socialworker, a housekeeper, a psychologist, chauffeuring services, and money. It makes absolutely no sense, but that is the way our welfare system has been conducted in this country and we see the failures of the welfare system in the juvenile courts.

I would just say beware of wolves in sheep's clothing who are going to come before you and they are going to say we need continuation of the same thing. And these people are academics and they are foundation people and they are government people whose livings are being made from this private and public welfare complex.

There are two types of politicians, I think, responsible for this, if I can lecture such an austere group of people, and that is Conservatives who have given over the responsibility for dealing with the poor to the Liberals, and the Liberals who haven't had a—and I perceive myself as a Liberal Democrat, by the way, though I think Liberal Democrats don't, but the Liberals who haven't had a creative thought in 30 years. And I think we have to come together to try to figure out ways of dealing with this very complex problem.

To use an example, Marianne Wright Edelman, who should know better, wrote in Mother's Day and Parade Magazine, if it is wrong for 13-year-old inner-city girls to have babies without the benefit of marriage, it is wrong for rich celebrities, too. Absolute garbage. A 35-year-old woman with a lot of money can raise a kid by herself but a 12-year-old kid or 14- or 15-year-old kid should be reading Chaucer, should be going to sweet shops, and should be doing other things. All I can say is I go to court, my 9-year-old kid is here with me today, not as an exhibit but because he wanted to get out of school. That is probably a form of child abuse.

Mr. LEVIN. Just a normal kid.

Mr. MURPHY. And I walk into court and I see kids the same age as my 9 year old and my 12 year old and I know they have the same ability and talent, but unless they can do the 40 in 4.1, we don't care about them. We are willing to spit their lives down the drain and that is what we are doing with the lives of the kids of the underclass.

And the way to do something about it isn't to give them more money. If I gave Joe $150 every time he broke a window, he would go break another window. If you give a 12-year-old kid AFDC because she has a child, it is cultural. What do you expect? We have got to change the system. We have got to rethink it. I don't have the answers. I am just a lawyer who goes to court. But we have to think about the answers and come up with conclusions. Thank you.

[The prepared statement follows:]

OFFICE OF THE COOK COUNTY PUBLIC GUARDIAN
JUVENILE COURT
2245 W. OGDEN AVENUE
4th FLOOR
CHICAGO, ILLINOIS 60612

PATRICK T. MURPHY

PHONE: (312) 433-4300
FAX: (312) 433-4336

TESTIMONY OF PATRICK T. MURPHY BEFORE THE COMMITTEE ON WAYS AND MEANS, SUB-COMMITTEE ON OVERSIGHT JANUARY 23, 1995

The Cook County Public Guardian's office acts as guardian for 400 elderly people who suffer from Alzheimer's disease and organic brain syndrome and also as attorney and guardian ad litem for 31,000 abused and neglected children in Cook County, Illinois. We have 250 employees 35 lawyers and about 50 social workers or investigators. The vast majority of our lawyers work in the Juvenile Court in Chicago.

I personally have been representing abused and neglected children since 1968 first as a legal services lawyer, then in private practicing and since 1986 as Public Guardian. I have argued cases involving abused and neglected children and their families at every level of the state and federal judiciary, including the United States Supreme Court. In 1974 I wrote a book about my experiences in representing abused and neglected and their families--Our Kindly Parent the State, Viking Press, Penguin Books.

In that book, and later on at least two occasions before Congressional committees, I argued that the poor were being victimized by the state's approach to child welfare. Along with others, I argued that family preservation would be

cheaper for the government and better for the child. In my experience in the 1970's cases of actual child abuse were rare. We argued that most children were taken from poor parents because of the middle class bias of state social workers.

In 1980 congress passed the Adoption Assistance and Child Welfare Act ("AAA"). This act mandates that the state provide family preservation services to keep children at home. In Illinois, for instance, these services have taken the form of housekeepers in the home, cash vouchers up to $500, a downpayment of two months rent on an apartment, psychiatric or other counseling and chauffeuring services. The Adoption Assistance Act was the culmination of the "do not blame the victim" philosophy popular in the late 60's and 70's. According to this viewpoint, a poor, powerless and misguided parent is as much a victim as the child whom he or she has abused. According to this thinking, the state should provide services so that parents can learn to provide adequate care to their children.

Because we represent abused and neglected children, primarily at the Juvenile Court in Chicago, we see life from the bottom of the mountain, not the top. I cannot pretend that our perspective is that of an administrator or a bureaucrat or an academician. We are lawyers going to a specific court in a specific county, in a specific state trying to represent, as best we can, 31,000 children who range in age from a few days old to swaggering, defiant and down deep frightened adolescents. We cannot tell you first hand the effects of the 427 reviews. However, we can tell you first hand that they appear to make no difference, other than to increase bureaucracy.

In brief we believe that the 427 Review should be done away with because:

(A) experience shows they do not help;

(B) over the past two decades, the philosophy these reviews seeks to uphold has been shown to be not only muddleheaded, but positively counterproductive, in that it harms the very people it seeks to help, and

(C) anything we can do to reduce federal bureaucracy and to return decision making to those who actually face these problems is a step in the right direction.

Let's take an actual case. On September 15, 1994 Chicago Police charged a 31-year-old woman living on the Westside of Chicago with endangering her nine children, age six weeks to adolescence. The police reported: "[e]ach child smelled of human feces, there was inadequate cleanliness, inadequate food, roach infested conditions and two inches of water in the house." The Illinois Department of Children & Family Services (DCFS) had been "working with" the mother for the past half dozen years. After the police took the kids from the woman, a DCFS spokesperson said: "From the time we've been involved with the family, we've been dealing with issues related to poverty...we can't take children away just because of poverty, and just about everything here...relates to poverty...."

Four years earlier, DCFS, with Juvenile Court approval, had taken the kids from the mother because she left home to get her welfare check and didn't think of coming back for two days. Her six children were left with an invalid grandma. According to investigators, at that time the four children:

> were without coats. Poor hygiene...standing water...soiled pampers throughout bedroom floor. Holes in walls and falling plaster....Older children

> admitted they had not had any breakfast for two days, only lunch at school and a sandwich for dinner. Infant was saturated with urine when child was taken into protective custody. Worker changed pamper and baby was so raw from diaper rash, skin literally came off in diaper. There was no food at all in the refrigerator, all baby formula was spoiled even bottle child was drinking from....

After a few months, DCFS returned the kids to the custody of the mother and began to offer her family preservation services. The State provided the mother with a housekeeper five days a week. They purchased beds and hired workmen to install a hot water heater and fix the holes in the wall. Somewhere along the line, however they forgot to make sure that the mother kicked her habit. Not surprisingly, four years later, the kids were in worse shape and there were three more of them.

I could write pages about the number of kids I have seen beaten, raped or killed while the state was trying to preserve a family that was not a family at all, but instead a couple of people whose sexual relations led to the birth of a child. In my view from the bottom of the mountain, at a collectively unconscious level, society simply does not consider the underclass kid to have the same worth as a white or black middle class child. These poor children are fungible commodities to be experimented with by sending them back to parents who have tortured or neglected them.

The child welfare crowd frequently takes a blasé attitude toward child abuse. Take a recent study[1] that divided all injuries suffered by children into four

---

[1] NATIONAL INCIDENCE AND PREVALENCE OF CHILD ABUSE AND NEGLECT: 1988, Revisited Report, Rockville, Maryland, Westat, September, 1991,

categories: Fatal, Serious, Moderate and Inferred. Moderate was defined in the report as "injuries or impairments for which observable symptoms persisted for at least 24 hours (e.g., bruises, depression or emotional distress.)" The authors of the report listed only six percent of all sexual abuse cases as serious, even though one third of all sexual abuse cases included penile penetration.

Therefore, the majority of cases where your friendly pervert screws a child are not serious. And it is only "moderate" sex abuse when the mom's paramour or the dad comes up behind a 12-year-old girl and fondles her breasts, or pats her butt, or bites her on the shoulder, or strokes her leg or crotch as they're watching MTV. And it's only moderate sex abuse when in one third of cases the lout actually screws the kid. But the true believers in the child welfare industry argue that these adults are victims who must be helped at the expense of the child's safety.

Could you imagine the response of feminists (or conservative, traditional women, for that matter) to anyone arguing that this type of behavior toward a nonconsenting adult woman is not serious? Or try suggesting that a boss who i mouthing sexual innuendos is not guilty of a serious infraction. Or that a goon who slaps his wife or girlfriend around leaving "injuries or impairments for which observable symptoms persisted for at least 24 hours (e.g., bruises, depression or emotional distress) causes only "moderate abuse." Beat up or rape the kid down

---

as reported by Douglas Besharov and Lisa Laumann in a paper prepared for the Woodrow Wilson School of Public and International Affairs, Princeton, New Jersey, May 25-27, 1994, DON'T CALL IT CHILD ABUSE IF IT'S REALLY POVERTY.

the block and you'll end up in the can for a good long spell. Beat up or have sex with your own child and you'll get a social worker and housekeeper.

And the federal guidelines mandate that even when the children are taken away, the states must bend over backwards to send the children back home. Let me give you one more case of ours, but I'll let the Chicago Tribune explain it:

> A mother who stood idly by as her boyfriend repeatedly sexually and physically abused her three daughters, including one who later died, should be flown at taxpayer expense to Florida four times a year to visit her two surviving girls, [DCFS officials] are recommending.
>
> ...
>
> At the trial, testimony showed that [the mother] for years stood idly by while as her three daughters were beaten and raped by [the boyfriend]. In some instances, she had been in the same bed with [the boyfriend] as he sexually attacked her daughter, according to the testimony.

(The daughters were four, six and eight at the time that the younger one was murdered by the boyfriend.)

The 427 Review for family preservation is a great idea if there is a family to preserve. But, it is a horrible idea if it involves keeping children in returning them to a situation where they can be seriously harmed. The goal of child welfare should be child protection. At times, child protection means preserving the family. But federally mandated child preservation too often means that services are lavished on irresponsible individuals who have seriously harmed their children.

Family Preservation also makes little sense in the larger scheme of welfare services. Under its aegis, irresponsible behavior is rewarded and responsible behavior is denigrated. If, for instance, you take any floor of any housing project in

the nation you may find seven families struggling heroically against impossible odds to raise their children adequately, three or four families providing marginally for their children, and one or two crack cocaine addicts who abuse their children or leave them kids alone while they go out looking for drugs. Which of the parents receives additional services from the tax payers? Not the seven families providing heroically for their children or even the families who are providing marginally care. Instead, the drug addict actively abusing or neglecting her children may get a housekeeper, money, intensive social work services, chauffeuring, to appointments and even several months rent for a new apartment, so that she can move out of the projects.

The message to people in the underclass is; act irresponsibly and you will get help. Act responsibly and you get nothing. I submit to you that this is a patronizing message. Because it involves the underclass, which in our major cities is comprised primarily of African American, it is a racist message.

These vignettes are anecdotal. But Chapin Hall at the University of Chicago conducted a massive three year study of the Illinois family preservation program--Family First. The study was the largest and most comprehensive ever performed on a family preservation. Chapin Hall concluded that Family First did not have any measurable success at keeping children out of the foster care system. Because the program cost $20 million dollars a year, the Chapin Hall report concluded that DCFS was spending $20 million to save $2 million, in effect wasting $18 million a year. In the best tradition of bureaucracy, the agency then sought to expand the

program.

Chapin Hall reported that DCFS officials recognized that the Family First initiative would lead to deaths of some children, but apparently believed that the successes would outweigh these setbacks. Chapin Hall pointed out that "It is almost certain that the probability of child deaths will be higher in a program in which children at risk are left at home rather than taken into foster care..." The report goes on to observe, "The original designers of the [family preservation program] realized that such cases would occur and went to some lengths to devise responses to these crises." As a part of its evaluation process, Chapin Hall began gathering data on the deaths of children during and after Family First services were offered. However, Chapin Hall reported, that after a year or so, "DCFS administrators have asked us to suspend our study of child deaths."

DCFS gives security deposits and rent downpayments to people whom the agency perceives to be in danger of losing their children because of inadequate housing. This is a reasonable program if funds are not given to parents who have blown the egg money on crack, coke, heroin and booze. When Chapin Hall began to study the housing initiative, DCFS again told them "to halt all inquiries...."

Who are the children and families we see at court?

In 1986, 8,000 children were in substitute care in Cook County as a result of abuse and neglect. Today, there are over 30,000 such children. In 1986, 262,000 children resided in substitute care, while today there are about half a million. Most child welfare experts attribute this astounding increase to drug

abuse. At least 80% of the cases we see in Cook County involve a drug addicted parent or parents. Lawyers in L.A. and New York tell me that their statistics are the same or higher.

At first I thought that drugs were the cause of the dramatic increase in child abuse, but not today. The usual case we see from the bottom of the mountain involves a woman in her earlier 20's with three to five children by several fathers, none of whom is involved with her or the kids. She becomes depressed and her depression is reality based. She is a high school drop out with little education and no job prospects. Her own mother had her first child when she should have been studying Chaucer or skipping rope. And she herself does not know her father. She wakes up one day realizing that for all intents and purposes her life is over. And, probably so too are the lives of her children. She turns to drugs as a reasonable, cheaper and certainly more viable alternative to a trip Vermont, the shore or Europe. And if you or I were in her shoes, we would turn to drugs or worse.

She becomes more depressed, withdrawn, forgets her children and goes off for hours, days, and even weeks leaving her kids for neighbors and family ultimately to rescue. In many cases her drug supplier becomes her paramour and ultimately the abuser of her children.

The underclass was not created by welfare, but today it is sustained by a welfare system that encourages dependency. The problems of the underclass are exacerbated by the flight of companies to underdeveloped countries. To succeed today, you need at least a high school diploma and probably more. Children having

children do not finish their high school education. People of the underclass do not have the high school education plus more. The Right ignores the plight of the underclass and the Left patronizes it, which is just another form of racism. Marion Wright Edelman of the Children's Defense Fund, who knows better, wrote in Parade Magazine on Mother's Day, 1994, "And if it's wrong for 13-year-old, inner city girls to have babies without benefit of marriage, it's wrong for rich celebrities too." The fact is, most single women celebrities who are having children are not children, and they have the maturity and financial resources to raise a child reasonably well. Thirteen year old girls should be doing math, playing volleyball, and working on computers, not changing diapers and worrying about their W.I.C. funds, AFDC checks and food stamps.

Every Sunday afternoon, I see large African American men running up and down the gridiron, knocking other men down and scoring touchdowns. Colleges and professional teams demand excellence from inner-city African American athletes. Society, schools and the Left expect nothing from inner-city African American kids, whether bright, average or dumb. The most depressing part of my job is to walk into juvenile court on any day, and to see kids about the same age as my own two sons, with the same potential for excellence and achievement, who will never have the chance to attain that potential. As a society, we should demand excellence from everybody, but most particularly from those who have no one else to motivate them to reach their potential.

I compare the underclass I see in court today to the poor I represented in the

60's and 70's, and the comparison is invidious. I now see five or six generations, 15 years apart, of welfare dependent families without constant male authority figures; schools that do not--and cannot without parental involvement--educate; factory jobs exported to Asia; a welfare system depriving people of dignity, fostering irresponsible behavior and belittling self-discipline; drugs sold on street corners as freely as soda, and guns as available as drugs; and the whole mess a Gordian knot resisting solutions and ready to explode in the outer cities as random violence and in the inner city as rioting and looting.

A New York Times' journalist points out that "while the cost of welfare is not small, it is not as large as the passions that surround the issue...."[2] The cost of AFDC may not be astronomical, but it is devastating in terms of spinoffs such as children who ultimately end up in the criminal justice system, who are abused and neglected, or who simply live out their lives in despair on welfare themselves. To understand the underclass and the problems of the underclass, legislators, members of the Administration and other politicians should not read boring statistics which can be argued every which way. Instead, they should spend a few days, weeks and even months in our criminal and juvenile justice courts in any moderately sized city.

The Democrats have predictably blamed Ronald Reagan, who has become the liberals' favorite whipping boy for all the social ills facing our country. Reagan was not exactly Oscar material, either before or after he was elected president, but

---

[2] New York Times, December 5, 1993.

I suppose it is only fair that the liberals place the blame on him for the underclass because conservatives have excoriated L.B.J.'s expansive and "irresponsible" programs for the same problems. But it does seem just a bit much for the liberals to shirk their own responsibility, when it was we, liberals, who hushed up the Moynihan report, when he warned us of the coming underclass syndrome almost three decades ago.

The Moynihan report was one of the earliest victims of political correctness. Moynihan pointed out what he perceived to be an alarming statistic--that 25% of all black children were being born to single moms. He also prophesied that the implications of this report could lead to increased misery among very poor African Americans. In other words, although he didn't call it that, he was alluding to what has since been tagged as an underclass. The Left would have no part or Moynihan or his report, both of which were labeled as racist. What they were really saying is that we cannot openly discuss the implications of this report because so many Americans are racist, and they will surely take these statistics to mean that African Americans are somehow less stable, less moral, less ethical and less family oriented than their white counterparts.

Instead of admitting to the problems of the underclass and welfare dependency, the Left purposely misstated the statistics, arguing that the majority of individuals on welfare are white. Of course this is true, but the vast majority of Americans are also white. When the statistics are studied realistically, it is clear that a welfare dependent, primarily African American underclass wallows in misery.

The Bane/Ellwood studies show that when first time recipients of AFDC are broken down by race, 60% are white, 35.7% black. At any one time, 48% of recipients are white and 47.5% are black. With respect to the percentage of individuals who receive AFDC for more than ten years, 15% are white, and 33.7% are black.

Most of the cases we see in Juvenile Court involve the underclass. Because in our major cities the underclass is primarily African American, the majority of our abused child clients are black. The problem is not racial, but neither is it economic. It is cultural. A culture of welfare dependent individuals recycle their welfare dependency and misery to a new generation every 15 years or so, and that population, for reasons dating back to slavery and segregation, is primarily African American. If we do not stop now, examine the problem and, as a society, try to do something about it, it will explode to haunt the rest of us and our children for generations to come. Worse, we as a society are flushing the lives of many potentially talented human beings right down the toilet. But forget the talented human beings, why should a decent society shove aside innocent children, talented or otherwise, because they come from a certain background?

In an article written for the Chicago Sun Times, The ACLU argued that welfare reform could be unconstitutional:

> The child exclusion is not about saving money:
>
> > it is about singling out poor children for punishment because of the decisions of their parents. The goal of child exclusion proposals, as outlined by its proponents is to coerce 'welfare mothers' into not having children. But just as the government cannot outlaw abortion and require women to bear children, the government cannot prevent

women from having children.[3]

The goal of welfare reform should not be to prevent women from having children, but to encourage teenage girls to make decisions based upon microeconomic realities and to delay child bearing until they are adults who are capable of supporting their children. The ACLU argument that poor children are being singled out for punishment is garbage. AFDC checks go to moms, not kids. These mothers make decisions how to spend the money and live off the checks as much as the children, and some times more. Most mothers receiving AFDC checks do use the money for the benefit of their children. But welfare cast as a children's issue makes questions of welfare dependency disappear.

CONCLUSION

Children, primarily from the underclass, are pouring into the Juvenile Court and child welfare bureaucracies, primarily because of the failures of our welfare system. I implore you to devise ways to cut down the federal bureaucracy and guidelines, which stifle creative thinking on the local level and which seem to exist only to uphold a politically correct philosophy, which no longer make sense.

The child welfare bureaucracy and its supporters are already turning up the heat, arguing that reform will harm children. The reality is that children are being harmed <u>today</u> by a welfare system which rewards irresponsible behavior and fails

---

[3] Article from the Op-Ed Column of the Chicago Sun Times, June 25, 1994, by Deborah Lewis, Legislative Counsel for the Washington, D.C., legislative office of the National American Civil Liberties Union.

to encourage teenagers to pursue educational goals and to escape the underclass through persistence and hard work. Children are being harmed today by a child welfare system which rewards parents for irresponsible behavior towards these children, by keeping these children in the homes of abusive parents.

And please do not forget that those who complain the loudest have financial incentives to do so. Child welfare is a major industry in this country. The Department of Children and Family Services in Illinois receives over one billion dollars a year in taxpayer support. Those who argue loudest against welfare reform more often than not earn their livings as part of a private/public welfare complex. President Eisenhower's 1960 dictum concerning the evils of a military/industrial complex today can be applied equally to public and private welfare and child welfare elites today. These individuals hide behind abused and neglected children in an attempt to keep the money flowing into their own coffers.

Chairman JOHNSON. Thank you very much, Mr. Murphy.

Ms. Barr, I would like you to describe in a little more detail your State's oversight system, because you mentioned that there are three different systems. You have to do certain things under section 427 that you don't normally do. But in your testimony, you describe in rather more detail what your State actually does and it sounds to me very sensible and appears in practice to have been very effective. So what do you do and what is the contrast between what you do and what 427 would have you do?

Ms. BALASCO-BARR. Section 427 requires us to do the division-directed case reviews that alternate with the court when there is court supervision of out-of-home placement. The Child Placement Review Board works from the judiciary system. It is a group of volunteers who are located in each county in New Jersey and they, too, review out-of-home placement cases and hold informal hearings regarding those same children. My point was that there are three bodies then reviewing the same case.

Chairman JOHNSON. What is your success with the volunteer review process?

Ms. BALASCO-BARR. It is—I value that, because oftentimes we get tied up into what is good case practice and sometimes forget what is good common sense and oftentimes the volunteer perspective brings to the case review process very good basic common sense. And that is the value of having lay volunteers reviewing the cases who are vested solely in what is good practice and what makes good sense for this child.

Chairman JOHNSON. Very interesting.

Mr. Murphy, do you believe that this kind of citizen review board random outcomes testing, random intervention would be better than the bureaucracy that we have now? Might it enable us to reach these problems earlier or manage them more efficiently?

Mr. MURPHY. I think we are just kind of playing around with something like a shell game, as I think maybe my testimony implied. I just think the whole system needs total rethinking. There should be more local control. Where the money comes from is something I am not an expert on. But I think that the control and the direction should be on a very local basis.

Chairman JOHNSON. Thank you. Mr. Matsui.

Mr. MATSUI. Thank you. I would like to just say, Mr. Horn, welcome back, and Mr. Murphy is making you look like a Liberal. I want to thank both Ms. Barr and certainly Peter Digre is a good friend and somebody that we have used often as a resource. We appreciate your coming from Los Angeles.

Mr. Murphy, I would like to ask you a question. You have 135 lawyers, you were saying, in your operation, your division, I guess it is?

Mr. MURPHY. Yes.

Mr. MATSUI. And you are in charge of making sure that well, you are a guardian for children, right, you are a court-ordered?

Mr. MURPHY. No. The public guardian name is a misnomer. We act as a guardian for elderly people in one small division. We take care of them and their estates. Our largest division, which I took over in 1987, there were 12 lawyers when I took it over, now there

are 135, and there were no socialworkers. Now there are about 60. We act as lawyers for children in that division.

Mr. MATSUI. So 135 lawyers under your jurisdiction——

Mr. MURPHY. That is correct.

Mr. MATSUI. You have jurisdiction over children? You are the lawyers for the children?

Mr. MURPHY. That is correct.

Mr. MATSUI. In other words, you are the guardian—then your department, I guess it is, is a guardian for these children?

Mr. MURPHY. We are their lawyers.

Mr. MATSUI. And this is how many thousand, 30,000?

Mr. MURPHY. Thirty thousand.

Mr. MATSUI. It started with 8,000 in 1980; it is 30,000 now?

Mr. MURPHY. Correct.

Mr. MATSUI. Now, this is the State. In other words——

Mr. MURPHY. The county.

Mr. MATSUI. In other words——

Mr. MURPHY. Chicago and its suburbs. The city of Chicago and its suburbs, about 6 million people.

Mr. MATSUI. Right. And you indicated—Chairwoman Johnson mentioned the 19 children that were left abused. And then I recall back in—if I am not mistaken, back in 1993, if I remember, in February or March of 1993, there was a situation where a mother had, I believe, killed her child?

Mr. MURPHY. That is correct.

Mr. MATSUI. We had a hearing about that.

Mr. MURPHY. That is correct.

Mr. MATSUI. In Chicago, if you recall, that some of us were interested in.

If you are the guardian and you have 135 lawyers, why is it you are not able to deal with these problems? Because it would appear to me that as guardian, you have a personal responsibility to making sure that these children are taken out of that kind of a situation. Why did that happen?

Mr. MURPHY. Well, we are the lawyers. Again, we are not the State agency which usually appears, which is the guardian. And what we end up doing is suing the State agency. We have won over 1 million—I won't go into all the lawsuits we have had against them.

One of the frustrations I feel, though, is when I came on board in 1987, I thought that suing and, as I said, we won all kinds of cases, would bring about reform. What you realize after awhile is that——

Mr. MATSUI. If you can answer my question, because you are—I have to understand this. You say you sue State agencies, but you do that on behalf of a particular child. Is that correct?

Mr. MURPHY. That is correct.

Mr. MATSUI. So if that child who was murdered by the child's mother, why did you not—you were the guardian of that child.

Mr. MURPHY. We were the lawyer. That is a good case, because that is a case where I think our lawyers goofed up and it was a family preservation case.

Mr. MATSUI. What lawyer goofed? Not your lawyer but somebody else.

Mr. MURPHY. Me. I think I goofed up in that case because I am responsible for the lawyers under me. This is a case, a good case to talk about, where a mom who spent years in a psychiatric facility was doing disgusting things. She was eating glass, sticking bottles into her, that's where the State came in and said that we want to keep the kid with the mom.

Mr. MATSUI. Right.

Mr. MURPHY. We ultimately went in and argued the kid should not live with the mom and we lost the case and we refused to appeal it thinking that we couldn't win. It came to court the second time and we agreed with the State the second time that this was a great family preservation case, we should put a housekeeper in the home. There was a housekeeper in the home 7 days a week. And the woman turned out and murdered her child. It is a good example of family preservation gone crazy, and we were as much to blame as the State in that case in agreeing to it.

Mr. MATSUI. And this is just the point I want to make, because this was a State-operated program.

Mr. MURPHY. That is correct.

Mr. MATSUI. In fact, what you are doing now is under State operation at this time.

Mr. MURPHY. No, no. It is a federally—don't forget family preservation came from the Adoption Assistance Act and it came from the 19—that is where it came from, right? So that Illinois was reacting and they had a special $20 million grant from the Feds to do this.

Mr. MATSUI. No, no. What I am talking about here is that your department is a State-operated——

Mr. MURPHY. County.

Mr. MATSUI. County, excuse me.

Mr. MURPHY. It is government operated.

Mr. MATSUI. I guess we just talked about the 19 children that were left.

Mr. MURPHY. We were not involved in that until they came into the system, of course. We were not their lawyers when they were living out there.

Mr. MATSUI. Doesn't this point out the problem with the entire system and the fact that here you are—you are running it. You are the one that should be in charge of this.

Mr. MURPHY. I am in charge of the lawyers——

Mr. MATSUI. It is one thing to rail about how terrible the system is, but what specific steps are you taking right now to try to deal with it? How can the Federal Government help you with this? Because we are having the same discussion that we had 2 years ago, and you are still doing the same thing but you haven't come up with any solution.

Mr. MURPHY. The solution—the solution is this, is that you and I are talking about lawyers going to court and socialworkers——

Mr. MATSUI. No, I am not. You are talking about that. Tell me what recommendations you would make specifically to us so that we can pass legislation to make your job better and make sure those 19 kids aren't in a position of disrepair and that young child doesn't get murdered?

Mr. MURPHY. You should put me out of business.

Mr. MATSUI. We would like to put you out of business, for good reasons.

Mr. MURPHY. Mr. Matsui, I know I am in Congress here, but you asked me a question. I would like an opportunity to respond.

Mr. MATSUI. I don't want a filibuster. I just want you to answer the question.

Mr. MURPHY. I will.

Mr. MATSUI. Good.

Mr. MURPHY. And that is my own agency has gone from 12 lawyers and no socialworkers to 135 lawyers and all these socialworkers in just a few years. The State DCFS office has tripled its budget in a few years. There was a prognostication by Secretary Bane that maybe things will level off. I will tell you they will double in our major cities in the next 5 years. Why? Because no matter what you do within the child welfare system, it will have no effect because the child welfare system is a product of the underclass and of our welfare system, which is in total disarray. So no matter how many billions and experts and socialworkers you pour into the child welfare system, it doesn't mean a thing, because as long as you have 14-year-old kids having kids, which no lawyer, no socialworker, no bureaucrat, no Congressman can do anything about, as long as we say we don't care if you get an education or not, we are going to continue to reward you, the system is going to be in disarray. We have got to change our welfare system and take a look at what—who we are encouraging.

You know, the real problem is that—I know the Democrats like to blame Reagan and the Republicans, Johnson, but no one listened to Pat Moynihan in 1966 when he prognosticated what was going to happen when kids were having kids without the benefit of fathers. We see it every day in juvenile court. That is what we have got to address.

Mr. MATSUI. Let me say this. I think you are getting to the root cause of our problem. And again, I shouldn't say root cause. But you are getting to the fundamental problem that we are trying to deal with here. But given the fact that we are trying to deal with the welfare system and that is in the same general area but on a separate track at this time, we still are talking about the child welfare system at this particular time and just to suggest that we just throw it out is——

Mr. MURPHY. I am saying not throw it out.

Mr. MATSUI. What are you suggesting, then?

Mr. MURPHY. I am saying unless you concentrate on this bigger welfare system of the underclass, it doesn't make a difference what you do with child welfare. You can run it from Washington, you can run it from Springfield, you can run it from L.A., you can run it from Mogadishu, it doesn't make any difference because we are feeding into it from the underclass and it is the underclass that you have got to attack. You have got to attack that problem because it will make no difference. We are going to double the size in Chicago, I can tell you, in 5 years.

Mr. MATSUI. Let me just conclude by saying I tend to agree with you. I tend to believe that the problem is going to get worse and worse. And we have a long ways ahead of us.

Mr. MURPHY. Because the underclass is growing.

Mr. MATSUI. I would like to thank all four of you. I am sorry I didn't get a chance to ask you questions. I do appreciate and look forward to working with you.

Chairman JOHNSON. Thank you. The panel has really given excellent testimony.

Mr. Hancock.

Mr. HANCOCK. Thank you very much. Mr. Murphy, I read the last paragraph in your statement. I would like to get a response to the statement that you make that this is a major industry, that actually it is to their benefit to increase the number of people on welfare because that is the way they make their living.

Would you like to make a statement on that?

Ms. BALASCO-BARR. I appreciate the opportunity to make a response to that, because when—I think we can get so overwhelmed by the numbers of what not—what is not working that we don't take the opportunity to look at where in States family preservation is working and where there has been decreases in the number of children coming into foster care and what model programs are working in several States, three of which that I know of personally because I was there. In Michigan with the Kellogg Foundation, looking at neighborhoods, building neighborhoods, changing neighborhoods, helping communities become more responsible for the children and families that live in those communities; Governor Whitman with her urban initiatives going back to the center cities, empowering communities, empowering church groups, empowering small neighborhoods, small groups to be responsible for the children that we have to serve, finding different ways that don't involve children going into foster care but still require the State or the city to spend money to help people improve their housing, improve their child care, improve their education programs, having substance abuse programs that serve people where they have to learn to live.

Mr. HANCOCK. Pardon me. It sounds to me like you are talking volunteerism. You are talking about getting people involved in this area whose personal income is not necessarily tied to our welfare programs. Am I correct in that statement? Mr. Horn, would you like to make a comment?

Mr. HORN. At the risk of no longer appearing Liberal to Congressman Matsui, I would like to——

Mr. MATSUI. I ruined your reputation, I am sorry.

Mr. HORN. I think that one of the points that Mr. Murphy is making is a very important one, which is that when you separate out, particularly biological, fathers from the household, what you get is an extraordinary increase in the potential for abuse. By one study, the estimate is that abuse goes up 40 times when biological fathers are out of the household.

Now, there are lots of reasons for that. One is there are less resources for the family. The second is that parenting is less public. There is not a partner to help you. The third is you tend to introduce nonbiological males into the household and that can be a very dangerous situation.

The fact of the matter is there is a great deal that can be done to improve this situation through child welfare reform and also welfare reform. Unless fathers start to take their responsibilities

more seriously and more men are in the homes to raise these children along with the mothers, unless we change that culturally, we are going to see exactly what Mr. Murphy predicts, which is a rising caseload in child welfare.

One of my complaints about the current system is that there are so many games States and local agencies have to play in order to access money for very specific purposes, that there are few resources left to address this problem, the problem of fatherlessness. One solution is to say OK, let's start a new fatherhood program. Let's appropriate $100 million and go out there and support fathers. Well, that is the wrong way to go. The right way to go is to give States and local agencies flexibility, and if, in fact, fatherlessness is an issue in their community, let them use the money to address this problem.

Now, to the issue of whether there are people getting wealthy off the child welfare industry. Certainly there is a lot of money in child welfare and there are people making money off child welfare. But I don't think there are a whole lot of millionaires who are running around because of funding streams that are coming from Washington for the child welfare system.

But clearly the incentives are wrong. Mr. Murphy is right, the incentives say abuse your kids, you get lots of services. But if you stay in school, you don't impregnate a girl, and if you do, you get married and you get a job, then where are the support systems for that family? We need to change the way that we do things fundamentally to encourage much more positive family life and parenting.

Mr. HANCOCK. What you are saying basically is it is going to have to be done through an educational process or a reeducational process that the male does have responsibilities in addition, because I don't think the schools are teaching that now. They are saying, we will provide you the equipment and encourage you to have sex.

Mr. DIGRE. Yes. I think Mr. Murphy created a misimpression in terms of the nature of people that I see flooding into the child welfare system. We had a real good case study in California in that our AFDC grants were cut twice in the end of 1992, and what we saw coming into the child welfare system was people who lacked the basic essentials of life: Food, clothing, and shelter.

We saw a vast—40 percent of all the people who came into our family preservation programs were there basically for the reason that they simply could not find housing. And so it is not—certainly there are many dangerous people who should never be—have access to their children and never be reunified with their children. But there is also a huge proportion of people who end up with kids in the foster care system who simply lack the wherewithal to raise their own kids. It gets down to those very specific issues about a place to live, food on the table, medical care, and things like that.

So I thought that was—that was much too strong a statement about the nature of the parents that we see. And I would invite any of you to come to Los Angeles to sit in one of our family preservation programs and talk to several dozen parents in a family shelter and judge for yourself whether there is hope for their futures if they can be stabilized in the economy.

Mr. HANCOCK. Thank you, Madam Chairman.

Chairman JOHNSON. Thank you. Now we go to Mr. Herger.

Mr. HERGER. Thank you, Madam Chairman.

If I could just follow up, please, Mr. Digre. Could you tell—as I am listening to you, I believe you are stating that because these families, because of the economy downturn, they don't have enough money, therefore we are seeing these problems multiply. Could you tell the committee your estimate of how many families you would say in your experience that are losing their children solely because of not having enough money?

Mr. DIGRE. Approximately half.

Mr. HERGER. So solely for no other reason just that there isn't enough money.

Mr. DIGRE. Now, it is what Mr. Murphy talks about. People at some point start to give up. That is when you start to see the introduction of crack and other drugs. But, you know, there is a point at which I would say about half of the families are not physical abusers, not sexual abusers, not people with propensities to violence but simply people who are struggling to keep ends pulled together and are eminently salvageable.

One of the things we have done is we implemented our big, very comprehensive, intensive family preservation program in Los Angeles in 1993. We brought it up covering half the county, half the zip codes in the county but not the other half. So we have compared the two.

What we have seen is in those areas where we have a real package of supports, a very intense package of 23 services and 16 visits a month to keep families together, we have had no growth in foster care whatsoever. Where we have not had this program, we saw during that same time period in 1994 about a 20-percent growth in the foster care population. So we saw about a 20- to 25-percent difference whether or not these were available. And what we found time and time again, what people were struggling with was the food, clothing, and the overriding issue of shelter and to back that up things like drug treatment, employment help, things like that.

Mr. HERGER. So you are—in about half the cases your department is removing children from families solely because they don't have enough money?

Mr. DIGRE. Not solely. People get into a whole complex of problems.

Mr. HERGER. That was the reason you mentioned, about 50 percent——

Mr. DIGRE. That seems to be the trigger. People lose their housing. They end up living on the street to support themselves. They get arrested. They get attracted to the drug culture. There is a whole host of things that develop.

Mr. HERGER. Remember what my question was. Your statement is these people don't have enough money, therefore they are losing their children. Evidently, it is your department's practice to remove children from families in about 50 percent of the cases because they don't have enough money.

Mr. DIGRE. What our juvenile court law is—the definition of neglect is children who are deprived of food, clothing, shelter, medical care, and the other essentials of life. So yes, if families are des-

titute and cannot provide food, clothing, and shelter under the juvenile court law, those children will enter the child welfare system for neglect.

Mr. HERGER. And that is about again, I don't want to belabor it, about 50 percent in the Los Angeles area.

Mr. Murphy, if I could return to some questioning from Mr. Matsui. It almost sounded like you were saying—I want you to clarify it, is it because of policies that we have at the Federal level that are leading to the fact that you have had such a dramatic increase in lawyers that you have needed in instances where—we even have a mother, I believe you mentioned, who was eating glass and yet the system chose to have these children still in her family, under her care? Does part of that come because of incentives or dollars that are coming from the Federal Government?

Mr. MURPHY. No. That answers the question. I think that the system has grown so much with people coming into it that what was perceived a few—and I think there has been so many problems within the child welfare system of kids being harmed within it that we on a local level felt there was a need for lawyers acting as advocates to fight the system. Most of our lawsuits are against the State of Illinois even though we are a government agency. So that is why it has grown.

My frustration is that as I tried to articulate in a not very good basis is that you reach a point where you understand that no matter how many hours you work, no matter how many cases you win, that because of this growth of the underclass, of basically children having children without any—without any chance of—having any chance in life that it is going to go on and on. By the way, I am not against family preservation programs. I am just against the way they were conducted.

Mr. HERGER. Being conducted in a manner where a mother can eat glass, as you mentioned, and still the recommendation of the agency is they stay in the family. You would tend to think that that is not a proper policy.

Mr. MURPHY. We take the most extreme cases. My own lawyers and I was at fault in that case, too, as I told Mr. Matsui, and that is an extreme case.

I will give you a less extreme case where a—a case came in with an undernourished kid at 6 months, went into the hospital, the doctors didn't want to send the kid back home because the woman had an IQ of a 6 year old. And the State of Illinois said we have family preservation in the home, we have a housekeeper there.

I looked at the report, it said the woman had—living at the house was a mess. There were cockroaches all over the place, rodents and garbage up to the ceiling, and also living in there were dogs, cats, a guinea pig, and a monkey. You say to yourself a monkey? Well, maybe that was the smartest person in the house. Maybe smarter than the socialworker who let this go on. That is the extreme you can go to.

The University of Chicago conducted a 5-year study, said it didn't work. It didn't harm, it didn't help. Families should be preserved if there is a family to preserve. It is cheaper and better for the kid, no doubt.

Mr. HERGER. Let me conclude, I do have to agree with both you and Mr. Horn that a system that can allow a situation you just described, also a system that spent approaching $5 trillion over the last four or five decades and has the type of results that we are having now definitely needs to be turned around, and I commend both of you in your attempt and this committee is hoping to change that. Thank you.

Chairman JOHNSON. Thank you, Mr. Levin.

Mr. McDermott.

Mr. MCDERMOTT. Thank you, Madam Chairperson.

I want to set a little context here. The two States that are held up as examples as the way we ought to reform welfare are Wisconsin and Michigan. They cut their welfare costs recently by dropping their grant in one State from $544 to $517 a month for a family. In another State, it was $525, now down to $459. Louisiana, for a family of three, welfare is $190 a month and in the State of Mississippi, welfare is $120 a month. Now, being an Irishman from Chicago, I appreciate the subtlety with which Chicagoans deal with issues.

I would like to deal with some of the rest of you here and talk about this business about children born to children. I have been a witness, an expert witness in dozens of cases as a child psychiatrist on where the kids should be placed, so I have some experience on the street. If a young woman comes in and she has had a child, she is 15 years old and we pass a law in the Congress that says if she is 15 years old, she goes back to school. If she doesn't go back to school, she doesn't get any welfare money and if she does not go back to school or she doesn't stay in school—the Chicago schools, as I know them, or some of the big city schools in this country, are not exactly conducive, we take the kid away from her at that point.

Well, let's—first, we could put her with the family, right? We could let the child be adopted by her mother. Now, very likely this is a family where there might have been some history of the same sort of thing happening. But then what do we do? Do we take the child out of the home? If the girl won't go to school and won't seek to better herself what is the next step? How do we know? Because the argument in the court, in most cases when I was in court, I was in on behalf of the mother because the State didn't provide any services to these very inadequate mothers and so to then say she is an inadequate mother when the State is taking the kid away and say you are not a good mother while doing nothing to help her, it seems like a self-fulfilling prophecy.

What I want to know is what you would outline. When should the State step in and say, OK, young lady, you have not done right by your child and we are going to take that child away from you and put it into an independent—I hate to use the word "orphanage," but some sort of setting. I mean, how would you set the system up to break that cycle that we are talking about?

No, I don't want Mr. Murphy from Chicago. I want to hear from these three. They have been quiet.

Ms. BALASCO-BARR. The first thing that we would do is see if the girl's parent is able to provide a home for both her and her new child. And oftentimes——

Mr. MCDERMOTT. Even if it is a welfare mother?

Ms. BALASCO-BARR. Even if it is a welfare mother.

Mr. MCDERMOTT. OK.

Ms. BALASCO-BARR. That doesn't preclude you from being able to care for your children.

Mr. MCDERMOTT. She would no longer get the grant. You would increase the grant of the grandmother?

Ms. BALASCO-BARR. The grandmother would become the grantee for her grandchild, essentially. Oftentimes, we find that these are problematic families and some States have been able to put together programs where the adolescent and her baby are placed in what we call "group homes" where the foster parent or the group home staff model for her how you are supposed to care for that child and begin to do two things: Reparent the girl who has had the baby and also model for her what is appropriate child-rearing practice, and at the same time she is going to school and getting an education that will lead to self-sufficiency.

But again, this is one of the rules that we have gotten a waiver on in that in order to place a child with foster care, there has to be a ward of the court. But waivers have been given so that the—that is a unit. The young girl and her baby are a unit in foster care and we are able to provide those visits at that time. There are some real good programs around the country, Lewell Belle Stuart in Detroit that has done a good job with taking young girls and their babies and turning them into self-sufficient young adults.

Mr. MCDERMOTT. What is it that prevents those real good programs from being massively applied across the country? Because there are always these demonstration projects, as you say, that work very well. And you say to yourself, every State can see what they are doing in Detroit; why don't they do that everywhere?

Ms. BALASCO-BARR. I think it is because it is—you get so focused on doing it that you don't get out and tell everybody about it. And you consistently take care of the children that come under your supervision in your locality. I don't think there is anything unique or different about somebody having common sense and saying you put the two together so that you don't repeat the mistakes in the future. And at the same time, you have that ongoing—and it is sort of appropriate because we have the Right to Life people protesting today, but the responsibility of what is good sexual responsible behavior is also a part of what is taught to these young girls when they are with us in these group homes and in these special family programs.

Mr. MCDERMOTT. But people in Chicago are desperate. Their numbers are going up astronomically. Why don't they look over to Detroit and see that program in Detroit and say, why don't we try that here in Chicago? What is it—they are certainly looking for solutions, don't you think?

Ms. BALASCO-BARR. I am going to respond because I used to be a children's protective services worker.

Mr. MCDERMOTT. Yes.

Ms. BALASCO-BARR. You get so overwhelmed by the problem you don't see the solution. And one of the things that I believe has helped New Jersey work well, Michigan work well, Wisconsin, Oregon, et cetera, is the quality of the supervision. It is the quality of the training. It is the requirement of the monitoring under Pub-

lic Law 96–272 that keeps the system honest. And I am being very careful talking about Michigan and New Jersey because that is where I work. But it is—it isn't a philosophy. It is a worker's sole belief in family preservation and making good decisions in the best interest of children. And you can't legislate that. It is a feeling. It is in your heart or it is not. And some of us don't need to be in child welfare because we get so hooked on the examples that we have been given from Chicago where somebody wasn't thinking, somebody only looked at family preservation and not what is in the best interest of a child.

The magic of family preservation is training, is supervision, it is review. It is not money. It is not oversight. It is a belief in a direction that this is good practice for children and families. Michigan does not write off substance-abusing mothers.

Mr. MCDERMOTT. You must be a little worried watching us try to write rules to tinker with the system that imply that we know how to legislate from up here what ought to happen out there.

Ms. BALASCO-BARR. No. What we look for from Congress is direction and intent. We count on the administration and the executive branch to give us the rules that we have to go by. And then we get down to case practice and go back to them and say I know what your intent was but this is what actually works.

Mr. MCDERMOTT. Tell me about Los Angeles County. What would you do with the case I outlined, 15 year old, won't go to school?

Mr. DIGRE. OK, specifically, if the 15 year old is not in any way abusing or neglecting her infant, we wouldn't do anything. You know, she would simply, if she was on the public assistance system, would simply be a participant in it. If the child becomes abused or neglected, then it would really depend on the nature of the abuse and neglect and really our judgment about what her capacity is to make changes and to be able to safely take care of the baby. And the alternatives have been pretty well outlined here. In many cases like this, through education, through support, with helping them get back in school, helping them prepare for employment, helping them to stabilize their life through family preservation, she can simply raise her own baby.

Many, many—in many cases, we see that the family structure is so chaotic that probably half of the kids end up growing up with an aunt or a grandmother. That is half of what all foster care is in this day and age. So they are often kept in the kinship system with an aunt who has a more stable lifestyle or with the grandmother who has really got some strength and is ready to do it.

If you do have to remove them entirely from their family network, there are basically two choices and you have to make a judgment about this young woman's potential to grow up and be able to nurture the baby. We have several opportunities where mothers and babies can live together in the same place but in a very structured and protective environment so she can complete her education, so she can make sure that the baby is well cared for and that the baby is protected while she grows up. In other cases, the young woman is so unstable that she just has to be separated from the baby. We will work with her from 1 year to 18 months to try to change that so the baby can live with her. If we can't, we are

going to go into court, terminate her parental rights, and get the baby a new mother and father.

Mr. MCDERMOTT. Do you have a particular system that says at 18 months any case that has been out there comes up and if they are not making it, that is it, you go to court?

Mr. DIGRE. Built right into your Federal law are requirements for a 6-month judicial review and 18-month——

Mr. MCDERMOTT. Probation hearing.

Mr. DIGRE. Absolutely. That is reflected I think in every juvenile court statute in the country. Ours has two cutoff points. Our first cutoff is you start to make the judgment regarding do we need to give up on this person and find a new home at 12 months, and often the judges will continue that to 18 months to give the parents a chance, a second chance. But the 18-month timeline, although there are some exceptions, is pretty firm. If you don't have your act together, if you haven't stabilized your life, you are not able to safely raise your child, about 1,100 or 1,200 times a year we do terminate parental rights and free kids to be adopted.

Mr. MCDERMOTT. You are nodding, Ms. Barr. Do you agree with that?

Ms. BALASCO-BARR. We are going for that. New Jersey has a unique system called voluntary placement agreement and the court is not involved. Unfortunately, we have had some cases that have languished awhile because of these informal placement agreements. But we are rapidly coming into compliance so that we can move more quickly toward permanence.

Mr. MCDERMOTT. Thank you, Madam Chairman. Thank you both for your testimony.

Chairman JOHNSON. May I just clarify, Ms. Barr, something you said earlier in response to Mr. McDermott. You mentioned that you had a waiver. Did you have to get a waiver for the group home program?

Ms. BALASCO-BARR. No. You have to have an allegation of abuse or neglect in order to place a child in foster care. And we are—when you put the mother and the child together, you are not alleging necessarily that somebody has been abused or neglected but this is in the best interest for the kid. So you have to have the waiver in order to access the funding.

Chairman JOHNSON. So this is a Federal waiver?

Ms. BALASCO-BARR. Yes.

Chairman JOHNSON. OK. I wanted to bring that out. I wasn't sure that is what you were saying. But, clearly, if that is what you are saying, that is a perfect example of a need for greater flexibility, even though, in addition, Mr. McDermott's line of questioning and your comments about the judicial review do indicate the combination of oversight and flexible service patterns that we have to try to achieve if we want to improve the system.

I turn to Mr. Johnson.

Mr. JOHNSON OF TEXAS. Thank you, Madam Chairman.

Chairman JOHNSON. Excuse me, Mr. Zimmer. I am sorry. I misread my own list here. It is Mr. Zimmer's chance to inquire.

Mr. JOHNSON OF TEXAS. Sure.

Mr. ZIMMER. Thank you. Unlike Mr. McDermott, I am not an Irishman from Chicago, so I don't know what Mr. Murphy would have said in the last round. I would like to give him some time.

Mr. MURPHY. The Irish are known for fighting amongst themselves, probably more than any other ethnic group. Probably——

Mr. MCDERMOTT. They have never said anything good about each other.

Mr. MURPHY. I think the McDermotts were the ones who were always turning in the Murphys back in—in any event, I think my answer wouldn't be that much different than Peter Digre's here, and that is that a 15-year-old kid who has a child, I don't—I think should go to school if she wants AFDC. And if she doesn't go to school, I would not give it to her. I would go one step further. I don't think I would give AFDC to anyone under 17 unless they have a high school diploma under any circumstances, and I would expect the family to step in and fill the gap, and if the family didn't, that is when the State would step in.

The reason I say this, it sounds very harsh and it is harsh, but I think we have to get the same message across to the underclass that I get across to my own children and you to your kids, and I think we patronize the poor today, whether it is an African-American population, in cities like Chicago it is a racist message. The message is we do not expect anything of you. I think the message has to be we expect the same thing of you as we do of the kid from the north shore in Chicago or from Connecticut or wherever. And that message is a tough message. But the whole message has been soft. The message to date has been anything else but that, act irresponsible, you are going to get rewarded. Act irresponsibly, we will reward you. We have got to turn it around. It will be hard for the first few years but we have got to do it. So I would do it.

I want to make one other comment. Mr. McDermott said Chicago may have bad problems, et cetera. We have an organized group of lawyers in Chicago, myself included. I am the one that went to the press in the case that Mr. Matsui talked about, and I stood up and I said, I made a mistake in that case. That case never would have come out unless there were lawyers doing it.

New York, for instance, has an organized group of lawyers representing children but they have draconian laws of confidentiality which we don't have in Illinois. Most States, the bureaucrats, the child welfare crowd hides behind laws of confidentiality, so they can stand up here and say anything they want to you.

What really goes on, if someone tries to come out and say there is a problem in the system, then everyone says we are going to sue you. I have had half a dozen—not half a dozen—I have had three or four beefs against me with the attorney registration of the disciplinary commission, from State bureaucrats and other so-called advocacy groups because I have gone to the media. This system has more confidentiality than the CIA and the FBI have. That is because it is in the child's best interest, everyone argues.

It is not. And I used to think it was because it was in the bureaucrats' best interest for you guys not to know what really goes on. But now I think the reason, the real reason we have laws of confidentiality is everyone inside the system knows how flaky the

system is but really thinks it is good flakiness and doesn't want the public to know so we hide behind them. The best thing you can do is do away with the laws of confidentiality so everyone can see how bad the system is.

Mr. ZIMMER. Mr. Murphy, I am glad you brought your son here. He should be proud of his father. You are setting an example——

Mr. MURPHY. He is a very bored little boy right now.

Mr. ZIMMER. Well, I can see that. Someday maybe he will appreciate what a candid and forceful and passionate father he has got. And I want to tell you in my experience in my 4 years in Congress, you are the first public official who has ever taken responsibility for a screw up in his department or under his authority, and I want to commend you for that.

Mr. MURPHY. That is because I have only had one.

Mr. ZIMMER. Ms. Balasco-Barr, I want to commend you for the good job you are doing in one of the most challenging divisions in the State of New Jersey. I know how difficult that job has been to manage in years past. I am sorry you didn't get to go through your entire written testimony. I want to give you an opportunity to go into some detail about where you think the Federal program should be changed and exactly how we could focus on outcomes rather than procedure.

Ms. BALASCO-BARR. I believe that each of the 50 States is dramatically different and has different needs, which means that when you have an intent that is promulgated by Congress, there has to be flexibility in allowing that State to develop its child welfare plan according to the needs of that State.

The reason that we are having this hue and cry over family preservation, and it doesn't work, you know, and it does and it is all wrong and it is all right, is because each community and each State has different kinds of problems that are addressed differently. And the—the flexibility that is required is not so much the flexibility in the money but it is the flexibility in the planning.

What Congress and what the administration needs to require from States is an assurance of care, an assurance of the quality of care, an assurance that the money is being directed not into the ways in which have been sort of hinted at about people making money on child welfare, but that money flows to the lowest possible group of folks who can adequately ensure care for kids.

When we—the case plan—and I think it was Secretary Bane who said the case plan is the foundation of child welfare practice. She may not have said it like that. But if you don't have a plan, what are you doing? And that is where the structure of what we do in child welfare has to be, on the frontline worker, the training, the support, the knowing what it is that you are about the business of doing in child welfare.

Oversight doesn't do—I was getting ready to say a strange word, but—it doesn't count for nothing. It doesn't count for nothing if the training, the caseworker, the intent, the knowing what it is that the people of this country want for children and families. If we don't know that at the line level, then we are wasting a whole lot of money and putting in bureaucracy that overview, overview, overview and review. If you don't have any foot soldiers, what are you overviewing and reviewing?

And that is where the emphasis, I strongly believe, in child welfare has to be—the support, the nurturance, the caring for, the training of the child welfare workers and firstline supervisors.

It is—yes, there is a system that we call child welfare and it has advocates, it has people, it has agencies, it has whole lots of folks, but we are all supposed to be about the business of the children and families. And I think a lot of the anxiety and the discussion and the confrontation goes on because sometimes we forget to ask the people that we are supposed to be serving how can we best serve you, and we all get together in conferences and workshops and talk about those people and we haven't taken the time to ask. And maybe we could cut out some of the money if we would use a lot more common sense, a lot more good practice, and we ask the people who we are serving and we ask the caseworkers, how can we help you do a better job? It is not going to conferences.

Mr. ZIMMER. Thank you.

Chairman JOHNSON. Thank you very much. Mr. Johnson.

Mr. JOHNSON OF TEXAS. You really sure this time?

Chairman JOHNSON. Sorry about that. The angle is bad.

Mr. JOHNSON OF TEXAS. Ms. Barr, I like what you say. It seems to me you are saying that we ought to be looking after the children's welfare and not talking about welfare for children. And in so doing, you made the statement that 427 reviews are a large part of your effort in your State.

Do you know how many people are involved? I know you quoted a number, 2-plus million, nearly 3 million.

Ms. BALASCO-BARR. There are 14 staff that directly report to me who do the case reviews. But within each office, there are also case practice reviewers on top of the case review boards that come out of the judiciary system and then the judiciary review by the judges after that.

Mr. JOHNSON OF TEXAS. So you have hundreds, at least, of people that are not really directly involved with taking care of the child but involved in making sure they dot the i's and cross the t's, is that true?

Ms. BALASCO-BARR. I wouldn't try to belittle it to the i's, you know, cross the t's, but we do have a degree of oversight, that I question its effectiveness. If you have established a pattern of doing what follows the law and your outcomes give you that, then there should be relief, some relief from the oversight.

Mr. JOHNSON OF TEXAS. And I also like what you say about no two States are alike. And you know, I don't think we here in Washington can decide what is good for New Jersey and that it is certainly not the same thing for North Dakota or Texas, for that matter, or California, or Chicago, even. And I don't remember making but one mistake in my lifetime, either, Mr. Murphy. I appreciate your comment. That is all I have. Thank you, Madam Chairman.

Chairman JOHNSON. Thank you, Mr. Johnson. Mr. Gibbons.

Mr. GIBBONS. Thank you. A brief question.

Chairman JOHNSON. And welcome, Mr. Gibbons. Pleasure to have you.

Mr. GIBBONS. Thank you very much.

I am of the opinion that the child financial support system in the United States is a mess. It certainly is in my State, in Florida.

What impact would having a better child financial support system have upon the problems that we are talking about here?

Mr. HORN. If I could address that a little bit. I think that certainly we could do a lot better job in both establishing paternity and collecting child support. And it certainly is better if you are raising children to have more financial resources.

But even if we were able to wave a magic wand and collect all of the outstanding child support payments, children would still be at-risk. One of the things we know is that when children are raised in households where the father is absent and uninvolved, children are at-risk even in upper-income households. So if what we are talking about here is simply getting child support payments from these men, as opposed to encouraging and supporting their active involvement with their children, their children will still be at-risk for things like child abuse.

So if we are going to talk about child support enforcement, and we should, and if we want to improve that system, and we should, and if we want to ensure that more children have more financial resources through child support payments, and we should, at the same time, we should recognize that fathers contribute far more to their children's welfare than simply child support payments. We must, therefore, be just as aggressive at ensuring that the fathers have the ability to interact with and be involved in their children's lives.

And along those lines if I could go back to a couple questions before, it seems to me that one of the things we should have done for that 14-year-old girl is that when she was 13 have messages permeating her neighborhood that young boys should not impregnate young girls. Frequently lost in the discussion about child welfare reform is any talk about the missing fathers. We need to help men understand that impregnating women before marriage is a form of child abuse because we know that out-of-wedlock childbearing places children at-risk.

One of the things we need to understand is that we have to focus not just on the mother, the single mother, but also upon the absent adult in that picture. That is the father.

Mr. MURPHY. You know, I think I would agree with Mr. Horn. I would go one step further, and that is, for instance, the New York Times last year did a study on all kids under the age of 15 charged with murder in New York City. Of the 25 kids, 21 had no father involved at all, 2 were silent on the issue, only 2 had a father involved. To me, that is the missing thing.

I don't know if—going after them for money becomes irrelevant, because many of them don't have money, but they should be involved with their children. For instance, again in Chicago, we had a 10-year-old kid who slit the throat of an older woman recently and killed her. And everyone was saying this is a horrible thing, he should go to jail. Of course he couldn't go to jail. The question to me was not the child, but where were his parents? Because essentially he had no upbringing.

And I would—I would on a local level go for laws that said if a kid under the age of x—whatever it is, 14 or 15—was brought in on a charge of delinquency, I would bring the parents in and find out what their involvement was. Now, if it was a poor welfare mom

that tried hard and didn't succeed, well, then there is—but if it is a father who was not involved with that guy, he is the guy that should be in the can, not the dopepeddler, because he is the guy who is responsible. I am not suggesting dopepeddlers shouldn't go to prison, but I think it is more important to get word across to fathers that we are going to put you in prison. You don't have to give them any money; what about taking him out to a ball game, just being there once in awhile? And if a father is not doing that, that is a crime. That, as Wade points out, is child abuse.

Chairman JOHNSON. There are requests for a couple of follow on questions. We will go to Mr. McDermott.

Mr. MCDERMOTT. Thank you, Madam Chairman. One of the questions I wanted to ask, because you talked about training, I would like to know what the minimal qualifications are for hiring a minimal—an entry-level worker in the child welfare system in New Jersey and California and Illinois, if you know them.

Ms. BALASCO-BARR. A bachelor's degree in a human service area, meaning education, psychology—preference is given to socialwork. And there is an incentive for a master's degree in socialwork, psychology or counseling.

Mr. MCDERMOTT. Can't get in with a history degree?

Ms. BALASCO-BARR. No.

Mr. MCDERMOTT. OK.

Mr. DIGRE. It is very similar. It is a bachelor's degree and at least 3 years of experience in socialwork and an educational program in a socialwork-related field. About 70 percent of the time, people we hire have master's degrees. Now the one exception to that is, we recruit very hard in the universities to hire fully bilingual employees, so we do have a class where we can hire trainees and put them through a special curriculum and a special entry in our department so that we have always got an adequate number of bilingual employees.

Mr. MCDERMOTT. And the starting salary?

Ms. BALASCO-BARR. I don't know.

Mr. MCDERMOTT. Range?

Ms. BALASCO-BARR. The range, I think it starts around $32,000.

Mr. DIGRE. About the same, $32,000, $33,000.

Mr. MCDERMOTT. Do you think you are representative of the United States in terms of the qualifications to get an entry-level job in a children's welfare system?

Ms. BALASCO-BARR. I think so. There might be some States that have more of a preference or are more specific about the socialwork degree. But generally we sort of clump it under human services, and then—but that is contingent on a real specific training program after hire.

Mr. DIGRE. In my experience, I believe we are considerably higher both in terms of qualifications and pay, and frankly, back to your earlier question, our turnover only runs in the 6 to 10-percent level. I think that is a direct correlation of, if people can make a living doing these jobs, they get invested in them, they stay, you just have better outcomes.

Mr. MCDERMOTT. Before you give a caseload to people, how much training do people have in New Jersey?

Ms. BALASCO-BARR. They have a minimum of 2 weeks' training before they get a caseload. And then there is a period of time in which they simply, like a shadow caseworker, they accompany a professional worker around on her caseload and then slowly are given cases. And then they come back for additional training after they have had a small caseload of around 10.

Mr. MCDERMOTT. And what—what is the average caseload in New Jersey for a caseworker once they are full?

Ms. BALASCO-BARR. It ranges between 25 and 32.

Mr. DIGRE. The training requirement is 8 weeks in our training academy, which incidentally is funded under IV–E administrative costs. We have three training academies at USC, UCLA and Cal State-Long Beach, our three schools of socialwork. And then they go into a 4-month program in training units, where they are gradually phased in.

Mr. MCDERMOTT. So it is really almost 6 months before they get——

Mr. DIGRE. Yes, exactly.

Mr. MCDERMOTT [continuing]. Actually starting to handle families?

Mr. DIGRE. They are starting to handle, but in a special training unit where they are under special supervision, where they are slowly introduced to it.

Ms. BALASCO-BARR. New Jersey has just started working with the Rutgers School of Social Work in a public child welfare training program. So I commend you—I mean, I envy you, really.

Mr. DIGRE. Our training academies were, incidentally, one of the things that caused the IV–E administrative numbers to jump up.

Mr. MCDERMOTT. I raise this issue because I think it is important for the record and the members to know the importance of training and what you start with when somebody comes in.

When I was, in the early eighties, in the State of Washington, we were taking people with history degrees. And they were getting into the department because they had good grades and whatever, and they really had no experience. You take a middle-class kid just out of college and suddenly hand them a caseload of 15 or 20 families from the inner city, most of them are sinking at sea, so deep that they don't know where they are for a long time. So that is why I think it is important that people recognize the importance of the programs that you are involved with.

Thank you very much, Madam Chair.

Chairman JOHNSON. I thank the panel.

Oh, Mr. Matsui.

Mr. MATSUI. Very briefly, both Mr. Murphy and Mr. Horn answered questions regarding the cutoff of benefits at teen level. Perhaps Mr. Digre and Ms. Barr could give me and the panel their thoughts on the issue of cutting off benefits for teens or whatever group they may be.

In addition to that, perhaps, Mr. Digre, in view of the fact you have worked with family preservation programs, and so has Ms. Barr, very briefly again both of you could answer the question about the example that Mr. Murphy gave where a child was living in a home with pets, monkeys, everything else, with a woman whose IQ was low. And again, I know it depends upon the specific

facts. But what would you do in a situation like that, in terms of your programs?

Chairman JOHNSON. Before the panel answers this question, I want just to clarify that the only proposal that denies benefits to children under 18 does give them Medicaid benefits and food stamps, and requires them to live at home. So those are the dimensions of what we are talking about.

Ms. BALASCO-BARR. Governor Whitman has been asking us for several weeks our reflections, and she hasn't really come to a conclusion, but I do know of her intense involvement and interest in early intervention and prevention. And I think whatever New Jersey does, it will be a decision based on an individual case basis. It will be something that—a decision made in the best interests of children. It will not be a blanket or arbitrary denial of benefits if, in turn, it does far more damage to a child than a principle regarding if you are such and such an age and you haven't done this or that.

Mr. DIGRE. Well, if somebody is terminated from assistance and they are able to go into employment or income through a decent child support check, or be part of a broader family, and if they are able to have employment—the most important thing there is to have health insurance so you can take care of your children and all the health needs of young children—I think it would be fine.

If they end up in a situation where they don't have assistance to get the necessities of life, the juvenile court statutes will be there. And as soon as you hit the point of lack of food, clothing, shelter, the children will end up in the family preservation or foster care system.

In terms of the kind of approach we bring to family preservation, we have taken a comprehensive—packaging 23 services into 1 package, a community-based approach working with community-based agencies, everything from churches to local school districts to the boys and girls club, to mental health centers, people that really have roots in community networks.

We have required a high level of intensity. You have to visit the family as often as 16 times a month to make sure that the first priority of family preservation, child safety, is that the kids are kept safe; and we also institute 17 additional standards of child safety to make sure we are really constantly keeping an eye on the safety of the children.

So it is basically a comprehensive, community-based and very intensive approach, very intensive on the visitations.

Mr. MATSUI. Did you have a—did you want to respond? Maybe you already have responded to the family preservation issue.

Ms. BALASCO-BARR. You know, as we were leaving the table, I did have a thought, an impression, that no one that I know of—and I have been a worker and a supervisor, et cetera—voluntarily wants to say that they are abusing and neglecting their kids solely to get the benefits of family preservation. I don't believe anybody in any community, whether it is rural or inner city or suburban, wants to be labeled abusive or neglectful because of alleged services that are given, or the $300 in emergency money in the family preservation program.

The families that I have met and worked with see only the benefits of having their family strengthened by being involved in family preservation. They then become advocates for the program when they go back into their own communities, when they are in their churches, that oftentimes we are able to intervene in another family that is in crisis before they have been labeled abusive or neglectful because of the kind of value that communities have placed on the family preservation program.

I feel badly that there are some States, and in Chicago it doesn't appear to be working, but I would ask that the committee look at the places where it does work, that you do have people who don't want it to work for whatever reason. But family—for every time they tell you, yes; after 12 months there was another incident, but rather for 12 months there wasn't an incident of abuse or neglect; and then for every family that requires foster home placement and we go through reunification, we have decreased the length of time that that child has been in foster care. And that is a value that we hold.

There are no blacks and whites, and there are no this ways or that ways. All of it has to be in light of, are we really doing the best thing for kids and families?

Mr. MATSUI. I would like to thank both of you and all of you.

Chairman JOHNSON. I would like to thank the panel as well, but before I do, I want to ask one concluding question and make a comment that feeds into the conversation of the preceding 15 or 20 minutes.

Mr. Horn, in your testimony, in talking about what has caused the explosion in the caseload, you say that abuse is up to 40 times more likely to occur when the biological father is not living in the home. Then you go on from that statement to say that this should have driven a change in welfare services or affected the service network in some way and that, instead, it resulted in an enormous effort to maximize reimbursements under title IV–E, which is the administrative costs section of the program, which also is loosely allowed to fund prevention. In other words, you couldn't just address this problem of fathers; you had to go through the burden of administrative costs and all the documentation.

We all know that is a very heavy, complex program, that administrative costs section, and yet that was the only place you could go for money to address this kind of new need. Is that the right conclusion to draw from those two paragraphs of your testimony?

Mr. HORN. There is a wonderful moment in the movie "All the President's Men," in which Deep Throat says, "Follow the money"; and I think if you follow the money when it comes to child welfare, and you understand where the incentives are and where you can draw down large sums of money, you understand where it is that people have put their efforts. And where they have put a lot of effort is in maximizing claims under the title IV–E administrative costs program, because that is where the money is, that is where the incentives are.

And last year, Congress passed and appropriated money for family preservation services despite the fact that there really is no empirical evidence that it is helpful. As Mr. Murphy says, the largest study of its kind shows that family preservation doesn't hurt,

doesn't help, just has a neutral effect. And yet now we are setting up a whole network of family preservation services.

What we have to do is stop telling child welfare agencies to follow the money, but rather to do what makes sense for them, consistent with the needs of their local communities. And if in that community one of those needs is to address the issue of fatherlessness, well, they should be able to do that with the money that they have available to them through Federal funding streams. And so what I recommend and what I continue to urge this committee to consider is making those funding streams much more flexible so that States can use them, given the wisdom that we hear at this table about what is good practice, and stop them from simply following the money.

Chairman JOHNSON. Thank you. And in conclusion, let me say to the witnesses, any suggestions you have for the governance language of a child welfare services block grant or for the means of accountability, we are interested in those two things. Because if we bring moneys together in a block grant, we certainly will not do it without clarifying what the uses of those moneys should be for, nor suggesting how we will know whether it got done or not.

As to the issue of the eligibility for children under 18, that is certainly a part of the welfare debate that is going on before the Human Resources Subcommittee.

I thank you, Mr. Murphy, for your insight into that problem, and all of you, for your thoughtful testimony, written and oral. Thank you very much.

On the next panel are Marcia Lowry of the American Civil Liberties Union, the Children's Rights Project; Michael Petit, the deputy director of the Child Welfare League of America; Ronald Henry, the Children's Rights Council; Brigitte Berger of Boston University, professor of sociology; Corinne Driver, National Association of Foster Care Reviewers; accompanied by Charles Cooper, Citizen Foster Care Review Board; and Karen Howze, adoptive parent.

We are going to let Karen go first since she does need to get back to work.

Sorry, Karen, that this has gone rather longer than we might have led you to believe it might, these first two panels. But it is important for the committee to have a chance to pursue their questions if we are to make good decisions in the future. So with that apology to you and to the rest of the panel, would you please proceed.

Ms. HOWZE. Sure.

STATEMENT OF KAREN AILEEN HOWZE, ADOPTIVE PARENT, WASHINGTON, D.C.

Ms. HOWZE. My children are products of the foster care system in the District of Columbia. My children receive an adoption subsidy each month, and that amount is equal to the amount that their foster parents received when they were in the care of the District of Columbia.

I adopted Charlene and Karie 10 years ago. I was given very little information about their backgrounds and their parents. I was simply told that the parents were "perennial homeless people," with no known history of drug abuse or alcohol abuse.

I think we all know now that perennial homelessness is a deeper problem than just people wandering the streets. In fact, it over the years became very clear to me that there was, in fact, drug involvement by the mother, though it was not street drugs; it was her need to take psychotropic medications because of her mental illness, and the assumption is that she was indeed taking those medications during her pregnancies.

By the time my children were ready for school, it was obvious that there were some very serious problems that were directly attributable at least to the mother's condition and possibly to the father's, who was diagnosed as schizophrenic.

My children were not nurtured in foster care, which exacerbated the situation. One of the things that they had to contend with was a hypersensitivity to touch, which meant that if you touched them or got close to them it felt as though there was a hot poker being run across their skin.

They have serious difficulties processing language and using it. Karie was nonverbal until the age of 6. At the age of 6, Charlene, who is the oldest, one day said to me that she didn't know what was wrong, but she just felt sad. That was 1986, and since then Karie has learned how to speak; she is now 11. By the time she started first grade, though, she was on the road to autism because of the level of nonservice that she had received in the public school system.

Four years ago, Gloria was placed with us. She is a sibling of the other two girls. She has a different father but the same mother. Gloria was caught up in the District of Columbia's lack of compliance with Federal guidelines and standards and lived in foster care and was reunited with her mentally retarded mother over a 5-year period. In that course of time, she was sexually abused by both her mother and by the foster care provider, who is the same provider who cared for the other two girls when they were in foster care. Learning about Gloria's past helped me also understand Charlene's.

Today Charlene, and I mean today, this afternoon, is why I have to leave at 2 o'clock; she is an inpatient at the Psychiatric Institute of Washington. She has been diagnosed as bipolar, or having manic depressive disorder. This child is 12 years old and it is very difficult for a 12 year old to understand what is happening to her body. The end result is these are my children, but without adoption subsidy, which comes to approximately $440 a month, which is not a lot of money—if I did not have that as a resource plus the medical assistance all in one package where I did not have to run around and try to touch base with all the entitlements, I probably would have had to turn my children back in, despite the love that I have for them.

Four years ago, I left my job as an executive with the Gannett Co.; I had been a founding editor of USA Today. I left that job because I could no longer travel and find adequate care that could meet the needs of my children when I was on the road, regardless of how much I was willing to pay.

Today, I kind of piece together whatever I can do to pay my mortgage and pay transportation and food costs and save enough aside to pay for the constant therapy that the children need.

The one thing that I would like to say to the committee is that this entitlement program, unlike a lot of the other things that are going to be discussed here and in the future, is one that was designed for the children. Many people within the social service arena believe that the parents who are receiving adoption subsidy are money-grabbing people who just want to be paid to care for these children; and of the 50,000, I can probably only imagine maybe 2 who would be in that category.

You lose everything when you suddenly find out 5 years after you have made a commitment to a child that that child is not the child or the children that you thought you were going to have. My children may never be independent. My middle daughter, Karie, will never be able to read or write with facility. She tries very hard, but she is almost functionally retarded. Gloria has the beginnings of multiple personality kind of issues that we have not begun to deal with because it is too soon, it has only been 3 years.

Without the little bit of help and the security of that help, I would probably be among those who would say to social services, please come get them, I cannot care for them to the best that they need to be cared for.

Now, since leaving my job, I now place all of my frustration about this system—and in my attempt to really understand it, because it is extremely complex, as the other panels discussed and I am sure we will hear today. I now represent children who are in foster care as an attorney, similar to Mr. Riley.

Is that his name? Murphy. Some Irish something. They all look alike, right? Similar to Mr. Murphy in Chicago on a different kind of panel approach.

What I would say to you is, I am primarily a children's attorney, though periodically I represent parents. The children on my caseload, my goal is to get them into families. This money helps, because the children I represent are just like my kids.

Children who come into the child welfare system came there because something went wrong, whether it is internal or external, and those things that go wrong don't go away. And somewhere in society there has to be a responsibility to assist in paying for it.

I will tell you in the District of Columbia—not necessarily New Jersey, not necessarily Oregon, but I think Ms. Balasco named only 5 States that seem to be paragons of good socialwork; there are 45 others, and those 45 would take the money out of this program and the foster care assistance programs and use it to hire a socialworker who would only help probably to exacerbate the kind of problems that my children experienced and will continue to experience the rest of their lives.

I thank you. The yellow light is on and I made a vow not to hit the red light. If you have any questions——

[The prepared statement and attachment follow:]

STATEMENT
OF
KAREN AILEEN HOWZE

BEFORE THE
SUBCOMMITTEE ON OVERSIGHT
JANUARY 23, 1995

My name is Karen Aileen Howze, and I am a single adoptive parent of three daughters -- Charlene, Karie, and Gloria. My children receive an adoption subsidy each month that is equal to the amount their foster parents received when they were wards of the District of Columbia.

I adopted Charlene and Karie ten years ago. I was given little information about their parents. I was told the parents are "perennial" homeless people with no known history of drug or alcohol abuse. Little was known about homelessness at the time. And no one told me that both parents were severely mentally ill, and that the mother had been taking psychotropic drugs prescribed for her mental illness -- probably throughout her pregnancies.

By the time the children were ready for school, it was obvious that there were problems that were directly attributable to their parents and their early days in foster care. My children were not nurtured. They had a sensitivity to touch that can only be described as the sensation a burning poker would leave on one's skin. They have difficulties processing language and using it. Charlene taught herself to read in kindergarten, but she couldn't stand in line with the other children without bumping into them and disrupting the all important line process. She never cried. She was depressed. And at age six, as I was putting her to bed, she looked at me and said, "Mommy, I'm sad."

Karie, on the other hand, did not speak. By the time she was to start first grade, she began to present signs of autism. She could not function in crowds, and large spaces made her extremely irritable or withdrawn. She is learning to read, but will never be facile with reading or writing.

Four years ago, Gloria was placed with us. She has the same mother as the other two, but a different father. She experienced abuse during her early life that included molestation by her mother and foster mother. She has serious emotional issues that we are dealing with on a daily basis.

It is clear they have challenges that will be with them for the rest of their lives. But, they are loving, caring children who have a respect for themselves and for others. But all of this does not change the reality of rearing them appropriately.

Today, my oldest daughter Charlene is in a local psychiatric hospital. Last June, at age 13, she was diagnosed as manic

depressive, the illness that plagues her mother. She has a condition that she will be faced with for the rest of her life. She will need counseling and constant monitoring of her medications. She must be taught at this early age how to tell whether the medicines are working before her behavior deteriorates. This is a lot to ask of a 12-year old. And it is a lot to ask of a parent who volunteered to love and care for children who had no one, unaware of the level of problems these children face.

My friends often wonder how I am able to handle these extraordinary stresses of parenting special children. I have had to leave a career as an executive with the Gannett Co. Inc., to care more effectively for my children. At the age of 40, I had to change my profession and cut in half my earning power, go through bankruptcy, and start again -- all for the love of my children.

Without the four hundred and forty dollars I receive each month for each children and the medical insurance that is part of the package, I would not have made it through various periods of the past five years. I might have had to dissolve the adoption despite my love for my children. The combinations of problems that my children have make for a household that is frequently manic and probably would be considered classically dysfunctional. I frequently feel so overwhelmed that I think it might be better for the kids if they were returned to the child welfare system. I receive great peace knowing that I am not the only parent who has these thoughts. And I am grateful that I have had the support of family, friends, and the financial support to meet some of their special needs through the adoption subsidy program.

With the program, I have at least eliminated the first reason that many parents give for returning children to the child welfare system, not enough financial resources to meet their needs. As an adoptive parent with special needs kids who is also now a lawyer to children who are in foster care in the District of Columbia, I know that if local jurisdictions are given the chance to decide where the money will go, the choice will be for social workers or support services to maintain the child welfare system. I know, and you have heard from others, that the financial support earmarked for special needs adopted children saves the system financially in the end by promoting permanency for the children. I ask you to consider the parents' side of this equation: the subsidy program provides the support for the children whose life history or life condition make it clear that love will never be enough.

I am attaching to my testimony some information prepared by the North American Council on Adoptable Children, who assisted me in the preparation of my testimony.

North American Council on Adoptable Children
970 Raymond Avenue, Suite 106, St. Paul, Minnesota 55114-1149 • 612-644-3036 • Fax 612-644-9848

With its enactment of The Adoption Assistance and Child Welfare Act of 1980 (Public Law 96-272) nearly fifteen years ago, the United States Congress began to promote the adoption of special needs children in out-of-home care by providing federal reimbursement for adoption assistance payments made to the families adopting them. Under 96-272, states are required to establish adoption assistance programs that provide monthly maintenance payments, Medicaid coverage, selected social services, and reimbursement for nonrecurring adoption costs to families adopting eligible children.

The North American Council on Adoptable Children (NACAC), through the support of the W.K. Kellogg Foundation, undertook this study to: (a) assess the general effectiveness of adoption assistance programs around the country; (b) construct profiles of children and families receiving assistance, as well as the types and sufficiency of benefits made available to them; (c) analyze the impacts that various systemic policies and practices have on the distribution of these benefits; and (d) highlight dominant trends and areas of major programmatic concern among assistance providers and recipients.

To address the objectives described above, input was solicited from state-level adoption administrators and policymakers, front-line adoption workers, and adoptive families in twenty states, including: Arizona, California, Colorado, the District of Columbia, Illinois, Indiana, Kansas, Louisiana, Massachusetts, Michigan, Minnesota, Mississippi, Montana, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Texas, and Washington. In total, 27 administrators/policymakers (i.e., state adoption supervisors, state legislators, budget analysts, etc.), 140 workers (seven–five public and two private–per state), and 532 families (responsible for finalizing 753 *domestic* adoptive placements through licensed public or private agencies *after 1990*) provided information via telephone interview and/or written survey instrument.

BASIC FINDINGS

In compiling the responses of these stakeholders, it was revealed that:

1. ***Adoption assistance programs (AAP) are critical in promoting permanency for special needs children.***

While some respondents questioned specific provisions or practices within their state's adoption assistance programs, there was virtually unanimous agreement that payments and services provided through them are critical in finding permanent homes for large numbers of vulnerable children. In general, interviewees confirmed that adoption assistance programs <u>are</u> acomplishing what they were set up to do--that is, facilitating the permanent placement of children who otherwise might remain unadopted.

Respondents repeatedly indicated that benefits provided through adoption assistance agreements are crucial to the long-term "health" of children and families involved. The statements below--the first two from state adoption supervisors, the third from a veteran adoption worker, and the last, most tellingly, from a letter written by an adoptive parent--typify comments made regarding the vital nature of these benefits:

- "There is no doubt that adoption assistance increases the number of special needs adoptions that occur. There are kids out there who simply won't be adopted without assistance. . . . Needless to say, money used for these benefits is money exceedingly well-spent. Adoption assistance is one of the few areas in child welfare where dollars spent actually make a concrete difference in children's lives."

- "Adoption assistance expenditures are absolutely essential. . . . Waiting kids are the neediest children in our entire society. We as policymakers can't pretend to say that we support the 'family unit' if we don't provide assistance to these kids."

- "Adoption assistance is a God-send. I've been a worker for over fifteen years, and there is no comparison between the number and types of adoptions that are completed now and those that were done when I started. So many families have benefited from the program. I can't imagine what would happen to families if they had to do without these benefits."

- "I am the father of twelve children, four born to me and eight adopted. My adopted children all have special needs. Their disabilities range in severity from a daughter who was born missing her right hand to a son who has Hanhart's Syndrome--congenital absence of one leg, both hands, and his lower jaw. Others of my children are physically able but emotionally disturbed.

  I want to tell you about one of my children because I think it is essential that you have some sense of what it is like to parent a special needs child and, more specifically, to give you some insight regarding the critical importance of adoption subsidies to adoptive families.

  Peter (not his real name) is fourteen. He was originally adopted at age three by parents in Los Angeles. After one year of a difficult placement, his adoptive mother burned him with boiling water. He went to the hospital, she went to jail. He never saw her again. He was sexually abused during his recuperation in the hospital. After that he lived in two separate foster homes before joining our family.

  Peter suffers from post traumatic stress syndrome, attention deficit disorder with hyperactivity, and serious learning disabilities. Until he began aggressive chemical treatment by a neuropsychiatrist, his behavior was leading him straight for residential treatment and quite possibly the criminal justice system.

  Life with Peter is agonizing and painful. It can also be satisfying and rewarding. To say that it is a severe test of our parenting skills is an understatement. We never know from day to day or moment to moment whether he will be threatening one of his siblings with a knife, or sitting quietly playing with Legos; on the roof urinating on the first unsuspecting soul to leave the

house, or reading a book on John F. Kennedy (a favorite of his); holding a playmate's head under water, trying to drown him, or neatly organizing his belongings in his room in his peculiar compulsive way; or running away and wandering all over town with God knows whom.

When his medication is effective, and lately--thank goodness-- it is more often than not, he can really focus and attend. On those days or during those hours we can see his potential for achieving a normal life.

The expenses associated with our and Peter's accomplishments have been enormous. The costs of psychiatric care, numerous psychological evaluations, ongoing therapy sessions, special educational placements, and medicines are a measurable drain on our financial resources. More difficult to measure are the emotional costs of our fear, concern, and anxiety. The costs of alienated relationships (neighbors, friends, and relatives) are similarly unmeasurable but equally great. However, I can assure you that all of these expenses have been substantial.

The adoption subsidy we receive for Peter is a tremendous resource which goes a long way in alleviating the financial strain of caring for him and in procuring the professional assistance he needs. It also gives us the resources necessary to provide a foundation for his life and to strengthen our family structure. Most importantly, it allows us the means to continue our commitment to him and to all our children so that they may grow up safely in a permanent and loving home. With adoption assistance, there is hope for Peter's future, and that's really the bottom line.

In addition to affirming the overall effectiveness of adoption assistance as a permanency incentive, most respondents--particularly those at the administrative or policymaking level--were firm in their belief that adoption assistance programs are an efficient outlet for child welfare dollars. As voiced by one state supervisor, "The adoption assistance program is the best 'bargain' in the entire child welfare realm...We're getting more for our dollars here than in any of our other programs for kids." This is not to say that all interviewees were completely satisfied with the workings of their own, or others', programs. As several emphasized, "We must tighten some things up in certain areas...The subsidy program is not a 'cure-all' for all bad fits. It is merely a safety net."

Nevertheless, and despite these caveats, when specifically asked about the "proper" prioritization of adoption assistance programs within the broader child welfare arena, respondents were quick to stress the importance of subsidized adoption. Ensuing discussions generally focused on the comparative merits and/or drawbacks of providing additional (or fewer) resources at the "front" (family reunification and preservation services) and "back" (adoption services) ends of the service delivery spectrum. Participants agreed that allocating sufficient resources at both ends of the spectrum remains critical for children and families, but *none* advocated for reducing adoption assistance funding in order to bolster front-end services. "Don't get me wrong--family preservation services are definitely needed. We might even be 'short-changing' families a little bit in this area right now. But adoption assistance is very important, and it should not be cut in any way. There will always be a group of kids for whom adoption is the most appropriate permanency option who desperately need adoption assistance benefits."

Chairman JOHNSON. Thank you very much.

Are there questions of Mrs. Howze?

Mr. McDermott.

Mr. MCDERMOTT. How much trouble do you have in getting services for your kids?

Ms. HOWZE. Well, that is another issue. What I found in this community and through networking with other parents who have special-needs kids, we are—our needs are further ahead than the helping psychiatrists, psychologists.

So often we are coming to them and saying, I see this, and they can't figure out what it is. We may have a sense of what it is, but it is all touch and go. In fact, a number of people I know personally, the therapists have said to them, why don't you just turn them back in, it is too much probably for you to handle. So there isn't really a network out there for people who come in this—with this I-am-going-to-help attitude, and then find out that there are very serious emotional and physical difficulties with the children that says, oh, we will be a part of your process.

Instead, it is sort of like, well, you volunteered, just go on and unvolunteer. And that is not unusual.

That is not part of the normal child welfare where you go for social services. It is the rest of the community.

So that is a very good question. It is very difficult to find services.

Mr. MCDERMOTT. Well, I was really driving at a more specific point, and that is, you have Medicaid coverage for these children under the special needs program?

Ms. HOWZE. Right. And my agreement also allows—they have changed the way that they are doing it now, but because there were so many uncertainties and because I am a smart person, I asked that they leave some wiggle room. So when I don't—when I first go to Medicaid providers and when they are not working in the best interests of my children, then I will find people in the community who will let me pay after reimbursement from the District of Columbia.

There have been times when the District of Columbia has refused to reimburse. For example, my middle child has no tongue muscle, so her speech is affected by that. She needed braces to reshape her mouth. We still haven't gotten the braces, though she gets lots of speech therapy, because DHS decided that they didn't think that was an appropriate expense.

So it is a dicey situation that parents are in, and you have to pick and choose what is most important. I have had to choose between focusing on my bipolar child because of the seriousness of that and the level of medication, and hold off on the other two in terms of their needs; and I don't think anybody should ever be placed in that situation, regardless of where the children came from.

Mr. MCDERMOTT. Are the costs for your child being in the mental hospital, are those going to be covered under Medicaid?

Ms. HOWZE. Those are covered completely under Medicaid, and that is another very good issue. Because if I—I don't have health insurance because I left my job. But if I did, she would not be able to go in the way she has been able to go in the last 2 years.

Mr. MCDERMOTT. Thank you.

Ms. HOWZE. Now, I would like to say, I will guarantee the U.S. Government and every taxpayer that my daughter will not be walking around the streets lying on a grate somewhere. That is what this is for. It is the preventiveness that keeps us from having major adult problems down the line, and that is what adoptive parents attempt to offer to their children.

Mr. MCDERMOTT. We are grateful for people like you who will do the kinds of things you are doing. Thank you.

Ms. HOWZE. Thank you.

Chairman JOHNSON. As you work with the system, is there any focus on, as there is with people over 65, you know, the costs of keeping people out of nursing homes versus in nursing homes? Is there any support for perhaps more generous services or supplements in addition to Medicaid, recognizing that if you didn't have these kids, they would almost certainly be institutionalized?

Ms. HOWZE. No. Because I think one of the things that has happened, and probably was happening before the passage of the Public Law, is that the State or local jurisdiction is so bound with their budget vagaries. So, for example, the District of Columbia is in a major, major problem right now.

I happen to have a client who is about to be adopted who is CP, G–2, blind, deaf, the whole bit. It has taken 9 months to try to negotiate a rate of payment for the care giver who wants to keep this boy for as long as he lives. That is the kind of playing with people's lives that occurs, that is based on fiscal and not on the needs of the child.

Chairman JOHNSON. Thank you very much. Thank you for your good testimony. Thank you for your contribution to the lives of these children and to the strength of our society.

Ms. HOWZE. Well, any time.

Chairman JOHNSON. Thank you very much.

Marcia Lowry.

STATEMENT OF MARCIA ROBINSON LOWRY, DIRECTOR, CHILDREN'S RIGHTS PROJECT, AMERICAN CIVIL LIBERTIES UNION

Ms. LOWRY. Good afternoon. I am very glad to have the opportunity to talk to you. Coming at the——

Mr. MCDERMOTT. Use the microphone, please.

Ms. LOWRY. Coming at the end of a morning of very interesting testimony makes it hard to kind of restrain myself to what I originally started out to say, because there have been so many interesting and important ideas here. And certainly the first speaker on this—can you hear me?

Mr. MCDERMOTT. Madam Chairman, your remarks will be in the record, so if there are other things you have heard, I hope that you will carry on so it is a real discussion here.

Ms. LOWRY. I am going to do my best. And certainly the last speaker illustrates a very important point, which is there are in fact extraordinary human beings in this country who are willing to give homes to children in serious trouble and willing to stick with them. And many children who have been in our foster care system are very, very damaged by that experience in itself.

The government spends a lot of money to produce children who are very, very fortunate to find a woman like Ms. Howze, who is prepared to take these children in and make a commitment to them.

We were earlier hearing a little bit about children having children, and let me just say I am—I am an attorney. I represent children in class action lawsuits against State and county child welfare agencies for falling below even what I consider to be the fairly broad standards of Federal law. And one young man, who was in foster care from the time he was 13 months old and is now 28 years old, said to me at one point, when he was getting married, and I said, "You know, maybe you ought to think about postponing having children for awhile"; he said, "I never had a family, I want to have my own family, I want to create my own family." But he had been in foster care his whole life, and although he was able to father children, he wasn't able to raise them. And his children are now in foster care as well.

The points that I really want to make today, that I have heard a little less about, are three:

There must be specific Federal standards in whatever Federal legislation governs the provision of money to the States. There are standards now in title IV–E. They are minimal standards. If we really wanted to have good child welfare systems, we would have more specific standards; and we could do that without taking away from the States, flexibility about how they administer child welfare services. But from the standpoint of these children and particularly from the standpoint of someone who has looked at many of these State child welfare systems, it will be a disaster, in my view, for these kids and for the use of government money if we take away what we have already got in terms of standards.

You heard something today about training for workers. You heard about caseloads. You heard about supervision. You didn't hear about quality assurance, but that is a big issue in the States. None of those things are required in the Federal statute now, and I am not here today to ask you to put them in. But what I am saying is, if you are really looking at quality services, those kinds of things are minimal things to do.

What you have now is a requirement for case plans, you have a requirement to move toward permanence. What you have is some very minimal standards with regard to placements. Without telling the States how to run their systems, I can't believe that anyone would say it is possible to provide decent services for children when you have 150 kids on your caseload. You can't do it.

During trial on the lawsuit against the D.C. child welfare system, we heard testimony from workers who said, when we asked them whether they made case plans, they laughed. They said all I am trying to do is get through my day without a child dying on my caseload. Now that was the right choice for the worker, but if we are serious about trying to get permanence for kids, the workers have to have caseloads and training that enables them to do what we want in the Federal statute. But most importantly, we have to have some general standards that are enforceable and about which there is oversight exercised.

And I really emphasize, I am not trying to come out on the other side of the question of whether the States should have flexibility. They should. They should decide what programs work best to get permanence for kids. But they have got to get permanence for kids or we will be back to where we were prior to 1980 when we had Federal funds go to the States under a statute, title IV–A, that basically did not set any standards at all.

Second, I believe that there has to be some Federal oversight. I do not believe that the 427 audits were effective and I don't believe that they did a good job. That doesn't mean that there can't be good, competent Federal oversight that will really tell us what is happening in the States without being incredibly burdensome.

And finally, whatever standards we have in Federal law must be legally enforceable, so that when the Federal oversight falls back, as it unfortunately has over the last 14 years, and when the States are not meeting the Federal standards, the children have some rights to hold the States accountable themselves.

Thank you.

[The prepared statement follows:]

TESTIMONY OF MARCIA ROBINSON LOWRY
AMERICAN CIVIL LIBERTIES UNION

My name is Marcia Robinson Lowry and I am the director of the Children's Rights Project of the American Civil Liberties Union. I'm very grateful for the opportunity to present testimony today to this subcommittee on this important issue.

Ever since the Adoption Assistance and Child Welfare Act (Public Law 96-272) became law in 1980, we have been bringing lawsuits against state and county child welfare systems for violating the minimal standards that are contained in that federal legislation. We represent tens of thousands of abused and neglected children in city and state child welfare systems around the country.

Foster care systems established and funded to serve children are failing, producing only more damaged graduates who will go on to produce new generations of damaged children, who will continue to lead unspeakably tragic lives and who will increasingly tax our public resources.

In 1980, Congress passed good legislation intended to protect children and to ensure that the billions of dollars spent in state child welfare systems was used as the opportunity to help and to protect these children, to intervene in their lives so they could have a decent childhood and the opportunity to grow up into healthy and productive adults.

For the most part, this legislation has been neither monitored nor enforced, and in many instances these huge amounts of federal money have not been used by the states to achieve the goals that Congress intended.

The protections included in this legislation need to be strengthened and enforced, not eliminated. The federal government certainly needs to do a far better job in its oversight of the $3.5 billion dollars in federal funds expended in 1994 for foster care services. It cannot leave these programs unmonitored.

Even with the standards contained in Public Law 96-272, the states have not done a very good job. If Congress eliminates those standards, by providing child welfare funds to the states in a block grant, and if it eliminates federal oversight of federally-funded programs for abused, neglected and dependent children, by eliminating "427 reviews," these children are certain to be damaged even further. The consequences are truly unthinkable.

The issues being considered by this subcommittee today are critically important to the most desperate and vulnerable children in this country:

> The almost 450,000 children in federally-funded foster care, a number which has increased 62% in the last ten years;
>
> The almost 3 million children reported for abuse or neglect in 1992, a 130% increase in the last ten years.

These numbers reflect the heart-wrenching stories of countless children whose care at the hands of their government caretakers has often not met even minimal standards.

> In Milwaukee, 10-year-old Alan talks matter-of-factly of his current foster family being recruited by his aunt distributing flyers in the neighborhood that say, "I'm a little boy. I like soccer. What I really need is a mom and a dad." Alan entered foster care when he was five. His mother abandoned him, and has a history of drug abuse and imprisonment. He has been in five different foster placements, and two unsuccessful returns to his mother, during at least one of which he was abused by his mother's boyfriend. He has been in at least eight different schools. His aunt, who could not care for him herself, advertised for a home for Alan after the child had remained in a temporary shelter for 11 months, and her phone calls to the child welfare agency had not been returned.
>
> In Philadelphia, a mildly retarded child who had been in foster care for his entire nine years, was taken out of the state by his fourth set of foster parents without his worker's knowledge because the worker had not visited the foster family for over a year and didn't know of their plans to move. His whereabouts were discovered in another state, after he arrived at school with observable bruises. Local police found that the foster parents were controlling his behavior by tying him to a tree.

While we must allow the states to have flexibility in designing and administering their child welfare programs, and in deciding how to meet the standards contained in federal law, we simply cannot assume the states will provide adequate protection to children in the absence of enforceable federal standards and some form of federal monitoring and oversight. This is not an issue of trust; it is an issue of verifying whether the states are, indeed, using federal money to meet certain basic and generally accepted standards. We must remember that these children are more voiceless and powerless than any group in our country, and that if Congress takes away the minimal protections provided by federal law, they will have none.

This subcommittee is addressing the questions of whether the federal reviews required by Section 427 of the Adoption Assistance Act have resulted in better services, and whether block granting federal child welfare services and foster care programs will improve services to children. Since state foster care systems remain so damaging, despite the enactment of Public Law 96-272 14 years ago, it may be tempting to simply try something different. Instead, however, I urge you to make good on the promises of that law, and to take steps to ensure, for the first time, that it is actually enforced.

There are three basic points that must be made.

I. CONGRESS MUST CONTINUE TO IMPOSE MINIMAL STANDARDS NOW CONTAINED IN FEDERAL LEGISLATION FOR CHILD PROTECTION AND CHILD WELFARE SERVICES AS A CONDITION OF FEDERAL FUNDING TO THE STATES.

States are entitled to make their own choices about precisely how to care for their abused and neglected children, but the federal government must be a partner in this process if children are to be protected. Congress is both entitled and obligated to impose these minimal standards because it pays a large share of the costs. It is both necessary and appropriate for Congress to set basic standards on how this money should be spent, and on what general public policy goals it wishes to further.

A consensus exists within the child welfare community, including standard-setting organizations, public administrators, and advocates, about minimal child welfare services and practices that should exist within every child welfare program:

- child welfare agencies must protect children they know to be at risk of harm from abuse or neglect: child-welfare agencies must respond promptly to reports of suspected abuse and neglect and must provide services to protect children who are the subjects of such reports from harm;

- child-welfare agencies must try to keep families together so long as the child can remain safely in the home: before removing a child from his or her home, child-welfare agencies must first attempt to provide services to the child and family in an effort to preserve the family, so long as the child can remain safely in the home;

- child-welfare agencies must try to minimize the time children remain in foster care: for those children who do enter government foster-care custody, child-welfare agencies must provide case planning and services that are geared towards allowing children to return home as quickly as possible or, if that is not possible or appropriate, allowing children to be adopted.

- child-welfare agencies must care for children while they remain in foster care: recognizing that most children who enter foster care are already damaged from abuse and neglect and thus often need intensive services, child-welfare agencies must provide services to children in foster care -- including medical services, stable and appropriate placements, educational services, psychological services, and counseling -- that are appropriate to their needs and that will assure that their experience in foster care is a healthy one.

- children are damaged by protracted stays in foster care- while many children need to enter foster care to assure their safety, it is widely recognized that lengthy stays in government custody can be very damaging for them. And in this respect it is essential to understand that for

children time has different dimensions than for adults: a year in the life of a child can be an extraordinarily long time. Indeed, for an infant or toddler, the passage of months without a stable and permanent caretaker can be permanently damaging. It is critical that child-welfare agencies move urgently to restore permanence to the lives of children in foster care.

In fact, these practices are currently mandated by the Adoption Assistance and Child Welfare Act of 1980, which Congress passed in response to concerns about children drifting for years in state foster care systems. Though the statute imposes only minimal substantive obligations on states that choose to receive substantial federal funds to support their foster-care systems, it does require that states provide planning and services to children in an effort to shorten their stay in foster care and to protect children while they remain in foster care.

The current provisions in the Adoption Assistance Act, Title IV-E of the Social Security Act, set basic standards for child welfare services without proscribing how a state should meet those standards.

For example, the law requires that each child have a written case plan that describes the reasons for the child's removal from his/her home and the appropriateness of the child's placement;

each child have a case plan for assuring proper care and the provision of services;

services be directed toward facilitating either the return of the child to his/her parents, or the child's adoption, so that if at all possible, the child be raised in a family and not in government custody;

the child's case plan assures that the child receives proper care for as long as the child remains in foster care;

that the states develop programs to try to keep children out of foster care whenever possible;

that homes or institutions in which children are placed be reasonably in accord with standards recommended by national organizations;

that the status of children in foster care be reviewed periodically in state proceedings to determine their future status.

These standards are neither overly prescriptive, nor are they utopian. Indeed, from the standpoint of protecting children, even more specific standards would be far better. No standards at all, or standards that are unenforceable, would be disastrous.

Nothing in this statute tells the states how to meet the broad standards in the statute, or what kinds of services or programs should be provided to do so. Eliminating these standards by block granting federal funds will deprive children of all protections.

The problem with the statute is not that it imposes burdens on the states or interferes with the provision of effective services, but that it is simply not being followed. But these protections must remain in place, for a number of reasons.

These protections set guidelines for the states which have some influence on state policy. The protections in federal law provide the standards on which federal oversight efforts must be based. And the protections in federal law provide a basis for advocates to hold the states accountable in the most egregious situations.

At the end of the 1970s, Title IV-A of the Social Security Act, which contained virtually no standards or protections for children, governed the provision of federal funds to state child welfare systems. There were at least 500,000 children in custody at that time, and general agreement that foster care

was no more than a custodial system. The legislative history supporting the enactment of Public Law 96-272 clearly expressed Congressional concern about the lack of federal monitoring of the use of federal child welfare funds. In passing the act in 1980, Congress noted that the federal funds provided under Title IV-A had not been used by the states to "move children out of foster care and into more permanent arrangements by reunifying them with their own families when this is feasible, or by placing them in adoptive homes," and that "there were significant weaknesses in program management which had adverse effects on the types of care and services provided to foster children."

Prior to the passage of this federal statute, children in foster care often had no chance at all to ever leave government custody. Adoption was something usually reserved for infants. If it did not take place within the first several months of a child's life, the child was considered unadoptable. A few examples:

> Carlos entered foster care when he was 13 months old. He lived in an institutional nursery for several years, a series of foster homes and institutions. When he expressed grief over his father's death, he was committed to a state mental hospital. When he turned 16, he was imprisoned for an altercation with a child care institution security guard. He is now 28, lives on the street, and has two children in foster care. There was nothing extraordinary about his case and nothing that happened to him violated the legal standards applicable prior to the passage of Public Law 96-272.
>
> Susie, two, and Donnie, three, were discovered in a closet, where their mother had left them because they had misbehaved. Despite their early neglect, they were still in relatively good psychological shape. They spent their next 13 years in foster care, where Donnie listened on the other side of a closed door while Susie was repeatedly sexually abused by one of their temporary foster parents.

After Public Law 96-272 was enacted, there were some limited improvements in state systems. For example, much more serious attention was paid to developing services to families to prevent abuse and neglect, and to avoiding the need for foster care; to getting children adopted; and to moving children from large, expensive custodial institutions into more family-like settings. State agencies, many of which had previously had conducted almost no planning for children once they entered state custody, became aware of the need to develop written case plans for children and, through those plans, became increasingly aware of the need to set goals and determine the steps to accomplish those goals for children. Within the first several years of implementation, the national foster care population dropped to 270,000 children.

However, these advances were short-lived, for several reasons unrelated to the statute itself but at least partly related to its enforcement.

States soon learned that the federal enforcement mechanism provided in the statute, the 427 review as it was developed by the federal Department of Health and Human Services, was not, in fact, a rigorous, thoughtful monitoring mechanism. Very few states failed these reviews -- indeed, advocates quickly learned that any state that failed a federal 427 review had a system in which children's lives were in jeopardy, to say nothing of their emotional well-being. One reason for this might have been that the only sanction provided by the 427 review to process was the denial of federal funding, a draconian sanction to impose on a child welfare system already unable to provide minimally adequate services to children. And then, in 1989, Congress suspended the availability of the federal funding cut-off, providing no sanctions at all for failing a federal 427 review.

It seems very reasonable to conclude that the failure of the federal government to either conduct meaningful reviews or to enforce the requirements of the federal law made it clear to the states that there would be no consequences -- at least at the federal level -- to their failure to comply with the law.

In addition, however, other factors were at work. State systems in need of widespread reform if they were to meet the minimal goals of the federal statute had barely had time to start developing their own approaches when

circumstances changed. The number of reports of suspected abuse and neglect exploded, with a 130% increase from 1984 to present, an explosion related both to greater public awareness and better reporting procedures but also correlated closely with drug abuse, homelessness, and other serious social dislocations that have devastating consequences for children and their families. Second, children began entering foster care at a younger age, staying longer and manifesting increasingly serious problems -- related in part to increased drug abuse by women -- problems that make it that much more challenging to treat these children and find them permanent homes. Finally, there have been substantial reductions in state and local support for social-service systems, reductions that have robbed child-welfare agencies of critically needed staff and service resources.

Given these forces, and the lack of federal effort to ensure implementation and enforcement, it should be no surprise that foster care systems are failing. However, it would be wrong to conclude that the Adoption Assistance Act has contributed to that failure. Rather, these systems are failing despite the statute's protections and despite the considerable federal resources that the statute provides.

A consensus exists in the child advocacy community about the importance of legally enforceable protections for children in foster care. This consensus is based on a number of factors:

- Children in foster care have no say in the political process- Children in foster care can't vote, usually have no way of communicating with anyone (much less with their elected representatives), and don't have fancy lobbyists or influential PAC's. Indeed, our citizens who are in foster care -- abused and neglected children -- are probably the most politically helpless group in our society. Because of this, it is essential that they have guarantees of minimal care and protection that can be legally enforced.

- Foster care systems are cloaked in secrecy that often is used to conceal illegal and unconscionable practices- Every state in the country cloaks its foster care system in secrecy, prohibiting the disclosure of any information about children's experiences in foster care. Though these statutes often were enacted to protect children, they routinely are used by state officials to conceal illegal and unconscionable practices. Given this secrecy, it is essential that there be the type of external oversight of these systems that legally-enforceable protections provide. Indeed, it has only been through litigation that many of the worst foster-care practices have been exposed.

- Children in foster care are in government custody- Every child who is in foster care is in government custody. Our society long has recognized that when the government takes custody of an individual, there must be basic legal protections to assure that that custody is not inappropriate or abusive. Given the serious problems that pervade many state foster care systems, it is particularly important that children in foster care have such legal protections.

In light of these considerations, it is absolutely essential that Congress assure that children in foster care have minimum protections that are legally enforceable. And given the consensus within the child-welfare community, it is clear that those legally enforceable protections should at least include the standards currently contained in federal law, which could be eliminated if foster care funds were block-granted.

It is impossible to say whether child welfare systems now operate in a way that is more harmful to children than the systems that Public Law 96-272 was designed to improve. It is fair to say that many are not meeting even the minimal goals contained in that law. It is also fair to say that we are squandering the opportunity to ensure that the very large amounts of federal and state money spent on child welfare services be used to benefit, rather than harm, our country's poorest and most vulnerable children.

The solution is not to eliminate the minimal protections we have. The solution is to make these protections more effective.

II. THERE MUST BE ADEQUATE FEDERAL REVIEW AND OVERSIGHT TO ENSURE THAT THESE STANDARDS ARE APPLIED.

This subcommittee is concerned with the question of whether the 427 reviews have, thus far, served to improve the lives of children. For the most part, the answer to that question is no. However, that does not mean that another form of federal oversight would not bring about a different answer. Congress was concerned about the lack of federal oversight in 1980; it should be equally concerned today. While we are critical of the Section 427 reviews that have taken place thus far, we very strongly endorse the need for meaningful, effective oversight, which can and should be provided under Section 427 of the statute. That is not to say that section 427 could not be improved. But even as presently enacted, that section 427 provides a basis for adequate monitoring, if the procedures that are developed under the statute -- about which HHS has broad discretion -- are well-planned and meaningful. The procedures that have been utilized in the past were not.

Section 427 of Public Law 96-272 provides that states must meet certain criteria related to the broad goals in the Adoption Assistance Act in order to qualify for additional federal payments. It does not specify how the federal government should make the determination of whether those criteria have been met.

In the past, the Department of Health and Human Services chose to comply with this provision of the law by conducting what this subcommittee is referring to as the "427 reviews." It would be hard to find many people who believe the reviews, as previously conducted by HHS, tell anybody anything about whether states are protecting children, or meeting the broad goal of trying to ensure that children grow up in families -- either their own, or adoptive -- whenever possible.

As originally enacted, section 427 of the Adoption Assistance Act required states to provide minimal services and have certain systems in place in order to receive child-welfare funds under the statute. In an effort to assess whether states were complying with these minimal mandates, the Department developed a process that involved an overview of state systems as well as a review of a very small number of case records of children in the state's foster-care program. Based on this review, the Department would then declare whether the state was or was not complying with the mandates of section 427. Those states that were out of compliance were to be declared ineligible for federal reimbursement for the fiscal year to which the finding of noncompliance applied.

As an initial matter, the review methodology was hopelessly inadequate. For instance, under that methodology, the Department could look at as few as 25 cases, regardless of how many tens of thousands of children were in a state's foster care system, in concluding that the state was complying with the statute. The shortcomings of the methodology were best demonstrated in 1989, when the Department declared that the District of Columbia had passed its 427 review shortly before a federal judge described the DC system as a "travesty" and found the whole system to be operated illegally in violation of the Adoption Assistance Act as well as the federal Constitution and statutory law of the District of Columbia.

Now, in addition to the fact that Congress suspended the funding sanction for states that failed 427 reviews, HHS has also suspended the reviews themselves. It is my understanding that HHS has been working on new procedures to provide more effective and meaningful reviews. Whether this new version of the 427 reviews will indeed, be better, remains to be seen. But it is clear that effective and efficient federal reviews can be designed to determine whether children are being protected and whether the minimal goals of 96-272 are being met.

However, it is absolutely essential that the federal government not shirk from its oversight responsibilities on behalf of children who are in state custody, or at risk of entering custody, and for whose benefit large amounts of federal money have been appropriated. Section 427 imposes no constraints on HHS' development of an effective and meaningful monitoring process, does not dictate either the scope or the extent of the reviews, and provides wide flexibility to develop reviews that are not unduly burdensome but which nevertheless allow the federal government to protect these children.

Congress went a step further in ensuring the potential effectiveness of 427 reviews by its passage of H.R. 5252 in the 103rd Congress. This bill provides for a far more constructive and far less intrusive new review process. Under this new bill, states substantially complying with the broad goals of the federal law will be reviewed less frequently. States which "fail" the new 427 review will have the opportunity to implement their own corrective action plan, with the provision of technical assistance. The bill still makes federal sanctions available, but provides far more opportunity for non-complying states to bring themselves into compliance with the federal standards, without being penalized by the loss of federal funds while trying to do so.

While the "427 reviews" utilized over the last 14 years have not demonstrably improved the lives of children, they were very deeply flawed. That does not in any way eliminate the need for adequate 427 reviews, Congressional oversight and protection for these children. Without impugning the concerns of many at the state level for their state's neglected and abused children, the inescapable fact is that too many states have a demonstrated record of failing to protect the children in their custody.

III. THE STANDARDS SET BY FEDERAL LAW MUST BE LEGALLY ENFORCEABLE.

In the absence of specific, enforceable federal standards, such as currently exist in the federal Adoption Assistance Act, the half-million children in government custody have few rights against their state custodians, if these custodians fail to meet the minimal standards and provide basic protections to them.

Although the states are entitled to discretion to determine the best way to meet the federal standards and to provide proper care for children, what programs are most effective in trying to ensure permanence for children, and how best to provide services to these children. However, the states should not have the flexibility to take millions of dollars in federal funds and not even make efforts to meet these very broad goals, or to operate their child welfare system in such a way that makes the achievement of these goals impossible.

For example, to take some real-life illustrations, state child welfare systems in which the telephone lines set up to receive abuse reports often go unanswered are not making efforts to protect children. States which leave children in unlicensed and unsupervised foster homes are not experimenting with new program designs. States which determine that abandoned three-year-old children are unadoptable -- without trying to recruit adoptive parents for them -- are not trying to find permanent homes for children. States which fail to provide any treatment at all for sexually abused children are not providing services to meet children's needs. Nevertheless, and regrettably, these situations exist in too many of our cities and states -- all of which operate federally-funded children welfare systems.

The standards currently contained in federal law do not permit advocates to challenge a state for violating federal law based on the view that one approach to children's services may be better than another. It does permit advocates to seek protection for children, however, when a state does not even develop its own reasonable approach. Without such standards, and the right to enforce these standards, children are entirely without protection.

Increasingly, and in some measure because the federal government has not itself ensured meaningful implementation of the law, the standards in federal law have been used as the basis for lawsuits on behalf of abused and neglected children. For example:

> In the District of Columbia, Caseloads were so high that one worker testified she couldn't develop plans for children -- she just wanted to make sure that all the children on her caseload were still alive. Almost no children were adopted, because the District did such a poor job of recruitng adoptive parents and making children legally available for adoption. Young children lived for years in expensive emergency institutions because foster parents weren't recruited or screened, and there were virtually no services to either help parents keep their children at home, or to help them take children back from foster care.
>
> In addition to being extraordinarily damaging to children, the Washington, D.C., foster care system wasted extraordinary amounts of

money. Children were kept in the most expensive but unsuitable kinds of care, and left in foster care when they could have been discharged either to their parents or to adoptive parents. The computer system was so outdated that over a million dollars was being paid to foster parents who no longer cared for children but whose names had never been taken off the rolls.

After a successful lawsuit was brought, problems remain but a great deal has already changed: training was instituted for all workers; the number of workers tripled; foster homes are now being visited and supervised; hundreds of children are being adopted; special units have been created to help children stay out of foster care by providing short-term help to their parents; and the response to child abuse and neglect reports has become more timely.

Now, because of continuing difficulties, outside experts have been brought in by the federal court to help the District solve some of its problems that continue to put children at risk.

LaShawn had spent her entire six years in foster care when the case went to trial, and was matched with adoptive parents because of the lawsuit. Her adoptive father said that when she came to live with his family, she didn't even know how to jump rope, tie her shoes, or play with other children. "This was a little girl who didn't know what a hug was. She didn't know what love was," he has said.

Although the problems in the District of Columbia are well known, the problems in its child welfare system are not, unfortunately, unique to this city.

Other systems have had similar problems, and lawsuits there have produced similar results.

In Connecticut, a lawsuit was filed after the state social services commissioner likened the system to a "hospital emergency room" and decried the "senseless, merciless destruction and devastation of our children." The state agency was failing to investigate 60% of the children reported as abused or neglected. The medical needs of children in state custody often did not receive routine medical care, foster parents were so underpaid that committed foster parents had to reach into their own pockets to buy adequate food and clothing for children, limiting the number of people willing to provide homes for children. Connecticut had many of the same problems afflicting the Washington, D.C. system.

A lawsuit filed in 1989 resulted in a consent decree approved 13 months later. Since then the state has been moving forward with implementation, sometimes unevenly, but with the clear goal of improving services for children in the state. Among the many achievements: a 50% reduction in caseload, so workers can provide better services to children; the creation of a training academy; the development of statewide policies; and an increase in payments to foster parents to meet minimal government standards for the care of a child.

In New Mexico, an adoption system was created where none existed, and where one-third of the foster care population was characterized by a state report as being "in limbo," after a lawsuit based on federal law was filed.

In Kansas, a lawsuit based in part on federal law and relying on the results of a state auditing agency that concluded that protective service investigations were not taking place as required by law, that children were not receiving case plans and were being placed in dangerous foster homes, and that few efforts were being made to have children adopted when they could not be returned to their parents, resulted in a consent decree that incorporates a statewide reform plan.

It would have been difficult to have produced these benefits for children without being able to rely on the specific standards contained in federal law, and which Congress is considering eliminating through block granting.

It is an extraordinary fact that for many children in federally-funded state foster care, their time in government custody will be more damaging than the abuse or neglect they suffered originally. It is extraordinary that this is taking place at the expense of the federal taxpayers. For the most part, states have not complied with the existing minimal protections afforded to children in existing federal law. Nor is there any evidence at all to suggest that the existence of the law or of the 427 reviews were in any way responsible for the deplorable state of child welfare services nationally. Eliminating rather than strengthening these protections, and the possibility of effective federal oversight, by block-granting federal child welfare services and foster care programs to the states will surely not provide any benefits to children. It will only leave them more vulnerable and unprotected than they already are.

Chairman JOHNSON. Thank you very much, Ms. Lowry.
Mr. Petit.

STATEMENT OF MICHAEL PETIT, DEPUTY DIRECTOR, CHILD WELFARE LEAGUE OF AMERICA, INC.

Mr. PETIT. Madam Chairman and members of the subcommittee, I am Michael Petit. I am the deputy director at the Child Welfare League of America, a 75-year-old nonprofit organization that represents 800 public and private child-serving organizations. About 2.5 million children a year are served by our member agencies.

In the last 25 years, I have worked on child welfare issues and have traveled to all 50 of the States working to evaluate and strengthen their child welfare systems. In the 8 years prior to that, I was the commissioner of Maine's Department of Human Services, which is that State's child welfare agency. In my travels, I discovered that the good news is, like the lady who testified at the beginning, there are thousands of individuals privately and within agencies who successfully protect children each day and who help families learn to better manage their own affairs. Yet, hundreds of others—hundreds of thousands of other children are living in dangerous and neglectful situations and most of those children are presently known to the authorities. For these children, government at all levels is the one thing that stands between them and grave injury.

It is our strong belief that the Federal role in this instance needs to be strengthened, not weakened. The real issue is that which you were alluding to earlier, which is that an increasing number of families are unable to manage the affairs of their children safely. The consequence of that is a State and county child welfare system that is so overburdened that many children in danger are literally receiving no protection whatsoever.

On the whole, the child welfare programs that we have visited in the country—and as I said, our work is helping those States to evaluate their systems—are generally severely underresourced. There are no States that meet Child Welfare League of America standards. We have been setting those standards for nearly 75 years. We have 11 volumes of such standards.

The caseloads that we encounter are as much as 100 to 1. Our recommended caseload standards in some of those programs are as low as 15 to 1.

With respect to flexibility and block granting, we think that is a terrific idea, at one level, the flexibility. But if the States were operating to the maximum degree of flexibility and efficiency, they would still be severely underresourced. There are simply too many families—States have been virtually overwhelmed by the crush of cases that have been brought to their attention.

The 18 children that you made reference to earlier, Madam Chairman, last year in Chicago, that were discovered in a neglectful situation, I subsequently met with many agencies across the country around that particular issue. It is viewed as a garden-variety type of a neglect problem; it is not viewed as an extraordinary case at all.

Representative McDermott asked what can be done programmatically. Among the things we are strongly advancing are

notions like getting serious with teenage pregnancy and all that means. Home visitor programs to certain households, particularly teenagers on AFDC, until such time as it is proven that home visitations are no longer necessary.

We have got some excellent models on that: Serious parenting instruction; child care in every school in this country, including programs that are run by junior and senior high school students; and with regards to training, one-half of the States have no preservice training right now for the child welfare workers. You can be a 23-year-old socialworker on Friday doing food stamps, and on Monday you are talking about somebody who has had sex with their children.

Having served as a State administrator myself and having interviewed hundreds over the years, 427 is a meaningless process for most of the States. It represents no kind of sanctions to the States whatsoever. It is viewed as a paper tiger.

Overall, I would give the system a grade of D. The reason why is that, for example, half of the kids that are killed in this country at the hands of their family members are already previously reported to the department. In one study, 40 percent of the kids returned from foster care, 1 year later, had been reabused and were back in State custody.

And one area that is seriously neglected is child sexual abuse. It is our belief right now that fewer than 1 out of 10 child sexual abuse cases in this country, where a felony has been committed, result in a prosecution. That means that 90 percent don't have a prosecution. And in State after State we ask judges, socialworkers and others if they believe that there are children that they know who are living at home with a sexual perpetrator, and the answer is always yes.

Some States have a much stronger inclination to do this than others. Let me give you two States, 3 million people in both States. One of them spends $24 million on its entire child welfare system. The other one spends $240 million on its child welfare system. Block granting anything back to the States is not going to change that reality.

The State's general fund appropriation is $4 million in the first instance. In that State, I have visited children in jail, 9 years old, whose only offense is to have been sexually abused by an adult, in jail because there was no other place to locate the child; children, 13 years old, in straitjackets because of mental illness, in local lockups without legal representation.

One of the consequences of all this is that telephone calls come into jurisdictions in which they are supposed to generate a protective investigation. In one jurisdiction we are working with right now, they get 30,000 referrals a year. They screen out 24,000, they go out on 6,000. They don't go out on 24,000. Imagine a comparable situation with the local fire department in which there is an inquiry over the phone trying to screen out a fire call because of, how hot is the smoke and what color is—what color is the flame?

Finally, with regards to the paperwork issue that was raised by Congressman Matsui, our experience, when we asked socialworkers this question—we have asked thousands of them, how much of your time is spent on paperwork versus families, it ranges from a

low of 3 percent with families, to not much more than 25 percent with families.

There is a crushing weight of paper. I would submit, though, that it is marginally related to Federal reviews. It is mostly related to the kinds of legal processes that are going on in the courts.

And I would just note that on that, when we are talking about taking children away from their families, I have a hard time imagining something that isn't going to be largely driven by certain legalistic considerations. Our testimony includes, I think, some 14 recommendations which I would be happy to talk about at some point.

[The prepared statement follows:]

TESTIMONY OF MICHAEL PETIT
CHILD WELFARE LEAGUE OF AMERICA, INC.

Madam Chairwoman and members of the Subcommittee, I am Michael Petit, Deputy Director of the Child Welfare League of America (CWLA). CWLA is a membership organization representing 800 public and voluntary child serving agencies that assist over 2.5 million vulnerable children and families each year. CWLA welcomes this opportunity to testify on federal child welfare programs and how the Congress might better protect children and improve their lives. I believe this is an urgent matter. Children are in danger and the federal government has a key role to play to protect them.

The principal focus of my work throughout my career has been to work on behalf of families in the care, development, safety and protection of children. At CWLA I also serve as the Director of CWLA's National Center for Excellence in Child Welfare. I have been to all 50 states and in nearly all of them have worked with state and local governments to evaluate and strengthen their abilities to better protect our nation's children. In the eight years prior to my work at CWLA, I served as the Commissioner for the State of Maine's Human Services Department. That Department had jurisdiction over child welfare, AFDC, Food Stamps and Medicaid. In the decade prior to that, I worked for private non-profit organizations such as United Way at the neighborhood and local level.

CWLA concurs wholeheartedly with your Subcommittee's desire to reexamine the effectiveness of current federal efforts on behalf of abused and neglected children. The good news is that there are many thousands of individuals, to be found in every state and jurisdiction, who are deeply committed to the care and safety of children and who everyday successfully protect and serve children at risk, whether in or out of their home, and who help families learn better ways to manage their own affairs. Their dedicated efforts provide the front line assistance that children need and these workers deserve great recognition for the important work they perform daily.

However, children's lives are in danger and the federal government has a critical role to play to keep them safe. I have found that, despite the best efforts of local communities and state governments, the work of the country's public and private child welfare agencies is insufficient to the task. Unless the federal government provides more leadership, not less, promotes greater accountability, not less, and commits more resources, not less, to the care and protection of children, states will not be able to adequately protect and care for the lives of our children. Hundred of thousands of children are at risk of serious injury and death and many of them known to authorities are failing to receive the attention and protection they require.

Much needs to be done to remedy these terrible situations. Specific to the questions posed by the Subcommittee, CWLA urges that an entitlement be maintained to help children receive the services they need to keep them safe. A block grant could severely undermine state and local community efforts to protect and serve children by eliminating the individual guarantee of support. Many of these children are in state custody. In other words, the state is their legal parent. They should not have to depend on an accident of geography and goodwill to be protected. We also must ensure enforceable protections for children in whatever systems are put in place. Accountability that includes a range of sanctions with real teeth is needed at all levels. Right now, 427 reviews don't accomplish that objective.

While child welfare is the administrative focus on these issues, the courts, as we all know, play a central part in child welfare determinations and must be included in new partnership to address the problems.

STATE CHILD WELFARE SYSTEMS ARE SO OVERBURDENED THAT MANY CHILDREN IN DANGER RECEIVE NO PROTECTION

I have worked with thousands of individuals engaged in the process of caring and protecting our nation's most vulnerable children—social workers, judges, law enforcement officers, prosecutors, state and local administrators, elected officials, therapists, educators, public health officials, and hundreds of children and families whom the system is intended to serve. I have learned first hand of many abused children who are protected, and whose families are successfully helped, because of effective intervention. But I have also learned first hand of numerous children, young and old:

- who are profoundly neglected—no food; no medical care, no personal hygiene
- who are abandoned—a six-year-old boy pushed from his car and left on the interstate
- who are seriously abused—severe head injuries resulting in a life time of paralysis and semi-consciousness spent in nursing homes
- who are raped repeatedly by adults—as young as 4 weeks old with venereal diseases, a 5 year old child with cerebral palsy sexually assaulted in her own crib
- and who are killed—burned to death in furnaces, hacked to death, drowned when forced to drink gallons of water.

Unfortunately, those agencies and individuals with the principal responsibility for addressing the horrible problems experienced by many children are nearly overwhelmed by the sheer number of children in need of protection, and by the increasing number of parents unable to fulfill their traditional protective responsibilities to their children. Having worked in this field for 25 years, I conclude that the nation's response to the often life-threatening conditions in which many of these young victims lives is unorganized, underfunded and, ultimately, completely inadequate.

Although child welfare operations vary wildly from one jurisdiction to another, sometimes even within the same state, and certainly some do a better job than others, the federal Title IV-E 427 review process has largely been ineffective in capturing these differences and certainly in compelling, or even guiding, corrective actions to improve the situation.

FEDERAL PROTECTIONS AND SANCTIONS ARE CRITICAL

Having served as a state administrator myself, and having worked with hundreds of others over the years, I can state with confidence that the use of federal sanctions aimed at correcting major deficiencies in state or local operations is not a worry to the states because, in practice, there are no federal sanctions. While the 427 review process has indeed created an onerous paper burden in some jurisdictions, it has not worked to effectively change the way the system care for our children. Congress and the Administration have begun to take welcomed steps to improve the 427 review process. Much more needs to be done.

The idea of a vigorous federal monitoring role must not be dismissed. In fact, CWLA believes that the federal government must assume a much stronger role in working with state jurisdictions, in a true partnership, to attack the widespread problems of child abuse and neglect which deeply threaten and damage our culture.

PRINCIPLES OF P.L. 96-272 REMAIN SOUND

CWLA continues to endorse the progressive principles passed by Congress in 1980 and contained in the Adoption Assistance and Child Welfare Reform Act (P.L. 96-272). We believe this law's emphasis on making all reasonable efforts to allow abused and neglected children to remain in their own homes with their own families, if it can be done safely, is the proper central tenet in providing assistance to troubled families and their children. In many jurisdictions across the country progress has been made in introducing family-focused, child-centered services in response to abuse and neglect; many children have been able to remain safely at home or safely returned to their homes after receiving short or long-term placements because of P.L. 96-272's commitment to reasonable efforts and family reunification. This is an accomplishment with which we can be pleased.

Specifically built into the law are the following priorities:

- providing supports to families in order to prevent separation of children from their families

- where separation is necessary, providing support services to enable children to be reunited with their families

- where reunification with their own families is not possible or appropriate, providing services that enable children to be adopted or placed in permanent foster homes with some form of legal protection.

To accomplish the above purpose and priorities, the law incorporates a number of procedural reforms and fiscal incentives:

- Provision of preplacement and postplacement services to keep children in their own homes or reunite with their families as soon as possible. These are sometimes referred to as services that must satisfy the "reasonable efforts" clause of the law.

- Requirements of case plans, periodic reviews, management information systems, and other procedures to ensure that children are removed from their homes only when necessary and are placed with permanent families in a timely fashion.

- Redirecting federal funds away from inappropriate foster care placement and toward permanent alternatives, particularly adoption.

- Establishment of adoption assistance programs, specifically federally funded subsidies for adoption of children with special needs, such as older, disabled and minority children.

Despite these provisions, the nation's collective response to abused, neglected and abandoned children is failing to provide both protection and appropriate living arrangements for hundreds of thousands of them: many are removed from their families prematurely without reasonable efforts having been made. Some are not removed quickly enough. Many children unnecessarily remain in foster care because of inadequate reunification efforts. Other children are reunified but without adequate follow-up services to their families, resulting in re-abuse and removal once more. Some children and youth are placed in facilities appropriate to their needs, others are placed in programs that are too restrictive or nor restrictive enough. For some children, known to be living in dangerous or threatening conditions, little or nothing is being done.

It is also reflected in the deaths of children killed at the hands of family members, nearly half of whom had previously been reported as abused or neglected prior to their death. A study found that 40% of one group of foster children, who had been reunified with their families, were placed back in foster care within a year because of re-abuse or further neglect. An informal, but reliable, opinion surveys of child welfare agencies and law enforcement agencies revealed that perhaps fewer than one in ten strongly suspected cases of child sexual abuse result in prosecution and conviction.

FEDERAL GOVERNMENT HAS KEY ROLE

CWLA strongly believes that the principal role of government and private agencies in the lives of troubled children and families is to enable families, whenever possible, to better manage their own affairs and safely care for their children. We are talking about the protection and care of millions of children.

Some jurisdictions have a much stronger inclination and capacity than others to address this urgent challenge. For example, consider the commitment of resources: two like-sized states of nearly 3 million people have allotted hugely different sums to child welfare, twenty-four million dollars in one state, two-hundred and forty million in the other, the last time I looked.

In the first state, we have seen children as young as nine years old, whose only offense was to have been sexually abused by an adult, spending days in jail because there was no foster home, emergency shelter or residential care facility for the child. In the second state, there is a well developed network of treatment services and shelter to help the child.

In the first state, child welfare workers involved in the most intimate aspects of a family's life can begin their job having received little or no training. In the second state, workers must have sufficient experience and education prior to being employed by the agency and receive weeks of specialized training prior to ever handling a case.

In the first state, juveniles who run away from home or who commit the most modest offenses, such as shoplifting or not attending school, can find themselves in a state training school or local jail, sometimes without legal representation, because there is no alternative shelter. In the second state, there is a network of specialized treatment and residential care aimed at meeting the child's needs and getting him reunited with his family as quickly as possible.

In the first state, there are no intensive family preservation services which might have prevented placement in the first instance. In the second state, there is a statewide network of family preservation services preventing hundreds of unnecessary placements each year.

In the first state, a well defined blueprint documenting in detail the extensive child welfare problems that exist, including what it would take to correct the problems is ignored by the governor and legislature despite extensive press coverage and a large state budget surplus. In the second state, the governor and legislature convene public forums, hold press conferences, convene citizen groups and conduct the extensive public education and planning needed to effectively protect abused and neglected children.

Neither the 427 review process nor any other federal oversight mechanism captured the differences in these two states and the subsequent harm that routinely befall the children in the first state.

The different responses by these states are not unusual nationally. In some states, elected officials provide leadership on behalf of abused children. In other states, we regularly encounter situations in which the basic attitude towards child welfare, communicated by top elected officials in the executive and legislative branches to child welfare administrators at budget time, is "don't ask, don't tell." And they usually don't. When they do, they may be fired, a situation we have encountered more than once. Neither the 427 review process, nor any other federal oversight mechanism, is able to address this reality at the present time.

These wide variations have tremendous implications for children. For instance, in some jurisdictions virtually all child abuse and neglect referrals result in an onsite investigation. In one jurisdiction in which we are working 30,000 referrals are made each year to the public child welfare agency. The agency screens out 24,000 by telephone. Imagine a fire department, whose dispatcher receives many false alarms, screening out 80% of its calls by telephone: How hot is the flame, the dispatcher might ask? What color is the smoke? What fabric is burning? Are you able to put it out yourself? This would be absurd, of course, because everyone recognizes that the consequences of being wrong in the assessment are so severe that it is worth the added cost to check every situation in person. This is how it should be for our children.

CWLA believes the amount of child abuse and neglect in this country is a national crisis. We believe it is contributing directly to subsequent criminal behavior. We know that many child victims eventually turn the tables and become the menacing victimizers we have come to fear. In the debate about crime insufficient attention is being paid to the connection between child abuse and neglect and public safety. We absolutely concur that neighborhoods, communities, counties, states, public and private providers of services, families themselves and all others with an interest in the well-being of children must be deeply involved and have important roles to play in solving the alarming and worsening problem of abuse and neglect.

We believe equally however, that despite the best efforts of local communities and state governments, the work of the nation's public and private child welfare agencies will remain insufficient to the task unless the federal government provides more leadership, promotes greater accountability and commits more, not fewer, resources to the care and protection of children. We believe a national strategy is necessary and must be tied together by a federal government working in close cooperation with states and local communities in the public and private sectors.

We recommend:

1. **First, maintain the entitlements** for all services necessary to provide care and protection to children who are brought into state custody. Block granting the entitlements would undermine the ability to protect and serve children and would make safety dependent on accidents of geography or individual goodwill. Careful and thoughtful consolidation of some discretionary activities in related areas would make good programmatic and fiscal sense.

2. **Include enforceable protections** in whatever systems are put in place. At present the federal government is a paper tiger in addressing the worst violations of federal intentions in child welfare. In numerous instances where class action litigation has been filed the state had recently passed a 427 review.

3. **Assume greater responsibility for coordinating and enforcing all federal child welfare initiatives,** and provide support and guidance to the governors enabling them to better coordinate federal efforts at the state level.

4. **Promote a nationwide unifying theme of child-centered, family-focused casework practice** as the heart of government strategy for protecting the safety and best interests of abused and neglected children.

5. **Provide support for the full array of prevention and treatment services** necessary to assist victims of child abuse and neglect.

6. **Develop national standards for child welfare practice** and condition federal funds to the states upon full adherence to these standards by the year 2000.

7. **Develop a national data base,** with mandatory state participation, that allows for more serious and effective accountability and planning.

8. **Establish and enforce more rigorous and comprehensive scrutiny of child welfare outcomes** within the states.

9. **Continue support for new computerized case management technology** that promises to better protect children, reduce unnecessary removal of children from their families, greatly reduce paperwork, increase social worker productivity and strengthen management capacity.

10. **Identify the true costs required to respond effectively to the country's child welfare crisis,** based on uniformly developed, state-by-state budget estimates, and provide the federal funds to support the national governments fair share needs.

11. **Develop a nationwide system of worker recruitment, training and certification,** including ongoing training of all child-serving staff, supervisors and administrators, similar to that which exists for nurses and teachers.

12. **Conduct a nationwide campaign to recruit new foster and adoptive homes and to retain existing homes,** and assist the states in their efforts to retain current foster homes and promote adoptions.

13. **Develop a technical assistance capacity to assist the states** in the transformation of their child welfare systems.

14. **Convene a national panel, to report back to the Congress** by this summer, on the scope of the problem nationally and the applicability of the above recommendation, and others, on this national failure to our children.

We recognize better than anyone that the federal government is unable to provide the warmth and attention that every injured child requires for healing. But we do know more about producing healthy children than ever before. We are committed to the idea that children do best when families are attentive to their needs. We believe equally that families themselves do best when communities are attentive to **their** needs. That speaks to the need for supportive public policies that help communities help families in the care and protection of all children. The federal government must assume a far more vigorous role in working with the states to assure that every child in every community is protected.

Thank you for this opportunity to express our concerns and suggestions. We and our 800 member agencies across the United States look forward to working with members of the Subcommittee and its staff to craft smarter and more effective ways to address the needs of injured children.

Chairman JOHNSON. Thank you very much.
Mr. Henry, Children's Rights Council.

STATEMENT OF RONALD K. HENRY, ESQ., CHILDREN'S RIGHTS COUNCIL

Mr. HENRY. Thank you. My name is Ron Henry. I am a volunteer child welfare attorney, testifying today on behalf of the Children's Rights Council. The Children's Rights Council would like to thank the Chair and the committee members for scheduling this very important hearing on the reform of the Federal role in child welfare programs.

The Children's Rights Council is a nonprofit educational organization whose sole purposes are the encouragement of family formation, family preservation, and the demilitarization of divorce to keep both parents actively involved in the child's life.

In providing services to children, we must always begin with the understanding that the best service we can provide to at-risk children is to reduce the number of children who become at-risk. Regardless of the social pathology that is under study—whether it be teenage pregnancy, drug abuse, suicide, low self-esteem, juvenile delinquency, poor academic performance or any of our other social ills—the greatest causal factor that researchers find for us is family breakdown or family nonformation or, as you heard from some of the earlier witnesses, father absence. We believe and we are here to talk to you today about the most underutilized resource in child welfare; that is, the family itself.

All of our programs currently focus on the single custodial mother alone. We give huge arrays of resources, many of which you have heard described today. We prop up that single mother as a stand-alone entity and insist over and over again, despite experience, that we are going to make it work.

Many of these single-parent families will never be able to function without support. Many of them will never even be able to function with support. Many of them continue in the very abuse and neglect that brought the child into the system in the first place. We know that from our history. That is why we have been discussing such things as orphanages, and other third-party placements for children.

Right now, our problem is that policy assumes a dichotomy of choices for children. Either we preserve that single-mother, propped-up situation, or we go to third-party care. We believe there is another way, a middle ground. That is, kinship care, using the resources of the full connection of blood-related relatives, all the people who care about and have a passionate love for that child because of their relationship to the child. That is the resource that is often overlooked and the one that we think needs to be brought more fully to the center.

If we continue to believe that the single custodial mother is the child's sole family, we will be butting our heads against the wall forever. We will be continuing to come up with new props, new services, 7-days-a-week housekeepers and the rest. That is not going to get us anywhere.

The typical at-risk child enters the welfare system as the result of an abuse and neglect complaint. Many of these abuse and ne-

glect complaints are initiated by other family members who observe and are concerned about the child's status.

Now, before addressing the positive steps that we can take as a government to aid that child, we first must be sure to obey the physician's creed, "do no harm." Too often, our approach does harm. When the Federal Government's narrow definition of family preservation is heavily oriented toward defending the single-parent custodial household, Federal intervention can and does actually prevent an improvement in the child's situation.

Take, for example, the sadly all-too-common case of an abusive or neglectful parent who is reported to authorities by other relatives, such as the grandparents. The grandparents are concerned about the welfare of the grandchild. They are frequently willing, even eager, to provide rescue for the child in their own home. Rather than obeying the physician's creed, however, Federal family preservation resources are reflexively mobilized on behalf of the abusive parent—cash benefits, the housekeeper, counseling, in-home services, free or subsidized legal services and other resources are all brought to bear to prop up that dysfunctional single parent. Generally, the only party who is not legally represented or subsidized by the Federal Government will be the very relative who reported the child's need and offered himself as a rescuer in the first place.

One simple but critical reform is to recognize that family preservation is not limited to the single-parent household, but includes the blood relatives of the extended family or kinship network. Whether it is the father, the grandparent or the aunt who seeks to be part of the answer for the child's needs, the government is wrong when it defines family preservation to exclude these relatives and actually mobilizes its own resources to resist their involvement.

The tunnel vision that afflicts current family preservation efforts can be seen at all stages of the child welfare process. It is rare for a caseworker even to seek the identity of the child's father, and almost unheard of for the caseworker to seek information regarding the father's fitness and willingness to provide for the child's needs. Too often, we ask only, can that father send a check. We don't look at that father as a human being, as a parent, as a physical and emotional resource for the child. If the father or another relative independently comes forward in an effort to assist the child, the caseworker's standard response is to resist rather than embrace the assistance. This resistance is wrong.

The government's interest is in protecting the child and not in defending one parent's ownership of that child against all others. Family preservation must be understood to include and encourage the participation of all family members, and must move beyond the mere administration of programs designed to prop up the single parent as a stand-alone entity.

Now, Madam Chairman, I have a number of specific responses or ideas in response to Congressman Matsui's request, which I will save for the question and answer period. But just to conclude briefly, the committee recognizes the broad differences among State programs. One of the things that we do wrong now is to measure State performance in terms of the number of Band-Aids they count and

administer; we are measuring how many Band-Aids rather than how much healing.

We need to change the 427 review process to look at the extent to which child welfare is enhanced. We need to look at whether the child's safety is improved, whether the child's behavior is improved, and whether the child's school performance has improved.

Madam Chairman, I look forward to the question period. Thank you.

[The prepared statement follows:]

TESTIMONY OF THE CHILDREN'S RIGHTS COUNCIL
BEFORE THE UNITED STATES HOUSE OF REPRESENTATIVES
COMMITTEE ON WAYS AND MEANS, SUBCOMMITTEE ON OVERSIGHT
JANUARY 23, 1995
PRESENTED BY RONALD K. HENRY

The Children's Rights Council thanks the Chair and Committee Members for scheduling this very important hearing on reform of the federal role in child welfare programs.

The Children's Rights Council is a non-profit, educational organization whose sole purposes are the encouragement of family formation, family preservation, and the "demilitarization" of divorce.

In providing services to children, we must always begin with the understanding that the best service we can provide to "at-risk" children is to reduce the number of children who become "at-risk". Regardless of the social pathology that is under study, whether it be teenage pregnancy, drug abuse, suicide, low self-esteem, juvenile delinquency, poor academic performance, or any of our other social ills, the greatest causal factor is family breakdown or family non-formation.

Virtually all of our social welfare programs are band aids and tonics to treat our childrens' afflictions. The intact two parent family is the immunization program that reduces the tragic needs for band aids and tonics. Too often, our government programs have forgotten the simple axiom that prevention is better than treatment. This hearing on family preservation programs specifically demonstrates the need to reform government programs that focus on treating symptoms while leaving the cause of the symptoms in place.

In virtually all of our programs, the phrase "family preservation" has become narrowly defined to mean the propping up of the single mother household as a stand-alone entity. While most single parents do all they can for their children, and many children of single parents develop beautifully, the inescapable history of our programs demonstrates that many single mother households will never succeed as stand-alone units and many children in those households are in grave danger, both physically and developmentally.

THE KINSHIP CARE ALTERNATIVE

The typical "at-risk" child enters the child welfare system as a result of an abuse and neglect complaint or at the request of the single custodial parent. Many of the abuse and neglect complaints are initiated by other family members who observe and are concerned about the child's status. Before addressing positive steps that can be taken by the government that can aid the child, we must be sure to obey the physician's creed of "First, do no harm."

When the federal government's narrow definition of "family preservation" is heavily oriented toward defending the single parent custodial household, the federal intervention can actually prevent an improvement in the child's situation. Take, for example, the sadly all too common case of an abusive or neglectful parent who is reported to authorities by other relatives such as the grandparents. The grandparents are concerned about the welfare of the grandchild and are frequently willing, eagerly or reluctantly, to provide rescue in their own home. Rather than obeying the physician's creed, however, federal "family preservation" resources are reflexively mobilized

on behalf of the abusive parent. Cash benefits, counseling, in-home services, free or subsidized legal services, and other resources are brought to bear to prop-up the dysfunctional single parent. Generally, the only party not legally represented and subsidized by the federal government will be the relative who reported the child's need and offered to serve as a refuge. One simple but critical reform is to recognize that family preservation is not limited to the single parent household but includes blood relatives in the extended family or "kinship" network. Whether it is the father, the grandparents, or the aunt who seeks to be part of the answer to the child's needs, the government is wrong when it defines "family preservation" to exclude these relatives and actively mobilizes its resources to resist their involvement.

The tunnel vision that afflicts current "family preservation" efforts can be seen at all stages of the child welfare process. It is rare for a caseworker even to seek the identity of the child's father and almost unheard of for the caseworker to seek information regarding the father's fitness and willingness to provide for the child's needs. If the father or another relative independently comes forward in an effort to assist the child, the caseworker's standard response is to resist rather than embrace the assistance. This resistance is wrong. The government's interest is in protecting the child and not in defending one parent's ownership of that child against all others. "Family preservation" must be understood to include and encourage the participation of all family members and must move beyond the mere administration of programs designed to prop up the single parent as a stand-alone entity.

The absurdity of the current system is even more starkly highlighted in situations where the caseworker realizes that the child must be taken from the care of the single parent. In every state in the country, the standard operating procedure is for the bureaucracy to skip over the entire extended family and consider only third party placement. The bureaucracy's fallacy is in viewing child placement as a simple dichotomy -- an unfit single parent versus third party foster care or adoption. Kinship care needs to be recognized as the broad middle on the continuum of options between single parent custody and third party placement.

While the Committee recognizes broad operating differences in the programs and procedures among the various states, the above prejudices and irrationalities have become a universal outgrowth of the current, narrow federal view of "family preservation." If child welfare programs remain federally directed, "family preservation" must be clearly redefined to embrace and encourage fathers, grandparents and other relatives as child rescuers. If the states are given block grants, the federal government must assure that its responsibility for having created this bias is countermanded in the block grant terms in order to assure that the block grants do not merely perpetuate the status quo.

Regardless of the form given to new child welfare programs, the federal government must change its method for the measurement of program success. Like many federal programs, the 427 review process examines the number of band-aids that have been applied to the wounds rather than the amount of healing that has taken place. In 427 reviews, the states are asked to disclose the number of band-aids and give a description and explanation of those band-aids. What is needed in reforming the

427 process is an evaluation that looks at those things that actually matter in the lives of children:

- Has the child's safety improved?
- Has the child's behavior improved?
- Has the child's school performance improved?

We know that the states are capable of running programs that use lots of band-aids. The federal government's evaluation system needs to be structured to incentivize the states not simply to devote more resources to the problem but to devote the available resources to those things which measurably improve child well being.

Kinship care is a resource currently overlooked by the too narrow definition of "family preservation". Kinship care does not create any new legal obligations, it merely embraces the voluntary love and resources of the family. Kinship care saves money. Unlike foster care providers, kinship care providers need not (Lipscomb v. Simmons, (9th Circuit, April 27, 1992)) and should not (to avoid improper incentives) be paid a salary in caring for their own kin. Kinship care improves child well being, reduces spending, and reduces government intrusion by promoting true family preservation.

The remainder of this testimony describes the overview of the Children's Rights Council's approach to welfare reform with particular emphasis upon the methods by which kinship care can become an important part of the solution in AFDC cases as well as in child welfare cases.

WELFARE REFORM INTRODUCTION

It is time to reform welfare. We must change the systems under which our only criteria are that beneficiaries must continue to neither work nor marry. Children are harmed when the unintended consequence of policy is to favor non-working, single parent households over all others. Most law-abiding citizens work 40 to 45 years to qualify for a social security benefit that is smaller than a teenager's welfare package.

Welfare reform requires attention to four areas: responsibility, paternity, accountability, and eligibility.

Responsibility. Every welfare recipient should be required to devote 40 hours per week to some combination of job search, training and work, with a strong emphasis on work. Revising current programs to end the existing discrimination against two-parent families will also increase access to child-care from both parents and reduce the cost of day-care needs.

Paternity. Current policy fails to distinguish between "runaway" and "thrown away" or "driven away" parents. Successful paternity establishment requires that fathers must be accepted and respected in all programs as family members rather than merely as cash donors.

Accountability. Prior efforts at reform have been reluctant to impose sanctions against uncooperative and irresponsible adults because of a fear of "punishing the child." The reality is that current policies allow children to be held as hostages to guarantee continued subsidy of adult irresponsibility.

Eligibility. Minor parents must live with or at the expense of their own parents. Income based eligibility standards should consider both the income of the parents and the resources

that are voluntarily available from the kinship network. Fraud must be addressed as a serious matter.

The following pages provide:

(1) an Overview of Principles and Programs (pages __ to __);

(2) a proposal for kinship care as an alternative to government care (pages __ to __);

(3) a proposal to end federal pre-emption of state law regarding teenage births (pages __ to __);

(4) a proposal for allocation of the dependent tax exemption (pages __ to __); and

(5) a proposal for dealing with program fraud (pages __ to __).

A. OVERVIEW OF PRINCIPLES AND PROGRAMS

There is widespread agreement that the current welfare system is destructive of the families it was intended to help. Despite its good intentions, the government has made a devil's bargain with the poor -- "We will give you money as long as you continue to neither work nor marry." Current programs and many reform proposals are patronizing. They assume that large classes of citizens are simply too stupid and incompetent to make any current or near term contribution to their own support. Real welfare reform requires recognition that there is no respect for the individual unless there is respect for the individual's labor.

1. "Making Work Pay": Rhetoric and Reality

Work always pays. Our problem is that we have established a parallel system under which non-work often pays better. Most law abiding citizens work 40 or 45 years to qualify for a social security benefit that is smaller than a teenager's welfare package. Many welfare recipients are not unemployed, they are prematurely retired. We have long recognized that Social Security rules discourage paid employment among senior citizens. We have recently recognized that welfare rules discourage paid employment among welfare recipients. The cornerstone of welfare reform must be respect for the importance and dignity of work. Except for the small number of people who are genuinely unable to make any contribution to their own needs, welfare must be a supplement, not a substitute for work.

Welfare reform requires attention to four areas: responsibility, paternity, accountability, and eligibility.

2. Responsibility

Responsibility should be immediate, mandatory and universal. Beginning immediately with entry into any welfare program, every recipient should be required to devote 40 hours per week to some combination of job search, training and work with a strong emphasis on work. Actual work experience is generally the best training for advancement in the work place. An immediate, universal work requirement also eliminates the "no job" option and encourages serious search efforts for the best available job.

The work requirement can be satisfied by private employment or by unpaid public service in exchange for receipt of the welfare benefit. Work programs should not discriminate against the non-welfare working poor. Vouchers and other special incentives to hire welfare recipients create the risk of displacing other workers. We should not support programs that have the unintended consequence of encouraging people to enter welfare as the path to job preferences. Community service jobs (e.g., assignment to charitable organizations) provide benefits to the community and training to the employee at little or no government cost. Many of the current, unmet needs of communities can be satisfied by this new pool of labor as a supplement to, rather than a substitute for, current employees.

All programs must be open to and end the current discrimination against two parent families. In two parent families, at least one parent must satisfy the 40 hour requirement.

Welfare reform should also begin the process of examining barriers to entry-level job creation. Many worthy tasks in society are not performed because the total cost of obtaining labor, including regulatory and recordkeeping burdens, exceeds the value of the service. We need to examine the extent to which willing workers have been priced out of the market by government mandates.

Child care may be less of a problem than argued by some. Most current working parents utilize some low-cost combination of family, friends and school to satisfy day care needs. As discrimination against two parent households is eliminated, a greater number of children will have access to child care from both parents. Finally, a portion of the community service assignments can be made to child care organizations to increase the available supply at little or no incremental cost. The Head Start Program already utilizes large numbers of low income parents who begin as unpaid interns and progess to paid staff and supervisory positions.

3. Paternity

Current policy fails to distinguish between "runaway" and "thrown away" or "driven away" parents. The federal government spends approximately two billion dollars per year on child support enforcement but purposefully and consciously excludes fathers from all parent-child programs. Under current AFDC rules, the low income father who wishes to be a physical and emotional asset to his children also becomes a financial liability by disqualifying them from most assistance. Research conducted by HHS itself confirms that both mothers and fathers distrust the bureaucracy and work jointly to conceal paternity. We cannot be surprised by low income parents who separate or conceal paternity when our policies make such behavior the economically rational course. A work requirement for single parents and an end to discrimination against two-parent households will change the dynamics of paternity establishment.

Eligibility for all federal programs should require establishment of paternity, beginning with eligibility for the WIC program. That program itself must be revised to develop and encourage the roles of fathers.

Paternity establishment forms in hospital programs should encourage the parties to voluntarily establish custody and visitation as well as financial support. Avoidance of poverty and welfare dependency are directly linked to father involvement. Child support compliance exceeds 90 percent in joint custody families. Child poverty rates and welfare dependency rates are much lower in father custody families than in mother custody.

Women's workforce participation and economic security are increased in joint custody and father custody families.

4. Accountability

AFDC and other programs are intended for the benefit of the dependent children. Adults receive the benefits and are expected to participate in the programs in support of the children's needs. Failure or refusal to participate in required programs or to spend the cash payments for the benefit of the children should be seen as evidence of child neglect or abuse. Such evidence should weigh heavily in determining whether it is in the best interests of the child to transfer custody to a more responsible relative or to consider a foster care placement. Prior efforts at reform have been reluctant to impose sanctions upon uncooperative and irresponsible adults because of a fear of "punishing the child." The reality is that current policies allow children to be held as hostages to guarantee continued subsidy of adult irresponsibility.

All recipients should be required to reimburse the value of benefits received. Currently, child support paid by non-custodial parents is used for reimbursement after a $50 per month waiver. The custodial parent should have the obligation to reimburse one-half of the welfare payments made on behalf of the child and each adult should have the obligation to reimburse benefits paid on behalf of that adult. Many welfare recipients require only short term assistance and that assistance can fairly be treated as a loan or a line of credit rather than as a grant. A uniform reimbursement requirement also encourages all recipients to minimize the period of dependency, take no more benefits than are required, and resume paid employment at the earliest possible date. Community service should be counted toward the reimbursement obligation but should be valued at a level that does not compete with the attractiveness of paid employment.

5. Eligibility

Under the law of each state, parents have an obligation of financial responsibility for their minor children. If the minor children themselves become parents, the minor parents should continue to be the obligation of their own parents. Accordingly, the birth of a child to minor parents may create a requirement for welfare assistance to the new infant but does not create a requirement for assistance to the minor parents unless their own parents are unable to supply the required support. Minor parents must live with or at the expense of their own parents. Payments on behalf of the new infant should be made to the parents of the minor parents as their guardians.

Welfare payments should be limited to citizens and immigrants with refugee status.

Income based eligibility standards should consider both the income of the parents and any resources that are voluntarily available from the kinship network. See attached proposal for more details.

Fraud must be addressed as a serious matter. Welfare benefits are based on the applicant's self-reporting of available income. If welfare fraud has concealed additional income, welfare eligibility must be recalculated, at a minimum, to include the demonstrated capacity for self support. See attached proposal for further details. Other fraud reduction mechanisms including electronic transfers and improved identification verification must be adopted.

The earned income tax credit must be modified to reduce the incentive and opportunity for strategies such as over-reporting of income to maximize benefits and to reduce discrimination against two parent families. Currently, many working class couples are ineligible for EITC but, simply by splitting into two dysfunctional fragments, both become eligible.

B. WELFARE ELIGIBILITY -- KINSHIP ALTERNATIVES TO WELFARE

There is a broad consensus that welfare dependency is not in the best interests of children. Recent legislative initiatives have begun to examine the structural flaws in existing welfare programs. One of the best opportunities for reducing welfare dependency is to be found in the development of more thoughtful eligibility criteria to better identify the children who are actually in need of welfare assistance.

Currently, most welfare programs look only at the cash income of the custodial single parent without regard to the availability of voluntary kinship or extended family assistance. The attached proposal provides that welfare eligibility should be determined by examining all resources that are available voluntarily through the child's kinship network.

The proposal does not relieve the child's parents of their obligations nor does it impose new obligations on other relatives. Only voluntary kinship assistance is considered.

Examples:

- Brother is willing to care for child of drug abuser with or without change of custody/guardianship. Welfare dependency is not in the best interests of the child and eligibility should be denied.
- Father of child is willing to provide child care with or without change of custody while mother works. Welfare dependency is not in the best interests of the child and eligibility should be denied.
- Adolescent mother lives with her parents. The parents have a legal obligation to support their adolescent daughter and are willing to care for grandchild while daughter completes school or works. Welfare dependency is not in the best interests of the child and eligibility should be denied.

KINSHIP CARE ACT OF 1995

SECTION ONE FINDINGS AND PURPOSES

The Congress of the United States finds that:

Welfare programs are intended to provide temporary economic sustenance for individuals while they seek to enter the workforce and eventually extricate themselves and their dependents from poverty.

Welfare programs have fallen short of this goal as many individuals receiving assistance fail to find and retain jobs.

The failure to escape poverty persists through generations as children of welfare families go onto welfare rolls as adults, resulting in a needless waste of human potential as well as economic and other costs to society.

A primary cause of intergenerational welfare dependency is the adverse impact of the welfare environment upon children.

To break intergenerational welfare dependency requires, where possible, the separation of children from the welfare environment and their placement into family situations that will be conducive to rejection of the welfare career.

Current welfare provisions lack measures that would assist in the elimination of intergenerational welfare dependency and, indeed, actually encourage such dependency by ignoring the availability of non-welfare alternatives for dependent children.

It is therefore in the public interest to amend the welfare laws to eliminate the encouragement of intergenerational welfare dependency and to promote the placement of children in non-welfare environments more conducive to an economically and socially productive adulthood.

SECTION TWO **AMENDMENT TO PUBLIC LAW NO. _____**

Section _____ of Public Law No. _____ is hereby amended to add a new subsection _____ as follows:

Subsection _____:

No person shall be eligible to receive benefits under this program by reason of the need of that person to support one or more child dependents unless the administrator *[or agency or other appropriate state official]* has certified, after undertaking diligent efforts, that there are no family members who are fit and willing to provide for the needs of such child without resort to welfare dependency. Such certification shall be required prior to initial entry into the program and, thereafter, upon periodic reviews of eligibility conducted annually.

C. TEENAGE PARENTS - WELFARE ELIGIBILITY

Under the law of each state, parents have an obligation of financial responsibility for their own minor children. If the minor children themselves become parents, these minor parents should continue to be the obligation of their own parents.

Current welfare eligibility rules subvert this basic rule of parental responsibility and create perverse incentives for teenage child bearing. Simply by having a child, federal programs give the teenager an independent income source and relieve the teenager's parents of the obligations imposed by state law.

Under state law, a minor must live with or at the expense of his or her own parents. The birth of a child to that minor should not be a basis for the federal government to override state law. The federal government should not subsidize the establishment of independent households by minors.

If the parents of the minor are already on public assistance, their payments should be governed by the rules applicable to other families experiencing the birth of an additional dependent. If the parents of the minor are a danger to the minor or grandchild, the case should be processed under the normal rules of guardianship used by the state. Again, there

is no justification for a federal program which automatically establishes all minors as independent households upon the birth of a baby.

D. DIVORCED FAMILIES - DEPENDENT TAX EXEMPTION

Prior law provided that the dependent exemption for a child of divorced parents was available to the parent providing greater than 50% of the child's support. At that time, it was difficult to determine which parent provided greater than 50% of the support and the law was changed in 1984 to create a presumption that the exemption would be given to the custodial parent. The current law has created some new problems and has not kept pace with federally imposed changes in the establishment of child support orders.

Most divorce litigants do not have lawyers and, even with lawyers, most divorce decrees fail to address the allocation of the dependent tax exemption. Some courts have taken the position that they do not have authority to allocate the exemption to the non-custodial parent even in cases where the custodial parent is unemployed and it is clear that the non-custodian is providing 100% of the child's financial support. Allocating the dependent exemption to a household with no income does not help the child and, in fact, reduces the after-tax income available to support the child.

Recent federal legislation governing the establishment of child support orders has eliminated the uncertainty which motivated the 1984 law regarding allocation of the dependent exemption. In the past, child support orders were subjective, ad hoc determinations that did not identify each parent's share of the child's financial costs. Federal law now requires that each state have a presumptive, mathematical guideline for the establishment of child support. Under the "income shares" model used by most states, the state determines a child's costs and then allocates these costs in proportion to each parent's income. The child support computation formula thus establishes unambiguously which parent provides more than 50% of the child's financial support.

The law should be revised to provide that the dependent exemption shall be allocated to the parent who bears more than 50% of the child's financial support as established by the applicable child support order. To avoid ambiguity and dispute, the taxpayer claiming the exemption could be required to submit a copy of the court order as an attachment to the tax return. Most child support orders are now generated by computers using the state's child support formula and are set forth in a one page computer printout.

E. RESPONDING TO WELFARE FRAUD

In the District of Columbia and in most states, welfare fraud is a no-risk adventure.

If caught, the standard guilty plea merely requires restitution (sometimes only partial) which is paid out of future welfare benefits! Welfare is a disastrously anti-family program in which the government offers itself as a substitute for responsible two-parent family behavior. Welfare fraud multiples the problem by making welfare more lucrative.

Welfare benefits are predicated on the assumption that the welfare recipient cannot earn an outside income and that a government subsidy is required for basic needs. Initially, we accept the applicant's unilateral assertion of this inability to earn an income. In the case of the welfare cheat, however,

behavior proves that an income can be earned and the receipt of welfare benefits is simply a theft of benefits that are not needed. Having proved that an income can be earned, the welfare cheat should be disqualified from receiving benefits in the future at least to the extent of the earnings potential that has been demonstrated.

Past enforcement efforts have been backward. The welfare cheat is permitted to quit the unreported job and go back to the dole. The reverse should be true. Having demonstrated earning capacity, the welfare cheat should be disqualified from again asserting an inability to earn income.

In the current economic crisis of budget deficits and soaring welfare rolls, it may finally be possible to impose serious sanctions upon welfare cheaters. The following legislative suggestions are offered:

1. The presence of unreported income means that the welfare cheat either does not need or has less need for welfare. Accordingly, the law should provide that welfare benefits will be reduced or eliminated on a forward-going basis to reflect the income that was being earned during the fraud and thus can be earned in the future.

2. State laws providing for mandatory jail terms of not less than 30 days for all persons convicted of welfare fraud should be required as a condition for a state's receipt of federal funds.

3. State laws providing that conviction for welfare fraud is a sufficient basis to support a judicial finding that it is in the best interests of the child for custody to be placed with another relative should be required as a condition for a state's receipt of federal funds.

4. State laws providing that conviction for welfare fraud is a sufficient basis to support a judicial finding of neglect or abuse so that the child may be placed in foster case should be required as a condition for a state's receipt of federal funds.

Chairman JOHNSON. Thank you. We appreciate your comments. Dr. Berger.

STATEMENT OF BRIGITTE BERGER, PROFESSOR OF SOCIOLOGY, BOSTON UNIVERSITY, BOSTON, MASS.

Ms. BERGER. Thank you very much.

I am a sociologist who has worked in family issues for a long time. I have written a number of books on these issues, including issues of child care, foster care, and the care of handicapped and severely disabled children. I could easily have talked about these issues to this committee. However, the Postal Service's—the Federal Postal Service's Specialty Express Service does not function as well as one would expect. So you have to make do with what I have to say today, which is slightly different from what the charge from the Chair has been.

The purpose of my testimony is to strongly endorse making use of largely unrestricted block grants in the overhaul of the national welfare system and to urge this committee not to fall prey to the fatal error to cast the issue of welfare reform in political and economic terms only.

A large set of data available to us today compels us to recognize that three decades of Federal intervention has resulted in the creation of a new culture of relative dependency at the bottom of American society that is stubbornly resistant to simple administrative and economic measures. It is therefore of singular importance, to my mind, to recognize that welfare today is threatened by the cultural dimensions of welfare dependency; and if you wish to make a dent in the, by now, deeply entrenched welfare culture, you will have to make use of culture-changing measures.

Block grants, in my opinion, offer a first and perhaps only available mechanism. In my written testimony, I provide the more detailed rationale that has led me to this conclusion.

I have first reviewed the data that show how we have gotten ourselves into this welfare mess. And while I do not wish to throw aspersions around—we all have to share blame together—there is no doubt in my mind that the phenomenal explosion of welfare rolls coincides precisely with the plethora of grants and programs that Federal intervention has dispensed.

The second point, then, which I am addressing, is why is that so in spite of the enormous amounts of money we have spent on these issues. And here I have come to a conclusion, which is as simple as it is straightforward.

I do think that Federal programs have unintentionally circumvented precisely those social mechanisms and factors which make for the spontaneous growth of a productive culture. As you can see, I take culture very seriously; and again in my testimony I take some pains to spell out how culture functions and, in particular, how in the absence of what I call "the mediating institutions" of the family, neighborhood and ethnic organizations, and the churches—the American welfare population has been deprived of its most important help.

The next point which I am trying to make here is that with the wisdom of hindsight we cannot help but come to the conclusion that Federal efforts have largely served as conduit and reinforce-

ment of the dysfunctional social norms leading to the consolidation of a dysfunctional welfare culture, which we are now called upon to address.

Now, how do we get out of this mess? And that is the next point which I am spelling out in my detailed presentation you have before you.

I think it is important to recognize there are no easy panaceas. Once the social fabric has been torn, there is very little the government, at any level, can do but prevent the worst from happening. If there is any hope for turning the present situation around, we are obliged to return to precisely those ground level mechanisms that have proven to be useful in providing structure and meaning to individual life—the family, the community, and religion.

I have written a lot about the role of the family. And everything I have heard so far at these hearings confirms my own findings that the past welfare practices have conveniently bypassed the family. It is only very recently that we have rediscovered the family, and then only by trying to superimpose all kinds of restrictions on its normal functioning. Nonetheless, it is very important that we recognize as well that the present welfare population—mostly women and children, single women and children—cannot help themselves and need some kind of support. What kind of support? Community support, voluntaristic, spontaneous groups that exist in every community, the support of the churches.

Now, I want to come to an end very quickly. I spell this out, if and how it can be done. The most critical point which I make in my testimony is this connection, one that I know will raise a lot of problems to this committee, is that I wish to urge that block grant mechanisms will allow religion to do its good work as it has done in the past. I know that I am getting into conflict with the first amendment and the way it has been interpreted since the sixties. I do think we can reverse some of these questions and problems by returning welfare to the State level. On the local level, where everyone is involved, these issues will have to be sorted out in a responsible manner. I have no doubt that all citizens can do that.

[The prepared statement follows:]

Brigitte Berger
Professor of Sociology
Boston University

Testimony before the House Ways and Means Committee - January 23,1995

Re: **Block Grants**

Mr. Chairman, Members of the Committee: Permit me to thank you for the opportunity to testify before this Committee. I am here today in a dual capacity: first as a sociologist located at Boston University, who has worked and written on issues relating to the social institution of the family and the community, and second, as a member of the Advisory Board of the Massachusetts based Pioneer Institute, an independent, nonprofit research organization funded by individuals, corporations, and foundations. While I cannot officially speak for this Institute, I know that my thinking reflects that favored by it.

The purpose of my testimony is to strongly endorse the making use of largely unrestricted block grants in the overhaul of the national welfare system and to urge this Committee not to fall prey to the fatal error to cast the issue of welfare reform in political and economic terms only. A large set of data available today compells us to recognize that three decades of federal interventionism has resulted in the creation of a new culture of welfare dependency at the bottom of American society that is stubbornly resistant to simple administrative and economic measures. It is therefore of singular importance for us to recognize that welfare today is driven by cultural dimensions of welfare dependency. If we wish to make a dent in the by now deeply entrenched and continually spreading welfare culture we will have to make use of culture-changing measures. Block grants, in my opinion offer us the first, and perhaps only available mechanism, for getting the country out of the current welfare mess.

The frightening statistics on factors making for the phenomenal rise of the welfare rolls - illegitimacy, teenage motherhood, single parenthood, delinquency, crime and substance abuse

- are only too well known for me to comment on here. By the same token, it is equally well known that the same period that saw the componential increase of children and women on welfare coincided with the explosion of a plethora of federal child welfare programs - family planning, prenatal and postnatal care, child nutrition, child abuse prevention and treatment, child health and guidance, daycare, Headstart, and many more in addition to the "big three" (AFDC,Medicaid, and Food Stamps). Both individually and collectively most, though not all, of these programs have fallen way short of producing the desired effects. The growing number of children growing up in poverty are not measurably better off today than they were some thirty years ago and all too many seem to be trapped into a life of poverty. Well-intentioned governmental programs appear to have accomplished little more than making child welfare a purview of the federal government, with governmental coffers disgorging ever larger amounts of money, and with no limits in sight.

Time and again it has been demonstrated that this new welfare culture exerts not only an intolerable drain on the national economy, but equally importantly, it is destructive of individual human lives. What is more, the new culture of welfare dependency is morally unacceptable and fraught with perils for the nation's future. While the block-granting mechanism in and by itself cannot provide us with ready-made panaceas, it is a very important first step toward genuine welfare reform.

This line of argumentation, I would propose, is as commonsensical as it is straightforward. Once a culture - that is the ways in which people behave, their values and their lifestyles - has come into existence, it starts to take on a dynamics of its own. And once this has happened, it is extremely difficult to change. If lifestyle changes can be brought about at all, then certainly not by government fiat. The bitter experience of the past decades have brought into start relief the impotence of the federal government for this task. If productive cultural changes could be brought about simply by a combination of good intentions, money, and an active involvement on part of the federal government, then surely the cornucopia of federal programs that have been institutionalized across the country in the course of the past decades should have done the trick. The term "culture" as used in the social sciences, however, though

not mysterious is something much more complicated. It is the spontaneous production of collective social life arising at the intersection of family, work, and voluntary associations taking place in any society. The problem with the existing welfare policies is that they have discouraged precisely these elements vital to the productive functioning of culture to do their work.

Permit me to elaborate this argument briefly. The welfare dependency culture that has taken roots in the wasteland of America's inner cities is a culture in which the game of social life is played out between isolated individuals at the bottom of society and the large, distant bureaucracies of the welfare state at the top. The federal policies of the past decades have bypassed the elements that traditionally mediate between the individual and the distant state, the family and voluntaristic institutions, such as informal neighborhood and ethnic associations and the churches. In the absence of the vital input flowing from these mediating institutions, an anomic culture of dependency has been forged which prevents individuals from developing habits of self-reliance and the capacity to plan for a future independent of government hand-outs, just as it prevents those trapped in it from taking advantage of existing educational and job opportunities. It is a culture characterized by fatalistic attitudes and chaotic lifestyles, a culture in which the language of entitlement has replaced the language of responsibility. It is contagious and produces a social ethos that stands in direct contradiction to precisely those norms and values that have made for America's strength in the past. Contrary to all intentions, the welfare system in its 1960s liberal mode has cut all too many people loose from their familial moorings, has isolated them from communal ties, deprived them of the spiritual and moral guidance of religious institutions and driven them into an existential and psychological dependency on the state.

It would be unfair to put the blame for the rise of the new welfare dependency culture on federal intervention policies only. Broad and poorly understood shifts in the normative order of society have transformed all segments of twentieth-century America with cataclysmic speed regardless of their location in the social hierarchy. Yet despite a general discrediting of traditional virtues, the American middle classes have been able to withstand the most harmful

effects of the turbulent 1960s and 1970s. Those living at the bottom of society have not. While massive federal interventionist practices may not have been solely responsible for the creation and diffusion of welfare dependency, it is safe to argue that they certainly were instrumental in giving expression and shape to its formation. Hence it is legitimate to conclude that America's welfare classes are not primarily victims of an unjust economy or a neglectful government. Rather, they are the victims of both general shifts in the normative order as well as ill-conceived interventionist efforts, the consequences of which neither the poor nor their welfare mentors expected. With the wisdom of hindsight, it is heartbreaking to observe that these well-intentioned federal efforts largely served as conduit and reinforcement of dysfunctional social norms leading to the consolidation of a dysfunctional welfare culture which we now are called upon to undo.

There are no easy panaceas for achieving this monumental task. Once the social fabric has been torn, there appears to be precious little government can do but prevent the worst from happening. If there is any hope for turning the present situation around, we are obliged to return to those ground-level mechanisms that have a proven track record in providing structure and meaning to individual life, namely the social institutions of the family, the community, and religion.

Let me here say only a few things about the role of the family. Common to all current debates on welfare reform is the rediscovery of the central importance of the traditional family of father, mother, and their children, tied to each other by bonds of mutual affection and obligations, living and striving together while pooling their resources. This rediscovery is fairly recent and it pains me to say that federal policy in its 1960s mode has done more than its share in discrediting the traditional family. Although two-parent families still form about half of the households below the poverty line at any given point in time, they rarely stay in poverty for extended periods, nor do they often show up among the homeless. Children in two-parent families have a better start in life than children from single-parent households where fathers are totally absent or play only a minimal role in their lives. A huge set of data collected over the past decades has led to the insight that welfare dependency, along with a

host of other pressing domestic problems such as rampant youth crime and the catastrophic failure of public education, is rooted in profound shifts in both the structure of the American family as well as its moral code. Statistics on separation, desertion, divorce, and illegitimate births document the collapse of the two-parent family among the welfare-dependent class. More qualitative research points to far-reaching changes in the welfare population relating to the commitment to the family as an institution, attitudes toward work and authority, and the ability to defer gratification. Together these shifts have fused into a devastating amalgam of influences with important consequences for the growing number of the persistently poor.

How we can turn this situation around is then one of the most pressing questions before the nation. The children and women of the welfare dependency class are certainly unable to achieve this on their own, nor will merely punitive governmental policies help those who are too young to help themselves. A vast social science literature attests to the capacity of religious and other more informal institutions arising at the level of the community in bringing about changes in the values and behavior of individuals and groups. The important role of mediating institutions has been recognized for long. Unfortunately, they have frequently been misused by policy experts sitting at distant planning boards. The community organization programs designed by the poverty warriors of the 1960s and 1970s may serve as a somber warning of the futility of policies that parachute programs - and their organizers - into communities of which they have little knowledge, while ignoring precisely those institutions that stand at the core of all individual and communal life. In divorcing the issue of welfare from the exigencies of family, informal community dynamics as well as from the accepted standards of morality, these 1960s programs merely served to turn welfare into a support system individuals have learned to feel entitled to, irrespective of their lifestyle choices. When we turn today once more to local initiatives, we will do well to remember the disastrous history of past efforts that circumvented precisely those forces that alone are able to make for stable and productive community dynamics.

There is no question about the necessity for government to protect and provide for children and the weak who cannot rely on those who should be their natural protectors and providers.

In the face of the overwhelming evidence from the grim experiences of the past, however, it is more than doubtful that federal bureaucracies located in Washington are up to the task. Although it goes without saying, that basic individual rights must be guaranteed and enforced on the national level, decentralizing public power from the federal government and shifting it to smaller units closer to the targeted problems make eminent sense. **I think it therefore of great importance that block grants to the states come with as few restrictions as possible.**The precise mix between federal restrictions and mandates, on the one hand, and the discretionary power of individual states, on the other, is still an open question and will have to be carefully worked out. Yet one thing is already perfectly clear today: federal interference must be kept at a minimum. In the absence of any fool-proof recipes for the reduction of the current welfare dependency culture, states must be allowed and encouraged to explore and experiment with initiatives and programs best suited to deal with local, and frequently distinctive problems. Only in this manner can efforts be identified that not only hold the potential for changing welfare-dependent behavior and that simultaneously hold the potential for creating dynamics productive of community development.

Fears have been voiced in recent weeks that without the protection of federal entitlement legislation the poor will be at the mercy of uncaring states and mean communities. Such fears sound hollow in the face of strong evidence to the contrary. This nation, more than any other I know, can be rightly proud of its voluntaristic tradition. It is this tradition that has made for America's strength and uniqueness. An extraordinary degree of compassion, of responsibility, and tolerance continues to thrive today in all sectors of American society from coast to coast. Not to provide considerable discretionary powers to the states, would, from the perspective I aargue here,, severely defeat the very purpose of the block grant initiative. Most important, such federal restrictions would in all likelihood interfere with the culture-building dynamics needed for achieving genuine and lasting welfare reform.

My recommendation that block granting should not be burdened by undue federal restrictions is further informed by the recognition of the important role religion plays in the transformation of individual values and behavior. We know from the data available to us -

and our experience reinforces this knowledge - that nothing can compete with religion in effecting lasting changes in the behavior of individuals. The utilization of religion to this end, however, runs directly counter to the highly secularist interpretation of the First Amendment that has been favored by the courts since the early 1960s. While nothing is further from my mind than to argue for some new establishment of religion by the state, I think it of some importance to ensure that the law does not inhibit states from making use of the guidance and sustenance-providing capacity of the very institution central to the life of most Americans. The historical evidence of the role religious institutions have played in incorporating generations of poor and destitute people into the mainstream of American society is too well known to this gremium to be trotted out once more.

My recommendation that also present-day federal legislation should not unduly interfere with the opportunity to make use of religion's behavior-changing and culture-building potential will, undoubtedly, lead to a major political battle. The fate of America's welfare population, however, demands immediate action and cannot wait for the outcome of prolonged disputes. Unrestricted block grants to the states, I would argue, allow for a renewed deliberation and sorting out of church-state issues in more manageable settings. On the basis of all we know, we have good reason to hope that the responsible and compassionate citizens of all states of the Union will arrive at formulas that will not deprive today's poor of the benefits of religion in their search for a purposeful and meaningful life.

My support of block grants then is informed by considerations among which the identification of mechanisms that promise productive changes in the current culture of welfare dependency figures prominently. Converting the present federally financed and organized welfare system into unrestricted block grants to the states is the necessary first step in the reversal of a situation in which federal policies designed to aid the poor have unintentionally turned welfare into an institution that feeds on itself. For genuine welfare reform to occur, however, individual states, in turn will have to carry the task of reform yet one step further.A number of states currently working under waivers, have already explored new and promising ways to achieve welfare reform. All states of the Union, I finally would recommend, should be obliged to reach out to municipalities, to businesses, and to private groups in their respective states in order to encourage initiatives of scale consonant with the distinctive needs of their welfare population. Common sense leads us to believe - and the research data confirm it - local and ethically inspired initiatives are our single best hope to bring about the much needed welfare reforms.

Chairman JOHNSON. Thank you very much, Dr. Berger.
Ms. Driver.

STATEMENT OF CORINNE DRIVER, DIRECTOR, NATIONAL ASSOCIATION OF FOSTER CARE REVIEWERS; ACCOMPANIED BY CHARLES COOPER, ADMINISTRATOR, CITIZEN FOSTER CARE REVIEW BOARD, STATE OF MARYLAND

Ms. DRIVER. Honorable hungry Congresspeople, thank you for including citizen volunteers in your discussions. I am Corinne Driver, a volunteer and unsalaried executive director of the National Association of Foster Care Reviewers, a nonprofit organization which promotes citizen review for every child removed from home by the State.

Children play with blocks. Blocks must not play with children. This statement explains citizen review, an existing, dynamic, cost-effective, community-based monitoring system, in which citizens review every child removed from home; promotes ongoing, periodic, independent review for all children in placement; recommends that volunteers can carry out those reviews cost-effectively; suggests that trained, experienced citizens should be empowered to share in holding their tax supported public systems accountable; suggests the 427s made a difference, even though they were woefully inadequate; and recommends that Congress must hold public systems to standards of good case practice and must maintain penalties.

With me is Charles Cooper, administrator of the Maryland Citizen Foster Care Review Board. Charlie represents more than 400 Maryland volunteer citizen reviewers supported by 25 staff. Maryland reviewers conducted nearly 11,000 reviews of individual foster children last year. Nationally, in 1992, 3,500 volunteers reviewed case plans for over 50,000 children.

Before 427 reviews, States did not even know how many children were in their care. States did not have data on children in care. Children were lingering longer in the system than necessary. Costly for the State, yes, but what about the cost to the child? Before citizen review came to New Jersey, which is my home State, the agency was responsible for about 13,000 children. They were not sure. When citizen review came into being 3 years after that, the caseload had dropped to 6,500. Expediting children out of the system saves money.

Citizen review boards exist by virtue of State law or judicial mandate, and usually consist of five trained citizens. I am representing those citizens who can tell of children like Maria, for whom the agency plan was return to her father until she told my review board that for the second time she was carrying her father's child.

Constituents can tell you of children whose biggest problem is bureaucratic policies within the very systems that are supposed to be helping, systems supported by our own tax dollars. If the policy of block granting is to bring decisionmaking closer to home, who better than citizens from home to require accountability?

Citizen review boards examine plans and results for each child in placement. Citizen review boards achieve hands-on accountability for each child, give citizens responsibility for fellow citizens, remove vested interests from foster care decisionmaking, create a

window into and offer accountability for the workings of taxpayer-supported public systems, and empower knowledgeable citizens to work toward improving those systems.

As a trained citizen reviewer under an oath of confidentiality, I went to Newark, N.J., weekly to review confidential records and plans for children and to talk with children, parents, foster parents and caseworkers. We studied the caseworkers' confidential file and previous court rulings. We told them our job was advisory and that our focus was to move children out of foster care and into permanent homes as quickly as possible.

Our periodic reviews often revealed lack of progress, sometimes because no caseworker had been assigned. Often, work on the case began just before our periodic review. Amazing. Often citizen review has impacted on a constipated adoption system where children get stuck.

In Nebraska, home of Boys Town, three separate studies have confirmed that a child is twice as likely to be adopted if the child is being monitored by a citizen review board. Think of the money that saves.

Wade Horn has already cited a Kansas example, and that saves money, too.

Despite imperfect 427s, it was remarkable, as reviewers watched their States take notice of foster care caseloads when their actions were subject to scrutiny and their dollars were on the line. It was wonderful as we watched 427 monitoring enlighten courts about their responsibilities to the foster care population. But bringing decisionmaking closer to home means we must bring monitoring closer to home.

Block grants must build in accountability. The intent and clout of the 427 reviews should be maintained.

I urge you, continue to protect children by requiring independent individual case reviews.

Incorporate in block grant philosophy standards, expectations and accountability for results. Maintain the ability to withhold funding based on documented results. Require States to put in place a strong independent cost-effective monitoring mechanism using trained volunteers, and assign block grant support directly to that monitoring mechanism to assure its independence.

Thank you.

[The prepared statement follows:]

STATEMENT TO THE WAYS & MEANS COMMITTEE
JANUARY 21, 1995

THIS TESTIMONY IS SUBMITTED BY CORINNE DRIVER, A VOLUNTEER AND UNSALARIED EXECUTIVE DIRECTOR OF THE NATIONAL ASSOCIATION OF FOSTER CARE REVIEWERS, (NAFCR), A NON-PROFIT ORGANIZATION WHICH PROMOTES THE ACCOUNTABILITY MECHANISM OF CITIZEN REVIEW FOR EVERY CHILD REMOVED FROM HOME BY THE STATE.

CHILDREN PLAY WITH BLOCKS.
BLOCKS MUST NOT PLAY WITH CHILDREN.

THIS STATEMENT:

- PROMOTES CONTINUING THE PERIODIC INDEPENDENT REVIEW FOR ALL CHILDREN IN PLACEMENT
- SUPPORTS THE INTENT OF 427 REVIEWS
- SUGGESTS THE 427s MADE A DIFFERENCE EVEN THOUGH THEY WERE WOEFULLY INADEQUATE
- RECOMMENDS THAT MONITORING AND PENALTIES MUST BE MAINTAINED WHETHER TITLE IVB AND IVE MONIES ARE BLOCK GRANTED OR NOT
- PROMOTES THE NEED FOR STANDARDS, OVERSIGHT AND ACCOUNTABILITY FOR EXPENDITURE OF TAX DOLLARS
- RECOMMENDS A COST EFFECTIVE MECHANISM, BASED 90% ON VOLUNTEER POWER, TO CARRY OUT THE INTENT OF THE 427 REVIEWS AND PROVIDE THE FEDERAL GOVERNMENT WITH INFORMATION UPON WHICH TO EVALUATE STATE'S ADHERENCE TO PRESCRIBED PROTECTIONS FOR CHILDREN
- EXPLAINS CITIZEN REVIEW, AN EXISTING, DYNAMIC, COST EFFECTIVE COMMUNITY BASED MONITORING SYSTEM IN WHICH TAXPAYING CITIZENS REVIEW EVERY CHILD REMOVED FROM HOME
- RECOMMENDS PROMULGATION TO ALL STATES OF INDEPENDENT, COST EFFECTIVE CITIZEN REVIEW
- RECOMMENDS EMPOWERMENT OF CITIZENS TO HOLD PUBLIC SYSTEMS ACCOUNTABLE BY BLOCK GRANTING DIRECTLY TO STATE CITIZEN REVIEW SYSTEMS
- RECOMMENDS ASSURING QUALITY CONTROL OF CASE BY CASE DATA GATHERING AND EXCELLENT TRAINING OF VOLUNTEERS BY A BLOCK GRANT TO THE NATIONAL ASSOCIATION OF FOSTER CARE REVIEWERS

****

WHY DOES CURRENT LAW REQUIRE INDEPENDENT REVIEW OF CHILDREN IN PLACEMENT? BECAUSE:

- STATES DID NOT EVEN KNOW HOW MANY CHILDREN WERE UNDER THEIR CARE
- STATES DID NOT HAVE DATA ON CHILDREN IN CARE
- CHILDREN WERE LINGERING IN THE SYSTEM FAR LONGER THAN NECESSARY--COSTLY FOR THE STATE? YES--BUT WHAT ABOUT THE COST TO THE CHILD!

WITHOUT STANDARDS, INDEPENDENT MONITORING AND FISCAL PENALTIES AND/OR INCENTIVES BUILT INTO BLOCK GRANTS IT IS PROBABLE THAT CHILDREN WILL ONCE AGAIN LANGUISH IN CARE AND CASELOADS INCREASE.

WHEN CITIZEN REVIEW BOARDS BEGAN IN NEW JERSEY IN 1979, ALMOST 10% OF CASES REVIEWED BY MY REVIEW BOARD WERE CHILDREN WHO HAD BEEN IN CARE THEIR WHOLE LIVES--INCLUDING MANY CHILDREN OVER 16 YEARS OLD. MANY OF THOSE CHILDREN HAD BEEN SHUFFLED FROM PLACE TO PLACE BY THE SYSTEM. ONE CHILD HAD OVER 30 DIFFERENT PLACEMENTS!

CITIZEN REVIEW BOARDS
A DESCRIPTION OF HOW THEY WORK

A PRIMARY GOAL OF NAFCR IS TO PROMOTE CITIZEN FOSTER CARE REVIEW BOARDS, A COST EFFECTIVE, CITIZEN BASED ACCOUNTABILITY MECHANISM FOCUSED ON CHILDREN IN PLACEMENT.

WHAT IS A CITIZEN REVIEW BOARD? CITIZEN REVIEW BOARDS EXIST BY VIRTUE OF STATE LAW OR JUDICIAL MANDATE AND USUALLY CONSIST OF FIVE TRAINED CITIZENS. CITIZEN REVIEW BOARDS EXAMINE PLANS AND RESULTS FOR EACH CHILD IN PLACEMENT. CITIZEN REVIEW BOARDS:

a. ACHIEVE HANDS ON ACCOUNTABILITY FOR EACH CHILD
b. GIVE CITIZENS RESPONSIBILITY FOR FELLOW CITIZENS
c. REMOVE VESTED INTEREST FROM FOSTER CARE DECISION MAKING
d. CREATE A WINDOW INTO AND OFFER ACCOUNTABILITY FOR THE WORKINGS OF TAXPAYER SUPPORTED PUBLIC SYSTEMS
e. EMPOWER KNOWLEDGEABLE CITIZENS TO WORK TOWARD IMPROVING THOSE SYSTEMS

TO EXPLAIN CITIZEN REVIEW I WILL USE MY OWN EXPERIENCE. AS A CITIZEN REVIEWER I WENT TO NEWARK NJ WEEKLY FOR OVER A DOZEN YEARS TO REVIEW CONFIDENTIAL RECORDS AND PLANS FOR CHILDREN AND TO TALK WITH CHILDREN, PARENTS, FOSTER PARENTS, AND CASEWORKERS. AFTER BEING TRAINED AND TAKING AN OATH OF CONFIDENTIALITY, MY FOUR FELLOW BOARD MEMBERS AND I BECAME A BOARD THAT REFLECTED THE SOCIO-ECONOMIC, CULTURAL, ETHNIC MAKE UP OF OUR COUNTY.

WE STUDIED THE CASEWORKER'S CONFIDENTIAL CASE FILE; PREVIOUS COURT RULINGS; CONFIDENTIAL PSYCHIATRIC, MEDICAL, AND POLICE REPORTS INCLUDING PICTURES OF BATTERED CHILDREN. WE EXPLAINED TO THE PARTIES IN EACH CASE THAT OUR JOB WAS ADVISORY, THAT OUR FOCUS WAS TO MOVE CHILDREN OUT OF FOSTER CARE AND INTO PERMANENT HOMES AS QUICKLY AS POSSIBLE AND THAT WE WERE VOLUNTEERS FROM THEIR COMMUNITY. AFTER TAKING TESTIMONY FROM ALL PARTIES, WE DISCUSSED, OFTEN DEBATED AND DEVELOPED RECOMMENDATIONS TO THE CASEWORKERS AND TO THE COURT. IT IS NOT ALWAYS EASY OR OBVIOUS TO DETERMINE THE MOST APPROPRIATE PLACEMENT PLAN FOR A CHILD.

MANY TIMES MY BOARD WAS ABLE TO REINFORCE A CASEWORKER WHO WAS GETTING NO COOPERATION FROM A RECALCITRANT PARENT OR NO ACCESS TO A JUDGE. MANY TIMES MY BOARD AMPLIFIED OR DISAGREED WITH THE AGENCY'S CASE PLAN. THIS DOES NOT MEAN THAT REVIEW BOARDS ALWAYS ASSUME AN ADVERSARIAL ROLE. OFTEN A CASEWORKER WOULD COME BEFORE US AND SAY "AGENCY POLICY REQUIRES THIS BUT I THINK SOMETHING ELSE WOULD BE BETTER FOR THAT CHILD SO PLEASE CONSIDER THAT AS YOU DEVELOP YOUR RECOMMENDATION".

OUR EXISTENCE AS A MONITORING PRESENCE ASSURED THAT CHILDREN IN OUR CASELOAD WOULD NOT END UP ON THE BOTTOM OF SOMEONE'S PILE OF CASES, NEVER TO SURFACE, THEREFORE NEVER TO BE SERVED, THEREFORE TO SPEND AN ENTIRE CHILDHOOD IN SUBSTITUTE CARE. OUR PERIODIC REVIEWS REVEALED PROGRESS OR LACK OF PROGRESS PARENTS WERE MAKING AND WHETHER CHILDREN COULD RETURN SAFELY HOME. TOO OFTEN NO ONE HAD MADE PROGRESS BECAUSE NO CASEWORKER WAS ASSIGNED. THAT USUALLY WAS DUE TO CASEWORKER TURNOVER OR CIVIL SERVICE AND BUDGETARY POLICIES. THE NECESSITY OF HAVING PERIODIC REVIEW IS DEMONSTRATED BY THE FREQUENCY WITH WHICH AGENCY WORK ON THE CASE PLAN DID NOT

BEGIN UNTIL LONG AFTER THE PLAN WAS MADE AND, COINCIDENTALLY, JUST BEFORE OUR PERIODIC REVIEW WAS SCHEDULED TO TAKE PLACE.

CITIZEN REVIEW OPENS A WINDOW TO ALL THOSE SERVICES, AGENCIES AND SYSTEMS THAT IMPACT ON A CHILD DEPENDENT ON THE STATE AS PARENT. WE HAVE LEARNED OF THE TREMENDOUS BURDEN OUR PROTECTIVE SERVICE SYSTEM PLACES ON CASEWORKERS AND OF CASEWORKERS' STRUGGLES TO HELP PEOPLE. AND WE HAVE LEARNED OF LITTLE THINGS--IRRITANTS THAT TAKE THEIR TOLL FINANCIALLY IF NOT EMOTIONALLY. IMAGINE BEING A PROTECTIVE SERVICE WORKER WALKING INTO A HOME AND, IN THE NAME OF SAFETY, TAKING A CHILD AWAY FROM THAT HOME OVER PROTESTATIONS OF PARENTS AND CHILD. WHEN YOU RETURN TO YOUR CAR WITH THE CHILD YOU FIND A PARKING TICKET ON YOUR CAR WHICH THE CITY WILL NOT FORGIVE. ADD INSULT TO INJURY AND ADD PARKING TICKETS TO THE AGENCY BUDGET. REVIEW BOARDS BEAMED QUITE A BIT OF LIGHT ON THAT PART OF THE BUDGET.

WE HAVE BEEN SHOCKED TO OBSERVE HOW OFTEN, IN SO MANY CASES, SERVICES AND AGENCIES FAIL CHILDREN AND FAMILIES. WE HAVE OBSERVED HOW SYSTEMS THAT ARE NOT WORKING FOR CHILDREN, TRAP CHILDREN IN THOSE SYSTEMS.

STATE CITIZEN ADVISORY BOARDS ARE ALSO A PART OF THE CITIZEN REVIEW SYSTEM. THE STATE BOARDS ELEVATE PRACTICAL KNOWLEDGE OF REVIEWERS AND DOCUMENTATION BY REVIEW BOARDS TO THE LEVEL OF RAISING QUESTIONS OF POLICY, PRACTICE AND PROCEDURE. STATE BOARDS ARE AN INDEPENDENT BODY MADE UP OF VOLUNTEERS, MOSTLY CITIZEN REVIEWERS, FROM JURISDICTIONS THROUGHOUT THE STATE. ADVISORY BOARDS GENERALLY ASK CITIZEN REVIEWERS TO DOCUMENT SYSTEMS BARRIERS IN EACH CASE THEY REVIEW. ADVISORY BOARDS MAKE RECOMMENDATIONS ANNUALLY TO THE LEGISLATURE, GOVERNOR AND SUPREME COURT OF THAT STATE. THEIR INDEPENDENCE ALLOWS THEM TO DIRECT RECOMMENDATIONS TO ANY PART OF THE SYSTEM.

A FEW EXAMPLES OF CITIZEN REVIEW AT WORK

CITIZENS CAN TELL YOU OF CHILDREN LIKE MARIA FOR WHOM THE AGENCY PLAN WAS RETURN TO HER FATHER--UNTIL SHE TOLD MY REVIEW BOARD THAT, FOR THE SECOND TIME, SHE WAS CARRYING HER FATHER'S CHILD. CITIZENS CAN TELL YOU OF FINDING RELATIVES THE AGENCY COULD NOT FIND OR DID NOT KNOW EXISTED. MY BOARD REVIEWED A FAMILY OF SIX CHILDREN WHO WERE SCATTERED IN FOUR DIFFERENT PLACEMENTS BECAUSE THEIR MOTHER WAS UNABLE TO PAY RENT. OUR INTERACTION WITH PARTIES WE INTERVIEWED RESULTED IN FINDING THE "LOST" FATHER WHO AGREED TO MAKE MONTHLY RENT PAYMENTS FOR HIS FAMILY OUT OF HIS LUCRATIVE TRUCK DRIVING JOB. THE STATE SAVED THE COST OF SIX FOSTER CARE PLACEMENTS.

CITIZENS CAN CITE MYRIADS OF CASE EXAMPLES DEMONSTRATING THAT ONE OF THE BIG PROBLEMS SOME CHILDREN FACE IS BUREAUCRATIC POLICIES WITHIN THE VERY SYSTEMS THAT ARE SUPPOSED TO BE HELPING CHILDREN...SYSTEMS SUPPORTED BY OUR OWN TAX DOLLARS.

BEFORE CITIZEN REVIEW CAME TO NEW JERSEY THE AGENCY WAS RESPONSIBLE FOR ABOUT 13,000 CHILDREN IN PLACEMENT. THEY WERE NOT SURE. THREE YEARS AFTER CITIZEN REVIEW, THE CASELOAD HAD DROPPED TO 6,500 DOCUMENTED CHILDREN. OTHER STATES ALSO REPORT DRAMATIC DROPS IN CASELOAD AFTER CITIZEN REVIEW BOARDS WERE INTRODUCED. THINK OF THE MONEY SAVED!

MARYLAND CITIZEN REVIEW BOARDS HAVE REVIEWED CHILDREN IN PLACEMENT FOR OVER FIFTEEN YEARS. 400 MARYLAND VOLUNTEER CITIZEN REVIEWERS ARE SUPPORTED BY 25 STAFF. MARYLAND CITIZEN REVIEWERS CONDUCTED NEARLY 11,000 REVIEWS OF

INDIVIDUAL FOSTER CHILDREN LAST YEAR. THERE IS A COST TO ADMINISTERING CITIZEN FOSTER CARE REVIEW--IN MARYLAND EACH REVIEW COSTS ABOUT EIGHTY DOLLARS ($80). IN JUXTAPOSITION TO THIS FIGURE IS THE FACT THAT THE AVERAGE ANNUAL COST IN MARYLAND OF KEEPING A CHILD IN FOSTER CARE IS $20,000. IF A CHILD IS REMOVED FROM THE SYSTEM ONE MONTH EARLIER BECAUSE OF REVIEW BOARD MONITORING, THE STATE SAVES ABOUT $1,400 IN THAT MONTH.

IOWA HAS DOCUMENTED THAT CHILDREN WITH REVIEW BOARDS WERE DISCHARGED FROM FOSTER FAMILY CARE 90 DAYS EARLIER AND FROM GROUP FOSTER CARE 29 DAYS EARLIER THAN THOSE WITHOUT REVIEW BOARDS. THESE ARE SAVINGS OF 1.5 AND 1.7 MILLION DOLLARS RESPECTIVELY. IOWA HAS ALSO DOCUMENTED THAT ADOPTION OF CHILDREN WITH REVIEW BOARDS WAS ACHIEVED 453 DAYS SOONER AT A PER CHILD COST SAVINGS OF $9,500 TO $34,000.

NATIONALLY, IN 1992, **3,500 VOLUNTEERS** REVIEWED CASE PLANS FOR OVER **50,000 CHILDREN** PLACED OUTSIDE OF THEIR HOMES. CURRENTLY NAFCR DOES NOT HAVE THE CAPACITY TO DOCUMENT THEIR SUCCESS STORIES ON A CASE BY CASE BASIS AND THEREFORE REPORT THE TOTAL DOLLAR SAVINGS. THE COST EFFECTIVENESS WOULD BE AMPLIFIED IF ONE WERE TO ASCRIBE A PER HOUR DOLLAR VALUE FOR EVERY HOUR OF VOLUNTEER TIME DONATED ON BEHALF OF CHILDREN.

KEEP THE PROTECTIONS, KEEP THE OVERSIGHT

CHILDREN IN PUBLIC SYSTEMS MUST BE PROTECTED. PL96:272 SPECIFIES SEVERAL PROTECTIONS THAT NOW APPLY TO BOTH TITLE IV-B AND IV-E PROGRAMS. THIS INCLUDES PERIODIC, INDEPENDENT MONITORING OF EVERY CHILD. THESE PROTECTIONS WERE ENUMERATED BECAUSE THEY WERE NOT BEING PRACTICED. THESE PROTECIONS MUST BE MAINTAINED AS PART OF BLOCK GRANTS. BLOCK GRANTS SHOULD MAINTAIN OVERSIGHT FOR ACCOUNTABILITY AND CONGRESS SHOULD HOLD STATES ACCOUNTABLE BY IMPOSING PENALTIES FOR FAILING TO MEET THE STANDARDS OF PROTECTION.

OUR EXPERIENCE AS CASE REVIEWERS HAS DEMONSTRATED THE IMPORTANCE OF REVIEWS IN GETTING TREATMENT FOR ABUSED AND NEGLECTED CHILDREN, PREPARING FAMILIES FOR THEIR CHILDREN'S RETURN, AND, WHERE APPROPRIATE, PUSHING AGENCIES TO FREE CHILDREN FOR ADOPTION. IT IS ESSENTIAL THAT THE CONGRESS HOLD STATES ACCOUNTABLE FOR PROVIDING THESE IMPORTANT PROTECTIONS FOR CHILDREN.

THE INTENT AND CLOUT OF THE 427s

SHOULD BE MAINTAINED
AND A LESS COSTLY REVIEW MECHANISM SHOULD BE IMPLEMENTED

THE COMMITTEE HEARING ANNOUNCEMENT IMPLIES THAT 427 REVIEWS "IMPOSE A COSTLY AND BURDENSOME WORKLOAD ON THE STATES". CERTAINLY THE REQUIREMENTS OF THOSE REVIEWS ARE PART OF GOOD CASE PRACTICE. TO REDUCE COSTS BY ELIMINATING GOOD CASE PRACTICE WILL IMPAIR THE QUALITY OF SERVICE PROVIDED BY THE AGENCY. CASELOADS WILL CLIMB--COSTS WILL ACCELERATE.

REVIEW REQUIREMENTS IMPOSED UPON THE COURTS HAVE HEIGHTENED THE REALIZATION OF JUDGES THAT THEIR DECISIONS MUST INTERACT WITH CASE PLANS AND CASE MANAGEMENT. THE COURT REQUIREMENTS

OF THE 427 REVIEWS ARE STRONG INCENTIVES FOR COMMUNICATION AND COORDIANTION ABOUT A CHILD BETWEEN CASEWORKERS AND JUDGES. HERE TOO THE REQUIREMENTS ENUMERATE LOGICAL PRACTICE AND SHOULD NOT BE PERCEIVED AS AN EXTRA COST IF THE GOAL IS TO DO THE BEST JOB POSSIBLE FOR THE CLIENT.

PERHAPS THE MOST FALLACIOUS ARGUMENT ABOUT COSTLINESS OF REQUIREMENTS UNDER 427 IS THE FACT THAT, IN MANY STATES THE INDEPENDENT REVIEW ASPECT IS CARRIED OUT COST EFFECTIVELY BY VOLUNTEERS. ALL STATES SHOULD ADOPT THIS MECHANISM AND FREE THEIR PAID AGENCY STAFF TO DO FIELD WORK INSTEAD OF CONDUCTING REVIEWS THAT ARE INTERNAL AND THEREFORE NOT REALLY INDEPENDENT. THE BEST PLAN FOR A CHILD MIGHT BE SACRIFICED TO AGENCY POLICY BY INTERNAL REVIEWERS WHO ARE BOUND BY THE POLICY.

AT THIS TIME ONLY HALF OUR STATES HAVE CITIZEN REVIEW. CONGRESSMAN CARDIN, OF THIS COMMITTEE, INTRODUCED REPORT LANGUAGE IN THE 1994 OMNIBUS BUDGET RECONCILLIATION ACT TO ENCOURAGE EXPANSION OF CITIZEN REVIEW. THE 1995 SENATE APPROPRIATIONS BILL ALSO URGES THE EXPANSION AND TRAINING OF CITIZEN REVIEWERS BY REQUESTING HHS TO ALLOCATE ONE MILLION DOLLARS ($1,000,000) TO NAFCR TO PROMOTE CITIZEN REVIEW AND TRAINING OF CITIZEN REVIEWERS.

THE NATIONAL ASSOCIATION OF FOSTER CARE REVIEWERS RECOMMENDS THAT CONGRESS EMBRACE THE CONCEPTS OF:

CITIZENS CARING FOR CITIZENS

AND

CITIZENS HOLDING THEIR TAX SUPPORTED PUBLIC SYSTEMS ACCOUNTABLE.

THE NATIONAL ASSOCIATION OF FOSTER CARE REVIEWERS RECOMMENDS THAT CONGRESS INCORPORATE IN ITS PROTECTIONS FOR CHILDREN AND FAMILIES, THE REQUIREMENT THAT A CITIZEN FOSTER CARE REVIEW BOARD REGULARLY, PERIODICALLY MONITOR EACH CHILD. AS LONG AS THAT CHILD IS IN THE PLACMENT SYSTEM.

IF THE POLICY OF BLOCKGRANTING IS TO BRING DECISION MAKING TO STATES, WHO IS BETTER ABLE THAN CITIZENS OF THE STATE TO HOLD THEIR OWN STATES ACCOUNTABLE? WHO CAN BETTER DOCUMENT THE REALITIES THAN VOLUNTEERS WITH ACCESS TO THE CONFIDENTIAL WORKINGS OF THEIR PUBLIC SYSTEMS? WHO CAN BETTER MONITOR THAN THOSE WITHOUT VESTED INTEREST. WHO CAN BETTER CALL FOR QUALITY AND ACCOUNTABILITY THAN DEDICATED VOLUNTEERS WHO DONATE THEIR TIME ON BEHALF OF CHILDREN BECAUSE THEY BELIEVE EVERY CHILD SHOULD GROW UP IN A SAFE, PERMANENT HOME?

CITIZEN REVIEW IS A PROVEN COST EFFECTIVE MECHANISM BASED 90% ON VOLUNTEER EFFORT.

CITIZEN REVIEW BRINGS OUT THE VOLUNTEER SPIRIT AND OFFERS THE COMMUNITY A WAY OF HELPING CHILDREN AND FAMILIES. CITIZEN REVIEW HAS DEMONSTRATED THAT THERE ARE LARGE NUMBERS OF PEOPLE WILLING AND CAPABLE OF VOLUNTEERING AS A REVIEWER.

IN THE LAST FIFTEEN YEARS, THE EXPERIENCE OF REVIEWERS REINFORCES THE NOTION THAT WE MUST OPEN MORE WINDOWS ONTO OUR PUBLIC SYSTEMS IF WE ARE TO KNOW HOW THEY ARE REALLY WORKING. BLOCK GRANTS OFFER AN OPPORTUNITY FOR CITIZENS TO BECOME INVOLVED WITH THEIR FELLOW CITIZENS, TO IDENTIFY WASTEFUL BUREAUCRATIC PRACTICES, TO IDENTIFY NEEDED COMMUNITY

SERVICES, TO OBSERVE THEIR TAX DOLLARS AT WORK AND TO PRESENT THEIR LEGISLATURES WITH UNBIASED FACTS.

WE RESPECTFULLY SUGGEST CITIZEN REVIEW SHOULD BE PROMOTED WHETHER TITLES IVB & E ARE BLOCK GRANTED OR NOT.

CITIZEN REVIEW AND THE ADOPTION SYSTEM

SOME EXAMPLES OF THE COST EFFECTIVENESS AND VALUE OF ONGOING CITIZEN REVIEW AS IT IMPACTS ON ADOPTION FOLLOW.

CITIZEN REVIEWERS HAVE LEARNED THAT IN STATE AFTER STATE THE ADOPTION SYSTEM IS OFTEN ILL--IT IS CONSTIPATED--THE CHILDREN GET STUCK.

- IN NEBRASKA, HOME OF THE PLACEMENT FACILITY BOYSTOWN, THREE SEPARATE STUDIES BY DR. ANN COYNE HAVE CONFIRMED THAT A CHILD IS TWICE AS LIKELY TO BE ADOPTED IF THE CHILD IS BEING MONITORED BY A CITIZEN REVIEW BOARD. THINK OF THE MONEY SAVED.

- ADOPTIONS REQUIRE COURT PROCEEDINGS. A STUDY OF THE EFFECT OF CITIZEN REVIEW BOARDS IN KANSAS INDICATED THAT CONTINUANCE OF CASES BY THE COURT WERE REDUCED BY TWO THIRDS WHEN THE CASES WERE SUBJECT OF A CITIZEN REVIEW. THINK OF THE MONEY SAVED.

- IN MARYLAND, AFTER CITIZEN REVIEWERS BEGAN TRACKING MILESTONES AND ADVOCATING SYSTEMATICALLY, THE NUMBER OF CHILDREN ADOPTED ROSE 50% AND ADOPTION DELAYS FELL 29%. THINK OF THE MONEY SAVED.

427 REVIEWS, ACCOUNTABILITY AND SANCTIONS

WE URGE YOU TO INCORPORATE IN BLOCK GRANT PHILOSOPHY ACCOUNTABILITY FOR RESULTS IN EACH STATE. THE GRANTS THEMSELVES SHOULD HAVE CLEARLY DEFINED, HIGH STANDARDS AND EXPECTATIONS ALONG WITH A SCHEDULE OF DOLLAR PENALTIES AND/OR REWARDS. CONGRESS SHOULD REQUIRE STATES TO ESTABLISH THE MONITORING MECHANISM OF CITIZEN REVIEW THAT WILL DOCUMENT ADHERENCE TO THE STANDARDS. WITHOUT SUCH AN ACCOUNTABILITY MECHANISM, HOW WILL STATE LEGISLATURES OR CONGRESS KNOW WHAT THEY ARE GETTING FOR THEIR BLOCK GRANTED DOLLARS.

AGENCIES RESPOND TO FISCAL SANCTIONS. REVIEW BOARDS OBSERVED THAT THE POSSIBILITY OF SANCTIONS WAS EXTREMELY EFFECTIVE IN FORCING STATES TO PAY ATTENTION TO THEIR FOSTER CARE CASELOAD--BECAUSE TITLE IVB AND IVE DOLLARS WERE AT STAKE.

FEDERAL 427 REVIEWS WERE POORLY CARRIED OUT AND DID NOT RELATE TO QUALITY. THIS IS NOT A CONDEMNATION OF THE DEDICATED STAFF IN THE CHILDREN'S BUREAU WHO ARE SKILLED PROFESSIONALS STRETCHED FAR TOO THIN. THEY DID WHAT THEY COULD.

DESPITE THE INADEQUACY OF THE 427 REVIEWS--

- IT WAS REMARKABLE HOW STATES TOOK NOTICE OF THEIR FOSTER CARE CASELOADS WHEN THEIR ACTIONS WERE SUBJECT TO SCRUTINY AND THEIR DOLLARS WERE ON THE LINE.

- IT WAS WONDERFUL TO OBESERVE THE EFFECT OF 427 MONITORING IN ENLIGHTENING COURTS ABOUT THEIR RESPONSIBILITES TO THE FOSTER CARE POPULATION

BUT 427 REVIEWS WERE TOO FAR REMOVED FROM CHILDREN TO REQUIRE ACCOUNTABILITY FOR CARRYING OUT THE PROTECTIONS OF THE LAW FOR THAT CHILD. BRINGING DECISION MAKING CLOSER TO HOME MEANS WE MUST BRING MONITORING AND ACCOUNTABILITY CLOSER TO HOME. CONGRESS MUST MAINTAIN THE ABILITY TO IMPOSE SANCTIONS BASED, AT LEAST IN PART, ON DOCUMENTATION RESULTING FROM HANDS ON MONITORING.

WE URGE THE CONGRESS TO:

- CONTINUE TO PROTECT CHILDREN BY REQUIRING CASE BY CASE REVIEWS.

- REQUIRE STATES TO PUT IN PLACE A STRONG, INDEPENDENT, COST EFFECTIVE MONITORING MECHANISM USING TRAINED VOLUNTEERS.

- BLOCK GRANT SUPPORT FOR THAT MONITORING MECHANISM DIRECTLY, TO ASSURE ITS INDEPENDENCE.

- REQUIRE STATE CITIZEN ADVISORY BOARDS TO REPORT ANNUALLY THEIR DATA AND RECOMMENDATIONS TO THE LEGISLATURE, SUPREME COURT, AND GOVERNOR.

- UTILIZE CITIZEN REVIEW DATA AS AN ASSISTANCE AT THE FEDERAL LEVEL TO REQUIRE COMPLIANCE WITH THE PROTECTIONS OF THE LAW THROUGH FISCAL PENALTIES AND/OR INCENTIVES.

FUNDING THE ACCOUNTABILITY MECHANISM OF CITIZEN REVIEW

NAFCR RECOMMENDS BUILDING IN THE ACCOUNTABILITY MECHANISM OF CITIZEN REVIEW AS A COMPANION TO BLOCK GRANTS. IN ORDER TO ASSURE COMPLETE INDEPENDENCE, FUNDING TO SUPPORT CITIZEN REVIEW SHOULD BE BLOCKED DIRECTLY TO THE STATE CITIZEN REVIEW BOARD.

VOLUNTEERS DONATE TIME AND ENERGY AND ARE COST EFFECTIVE BUT, MONITORING BY VOLUNTEERS, OR ANYONE ELSE, WILL BE A SHAM WITHOUT AN INFRASTRUCTURE OF TRAINING, DATA GATHERING ABILITY AND SUPPORT STAFF.

STATE CITIZEN REVIEW BUDGETS ARE LOW. CURRENTLY NO STATE CITIZEN REVIEW PROGRAM HAS A BUDGET EVEN AS HIGH AS $2,000,000 (TWO MILLION DOLLARS).

INCLUDED IN GRANTS TO STATE CITIZEN REVIEW BOARDS WOULD BE THE COSTS OF ESTABLISHING AND MAINTAINING THE DATA COLLECTION ASPECT UPON WHICH ANNUAL REPORTS WOULD BE BASED AND WHICH WILL PROVIDE INFORMATION REQUESTED FOR FEDERAL OVERSIGHT.

THE NATIONAL ASSOCIATION OF FOSTER CARE REVIEWERS WOULD WORK WITH CONGRESS AND HHS IN DETERMINING WHAT DATA REVIEWERS SHOULD DOCUMENT. NAFCR WOULD BE RESPONSIBILE FOR EXCELLENT VOLUNTEER TRAINING TO ASSURE QUALITY OF CITIZEN REVIEW. IT WOULD BE RESPONSIBLE FOR ONGOING AND REMEDIAL TRAINING AND PROVIDE DATA COLLECTION EXPERTISE THAT WILL HELP STATES ASSURE ADHERENCE TO FEDERAL STANDARDS AND PROTECTIONS. IN ORDER TO MAINTAIN AND REINFORCE THE INDEPENDENCE OF CITIZEN REVIEW FROM OTHER GOVERNMENTAL ENTITIES, FUNDING FOR CARRYING OUT THESE RESPONSIBILITIES WOULD BE GRANTED DIRECTLY TO NAFCR.

WELL TRAINED VOLUNTEERS WHO ARE EMPOWERED BY LAW TO FOCUS ON THE BEST INTEREST OF EACH INDIVIDUAL CHILD AND TO HOLD PUBLIC SYSTEMS ACCOUNTABLE BY COMPILING DATA ON A CASE BY CASE BASIS WILL SAVE STATES UNTOLD NUMBERS OF DOLLARS. THE COST OF SUPPORTING THE VOLUNTEER EFFORT WILL BE MINIMAL IN RELATION TO ITS REWARDS OF SAVING PUBLIC DOLLARS AND SAVING CHILDREN FROM GROWING UP AS A WARD OF THE STATE.

THE NATIONAL ASSOCIATION OF FOSTER CARE REVIEWERS URGES ADOPTION OF THE CONCEPT OF CITIZEN REVIEW FOR ALL CHILDREN IN PLACEMENT.

Chairman JOHNSON. Thank you very much, Ms. Driver.

Mr. Cooper.

Mr. COOPER. Of course, we endorse what she said. I am the director of the Maryland Citizen Foster Care Review Board office. We have about 400 volunteers. I would like to make the point in conducting these 11,000 reviews, we make a lot of—we make a lot of difference in the compliance of the agency with the 427 review process, so it is important to us. It gives us the handle we need to have citizens get in there and hold people accountable, and we have results. For example, like Mr. Petit talked about, the reentry rate is 50 percent of the children returned home are back in the system in about 1 year.

Mr. PETIT. Forty.

Mr. COOPER. In Maryland, that is about 16 percent. So we believe we—our review system and other things our State has done has brought more quality to the system than you have when you have merely internal reviews of an agency reviewing itself.

We are involved in system advocacy that addresses what Mr. Henry talked about. For example, our citizen reviewers are supporting and initiating bills in this year's legislature to make sure fathers are identified and contacted and that relatives are brought into the process appropriately. So I think that citizen review really provides some assurance of the quality that the lady from New Jersey, Ms. Barr, talked about. And someone came here from Illinois and talked where they have caseloads, I understand, of 100 children per worker and talked about the disasters of the program. The question is, is it in the program design or is it in some of the quality components that are missing from a State that doesn't have this kind of citizen accountability.

Chairman JOHNSON. Thank you.

I thank the panel for your good input. These citizen review boards, are they required or permitted by 427 reviews or is the 427 law silent on them?

Ms. DRIVER. The establishment of citizen foster care review boards across the country were encouraged by 427s, however, as was mentioned earlier, New Jersey, for example, and Arizona and South Carolina and some other States actually had citizen review before Public Law 96–272 came into being. However, it was a major impetus.

Chairman JOHNSON. Have they spread, then, since 427?

Ms. DRIVER. They have. And about four to five States within the last 2 years, are either adopting it completely or piloting it. But I think that in fact only about half the States currently actually use citizen foster care review boards. And of those that do use them, in every State not every child is reviewed.

Usually, in answer to your question about what creates them, usually it is State law. But otherwise, it is judicial mandates, because citizen review programs sometimes are postured within the courts, sometimes are independent and are postured different places in the system.

Chairman JOHNSON. Thank you very much.

I appreciate that clarification.

Mr. Matsui, would you like to inquire?

Mr. MATSUI. I will be very brief, Madam Chairwoman. I want to thank all six of you for being here today. I appreciate it very much.

One of the problems—and I wish Mr. Murphy was here because I am going to refer to him, not in a negative way, but just refer to him. One of our problems as we discuss the safety net, that is, the child welfare programs, when you get in a trap, you then bring up the overall problem with welfare itself and it is hard to defend the status quo, what is going on in many of the cities.

It is very, very difficult to talk about this issue in a very rational fashion, unfortunately. But I would like to confine my remarks basically to the child welfare system itself because that is the purpose of this discussion, whether we block grant it or make changes or make major, minor adjustments is what we are really talking about here. Perhaps, I will start with Mr. Petit.

You were up in Maine, if I am not mistaken?

Mr. PETIT. Yes, I was.

Mr. MATSUI. We talked, I think, it was in the 1987—1988, during consideration of the Family Support Act. How well are these programs—and you will have to forgive me. I was at another meeting and you may have addressed this. How well are these programs actually working? We are basically talking about foster care, obviously, adoption services, we are talking about family preservation. Obviously, the court system has to play a significant role in all of this. There is a mix of State-Federal money, State-Federal regulations. How are these programs really working? And can we make minor adjustments to make them work better?

Mr. PETIT. Well, in the first instance, child protection, the actual intake and assessment process within these agencies, I—you were absent, sir. What I stated was overall I give the system a "D" at best. There are literally hundreds of thousands of children known to the system right now who are at home with perpetrators who will be injured today, they will be raped today, and the system will have a very weak ability to intervene in those kinds of situations.

In many places, people are doing very good work. But on balance, it is a dangerous place for these kids. I cited one particular example of 9-year-old children in jails because they have been sexually abused because there is no place to put them.

In Sacramento County, your own county, and the agency there is a terrific agency, we are working with them right now. But because of what has happened in the State of California financially in the last few years, 24,000 cases of child protection are screened out over the telephone. In some—6,000 are actually investigated. We find workers who are inexperienced.

In some child protective units, 70 percent of the workers turn over in the course of a year. We held an administrative orientation for new child welfare directors and State commissioners between 1991 and 1993. We did one in both of those years. There has been a 70-percent turnover in one or both of those top two positions in child welfare nationally.

There are no standards that the States are being held to. There are an abundance of standards but they are not mandatory. So in some I think the situation—there is a wild variation in how it is conducted including within individual States.

We have reviewed thousands of records. We have talked with thousands of individual workers. What we find is a lack of purposefulness and focus among individual workers. They are frequently freelancing their work.

We would strongly recommend the adoption of standards that you condition Federal financing upon those standards and that you further require from each one of the States how much it would cost to come into compliance with those standards. In Texas right now, the child welfare expenditures are $350 million a year. They have some 10,000 or 15,000 kids in out-of-home care.

In Illinois, with one half the population, their child welfare expenditure is $1 billion with 50,000 children in out-of-home care. So while everyone has been reminded of how different the States are and the need to accord them great flexibility, the fact of the matter is the needs of children are strikingly similar from one jurisdiction to the next. And what we are seeing is by accident of geography, in many instances, you are protected or not.

Some States have zero children a year who are killed. Some States have 150 to 200 children a year that are killed. You can see it as a function of the kind of training that workers receive, how closely integrated the different systems are with each other. In California, again, because we are doing a lot of work there, in San Diego recently, their legal expenditures—and you raised earlier the question of paperwork, the legal expenditures in which children who are accorded attorneys, was $11 million a year on a $100-million-a-year budget.

The next largest jurisdiction we have been able to find was $1.8 million in Philadelphia, which happens to be the home of the Constitution where they also are concerned about due process kinds of considerations. So you have large numbers of people who are intervening in these cases who are not really laying their hands on children.

You know, one of the case plans that you alluded to before in terms of the workers not recording them, in San Diego County recently we ran into a situation where a mother was told the only way she can get her three children back, is if she visits them once a week, she gets a job, and if she curbs her substance abuse.

She curbed her substance abuse, she got a job. On Saturdays was the day that she tried to see her kids because she was working. All she had was public transportation. She couldn't travel the entire distance because the kids were in three different homes. It was taking her 8 to 10 hours a day just to get to where the children were. Because she was not able to visit them consistently, the children were denied from returning to her. A $2,000 or $3,000 investment in an automobile would have permitted this woman to take over responsibility for her family.

So I think, on balance, our view is that the situation is chaotic. Large numbers of children are being unnecessarily killed, raped and injured. We have seen this in every single State. There is not a single State in the country that we would hold up as a model. Certainly, some do a better job than others. And that is reflective of the investment.

The other thing I would tell you is that we have been involved with Ms. Lowry's organization, the ACLU, of which I am a card-

carrying member, and we have gotten deeply and intimately involved with the States in crafting a response to those legal actions. One of the things that we have discovered in doing that is that a frequent and recurring attitude among locally elected officials and Governors and State legislators around child welfare budgets is, don't ask and don't tell. They literally do not want to know.

They start out with a 95-percent funding request or 103-percent funding request, but they do not want to target it to what the States's administrators are specifically identifying as the need. So that simply returns to the point that there must be a strong Federal role in this process that accords maximum flexibility, that is a partnership kind of a function. And one of our last recommendations, and then I will cease on this one, is that you consider creating a fast-forward national panel comprised of some of the people that were here with strong representation of the States and local governments to work with you and your staffs to craft something very quickly in dealing with this issue.

The full dimensions of this problem have yet to be defined. We estimate that there are between 0.5 and 1 million children a year who are being sexually abused in this country and the overall response to that is a very, very weak one.

Mr. MATSUI. Anybody have any comments?

Ms. LOWRY. Yes, if I might. In response to the question that you started off with, Mr. Matsui, if the Federal statutes were being enforced, truly, we would see very different things happening in the States.

I agree with Mr. Petit about his description of the problems. But the general framework is in the statute now. It could be more specific, as I said in my testimony. But the statute already covers a broad range of issues which, if implemented, would protect children. And I think that is the real shame.

We could get a better one, but we haven't even enforced the one we have got. And that is my concern about giving up on what we have and going to something less. Not that things can't be improved. They always can. But if we were protecting children in the Federal child cap—I am sorry, the child abuse statute already requires not specifics, but that States have systems that will protect kids who are reported for child abuse and plans that are supposed to assure permanence. If we were doing that in the States, if anybody were ensuring that the States were doing these things, I think that we would have very different kinds of statements to make today.

Mr. MATSUI. And I didn't mean to interrupt because I know others—I will be very—I think Mr. Cooper has a comment. See, that is what is a little troubling with respect to the last panel, is the fact that these abusers and these murderers, that the gentleman from Michigan—or Illinois talked about, you know, there is no law—there are laws to make sure that doesn't happen.

Maybe—maybe Dr. Berger wants to comment on that, because I want a dialog here. I want to find out what the problem is. But it seems to me an issue—obviously, the system is overwhelmed. The system is overwhelmed and I see the frustration. But I would imagine there are laws for early intervention in those situations that, obviously, wasn't done in the Illinois case.

Ms. LOWRY. There really is no accountability. There are laws. States have very specific statutes and then the Federal Government has general statutes, but nobody is really following it. And as flawed as the 427 audits were, and they were, they at least at the beginning exercised some check that the States thought might come down on them. Then as the audits went forward and it became clear that they were not rigorous at all, then I think they came to have less weight. But I think if there was a clear message to the States, here are the basic minimal standards, you have got to follow them or something bad will happen, and we very much support the fact that Congress changed the sanctions so that there could be constructive intervention into the State other than simply a bang funding cutoff, then I think you might see something different in the States.

Mr. MATSUI. Can I have—Dr. Berger. Yes.

Ms. BERGER. Yes. I would just like to make a comment of caution on this. There is also a wave around this country which could only be described, the abuse of child abuse.

Mr. MATSUI. What was that?

Ms. BERGER. The abuse of child abuse. In other words, we are using child abuse disproportionately to try to put Federal regulation requirements in place. We have laws in existence that punish, and punish severely, people who abuse children: Parents, mothers and especially the boyfriends of single mothers, the live-in men in the households. Such laws are already in place. I do not know what system you want to develop whereby we have even more monitoring systems to develop, and costly, in addition. I furthermore do not see what the difference is between State laws and Federal laws. From my point of view, the rule of thumb is: The closer to the bottom of society, the closer to the problem, the better you have a chance of changing and improving the situation.

Mr. MATSUI. Let me ask you, though, you don't want the current criminal justice system to be the only one responsible, though, for the issue of child abuse, do you?

Ms. BERGER. I think this is your first line of defense and we all rely upon this. The second line of defense would be to develop general rules. But I do not see how you can have a Federal system of rules that can be implemented and that works.

Mr. MATSUI. But, Dr. Berger, here is what the problem is, though. I was on the city council 16 years ago. I was on there for 7, not quite 8 years. So, I mean, even then, we had problems in terms of our ability to really, you know, give adequate protection to our citizens. This was back in the early seventies, midseventies. And the system is totally overwhelmed now.

If you get a call to the police department under 911, you know, they are going to go to the armed robbery first. They are going to go to a violent crime, but domestic violence is still not high on the priority list in terms of the average local police department. I can just tell you, so you can't rely upon that to make the case.

Ms. BERGER. I would advise everyone to sit in courts and listen to cases whereby children are taken away from their families. Very often the rules of child abuse are very vague and at times even very hazardous. Let me give you an example; if you don't provide a regular breakfast, a warm breakfast to your children—you abuse

a child. The Federal stipulations are so ordinarily chaotic that you no longer know what is abuse or what is not abuse.

Chairman JOHNSON. We must go on to the others and then we can come back, if you would like to.

Mr. Johnson.

Mr. JOHNSON OF TEXAS. You sure?

Chairman JOHNSON. Yes. Because you have been here throughout the testimony.

Mr. JOHNSON OF TEXAS. OK. Thank you.

I agree with you, Doctor. I think it is impossible for the Federal Government to make its will known in the States. It is also improper for us to regulate it that closely. And as a matter of fact, this last election showed that people don't want more regulation, they want less.

I know in Texas, for example, the State courts do handle these systems and there are those who slip through the cracks in any system. And I think that if a parent is abusing a child, he is going to get punished for it under our current laws. You are absolutely right in saying it is better conducted closer to home. And I thank you for that comment.

Would you like to respond?

Ms. BERGER. May I just make another comment which occurred to me all through this morning. Everyone talks about the single importance of highly trained and credentialed child care workers. I know one case Ms. Lowry has been involved in. A residential school for disabled children—the single best person dealing with these children was a Polish peasant with 6 years of education. This person would no longer be employed because of the new Federal laws that require credentials.

In other words, we are depriving ourselves of good people to care for clients like the ones you are representing. There are many good people in every uncredentialed community. So if you write out new kinds of stipulations, I would like them to be much more flexible and not apply to credentialing. No amount of education can make you into a good child care worker, and I know a lot about this because I have done reviews at residential homes for abused children. So I am—I am sorry, Mr. Matsui, that I come to that conclusion. When I started out 30 years ago to work on such issues, I was on your line, as well. It has been a bitter experience and I had to rethink many issues.

Mr. PETIT. I think that the issue is not intervening in those kinds of situations. The problem is the State right now has magnum force in intervening in the lives of people and, in many instances, you don't need the police and you certainly don't need child protective services. Many of the garden variety kinds of neglect cases could be handled well by public health nurses, by community and socialworkers, and so forth.

What is missing right now across the country is an assessment process that allows a good analysis of what is going on within a household, being done by mature workers that allows them to select from a menu of services and says this is what we would like to plug this family into. The great majority of these cases don't need State intervention, what they need is local community intervention of a nonminimally intrusive kind of a nature.

The problem right now is that the States, most of them, because they are so strapped for cash, and especially locally, is that they have a triage system. They are going out on only the most severe cases. I know of virtually no system that has the luxury of removing children from their families because of something like improper meals. Forget warm meals. Even if they are not doing meals, in many instances, they will not intervene in those kinds of cases. The States are not all equal on this.

I would just note, Mr. Johnson, in Texas, with all due respect, there are more than 100 children a year who are killed in Texas every single year. It is not one of the stronger systems that exists nationally. And you know, there is no basis for the Federal Government at this point interjecting itself into those situations at a protective level.

Mr. JOHNSON OF TEXAS. But your statement, Mr. Petit, that there is over 100 in Texas killed, from what cause?

Mr. PETIT. From—at the hands of parents, at the hands of family members.

Mr. JOHNSON OF TEXAS. You know, I won't believe that unless you show me the precise cases.

Mr. PETIT. I would be very happy to show you the cases.

[The following was subsequently received:]

February 6, 1995

The Honorable Sam Johnson
1030 Rayburn House Office Building
U. S. House of Representatives
Washington, DC 20515

Dear Representative Johnson:

This letter follows up on the brief discussion we had at the Ways and Means Oversight Subcommittee hearing on January 23, 1995 on Title IV-E and the 427 review process. During my report on the problems associated with unevenness of arrangements, responses and resources within and among the states, I described data on child fatalities nationally and in several states, including Texas. You requested those data and I have enclosed the most recent information based on the 1993 survey by the National Committee to Prevent Child Abuse. Texas had 114 child abuse and neglect related fatalities in 1993. The data for 1994 will be available in April 1995.

I would be happy to discuss further with you these and other issues related to the state/federal partnership to protect abused and neglected children.

Sincerely,

Michael Petit
Deputy Director

Enclosure

Mr. JOHNSON OF TEXAS. But in spite of that, what are they across the Nation?

Mr. PETIT. Texas has one of the highest rates.

Mr. JOHNSON OF TEXAS. What is the total?

Mr. PETIT. Right now, about 1,300 cases minimally believed, but in truth, the number is probably closer to 5,000. They frequently get put down to something else.

Mr. JOHNSON OF TEXAS. Actual fact, you are saying 1,300 a year?

Mr. PETIT. Inflicted. If the mother is on a fifth story of a building and she lets a 1-year-old child go out and play in traffic, does that constitute a child abuse death? No. It would not be so counted presently. It would just simply be a motor vehicular accident. But in the actual hands of the parents on the child, about 1,300 a year.

Mr. JOHNSON OF TEXAS. That is not child abuse in my view, either. That is mismanagement. That is the parent not taking responsibility of her kid but it is not abuse.

Mr. PETIT. It is a seriously neglectful situation that resulted in the child's death and it is exactly the kind of thing the State right now——

Mr. JOHNSON OF TEXAS. So you are saying the United States should get involved in that and control that person's life and tell each parent when and where they can let their children play, where and when they can let them ride a bicycle, where and when they can cross the street?

Mr. PETIT. If parents are endangering the lives of their children, since children are completely powerless and completely dependent upon their parents for protecting them, somebody has to intervene. That is why the states have created those child abuse laws.

Mr. JOHNSON OF TEXAS. You are absolutely wrong.

Mr. PETIT. What I am saying to you is that the child abuse laws as administered by the States vary widely, and in some States, they vigorously protect these children, and in other States, they don't protect these children and that is why so many kids are dying.

Mr. JOHNSON OF TEXAS. Where in our Constitution does it say the U.S. Government has the responsibility to take care of those kinds of situations?

Mr. PETIT. Life——

Mr. JOHNSON OF TEXAS. We are a States-rights constitution, believe it or not, and that is what we are getting back to, trying to.

Mr. PETIT. I think the Declaration begins with life, liberty and the protection of happiness.

Mr. JOHNSON OF TEXAS. It does not say protection, the pursuit of happiness, is the quote.

Mr. PETIT. Pursuit of happiness. I would say life is the first one. These kids are dying because nobody is intervening on their behalf, even though they are at-risk of being killed. If that isn't going to be intervened by government, who else is going to do it?

Mr. JOHNSON OF TEXAS. I am just going to say that I do not agree with that statement, and would close my questioning at that point.

Chairman JOHNSON. Thank you.

Mr. HERGER. Madam Chairman, if I could take 1 second to synthesize that, if I could please?

Chairman JOHNSON. Very briefly. We do have to adjourn at 2:30 and we have two more questioners.

Mr. HERGER. Madam Chair, the comments from both the panel and from the members of the committee have asked what ought to be the lines of defense, how do we get protection for children. We submit, at the Children's Rights Council, that the first line of defense for children is the family. We need to look at policies that the Federal Government has that get in the way of families doing their functions, policies that interfere with the things that families know how to do, policies that prevent families from being the best protection for children they can be.

Take, for example, the simple issue of paternity establishment. Every child in this country is born with, wants, loves, and needs two parents. We have a system right now under which the greater number of our welfare recipients don't even know who their dad is, and find that their dad is actively concealed from them by a welfare system that doesn't care about that dad, except to see him as a nuisance.

Just to give you an example of one case we publicized a bit during this summer, not that it is any different from many other cases, but simply one we picked out. A man and a woman with low income had a baby out of wedlock and decided to do the right thing. Got married, moved in together, kept their minimum-wage jobs. What was the response of the bureaucracy? What did they say as soon as they found those people? They said: "Dad, you must leave. You are hurting your child by being here."

If we care about children in this country, we have got to adopt that physician's law, "first, do no harm." Get government out of the business of damaging families and then see what we can do to help families as a second step.

Chairman JOHNSON. Mr. Hancock.

Mr. HANCOCK. I was just thinking about this conversation between Sam and Mr. Petit. Evidently, I am a child abuser, because there have been times when I didn't have my eye on my child 24 hours a day. I can think of a case where a small child recently got run over as a result of a car being left out of gear and the little child was out in the driveway.

I know the family real well, but they were not guilty of any form of child abuse whatsoever. So I take offense to the extent that that was carried. And I agree with Mr. Johnson, that this is not a function of the Federal Government.

Wasn't the reason that we are holding this hearing to decide whether we should have block grants and to get the Federal Government out of funding these various programs? According to most of the testimony we have heard today, you can't enforce the law. We have got the laws but they can't enforce them.

Well, if that is true, then why are we spending our time trying to write some more laws that we can't enforce? So it would appear to me that we need to go back to square one. We need to get back to where we start training and educating people again, teaching that, yes, you do have certain responsibilities and society is going to have to address it.

I don't think that government itself can address this question. I think it is much deeper than that. It is the very moral fiber of our

society. And you are not going to be able to do it by passing more laws. We are going to have to be able to get back to where more volunteerism is involved.

Ms. LOWRY. Can I say one more thing?

Chairman JOHNSON. I am going to move on, if I may. I absolutely have to leave at 2:30 and I left my questions till the end, and I want to at least give us a chance to focus a little bit more carefully, Ms. Lowry, on your challenge to the system. And I would like you and Mr. Petit to address the issue of, if the system is failing as badly as it is, and we have had a lot of testimony from a lot of different points of view that the system is not meeting the needs of America's children, it is also absolutely clear and we have put a lot of new money into this system, we have basically tripled the dollars in the last 5 years. There are not many programs in anyone's budget, public or private sector, Federal, State or local that we have done that with, and yet we are not addressing the problem.

Mr. Murphy in the preceding panel said you are not getting to the cause. Mr. Petit, that is what I hear you saying. I hear you saying, from my notes, that the system is crushing us with paper, that it is not working, and you mentioned getting serious about teen pregnancy. Get serious about child care in every school. I would assume, then, that teen parents would be sure to go to school, you would require that.

These are basically more welfare reform issues than they are actually foster care reform issues. Then you mentioned be sure to require inservice training and a good assessment process with a much greater, more flexible approach as to whom provides services. I would assume, you would even then allow the community-level church groups to develop, where the family support and frankly, the Federal level can't reach.

How do we bring together child services so that we get at Wade Horn's 25 programs? I mean, this is ridiculous. What do we put together—you may not want to be specific on this. But what are the things that should govern it and how do we hold it accountable and how do we get around the very real problems that Ms. Lowry has pointed to, though her solution actually sort of sounds to me like more of the same. I will give you plenty of time to answer.

I may have to duck out. And Mr. Cardin hasn't had a chance to speak, so I will ask one of my colleagues to take over. But if I don't get a chance to finish this with you now, I am interested in your input in the future.

Mr. PETIT. First of all, let me say that contrary to what sounded like in my exchange with Mr. Johnson, that I absolutely fundamentally believe, in the first instance, the role of government was to enable families to manage their own affairs in as minimally an intrusive a way as possible. I agree, sir, you cannot deputize half the population to watch the other half of the population, which is what we are moving toward right now.

So, in the first instance, I think it is a question of we must enable people to learn how to be better parents. We are not doing serious parenting around this country. It is a minimal kind of a program that is being offered only to those people who are perceived as being abusive.

We know much more about healthy human development than we ever knew before. All of the other Western industrialized countries have at the local level, not at a Federal level, but at a local level, home visitor programs to young families, especially families who are under the age of 21 years old.

When we asked a survey in North Dakota recently, we just did this for the entire State of North Dakota, 89 percent of a statewide survey of families said they would like to have a home visitation program, not of child protective workers but of public health nurses working with them. We also learned from 80 percent of the parents, that they said parenting was more difficult, they believed, than when their parents were parenting, and childhood is more difficult today than when they were children as well.

I think that there are two issues here that I would urge the committee to think about, one is a mechanical issue and it is the point Mr. Matsui raised. There are 3 million children every year being referred to legal organizations, governments that are supposed to examine those cases. That business of the mechanics of child welfare, what happens from the point that somebody dials 911 to the point of achieving a safe, permanent situation for children is a tremendously ignored area.

There has been no court representation here today. They are deeply involved with this whole matter, and right now, it is a very highly legalistic process, that everybody agrees lawyers don't put their hands on children. We need other people to be able to do that kind of thing. So all the steps in that process we would urge you to take a look at.

But the other issue that is surrounding all this are the causative factors that don't have anything to do with the mechanics of all of this stuff but have to do instead with the question of what is contributing to this problem in the first instance. We would submit right now that we have created a spawning ground, that will ensure that the country will be dealing with this for the next 20 or 30 years, unless we do much more front-end kind of work.

And in North Dakota right now, their legislature is debating a report that we have just prepared for them. It was convened by the legislature. It was a year-and-a-half long assessment. It involved more than 2,000 citizens in focus group discussions, all of the State agencies, all the local agencies trying to push decisionmaking down as finite as possible, all geared at how can families and then communities take care of their own needs.

We believe that children do best when families are attentive to their needs. Families do best when communities are attentive to their needs. And the reality is the country has not adjusted to the changing demographics in the post-World War II period, that basically has large numbers of adults outside the home with nobody watching children. That is a fundamental consideration irrespective of your income level.

They are going to embrace, we believe, perhaps, universal child care in North Dakota, using junior and senior high school students to run the child care facilities, with an appropriate adult, and with seniors, so the kids learn what parenting is all about. There is no role modeling going on, and to learn what a serious job it is.

So my point is, there are legal issues involved when the kids are brought to the system, that the courts and child welfare need to protect children who are literally at-risk of being injured or sexually assaulted. And when you have judges say to you, and prosecutors say to you, that I know that there are kids right now, we know who they are, we believe they are at home with their perpetrator and we don't have the hooks legally to get our hands into them, that is a question that I think needs to be addressed one State at a time, with some Federal oversight and support.

Chairman JOHNSON. Thank you.

Ms. Lowry, I do want you to answer this question. I want you to answer it fully. I may have to walk out in the middle, but I will talk with you about it later so I will hear the rest of what you said. I think it is important for the record, it is important for the committee.

I am going to turn the gavel over to Mr. Hancock so that Mr. Cardin will have a chance to question, if he cares to, or they will have a chance to follow up, if they care to.

Ms. LOWRY. Thank you.

On the question of more—whether this—what I am recommending is simply more of the same. Let me say a couple of things. The kinds of things that Mr. Petit is talking about, different kinds of programs, better programs, teenage pregnancy, front-in services, all that is not contrary to what I am saying.

All I am saying is, number one, things aren't good now but look where they were in 1980. Nobody had an idea of what a case plan was or the need to have a case plan. We didn't know how many kids there were. They were out in large institutions in the country. There were families that would have adopted them and they weren't being asked.

Witness the fact that after the statute passed in 1980, when we had a population of 500,000, the population dropped to 270,000 within the next 3 years. So I am not saying that things are great now, goodness knows, anybody who has looked at any of the lawsuits, knows that I don't think that things are better now, are OK now. But we need to have legally enforceable standards and they are not standards that say how many hours a day you have to keep your child within your eyesight. They are standards that say, as a general matter, when things get so bad that the government gets involved, not when somebody just walking down the block gets involved, but when it gets so bad—and what we are talking about really is kids who are left alone in their homes for 3 days with no food. That is really the kind of stuff we are talking about and that is very common.

I don't know any—just like Mr. Petit, I don't know any system that is worried about a hot breakfast for a kid. They are worried about the kids dying of malnutrition because that is what we are talking about. What I am saying is, we have got to have those general standards and they have got to be enforceable.

You asked me, I think, Mr. Hancock, a few minutes ago, what difference does it make, the laws aren't being followed? Well, either they can be followed by virtue of the Federal Government exercising some general oversight responsibility, allowing the States flexibility to decide how they are going to protect kids, but then making

sure that they have got some program that protects kids, or they can get followed in the way that my organization, the Children's Rights Project becomes involved. And that is when States sink so far below a minimally acceptable level, as happened in the District of Columbia—which is not a State, of course, but nevertheless, was held to the Federal standard—the kids have to get their day in court, not on individual situations, although they form part of the information, but when you have a system that has workers that carry caseloads of 150, that is not a system that can protect anybody.

And so that is the importance of looking at this from a systemic perspective and from having general, enforceable standards that either the States will follow, because otherwise, the Federal Government is going to bother them, or worse comes to worse—and, obviously, it should be the last recourse, somebody is going to make them talk about in front of a Federal judge.

Mr. HANCOCK [presiding]. The gentleman from Maryland.

Mr. CARDIN. Thank you.

Let me thank each of you for your testimonies today. This is, obviously, an extremely important subject, and we are trying to seek good advice as to what we should do. I guess the frustrating part is I haven't yet met anyone who doesn't think the system is in need of significant change. Where we seem to be frustrated is what type of change will bring about a constructive result. And we haven't been able to come to, I think, a consensus on that. And I am hoping that your testimony will help us to reach some agreement.

I agree with Mr. Petit, in that the welfare of our children is the responsibility of all of us, starting first with our families, but government has certainly a very important role when it comes to the welfare of our children. And I strongly believe in federalism. Section 427 reviews have been troublesome to my State and they have been in to see me about changes.

So I guess my question to Mr. Cooper, who has done such a wonderful job here in Maryland: What if we were not to have Federal standards at all? What impact do you think that would have on our children? What response should the States come forward with?

Mr. COOPER. The hearing today is focused on the 427 requirements and, for example, the periodic review that looks at the case plan and says are we going in the right direction for the child? I think even our Federal—our State administrators, as well as our citizen reviewers, would agree we should have that and we have to have that. And if the Federal Government takes that away, we will have to put it back in through State laws. So that is something we need to keep.

I think we have missed a point here today, and I am just speaking for myself. But the IV–E requirement, one, that pays the foster care maintenance payment to the State, is costing States a lot of administrative waste.

What happens? If a child comes into foster care and they are on AFDC, or they would have been on AFDC, the Federal Government will pay a share. If they wouldn't have been on AFDC, maybe it was that family Mr. Henry was talking about, where both parents work the minimum wage. Well, we won't pay for that child. So what happens in Maryland, we spend about $1 million a year de-

termining whether the kid was poor enough. What does that have to do with it and what Federal interest is advanced by making that determination?

I think that is a significant area of paperwork reduction that we could do, and that is not to say that we should do away with some other requirements, like the fact that before a child is brought into foster care, a court should have found that there were reasonable efforts to try to help the family keep the child safe within the family. We ought to keep that, but throw out the income redetermination.

I think we need more research into some of these issues like, when is family preservation appropriate. I think that the Federal Government could make a real contribution there, because I don't think we now—I think we have to keep working on the courts. There is a small Federal amount of money to get the courts to improve themselves, and I think we need to keep doing that.

Mr. CARDIN. Let me try to have you focus on Federal standards for just one moment. Is your concern that if we were not to have Federal standards, there would be a lack of uniformity among the States, or are you afraid that the States would not establish adequate standards in order to protect our children?

Mr. COOPER. I am particularly—I have to say from my point of view, I am particularly afraid of the States right now that don't have citizen review. Because I think in Maryland, where we have 400 citizens actively now and probably 1,000 citizens that have been through and heard cases about—like Ms. Howze's case, we would have reviews in Maryland and we would get them enforced.

I mean, the Federal Government, in putting that requirement, made a big difference in our effectiveness in setting up, and I think we are there now. But what about—if citizens reviewed 50,000 kids, then that is about 10 percent. What really concerns me is that I think that—and Mr. Petit spoke about the tremendous variations that we have in child welfare. So, yes, uniformity of quality is a big concern. And we need to—we need to make these—we need to look at these requirements again to get more outcome oriented. I am going to try to write in some suggestion about that.

Mr. CARDIN. Let Mr. Petit have a chance.

Mr. PETIT. Let me say, right now, the States are not burdened by much in the way of standards. There are 11 volumes of standards by the Child Welfare League. There are many volumes on the Council of Accreditation. There are no States in compliance, because they are on a voluntary basis.

They have been around for years and years. The States have caseload ratios that range from 15 to 1 to 20 to 1, to some instances, at a practical level, 120 to 1, which is impossible to do serious casework on that.

We think the States and the Federal Government, working with private volunteer agencies ought to actually agree on what standards to hold themselves to jointly, and then based on that, ought to create the tension within the system that everybody holds each other accountable.

Right now, there are no real standards that are uniformly applied, and the States are rarely, if ever, sanctioned as a result of this. And I don't think this is a question of Big Brother, Federal

Government watching the States. The difficulty is with a country as big as ours, and with much of this being done with local jurisdictions with county assistance, who provides technical assistance to the States and counties that want to do a better job in this area?

Mr. CARDIN. That was my point. You see inconsistencies within States because of local governments?

Mr. PETIT. We see inconsistencies within States, we see inconsistencies within counties, and we see inconsistencies within five socialworkers responsible to the same supervisory officer. In many instances, they are freelancing on their own, making decisions about who comes, who goes, what the point of intervention will be.

That is what happens when there is a lack of vigorous accountability, training. The States ought to be holding themselves accountable, and it is very weak in many jurisdictions.

Mr. CARDIN. I will give Ms. Lowry the last 30 seconds.

Ms. LOWRY. Thank you.

There are general standards in the Federal law now. They are very general. And the States can do a wide range of activities and comply. But there are standards that say there has to be a case plan within a specified time.

The case plan has to say specific things. The plan has to work toward permanence. The children have to be in homes or facilities that generally conform with nationally acceptable standards, hence, Mr. Petit's organization, standards.

Again, there is a wide range of flexibility, but it is a framework. They can't take a kid into care and not plan for the kid at all.

On the other hand, they can try all different approaches to try to achieve permanence for a kid. So there are some minimal standards. They are not very stringent and the State really can enforce them a lot of different ways. But taking those away and leaving nothing, I fear, would be very, very bad for kids.

Ms. DRIVER. May I speak to your question?

Mr. CARDIN. Sure. I would urge, though, that we look at not necessarily making the Federal standards more stringent or more relaxed, but making it a system that can work. The current system is not working, so we need to figure out a way in which there is really a partnership with the Federal Government working with the States in a realistic regulatory system.

Ms. LOWRY. Right. If I may, I think one step has been taken in that direction by changing the 427 sanctions. It used to be that if the Federal Government reviewed a State and found that it didn't meet the standards, the Federal Government's only option was to simply cut off funds, which wasn't very helpful to a State that was floundering. Now, as a result of some legislation that passed in the fall, the State—the Federal Government has an escalating series of activities, including providing technical assistance to the State. That is a way to, I think, work better.

Mr. CARDIN. No question, we improved it. We still have some old issues that are outstanding.

Ms. LOWRY. Without a doubt. But the problem isn't, I think, as Mr. Petit says, that anybody says the States were overburdened with standards. They are very loose standards. The problem is there hasn't been any pressure to make them comply with even the loose standards that exist.

Mr. CARDIN. Thank you.

Ms. Driver.

Ms. DRIVER. Yes. In response to your question about standards in States that don't have citizen review, Iowa, has just—is building up its citizen review system now under legislative mandate and they are under a trial. A case plan is, one would think, a normal thing when you take a child from a home, and one of the things—mind you, 98—96–272 has been in existence since 1980. You would think that there would be case plans in every case in the State of Iowa.

And I am not trying to pick on Iowa. It is just that this is one State where we have been gathering some data. And the number of children who did not have case plans was incredible, until foster care review boards came into existence, and they have seen a marked increase in the number of case plans.

And I would like to, on another subject, thank you for your interest in the subject and the question of citizen review and oversight, for working to get some report language in the Omnibus Budget Reconciliation Act 2 years ago.

Mr. CARDIN. Thank you.

Ms. DRIVER. Thank you.

Mr. CARDIN. Thank you for your patience, Mr. Chairman.

Mr. HANCOCK. The Chair would like to thank you for your testimony and taking the time to give us some very useful information.

With that, this hearing is adjourned.

[Whereupon, at 2:45 p.m., the hearing was adjourned.]

RE: Testimony to the Ways and Means Sub-Committee
concerning Establishment of Citizen Review of Child Placement.

Dear Mr. Moseley:

I am volunteer reviewer on a Citizen Review Board in Oklahoma and Vice Chair of the Oklahoma State Review Board and I would like to communicate my thoughts to the Sub-Committee concerning the need for citizen review.

One of the first cases I reviewed involved "Rhonda", eight, who had been sexually abused by her mother's boy friend. She and her brother, "Jake" were abandoned by their mother in 1992 when the State took custody. Parental rights were terminated quickly and the children were placed in foster care.

Rhonda's emotional problems and sexual acting out were severe. Jake, a bright five year old, did not exhibit the same problems. It was obvious that adoptive parents for Rhonda were going to be difficult to find. Even though it would be preferred to place these children together, our review board asked the court to consider separate placement. An adoptive family was found for both children but it failed after six months. In the spring of 1993, the children were placed together in therapeutic foster care. They receive counseling from a psychologist to help them recover from the failed placement.

In two months this case will be three years old. Rhonda is eleven and Jake is eight. Rhonda's behavior is better, but she still acts out sexually and might be described as a pubescent Lolita that seeks affection sexually. Jake remains an intelligent little boy.

The policies and procedures of Human Services require that they make every effort to place these children together. This is commendable but very limiting for Jake. The Reviewer's job is to point out to the Court that even though the bond between these children is very strong another failed adoption will cause great damage to both children. It may be in Jake's best interest to place him separately providing for visitation with Rhonda. Rhonda will remain in foster care until a separate placement for her can be found. It is unfair to use Jake as bait so that these children can be placed together.

Citizen review is mandated to recommend to the court what is in the best interest of the children. While courts may not have time to hear from everyone involved with these children, we communicate with foster parents, schools, physicians, counselors, attorneys, and others to gather information about these children. We then make recommendations to the court that are not constrained by hundreds of pages of policies and procedures. These recommendations reflect the standards and expectations of our communities where we and these children live.

Citizen Reviewers make recommendations to the court that originate from a desire to meet the needs of the child and protect society without the constraints of agency policies or the limitations imposed by procedural rules. When Human Services and the court work with the Citizen Reviewers as members of a team committed to the needs of society instead of as adversaries, the collaboration has a positive impact.

Citizen review should be required for every child in the State's care to insure that all children and families in the system receive appropriate services. Thus reducing the tendency to slap a Band-Aid on family problems only to see the families reappear a short time later for another Band-Aid.

Reviewers should conduct administrative reviews every six months to ascertain appropriateness and effectiveness of service plans. Such reviews would assure that plan and court goals are being met and reduce need for semi annual court review. Such a forum should also seek independent input from the children, parents, foster parents, schools, physicians and other service providers that generally do not communicate to the court or with each other. This is an inexpensive way to reduce the stress on the court system caused by excessive case loads while retaining the quality and appropriateness of services provided.

Uniform data gathered by review boards and compiled by the State and National Association of Reviewers would be useful to Congress in evaluating the efficacy of service providers, agency policies and court operation. This information system will have a low implementation and maintenance cost. This information flow would also be unencumbered by the bureaucratic infrastructure that bedevils the current Juvenile and Child Welfare systems.

As members of the community citizen reviewers have a unique capacity to see that the services received by troubled children their families are appropriate. We welcome the opportunity to serve the our children, families, communities and courts.

STATEMENT OF ROSEMARY WINDER STRANGE
DIRECTOR OF SOCIAL SERVICES
CATHOLIC CHARITIES USA

Madame Chairwoman, Thank you for the opportunity to provide written testimony regarding block granting and 427 reviews. We oppose block granting to the states these federally mandated programs as well as the elimination of the requirements of section 427.

Catholic Charities USA is the nation's largest, private, social service organization. The network of 1,400 agencies and institutions and thousands of concerned individuals works to reduce poverty, support families, and empower communities in the United States.

Catholic Charities agencies and institutions, with more than 266,000 staff members and volunteers, provide social services ranging from adoption and counseling to food and housing. People of all religious, national, racial, social, and economic backgrounds receive services from Catholic Charities. We provide a full range of services to families and children. We operate modern homes and treatment centers for children.

Catholic Charities USA promotes public policies and strategies that address human needs and social injustices. More than 10 million people turned to Catholic Charities for help in 1993. Three million of those individuals were children and adolescents who were 17 years of age or younger.

Catholic Charities agencies have a long and proud history of making permanent placement plans for children in need of families. Even before 1910 when the National Catholic Conference (now Catholic Charities USA) was founded, our agencies were providing quality permanent placement plans for children available for adoption.

As stated by the National Conference of Catholic Bishops in its 1992 Pastoral Statement, *Putting Children and Families First,* Catholic Charities USA believes that "no government can love a child, and no policy can substitute for a family's care. But government can either support or undermine families."

The Adoption Assistance and Child Welfare Act was signed into law in June 1980. This legislation (P.L. 96-272) addresses matters that pertain to both the entry and exit of children from care. It includes measures to stop the drift that characterized the tenure of many children in placement. The law requires that states know what is happening to children in their care, and it redefines the relationship between federal and state government with respect to children at risk of placement and those already in care. This is accomplished mainly through a fiscal restructuring that offers states incentives to accomplish the goals of the act.

Public Law 96-272, the Adoption Assistance and Child Welfare Act of 1980, and the child protection under Section 427 of the act corrected many abuses of the past which we do not want to see revisited. A whole range of services to children and their parents are necessary to support the family unit; and when placement is necessary, to reunite the family as quickly as possible.

In 1993 Catholic Charities agencies cared for 51,403 children in residential facilities, group homes and foster home care. These children were from all economic levels who could not live with their parents for a variety of reasons including the child's treatment needs and parental neglect and abuse. Our services allowed families to stay together. Other times our services determined which children needed to be removed from their homes, temporarily or permanently. This range of services is what is required by the 427 reviews.

We acknowledge that there have been abuses in the interpretation and application of the 427 reviews. In an effort to speedily return children to their parents, discharge plans are made which are not always in the best interests of the child or the family. Catholic Charities USA views Public Law 96-272 as a step in the right direction while acknowledging its shortcomings.

We too are concerned about the abuses. Residential care is sometimes the level of care a particular child needs at a particular time, but foster care is seen as "least restrictive." As a result, many children are bumped from foster home to foster home and risk becoming emotionally disturbed. These children eventually require more expensive residential care and treatment. Some children never get a stable home. Due to funding shortages, child protective services and other child welfare services are understaffed, and workers are poorly trained. Eliminating any of the requirements of P.L. 96-272 and the other federal child protections would set the field of child welfare back fourteen years and would be a detriment to the children and families of our nation. Let's correct the abuses, but let's not wipe out what has been accomplished.

We fear that block granting federal child welfare services and foster care programs back to the states will limit the funds available for these critical children's services as demands increase. Adoption assistance and foster care are entitlements to individuals. Block granting would change the nature of the child's right to a protective safe environment either through the foster care or adoption system.

Thank you for this opportunity to offer testimony to The Ways and Means Subcommittee On Oversight.

Old Arroyo Chamisa #32A
Santa Fe, NM 87505

1 February 1995

Mr. Phillip D. Moseley, Chief of Staff
Committee on Ways and Means
US House of Representatives
1102 Longworth House Office Bldg.
Washington, DC 20515

Dear Sir,

The people who have lent their names to this letter are citizen volunteers on two boards in New Mexico's Foster Care Citizen Review program. We are writing to register our support, in the Ways and Means Subcommittee hearings on child welfare programs, for consideration of expanding citizen review as a responsible, effective, and economical way to improve the effectiveness of child welfare programs and provide protection to foster children.

We commend this subcommittee for undertaking to examine what is happening to the children who, through no fault of their own, are caught up in systems that, despite good intentions, are not meeting their needs.

From our familiarity with state and local social service programs, we would point out that, because of citizen review, foster care is the **only** social service program in which service effectiveness is monitored client by client, with participation of client-children and families as well as all others involved in providing care and services, right at the service delivery level of the family and child. We are at the forefront of assuring that abused and neglected children get the services they need, and get permanent families at the earliest possible time. No other public bureaucracy or court procedure even approaches this degree of monitoring and quality assurance. A small number of dedicated volunteers are able to assure that thousands of children do not languish unncessarily in temporary care when what they need is a loving and nurturing family. No internal or administrative review can begin to meet the kind of standard of objective, independent review afforded by citizen reviewers.

We urge the subcommittee to consider for recommendation that every child in the custody of a public child welfare agency be assured of an independent citizen review by requiring all states to establish such safeguarding procedures. Such reviews should be required at six month intervals.

Courts should be required to utilize such review information in their judicial reviews of children in legal custody.

States should also be required to establish a state review board, consisting primarily of citizen reviewers, which reports annually to state executive, legislative, and judicial agencies and to the Federal funding agency for reporting to Congress on the utilization of Federal funds.

The law should provide both incentives and penalties to states for effective or ineffective implementation of review requirements.

We believe the National Association of Foster Care Reviewers, the primary representative of the 24 states now having some citizen review, is the appropriate vehicle for providing training to states and citizen reviewers, for directing the gathering of uniform data for reports to the Federal agency and to Congress on the status of children in substitute care, and the progress being made in remedying the problem of nearly one-half million children who now do not have permanent families.

Funding for citizen review programs should go directly to state boards in order to ensure their independence from any state agency or courts which control the services provided to abused and neglected children. Funding for the national training, data collection and reporting to the Congress and the Federal agency should be directed to the National Association of Foster Care Reviewers to assure that its operations are conducted independent of any Federal or state agencies controlling child protection programs.

Our thanks once again to the Subcommittee on Oversight and its chair, Rep. Nancy L. Johnson, for undertaking this important issue.

The following Citizen Reviewers have authorized their names to be appended to this letter.

Room 1102 Longworth House Office Building
Washington, D.C. 20515

Dear Mr. Moseley:

Attached are six (6) copies of written testimony on Pennsylvania's child welfare programs for submission to the U.S. Ways and Means Subcommittee on Oversight. The deadline for submission is Tuesday, February 7, 1995.

Thank you for the opportunity to provide testimony on the structure and funding of child welfare programs at the federal level.

Sincerely,

Michael J. Breslin

Attachment

I want to express my sincere thanks to the Honorable Nancy L. Johnson and the members of the Subcommittee on Oversight of the Committee on Ways and Means for the opportunity to provide testimony on the structure and funding of child welfare programs at the federal level. Your commitment to moving quickly to review and address areas of federal/state relations that involve mandates and impose burdens on states is greatly appreciated and long overdue.

As child welfare needs and costs have multiplied, federal support for child welfare programs has become indispensable. Federal programs currently fund 37 percent of the cost of Pennsylvania's child welfare services. But, each federal program is accompanied by procedural, monitoring and reporting requirements. These requirements not only add significantly to paperwork and administrative responsibilities of staff, but also inhibit program flexibility and the freedom to experiment with program funds. My statement will propose some modest changes to reduce federal Title IV-B funding requirements as well as provide a few comments on the importance of continued federal funding for state child welfare programs.

I will begin by addressing Pennsylvania's experience in implementing Section 427 of Title IV-B.

The case planning system and court review requirements of P.L. 96-272 have changed the way public child welfare agencies in Pennsylvania do business. Before P.L. 96-272, parents voluntarily placed their children and sometimes were never able to get them back. Parents were prohibited from knowing where their children were and were not allowed to visit with any regularity. Private agencies accepted children into placement without the involvement of any public authority or the courts. With P.L. 96-272, county children and youth agencies fully assumed the following responsibilities:

--they assumed active responsibility for case management and decision-making about placement of children and their return home in conjunction with the courts;

--they assumed responsibility for determining case goals and assessing progress toward those goals;

--they assumed responsibility for bringing parents into the case planning process in a meaningful way so that parents had goals to achieve after which their children would be returned;

--they assumed responsibility for working with the courts to establish a case review system for all children in placement which assures that goals are appropriate and that progress is being made toward achieving those goals; and

--they assumed responsibility for compliance with federal and state funding requirements which hold all of us accountable for the public funds expended for these services.

All of these responsibilities have made the child welfare system more accountable to the public, to parents, to those who work in the system and to the courts, and have improved the quality of service to children in out-of-home care.

Pennsylvania has a strong record of achievement in Section 427 compliance. We have met the federal standards in all Section 427 reviews and have achieved 100 percent compliance in a majority of those reviews.

While we believe strongly in the importance of the Section 427 requirements, we also believe that federal enforcement of the requirements through program audits is no longer necessary. State laws, operating policies and procedural safeguards supporting and reflecting a philosophy of family preservation have been an integral part of Pennsylvania's child welfare system for the past 12 years. Federal Section 427 audits are time consuming and

expensive, especially for a county administered child welfare system such as Pennsylvania's. For these reasons, I am recommending that the Title IV-B Section 427 requirements be eliminated or, if this is not possible, that each state be able to self certify that it meets the requirements of Section 427.

Next, I will address the planning requirements contained in Title IV-B as amended by the Omnibus Budget Reconciliation Act of 1993 (OBRA '93) and make a recommendation on future funding of state child welfare service programs.

OBRA '93 amended Title IV-B to create a new capped entitlement program for family support and family preservation services. OBRA '93 authorizes formula grants to states totaling $60 million in Federal Fiscal Year 1994 and increasing to $255 million by Federal Fiscal year 1998 to fund the new family support and family preservation program. Pennsylvania's share of these funds was $2.360 million for Federal Fiscal Year 1994 and will be $9.755 million in Federal Fiscal Year 1998. While these funds are needed in Pennsylvania, we are concerned that the creation of another categorical program will further fragment funding and limit state flexibility to meet specific state needs.

OBRA '93 also changed and expanded the state planning required to be eligible to receive Title IV-B funds. The new Title IV-B plan requirements are more extensive and prescriptive than the previous planning required by Title IV-B. The new planning requirements specify whom states must involve in the planning process and mandate a statewide needs assessment, extensive program inventories, the targeting of resources, and the development of data systems to monitor the achievement of goals and report to the federal government.

Prior Title IV-B planning requirements allowed states to define their own planning process and to determine for themselves who would be involved in the planning process. In Pennsylvania, we have used Title IV-B planning to define priorities for the development of our child welfare system in ways that make the most sense to Pennsylvania. The process has helped to build a partnership between the State and local communities and to address the most important needs of our child welfare system. We believe the new planning requirements go too far in specifying how states must plan for child welfare services.

Pennsylvania is establishing a community-based, interagency, comprehensive approach to the delivery of services to children and families. State flexibility in the planning and use of Title IV-B funds is important to the continuing development of this cross-system approach to child and family services. The OBRA '93 child welfare amendments have made Title IV-B more categorical and prescriptive. Merging the two parts of Title IV-B into a single child welfare block grant along with a return to the prior planning requirements will reduce costs to the states and return flexibility to the program.

In closing, I wish to offer a few general comments on federal funding of state child and family service programs.

There are over 70 federal programs administered through state government in Pennsylvania that are designed to address specific child and family health and welfare issues. This array of services, each with its own discrete eligibility criteria, rules and procedures, contribute to a complex, categorical and rigid system that focus on specific problems rather than on comprehensive family needs. Our hope is that you will reduce the complexity of federal funding and provide states and communities with the flexibility to design local strategies that will keep families together as well as protect and care for those children who cannot remain with their own families. As new funding approaches are considered, other related funding streams, such as health and

education, should also be reviewed so that the complexity of programs and funds provided to states can be streamlined and merged. The emphasis must shift from a program specific focus to one that addresses broad child and family outcomes.

Child welfare programs are funded primarily through four federal revenue sources: Title IV-B, Title IV-E, Title IV-A emergency assistance and Title XIX Medicaid. While a more consistent approach and greater flexibility in federal requirements for these programs is needed, changes in any of these funding sources which do not respond to changes in the level of client need will create a significant financial burden on states and local communities.

The cost of child welfare services has increased dramatically during the past five years. Despite our best efforts to preserve families and prevent the placement of children, the number of children in need of foster care continues to grow. Budgeted costs for children and youth services in Pennsylvania for the current fiscal year are $826 million. Just five years ago, in fiscal year 1989-90, total costs for Pennsylvania's children and youth system were $457 million. This is an 80 percent increase in five years. Seventy-five percent of the cost of these services is the result of foster care placements.

The dissolution of families and the decay of communities has led to this continuing demand for substitute family care. Out-of-wedlock births, teen pregnancy, drug abuse, and the increase of single parent families are major problems affecting the need for child welfare services that will require the involvement of all sectors of our society to solve. It is essential that states have the flexibility to work with local communities that can develop local interventions and prevention strategies to build strong families and communities. As indicated previously, it is the myriad of discrete programs with a single focus that tie the hands of those at the local level trying to address comprehensive family problems. We must work to keep families together and provide our communities with the resources, capacity and flexibility to do the job.

WRITTEN COMMENTS FROM
CAROL A. BRUNTY, COMMISSIONER
VIRGINIA DEPARTMENT OF SOCIAL SERVICES FOR
THE COMMITTEE ON WAYS AND MEANS
SUBCOMMITTEE ON OVERSIGHT

February 7, 1995

Public Law 96-272, the Adoption Assistance and Child Welfare Act of 1980, was passed to provide valuable protections for children that were at risk of out-of-home placements. Prior to this legislation, systems among the states varied radically. It was not unusual for children to be caught in "foster care drift" and "forgotten children" was a descriptive term for these children. With passage of Public Law 96-272, public policy was changed and states were held accountable for the children in their care. Permanency planning became the goal and services were focused on keeping children with their birth families. If children had to be removed, Public Law 96-272 sought to assure (i) return to safe birth homes, or (ii) timely placement with adoptive families. To achieve this goal, states were required to develop and implement automated information systems, case reviews and service planning. Compliance was to be determined through federal audits which were to focus on 18 specifically identified safeguards.

Virginia was one of the first states to make effective use of the permanency planning concept. We embraced the permanency planning philosophy, instituted a system of case review, and developed an automated tracking system as early as 1976. Consequently, by June 1994, there were 6313 children in foster care throughout the state. This was 4990 (44%) fewer children in care than in 1976 when the permanency planning concept was initiated.

Few child welfare professionals will argue with the philosophical intent of the Act. Through implementation, the lives of children have been positively impacted. More children are being kept in their birth families, the length of time a child remains in foster care has decreased, and more children are achieving adoption than ever before.

Nevertheless, we still have a long way to go in meeting the critical needs of children and families. There are three issues that merit serious consideration: accountability, flexibility, and resources to carry out the intent of the Act.

Accountability

Although significant progress was made after the protections of Section 427 of the Social Security Act were developed, the federal approach to monitoring these requirements has focused more on procedural requirements and checking of boxes than on quality of service provision. For example, the focus of federal reviews has been on the *timeliness* of administrative panel reviews and dispositional hearings rather than on the service outcomes. Similarly, the *existence* of a service plan has been seen as the critical element, rather than the actual service planning process and the services that were provided.

While this approach may have been appropriate initially to ensure uniform compliance among states, we need to move beyond just a paper review to a monitoring process that focuses on the true intent of the Act. Passage of a 427 audit, as it currently exists, has little to do with the effectiveness of a child welfare program. More than half of the states are involved in some kind of child welfare litigation or are operating under consent decrees. Many of these states had passed 427 audits without difficulty. The time has come for us to begin looking at the appropriateness and quality of services being provided and at the outcomes being achieved as a result of these services.

Whether monitoring continues to be a function of the federal government or is taken over by the states, this type of monitoring is certain to present a tremendous challenge. However, movement in this direction is essential if we are to reform and improve the child welfare system while building on the knowledge we have gained in the past decade.

Flexibility

Flexibility is also an essential component of any attempt to reform current systems. Virginia has recently redesigned its approach to service provision. In 1992, the General Assembly enacted legislation entitled the Comprehensive Services Act. Passage of this act dramatically altered the administrative and funding systems providing services to at-risk youth and families. The purpose of the act was to create a collaborative system of services and funding that is child-centered, family-focused and community-based. Services and funding are consistent with the Commonwealth's policies of preserving families and providing appropriate services in the least restrictive environment, while protecting the welfare of children and maintaining the safety of the public. Early intervention, interagency collaboration, family involvement, public and private partnerships, and community flexibility in decision-making and the utilization of funds characterize this innovative system.

With this act, an administrative structure was developed and funding from five human service agencies was combined to carry out this initiative. Although findings from numerous studies indicated that redesign of Virginia's service system was essential and that the proposed structure was the most effective and cost efficient, implementation was an unnecessary challenge because of existing categorical funding limitations. Categorical funding from the federal government has inhibited Virginia's ability to de-categorize the needs of children and families even with our new system.

The bottom line is that we believe we are doing some things right in the Commonwealth. Virginia is not unique, nor is it any more creative than other states. Given the opportunity, states have proven their ability to develop programs and services that meet the needs of their citizens and that are cost effective. Therefore, we would advocate for a reduction in costly and burdensome federal regulations and an increase in state flexibility.

Current funding streams limit populations that can be served, creativity in developing services needed by local communities, and flexibility by states to improve services to their citizens. Block granting, which would allow more flexibility and creativity on the state level, could be advantageous in moving toward more effective service systems. Effective block granting would include indexing that will accommodate state population growth, triggers that allow "uncapping" of the block grant during times of increases in the child welfare caseload, and incentives for states that are based on achievement of positive outcomes, rather than punitive penalties for not meeting process requirements.

Resources

Although block granting has the potential for encouraging more creativity and flexibility on the state level, careful consideration must be given to the structure of any block grant design.

Currently, Title IV-E, which provides states with funding for administration, training, and maintenance expenses is an open ended entitlement program. With the creation of block grants, funding

could be capped at a level that would restrict the development of innovative programs and services and which would preclude the state's ability to develop qualified resources. Observation of those states that have undergone consent degrees, as a result of suits being filed by the American Civil Liberties Union, shows that resources are one of the most critical components in an effective service delivery system. With increased, qualified resources, outcomes for children in these systems have improved significantly.

Summary

The federal government has taken an essential leadership role in shaping the direction of child welfare service systems. Federal 427 reviews were instrumental in moving states away from antiquated systems that encouraged foster care drift toward service systems that resulted in beneficial outcomes for children and families. Progress now demands that we move beyond the traditional monitoring approach to an approach that forces states to move even further toward positive outcomes. Block grants have the potential for giving the states necessary and appropriate flexibility in developing approaches that best meet the needs of their citizens. Structuring of block grants must include indexing for population growth and incentives for achievement of positive outcomes.

The challenge before us is structuring a funding stream that contains the components of public accountability, flexibility for individual states, and incentives for achievement of positive outcomes. We believe the concepts of Public Law 96-272 are still valid, but future measurement of state child welfare systems must be based on achievement of agreed upon outcomes or benchmarks that are child centered, family focused, and community based.

JOHNSON ANNOUNCES DETAILS OF HEARING ON FCC PROVISION

Congresswoman Nancy L. Johnson (R-CT), Chairman of the Subcommittee on Oversight of the Committee on Ways and Means, today announced that the subcommittee will hold a hearing to examine the operation and administration of a tax provision which allows the Federal Communication Commission to grant tax relief with respect to the sales of radio, television, and other properties under certain circumstances. This provision is known as Internal Revenue Code section 1071. **The hearing will be held on Friday, January 27, 1995, in room B-318 of the Rayburn House Office Building, beginning at 10:00 a.m.**

BACKGROUND:

Code section 1071 was enacted in 1943 to address concerns with respect to involuntary conversions of radio stations arising from wartime restrictions on the purchase and availability of new radio property. Under section 1071, gain from the sale or exchange of broadcast facilities may be deferred in cases where the sale or exchange is certified by the Federal Communications Commission "to be necessary or appropriate to effectuate a change in a policy of, or the adoption of a new policy by, the Commission with respect to the ownership and control of radio broadcasting stations...."

In 1978, the FCC announced a policy of promoting minority ownership of broadcast facilities by offering a tax certificate to those who voluntarily sell such facilities to minority individuals or minority-controlled entities. Since that time, the FCC has issued over 300 such tax certificates. Recent press reports about the FCC's administration of section 1071, both in terms of the types of properties covered and the size of the tax benefits being granted, raise significant questions about this provision.

FOCUS OF THE HEARING:

The Subcommittee will examine: (1) whether the FCC's 1978 policy is consistent with the underlying intent of section 1071; (2) whether the FCC's administration of section 1071 constitutes an impermissible exercise of legislative authority; (3) whether the tax incentive provided in section 1071 in fact fosters minority ownership of broadcast facilities; and (4) whether the FCC policy is a necessary or appropriate means of achieving this goal.

DETAILS FOR SUBMISSION OF REQUESTS TO BE HEARD:

Requests to be heard at the hearing must be made by telephone to Traci Altman or Bradley Schreiber at (202) 225-1721 no later than the close of business on Monday, January 23, 1995. The telephone request should be followed by a formal written request to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. The staff of the Subcommittee on Oversight will notify by telephone those scheduled to appear as soon as possible after the filing deadline. Any questions concerning a scheduled appearance should be directed to the Subcommittee staff at (202) 225-7601.

In view of the limited time available to hear witnesses, the Subcommittee may not be able to accommodate all requests to be heard. Those persons and organizations not scheduled for an oral appearance are encouraged to submit written statements for the record of the hearing. All persons requesting to be heard, whether they are scheduled for oral testimony or not, will be notified as soon as possible after the filing deadline.

Witnesses scheduled to present oral testimony are required to summarize briefly their written statements in no more than five minutes. **THE FIVE MINUTE RULE WILL BE STRICTLY ENFORCED. The full written statement of each witness will be included in the printed record.**

In order to assure the most productive use of the limited amount of time available to question witnesses, all witnesses scheduled to appear before the Subcommittee are required to submit 200 copies of their prepared statements for review by Members prior to the hearing. **Testimony should arrive at the Subcommittee on Oversight office, room 1136 Longworth House Office Building, no later than noon, Thursday, January 26, 1995.** Failure to do so may result in the witness being denied the opportunity to testify in person.

WRITTEN STATEMENTS IN LIEU OF PERSONAL APPEARANCE:

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement by the close of business on Tuesday, February 7, 1995, to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filing written statements wish to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Subcommittee on Oversight office, room 1136 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

Each statement presented for printing to the Committee by a witness, any written statement or exhibit submitted for the printed record or any written comments in response to a request for written comments must conform to the guidelines listed below. Any statement or exhibit not in compliance with these guidelines will not be printed, but will be maintained in the Committee files for review and use by the Committee.

1. All statements and any accompanying exhibits for printing must be typed in single space on legal-size paper and may not exceed a total of 10 pages.

2. Copies of whole documents submitted as exhibit material will not be accepted for printing. Instead, exhibit material should be referenced and quoted or paraphrased. All exhibit material not meeting these specifications will be maintained in the Committee files for review and use by the Committee.

3. Statements must contain the name and capacity in which the witness will appear or, for written comments, the name and capacity of the person submitting the statement, as well as any clients or persons, or any organization for whom the witness appears or for whom the statement is submitted.

4. A supplemental sheet must accompany each statement listing the name, full address, a telephone number where the witness or the designated representative may be reached and a topical outline or summary of the comments and recommendations in the full statement. This supplemental sheet will not be included in the printed record.

The above restrictions and limitations apply only to material being submitted for printing. Statements and exhibits or supplementary material submitted solely for distribution to the Members, the press and the public during the course of a public hearing may be submitted in other forms.

*****

Chairman JOHNSON. Good morning, everyone.

I regret our late start, but we will try to move along. Today the Oversight Subcommittee will examine the operation of a provision in the Internal Revenue Code that allows the FCC (Federal Communications Commission) to grant tax benefits with respect to the sales of radio, television, and other broadcast properties. That provision, Internal Revenue Code section 1071, was enacted in 1943 to address concerns with respect to the involuntary conversion of radio stations arising from wartime restrictions on the purchase and availability of new radio properties.

Under section 1071, gain from the sale or exchange of property may be deferred in cases where the sale or exchange is certified by the Federal Communications Commission to "be necessary or appropriate to effectuate a change in a policy of or the adoption of a new policy by the Commission with respect to the ownership and control of radio broadcasting stations."

This provision has been significantly expanded by the FCC over the last 50 years. First, radio stations were expanded to include television stations. Then television stations were expanded to include cable television; more recently, personal communication services. The newest type of cellular phones have been added.

The policies which the FCC believes warrant the granting of tax breaks also have changed over the years. The original policy of the FCC was to allow tax benefits only in the cases of involuntary conversions of radio stations. In 1978, the FCC announced a new policy of promoting minority ownership of broadcast facilities by offering an FCC tax certificate to those who voluntarily sell such facilities to minority individuals and minority-controlled entities.

The size of transactions receiving tax benefits under section 1071 also has expanded. One proposed transaction recently in the news involves the sale by Viacom of cable television properties for approximately $2.3 billion. The total Federal and State tax benefits for this one transaction could well be in excess of $1½ billion. Clearly, this subcommittee has a responsibility to examine whether a policy which allows a Federal agency to hand out tax benefits of this magnitude is in the taxpayers' interest.

The subcommittee will examine the FCC's 1978 policy to see if it is consistent with the underlying intent of section 1071 or whether the FCC's administration of section 1071 represents the exercise of what can more properly be described as legislative powers.

The subcommittee also will examine whether the tax incentive provided in section 1071 in fact fosters minority ownership of broadcast facilities or whether the FCC policy is a necessary, appropriate means of achieving this goal. The FCC has a number of programs besides the tax break intended to promote diversity in the ownership of broadcast facilities. It is possible these other programs, programs augmented by other changes in the laws regarding the ownership of broadcast stations, would be a better way to promote diversity.

As far as I am concerned, this is not a hearing about the wisdom of promoting diversity. It is an inquiry into whether section 1071, as currently administered by the FCC, is a sensible way of doing so.

With that, I would like to yield to my colleague, Mr. Matsui, for opening comments.

Mr. MATSUI. Thank you very much, Madam Chairman.

I do not think there is any question that the issue of diversity in broadcasting, diversity in ideas, diversity in ownership, is a laudable, important goal of the United States. After all, we are an extremely diverse country. To have a free exchange of ideas on our airwaves is obviously essential for our country to remain unified with common goals, common visions, and common ideals.

I think, also, at the same time, we have to recognize that with the limited pie available in America today, we are already talking about eliminating the Corporation for Public Broadcasting and a number of other very important programs of the Federal Government. We must look at ways of making the system more efficient.

The real issue involved here, I believe, is whether or not using first the Tax Code to try to achieve the laudable goal of diversity in broadcasting is an appropriate vehicle; second, if in fact one should say it is, then what one must ask is whether the section 1071 is a further appropriate way to achieve these goals.

I think the purpose of this hearing will, hopefully, bring that out. I might just further point out that in my discussions with both the Treasury Department, Joint Tax Committee, and FCC, we find that there is a dearth of information available as to whether this program is in fact working. I think it is extremely unfortunate, but as many of you know, back in 1987, the Appropriations Committee, beginning on the Senate side, put in a rider prohibiting the FCC, the Treasury Department, and other agencies of the Federal Government from investigating, analyzing, and determining whether or not this program is working, the amount of benefits that are out as a result of this program, and, more importantly, from making any changes or alterations in this particular program.

As the chairwoman mentioned, this section was originally devised on involuntary transfers back during the wartime period of 1943. The FCC made the decision to expand it. The latest expansions were, as the chairwoman says, in the area of personal communications devices. So this is the first—well, one of the few times that Congress will be analyzing the results of this expansion of this particular section.

Let me also make one further observation. The ostensible reason this issue has come before us today was because of the recent news reports of the Viacom-TCI-Washington transaction that was apparently completed on January 20, 3 days after the press report sent out by Chairman Bill Archer that he wanted to do an investigation of this particular matter.

It is my hope this committee, subcommittee, and the full committee and the Members of the House and Senate, and the President, will make sure that if there are any changes made in the code, it should provide the changes be applied to the transaction that called the matter to our attention.

I have tried to review with some detail this transaction. It is a shame Viacom, TCI, and Mr. Washington are not here to testify today, but, apparently, as I understand, notices have been sent notifying interested parties that they were free to appear and make their case. If they would have come, perhaps we could change our

mind, but until such time, I think that we need to make sure whatever changes we make apply to this particular transaction. They are on notice. There is no constitutional issue involved, as everyone knows.

Let me just, Madam Chairwoman, mention the Viacom transaction. In 1978, Mr. Washington was working for the FCC through the Carter administration. He, among others, devised this particular change to expand the use of section 1071. He has been involved in at least four other tax certificate transactions. Apparently, he still retains ownership interest in many of them.

In this particular transaction, we understand that his investment is anywhere from $1 to $2.3 million out of a $2.3 billion transaction. The total tax benefits, as the chairwoman says, to Viacom, exceed $460 million, because the deferral will be in excess of $1 billion.

That is the issue that we must discuss, whether or not this program works, not only in this case but in other cases, and we must really determine whether this is an appropriate use of taxpayers' money for an obvious laudable goal. So I welcome the chairwoman holding these hearings and I welcome the testimony of the witnesses.

Chairman JOHNSON. Thank you. Just for the record, we did invite Viacom to come and testify. They preferred not to, and I want to submit for the record a letter from Reed Hundt of the FCC that the members will receive shortly.

[The information follows:]

FEDERAL COMMUNICATIONS COMMISSION
WASHINGTON

OFFICE OF
THE CHAIRMAN

January 26, 1995

Honorable Nancy L. Johnson
Chairman
Subcommittee on Oversight of the Committee on Ways and Means
United States Capitol
Washington, D.C. 20515

Dear Chairman Johnson:

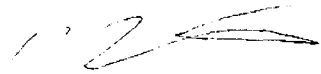
Thank you for inviting me to participate in the Subcommittee's hearing to examine the operation and administration of Internal Revenue Code section 1071, which allows the Commission to grant tax relief with respect to the sales of broadcast and cable facilities to minority buyers. With your indulgence, I will take advantage of the offer in Mr. Mosely's letter and designate the Commission's General Counsel, William E. Kennard, to testify at the hearing. Mr. Kennard, whose written statement is attached, is familiar with the background and operation of the tax certificate program, and will of course be happy to respond to the Subcommittee's questions.

I do want to note in advance of the hearing that statutory language currently in effect forbids the Commission from spending any appropriated funds to "repeal, to retroactively apply changes in, or to continue a reexamination of [its] policies with respect to . . . tax certificates granted under 26 U.S.C. §1071, to expand minority ownership of broadcasting licenses." Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations Act, 1995, Pub. L. No. 103-317, 108 Stat. 1724 (1994). Congress has reenacted that language each year since 1987, when it directed the Commission to end a reexamination of minority ownership policies that the Commission had launched in 1986, and told it instead to "apply the policies regarding . . . tax certificates that were in effect before the inquiry commenced." S.Rep. 100-182, p. 76 (1987). See Continuing Appropriations for Fiscal Year 1988, Pub. L. No. 100-202, 101 Stat. 1329 (1987). Ever since, we have had no choice but to apply the tax certificate program as it existed in 1986.

Because of this ongoing statutory constraint on the Commission's discretion in implementing the tax certificate program, the Commission has been unable to subject the program to the kind of reexamination and reassessment that all administrative programs warrant. The Commission, for example, has not had the ability to collect and evaluate facts about the program to the same extent as with other programs in its regulatory jurisdiction.

I want to assure you that the Commission looks forward to cooperating fully with the Subcommittee in responding to questions about the history and current administration of the tax certificate program. Please let me know if, after the hearing, there is any further assistance we can provide.

Sincerely,



Reed E. Hundt

Mr. MCDERMOTT. Madam Chairwoman, will you not take any other opening statements?

Chairman JOHNSON. I can if the subcommittee would like. We do have a long list of witnesses, but I would be happy to yield to the gentleman from Washington.

Mr. MCDERMOTT. I guess I only raise it because I keep wondering why we are zeroing in on this program. I understand there is a large deal that is about to go through or has gone through, according to Mr. Matsui, and the chairman of the committee would like to stop it from happening. But the question I have to ask is are there not some other large tax breaks being brokered even at this very moment that we are having this hearing? It seems to me we are singling out this program while there are many other tax breaks on the books that we should also take a look at.

I have in hand a short list of more than half a dozen special interest tax breaks that are far more generous than this program, and I hope that we are also going to examine those. I hope that the chairwoman will look at taxing capital gains on inherited property, which is worth $20 billion; or reforming estate and gifts taxes, which is $8 billion over the next 5 years; or curbing the excessive depreciation writeoffs, which is $25 billion over the next 5 years; or ending the tax breaks on mergers and acquisitions, which is $9 billion over the next 5 years; or ending tax breaks for runaway plants, which is $1 billion in the next 5 years; or closing gas and oil tax loopholes, which is $7.6 billion.

The question you have to ask yourself is why is this the first thing that comes up? I am waiting to hear the answer. Why this one is—is it just because it was in the paper last week? I think that we ought to get to the bottom of that.

Chairman JOHNSON. Are there other members who would like to make opening statements?

Mr. Herger.

Mr. HERGER. Well, Madam Chair, just very quickly, I just have to ask the question, in response to the gentleman from Washington, did you hear what the Chair and the gentleman from California mentioned? This is pretty major, isn't it? We are talking hundreds of millions of dollars involving one individual. Is the gentleman from Washington questioning the fact that this should be brought up?

Mr. MCDERMOTT. No. No, I am perfectly willing to look at any tax break as long as we do not stop with this hearing on this particular one.

Mr. HERGER. Well, we are early in the session.

Mr. MCDERMOTT. There are a whole lot of other places where we could pick up a whole hell of a lot more money than we are going to pick up in this one, that are more egregious and have gone on for a longer period of time. From my standpoint, when it comes up that it happens to be this kind of deal that makes the first one out of the block, to me, that raises real questions about what is happening here.

Chairman JOHNSON. I would like to correct for the record the gentleman's comment that this chairman would like to stop it from happening. The chairman did not say she would like to stop it from happening.

In fact, in my opening comments I said, clearly, this subcommittee has the responsibility to examine whether a policy that allows a Federal agency such a free hand to hand out tax benefits of this magnitude is in the public's interest. That is the question before us.

Second, I regret the gentleman was not at the meeting of the Oversight Subcommittee, the bipartisan meeting, at which we reviewed our agenda because some of the things he suggested he could have offered at that time. We do have a full agenda. We will certainly be looking at many things, and we will be happy to add those things to the agenda as well.

Mr. MCDERMOTT. If the Chair would yield for 1 second, I was referring to the chairman of the full committee; I was not referring to you, who wants to stop this.

Chairman JOHNSON. Well, your reference appeared to refer to me.

Mr. MCDERMOTT. I was not precise.

Chairman JOHNSON. I have no indication from the chairman that he is interested in anything more than the exploration that I have been tasked to carry out for the oversight function, which is exactly what government ought to be doing: overseeing the way the law is being implemented and that is what we are doing here today.

Mr. HANCOCK. Madam Chair.

Chairman JOHNSON. Mr. Hancock.

Mr. HANCOCK. Just a real quick statement. There is a major difference between a $400 million tax credit to one corporation, than a $400 million or $1 or $10 billion that is spread out over thousands of people. There is a major difference.

Chairman JOHNSON. Mr. Kies, would you proceed, please.

STATEMENT OF KENNETH J. KIES, CHIEF OF STAFF, JOINT COMMITTEE ON TAXATION, ACCOMPANIED BY MARY SCHMITT, DEPUTY CHIEF OF STAFF

Mr. KIES. Thank you, Madam Chairwoman.

I am accompanied today by Mary Schmitt, the Deputy Chief of Staff of the Joint Committee on Taxation. It is my pleasure to present the testimony of the staff of the Joint Committee on Taxation to this subcommittee on the Federal Communications Commission tax certificate program.

My testimony will be in four parts. First, I will provide a brief overview of the Internal Revenue Code section 1071 issues; second, I will describe the legislative background of section 1071 and the FCC tax certificate program; third, I will describe the application of the tax rules in those cases where an FCC tax certificate is granted; and, fourth, I will describe briefly some of the tax policy issues the subcommittee may wish to consider in assessing section 1071.

Under present law, a taxpayer generally is required to include in gross income the gain recognized upon the sale or disposition of a business, including a broadcast business. An exception to this general rule under section 1071 provides that a seller of certain property who receives a tax certificate from the FCC may defer the recognition of gain on the sale indefinitely by either electing to purchase replacement property within 2 years after the taxable year

in which the sale occurs, or electing to reduce the basis of depreciable property held by the seller immediately after the sale. The deferred gain may be recognized upon subsequent disposition, if any, of the replacement properties.

Section 1071 was originally enacted in 1943 to facilitate the sale of properties required to be disposed of because of certain prohibitions on ownership of multiple stations within the same market. The tax certificate program has been modified and expanded a number of times.

In 1978, the FCC announced a policy of promoting minority ownership of broadcast facilities by offering an FCC tax certificate to those who voluntarily sell such facilities to minority-owned or controlled entities. The FCC's policy was based on the view that minority ownership of broadcast stations would provide a significant means of fostering the inclusion of minority views in programming thereby serving the needs and interests of the minority community.

The FCC subsequently expanded its policy to include the sale of cable television in 1993. The FCC further expanded the program to apply to personal communication services. Minorities within the meaning of the FCC policy include "blacks, Hispanics, American Indians, Alaskan Natives, Asian and Pacific Islanders."

As a general rule, a minority-controlled corporation is one in which more than 50 percent of the voting stock is held by minorities. A minority-controlled partnership is one in which the general partner is a minority or minority-controlled and minorities have at least a 20 percent interest in the partnership.

The FCC requires those who acquire broadcast properties with the help of the FCC tax certificate policy to hold those properties for at least 1 year. An acquisition can qualify if there is a preexisting agreement to buy out the minority interest at the end of the 1-year holding period.

In 1982, the FCC further diversified or further expanded its tax certificate policy for minority ownership. At that time the FCC decided that in addition to those who sell properties to minorities, investors who contribute to the stabilization of the capital base of a minority enterprise would be entitled to a tax certificate upon the subsequent sale of their interest in a minority entity.

Some recent news reports suggest that FCC tax certificates are not fostering real minority ownership of broadcast stations. In some instances, a minority investor purports to control the buyer often through a limited partnership or other syndication, but effectively does not because of the small economic interest of the minority investor. In other instances, minority buyers are reported to have resold the broadcast properties shortly after their original sale.

The FCC tax certificate program functions as an open-ended tax expenditure with the FCC as the authorizing agency. Since 1978, the FCC has issued 378 certificates under section 1071, 317 of which relate to the sale of broadcast properties to minority-owned or controlled buyers. The staff of the Joint Committee previously estimated that the tax expenditure relating to Code section 1071 over 5 fiscal years was $500 million; however, it is in the process of reviewing this estimate in light of new information it is receiv-

ing. The Treasury Department has estimated the tax expenditure at $1.6 billion for the same period.

Code section 1071 was originally enacted in 1943, as I indicated. Congress believed that the involuntary conversion rules at the time were inadequate and expanded those rules in the case of the sales of these properties due to the fact there was a lack of availability of radio stations for replacement properties at the time.

Apart from the FCC tax certificate program, there are other programs administered by the FCC to foster minority ownership. The FCC awards comparative merit in licensing proceedings to minority applicants in the interest of promoting minority entrepreneurship.

In addition, the FCC's distressed sale policy allows broadcasting licensees, whose licenses have been designated for a revocation hearing, prior to the commencement of a hearing to sell their station to a minority-owned or controlled entity at a price substantially below fair market value. The licensee, whose license has been designated for hearing, would ordinarily be prohibited from selling, assigning, or otherwise disposing of its interest until the issues have been resolved in the licensee's favor.

On January 20, 1995, Viacom and Mitgo, wholly owned by Frank Washington, and affiliates of InterMedia Partners, announced they had signed a definitive agreement under which Viacom will sell its cable systems serving 1.1 million customers to a partnership, of which Mitgo is the general partner, for approximately $2.3 billion in cash. A subsidiary of TeleCommunications Inc. is one of the limited partners of InterMedia. Recent news reports suggest that TeleCommunications will provide "nearly all" of the money for the cable system purchase. Mr. Washington will invest approximately $1 million of his own money according to recent reports. Mr. Washington is an African-American and apparently controls Mitgo for FCC purposes, which will be the general partner for the partnership acquiring the cable systems.

The sale is subject to customary conditions, approvals of local franchise authorities, and receipt of the FCC tax certificate. Viacom has said the proceeds from the transaction, which it expects to complete in the second half of this year, will be used to repay debts.

As designed, the sale appears to meet the standards articulated by the FCC to qualify for a tax certificate under section 1071, even though the actual investment by Mr. Washington may be as little as $1 million. News reports and other publicly available information indicate that the deferred gain on the Viacom sale can be reasonably expected to be in the range of $1.1 to $1.6 billion.

The tax deferral, including State tax benefits, would be in the range of $440 to $640 million.

Under generally applicable Code provisions, the seller of a broadcast business, or any other business, recognizes gain to the extent the sale price exceeds the seller's basis in the property. Under Code section 1071, a seller receiving a tax certificate can defer recognizing the gain on the sale indefinitely by making either one or a combination of two elections.

The seller may elect to treat the sale or exchange as an "involuntary conversion." If this election is made, the taxpayer will generally avoid recognizing gain on the sale to the extent it reinvests

the sale proceeds in qualifying replacement properties within 2 years from the end of the tax year in which the sale occurs.

The IRS has issued private letter rulings holding that purchasing stocks or assets from a related party can qualify as replacement properties. Thus, it appears that in certain circumstances, related taxpayers may obtain significant tax deferral without any additional cash outlay to acquire new properties after a qualifying FCC tax certificate sale. The involuntary conversion election could provide greater flexibility as to the allocation of reduced basis than the alternative election to reduce the basis of depreciable property.

Let me just briefly review some of the tax policy issues raised by section 1071 and then I would be happy to take any questions.

Based upon our review of Code section 1071, and the manner in which it is administered by the FCC and the IRS, there are a number of tax policy considerations which we have identified and which the subcommittee may wish to take into consideration in reviewing what, if any, changes should be made to this provision. They are as follows:

First, the current law provision extends broad discretionary authority to an agency of the Federal Government to administer a tax provision which is substantially open-ended. The recent expansion of the program to personal communications service licenses is evidence of its open-ended nature. We have been unable to identify any other aspect of the Internal Revenue Code, other than the provision which grants the State Department the authority to designate combat zones, which extends this kind of discretionary authority.

Second, the manner in which the FCC administers this provision does not take into account the tax cost associated with granting an FCC tax certificate. Indeed, we have been advised that the FCC does not request the information as part of its tax certificate application program. As a result, there is no effort made to balance the cost to the Federal Government in the form of lost tax revenues with the benefit which is obtained from the granting of the FCC tax certificate.

Third, there is no cap on the amount of tax benefit which accrues on a per transaction basis. This raises concerns, particularly when considering a transaction like the proposed Viacom transaction, which appears to have the ability to confer a substantial tax benefit in the range of $440 to $640 million if it were to receive an FCC tax certificate. In addition, there is no requirement that the tax benefit accrue, in whole or in part, to the minority-owned or minority-controlled purchaser. In many transactions it is possible that the minority-owned or controlled purchaser is paying full fair market value for the property acquired even though the seller may be receiving a substantial tax benefit over and above the sale price for the broadcast property.

Fourth, it appears that as a result of IRS interpretation, the sellers of property qualifying for the FCC tax certificate may be able to utilize various planning techniques that enable them to obtain a tax deferral indefinitely without reducing the basis of existing properties or being forced to acquire new properties from unrelated third parties.

Fifth, the manner in which the FCC has administered section 1071 appears to allow transitory ownership by minority parties and ownership of very small actual interests in properties qualifying for the FCC tax certificate.

Sixth, programs like this one have typically been administered through the appropriation of direct spending amounts so that the Congress can have continuing oversight over the amount of money which is being spent for a particular program. As a result, Congress may wish to substitute a direct appropriation for section 1071.

These are all issues which the subcommittee needs to consider in assessing the merits of the current law and any proposed changes. I would be happy to take any questions that you might have.

Thank you.

[The prepared statement follows:]

STATEMENT OF KENNETH J. KIES, CHIEF OF STAFF JOINT COMMITTEE ON TAXATION

Thank you Madam Chairwoman. It is my pleasure to present the testimony of the Staff of the Joint Committee on Taxation at this hearing of the Oversight Subcommittee on the Federal Communications Commission's tax certificate program. My testimony will be in four parts: first, I will provide a brief overview of Internal Revenue Code section 1071 issues; second, I will describe the legislative background of section 1071 and the FCC tax certificate program; third, I will describe the application of the tax rules in those cases where an FCC tax certificate is granted; and fourth, I will briefly describe some of the tax policy issues the Committee may wish to consider in assessing section 1071.

Overview

Under present law, a taxpayer generally is required to include in gross income the gain recognized upon the sale or disposition of a business, including a broadcast business. An exception to this general rule under Code section 1071 provides that a seller of certain property who receives a tax certificate from the FCC may defer the recognition of gain on the sale indefinitely by either (1) electing to purchase replacement property within 2 years after the taxable year in which the sale occurs or (2) electing to reduce the basis of depreciable property held by the seller immediately after the sale or acquired by the seller in the taxable year of the sale. The deferred gain may be recognized upon the subsequent disposition, if any, of the replacement property. The purchaser of a broadcast business, whether or not pursuant to a tax certificate program, acquires a basis in the business equal to the purchase price paid, which may be eligible for depreciation or amortization deductions. The tax benefit provided by Code section 1071 is the ability to defer, in some cases permanently, what would otherwise be a current tax payment to later years. A long-term or indefinite deferral can constitute the equivalent of complete tax forgiveness.

Code section 1071 was originally enacted in 1943 to facilitate the sales of properties required to be disposed of because of certain prohibitions on ownership of multiple radio stations within the same market. This tax certificate program has been modified and expanded a number of times.

Minority ownership policy

In 1978, the FCC announced a policy of promoting minority ownership of broadcast facilities by offering an FCC tax certificate to those who voluntarily sell such facilities (either in the form of assets or stock) to minority-owned or controlled entities. The FCC's policy was based on the view that minority ownership of broadcast stations would provide a significant means of fostering the inclusion of minority views in programming, thereby serving the needs and interests of the minority community as well as enriching and educating the non-minority audience. The FCC subsequently expanded its policy to include the sale of cable television systems. In 1993, the FCC further expanded the program to apply to personal communication services. The FCC is in the process of auctioning 2,000 of these licenses.

"Minorities," within the meaning of the FCC's policy, include "Blacks, Hispanics, American Indians, Alaska Natives, Asians, and Pacific Islanders." As a general rule, a minority-controlled corporation is one in which more than 50 percent of the voting stock is held by minorities. A minority-controlled limited partnership is one in which the general partner is a minority or minority-controlled, and minorities have at least a 20-percent interest in the partnership. The FCC requires those who acquire broadcast properties with the help of the FCC tax certificate policy to hold those properties for at least one year. An acquisition can qualify even if there is a pre-existing agreement (or option) to buy out the minority interest at the end of the one-year holding period, provided that the transaction is at arms-length.

In 1982, the FCC further diversified its tax certificate policy for minority ownership. At that time, the FCC decided that, in addition to those who sell properties to minorities, investors who contribute to the stabilization of the capital base of a minority enterprise would be entitled to a tax certificate upon the subsequent sale of their interest in the minority entity.[1] Since 1987, in appropriations legislation, the Congress has prohibited the FCC from using any of its appropriated funds to repeal, to retroactively apply changes in, or to continue a reexamination of its comparative licensing, distress sale and tax certificate policies. This limitation has not prevented an expansion of the existing program.

Some recent news reports suggest that FCC tax certificates are not fostering "real" minority ownership of broadcast stations. In some instances, a minority investor purports to control the buyer (often through a limited partnership or other syndication) but effectively does not because of the small economic interest of the minority investor. In other instances, minority buyers are reported to have resold the broadcast property (or their interest in the property) shortly after the original sale.

The FCC tax certificate program functions as an open-ended tax expenditure with the FCC as authorizing agency. Since 1978, the FCC has issued 378 tax certificates under Code section 1071, 317 of which related to the sale of broadcast properties to minority-owned or minority-controlled buyers. The staff of the Joint Committee on Taxation previously has estimated the tax expenditure

---

[1] To qualify for an FCC tax certificate in this circumstance, an investor must either (1) provide start-up financing that allows a minority to acquire either broadcast or cable properties, or (2) purchase shares in a minority-controlled entity within the first year after the licenses necessary to operate the property is issued to the minority. In these situations, the status of the divesting investor and the purchaser of the divested interest is irrelevant, since the goal is to increase the financing opportunities available to minorities.

relating to Code section 1071 to be $500 million over the five fiscal years 1995-1999, although it is in the process of reviewing this estimate in light of new information it is receiving. The Treasury Dpartment has estimated the tax expenditure at $1.6 billion over the same period.

Legislative Background

Code section 1071 was originally enacted as part of the Revenue Act of 1943 to help the FCC implement a new policy that prohibited licensees from owning more than one radio station per market. Congress believed that the involuntary conversion rules (which generally permitted gain on sales to be excluded from taxable income if the proceeds of a sale were reinvested in property similar to the property involuntarily converted) should be applied to these transactions but needed to be liberalized for the FCC-ordered sales because, "[d]ue to wartime restrictions, the purchase of new radio property [would have been]... difficult."

The term "radio broadcasting" was expanded to include cable television in 1973. The use of FCC tax certificates was recently expanded in connection with the auction of personal communication services.

Other FCC minority ownership programs

Apart from the FCC tax certificate program, there are other programs administered by the FCC to foster minority ownership. The FCC awards comparative merit in licensing proceedings to minority applicants in the interest of promoting minority entrepreneurship. In addition, the FCC's distress sale policy allows broadcasting licensees whose licenses have been designated for revocation hearing, prior to the commencement of a hearing, to sell their station to a minority-owned or controlled entity, at a price "substantially" below its fair market value. A licensee whose license

has been designated for hearing would ordinarily be prohibited from selling, assigning or otherwise disposing of its interest, until the issues have been resolved in the licensee's favor.

Viacom transaction

On January 20, 1995, Viacom Inc. (a publicly-traded company) and Mitgo Corp., a company wholly owned by Frank Washington, and affiliates of InterMedia Partners announced that they had signed a definitive agreement under which Viacom will sell its cable systems serving 1.1 million customers to a partnership, of which Mitgo is the general partner, for approximately $2.3 billion in cash. A subsidiary of TeleCommunications Inc. (a national cable television operator) is one of the limited partners of Intermedia. Recent news reports suggest that TeleCommunications Inc. will provide "nearly all" of the money for the cable system purchase. Mr. Washington will invest about $1 million of his money. Mr. Washington is an African American and apparently controls Mitgo for FCC purposes, which will be the general partner for the partnership acquiring the cable systems.

The sale is subject to customary conditions, approvals of local franchise authorities and receipt of an FCC tax certificate. Viacom said proceeds from the transaction, which is expected to be completed in the second half of 1995, will be used to repay debt.

As designed, the sale appears to meet the standards articulated by the FCC to qualify for a tax certificate pursuant to Code section 1071 even though the actual investment by Mr. Washington may be as little as $1 million. News reports and other available information indicate that the deferred gain on the Viacom sale can be reasonably expected to be in the range of $1.1 billion to $1.6 billion.

Application of Tax Rules

Under generally applicable Code provisions, the seller of a broadcast business, or any other business, recognizes gain to the extent the sale price (and any other consideration received) exceeds the seller's basis in the property. Under Code section 1071, a seller receiving a tax certificate from the FCC can defer recognizing gain on the sale indefinitely by making either one or a combination of two elections on its tax return for the year of the sale.

The seller may elect to treat the sale or exchange as an "involuntary conversion" under Code Section 1033. If this election is made, the taxpayer will generally avoid recognizing gain on the sale to the extent that it reinvests the sale proceeds in qualifying replacement property within two years from the end of the tax year in which the sale occurs. If the taxpayer sells assets rather than stock, it may be required to recapture depreciation under certain circumstances.

Qualifying replacement property, within the meaning of this section of the Code, includes the following:

(1) Stock of corporations operating "radio broadcasting stations" (a term that the Internal Revenue Service ("IRS") interprets as including television stations and cable television stations). The seller may purchase any number of shares of a broadcast corporation, including a publicly-traded company (and may invest in more than one broadcast company).

(2) Assets "similar or related in service or use" to the property sold.

Under the "involuntary conversion" election and the general involuntary conversion rules, the taxpayer's basis in the acquired replacement property will generally be the "carryover" basis of the property that was sold, rather than a fair market value basis reflecting the full reinvested proceeds. If the replacement property is stock of a corporation conducting a qualifying business,

the carryover basis would apply to the stock but generally would not change the basis of assets inside the corporation. Depending on the basis and remaining depreciable lives of the assets inside the corporation, this might result in significant deferral of any tax detriment resulting from the carryover basis, as long as the stock is not sold.

The IRS has issued private letter rulings holding that the purchase of stock or assets from a related party can qualify as a replacement purchase. Thus, it appears that in certain circumstances related taxpayers may obtain significant tax deferral without any additional cash outlay to acquire new properties after a qualifying FCC tax certificate sale. The involuntary conversion election could provide greater flexibility as to the allocation of reduced basis than the alternative election to reduce basis of depreciable property.

If the seller chooses not to purchase "replacement property" or would otherwise recognize gain (because it reinvested only a portion of its cash proceeds in qualifying replacement property), Code section 1071 allows the seller to elect not to recognize the gain to the extent it is applied to reduce the basis of depreciable property (within the meaning of Code section 167) that is either held by the seller immediately after the sale or acquired by the seller in the taxable year of the sale. Eligible property includes most tangible property (not just broadcast property), but does not usually include items such as inventories, stock in trade, and securities. Eligible property also includes goodwill and other intangible property that is depreciable under Code section 197 (which generally applies to intangible property acquired after August 10, 1993). A seller that elects to reduce its basis in depreciable property must reduce its basis in all of its depreciable property by reference to a regulatory formula--it cannot allocate the reduction disproportionately unless authorized by the IRS to do so.

Issues Raised by Code Section 1071

Based upon our review of Code 1071, and the manner in which it is administered by the FCC and the Internal Revenue Service, there are a number of tax policy considerations which we have identified and which the Committee may wish to take into consideration in reviewing what, if any, changes should be made to this provision. These considerations are as follows:

- First, the current law provision extends broad discretionary authority to an agency of the Federal government to administer a tax provision which is substantially open-ended. The recent expansion of the program to personal communication service licenses is evidence of its open-ended nature. We have been unable to identify any other aspects of the Internal Revenue Code, other than the provision which grants the State Department the authority to designate combat zones, which extends this kind of discretionary authority.
- Second, the manner in which the FCC administers this provision does not take into account the tax cost associated with the granting of an FCC tax certificate. Indeed, we have been advised that the FCC does not request this information as part of its tax certificate application program. As a result, there is no effort made to balance the cost to the Federal government with the benefit which is obtained from the granting of an FCC tax certificate.
- Third, there is no cap on the amount of tax benefit which accrues on a per transaction basis. This raises concerns, particularly when considering a transaction like the proposed Viacom transaction, which appears to have the ability to confer a substantial tax benefit in the range of $440 million to $640 million if it were to receive an FCC tax certificate. In addition, there is no requirement that the tax benefit accrue, in whole or in part, to the minority-owned or controlled purchaser. In many transactions it is possible that the minority-owned or

controlled purchaser is paying full fair market value for the property acquired even though the seller may be receiving a substantial tax benefit over and above the sale price for the broadcast property.

- Fourth it appears that as a result of IRS interpretation, the sellers of property qualifying for the FCC tax certificate can utilize various planning techniques that enable them to obtain a tax deferral indefinitely without reducing the basis of existing properties or being forced to acquire new properties with a reduced basis.
- Fifth, the manner in which the FCC has administered Code section 1071 appears to allow transitory ownership by minority parties and ownership of very small actual interests in properties qualifying for the FCC tax certificate.
- Sixth, programs like this one have typically been administered through the appropriation of direct spending amounts so that Congress can have continuing oversight over the amount of money which is being spent for the particular program. As a result, Congress may wish to substitute a direct appropriation program for Code section 1071.

These are all issues which the Committee needs to consider assessing the merits of current law and any changes that may be necessary. I will be happy to take questions.

Chairman JOHNSON. Thank you, Mr. Kies.

In regard to the Viacom transaction, to what extent has the purchase price to the purchaser been reduced to reflect a tax benefit which Viacom will enjoy if it receives an FCC tax certificate?

Mr. KIES. Well, it is difficult to know exactly because we do not have all the details on the transaction. However, in discussions with experts in the cable industry, we have been advised that typically the fair market value of cable properties is determined as a multiple of cash-flow.

In the case of Viacom, based on SEC documents, it appears that the cash-flow—net cash-flow from the cable properties—is in the neighborhood of $110 to $150 million per year. At 10 times cash-flow on the upper end, that would suggest a fair market value of $1.5 billion. The cash purchase price here is $2.3 billion. That would tend to suggest that Viacom is receiving at or above fair market value without regard to the tax benefits.

If that is the case, then it would not appear that the tax benefit is in any way benefiting the minority-controlled purchaser, just based on that analysis.

Chairman JOHNSON. So normally the sale price is 10 times cash-flow, roughly? In this case it is 15 to 20 times cash-flow?

Mr. KIES. It is in that neighborhood in this particular transaction.

Chairman JOHNSON. So there does not appear to be any benefit to the purchaser of the tax certificate?

Mr. KIES. Based on that analysis, no.

Chairman JOHNSON. Second, under section 1071, the seller is required to reinvest the proceeds of gain which are not subject to tax within a 2-year period or to reduce basis in existing properties. For those taxpayers who elect to reinvest the proceeds in existing properties, are they forced to reduce basis in those assets and, thus, give up some of the benefit of those assets?

In other words, since they got a great big benefit through the FCC certificate and are required to reinvest it, are they then required to give up some other benefit that they already have as they do that reinvestment process?

Mr. KIES. That is the general rule, although, as I alluded to in my testimony regarding the replacement property requirement, the IRS has ruled that a taxpayer can purchase the replacement property from a related party. As a consequence, it is possible, and it appears that because there have been a number of IRS rulings issued regarding this issue, that an entity would purchase replacement property from within its own consolidated group. If that were the case, for example, if a taxpayer purchased stock in a subsidiary, there might not be a reduction in basis of the assets subject to depreciation.

I might just say, though, even if there is a reduction in basis of assets, there is still a substantial tax benefit because the reduction in basis of assets causes a loss of depreciation that takes place over a long period of time, whereas the tax deferral occurs all in the first year. So there is still substantial benefit to the seller even if there is a reduction of basis.

Chairman JOHNSON. Thank you, Mr. Kies.

We have a large and inquisitive subcommittee, so I am going to defer the rest of my questions and we will go through the membership once. We will use the timeclock and then if there are further questions, since this is such an important matter, we will try briefly with a second round of questions.

Mr. Matsui.

Mr. MATSUI. Thank you, Madam Chairwoman.

Mr. Kies, you indicated in your brief or your report that the total tax loss over the next 5 years could be up to $500 million. The Treasury Department has said that the total tax loss could be in excess of $1.6 billion over the next 5 years. I notice that in your addendum you mention that there may be further information that might result in a higher number.

Can you tell me whether you have reestimated this; and second, what that number is if you have reestimated this?

Mr. KIES. Mr. Matsui, we have not reestimated it yet. I can describe some of the additional information that is coming to our attention.

Mr. MATSUI. Let us do this. Perhaps you can get for the subcommittee and the full committee, after you have done your analysis quickly, I hope, what your view of the total tax loss will be to the Federal Treasury over the 5-year period with the additional information you have received.

Mr. KIES. We will be doing that.

Mr. MATSUI. Because we will need that obviously for whatever changes, if we make any in order.

[The following was subsequently received:]

#95-1 090
30-Mar-95

ESTIMATE OF FEDERAL TAX EXPENDITURE FOR INTERNAL REVENUE CODE SECTION 1071

Fiscal Years 1996 - 2000

[Billions of Dollars]

Provision	1996	1997	1998	1999	2000	1996-00
1. Deferral of gains from sales of broadcasting facilities to minority-owned businesses	0.2	0.4	0.4	0.4	0.4	1.8
NET TOTALS	**0.2**	**0.4**	**0.4**	**0.4**	**0.4**	**1.8**

Joint Committee on Taxation

NOTE: Details may not add to totals due to rounding.

Mr. MATSUI. Mr. Washington invested, according to news reports, anywhere up to $1 to $2.3 million. I understand maybe the $1.3 additional million is his obligation, his debt obligation, although no one really seems to have that information.

The total transaction is $2.3 billion. Now, Mr. Washington has in excess of a 20-percent interest; that qualifies him as a minority participant.

What are the rules—in other words, can somebody invest $10 or $20, and as long as his partnership interest is in excess of 20 percent, he will then be able to qualify? Is this an equity interest? In other words, will he have $400 million gain out of this with the $1 million investment? How does this work?

Mr. KIES. The reason you can have a relatively small investment but still have what qualifies as a 20-percent equity interest in the partnership is that the other investors who have put in the $2.3 billion probably are receiving what is referred to as a guaranteed payment or a guaranteed return. So they stand ahead of the profits interest. The 20-percent interest represents an interest in profits after the return to the $2.3 billion contribution by the investors.

Mr. MATSUI. So it is not an equity interest he acquires with this $1 or $2.3 million investment?

Mr. KIES. It is not an equity interest in the sense that you would normally think of 20 percent of the $2.3 billion. I think it is a safe bet that the people putting in the $2.3 billion are not going to let $400 million go out for the $1 million investment.

The answer to the first part of your question, whether or not you can put $10 in. We believe that an investor could put in what is referred to as sweat equity, which is his or her intention to work on the property and receive back a 20-percent equity interest under those circumstances.

Mr. MATSUI. I would find that much more palatable, if in fact he did not own four other businesses, two of which were with Jack Kent Cook. I understand Jack Kent Cook cannot be one of the easier persons to work with. So it would be my opinion that in fact he put in a lot of sweat equity. I don't know how he could manage to do it.

One last question, and I know other members have questions.

Could you tell me of the 317 such transactions with minority participants, the lengths of time in which the minority participants held on to the contract? You said under the 1071 rules they must exceed at least 12 months. Do we have any information on that? Do we have any information as to whether these 317 purchases resulted in a diverse set of ideas or diverse set of programming?

Is there any information that would show us what the result of all this effort has been in terms of achieving our goals of diversity, of minority participants and, second, in achieving our goals of diverse programming? I ask that because I am assuming that Mr. Washington—of the 317, 4 are his, so it is one ownership. So we cannot really tell if there are 317 new minority contractors out there. There may be a number, but there could be much less than that if there are a lot of transactions that one or two people have.

Mr. KIES. The information is a little bit spotty. There is a variety of witnesses who are going to testify about some of that, some of

whom will tell you they own 100 percent of these properties and have owned them for a long period of time.

Mr. MATSUI. That is what we really want out of this, but some of the information provides otherwise, but go ahead.

Mr. KIES. Some clearly have not been held or they have been held for a transitory period. In terms of the effect of the program, the one statistic we do have is since 1978 when the program was put into effect, the minority-owned or controlled properties increased from, I think it was 0.5 to 2.9 percent. It is not possible to determine to what extent this program is responsible for that because the FCC does have other programs that play a role.

I think some of the witnesses will, and some of the scholarly pieces that have been written on this program suggest some skepticism as to how much it has impacted programming.

Mr. MATSUI. If I may just ask one further followup to that question, then. As far as these contractors are concerned, you do not have that information now. Is that because of the appropriation rider which prohibits any analysis or any reexamination of this program?

Mr. KIES. We have asked the FCC for information on the 317 deals that have been done. We have received some of it. Some of it is archived. In some cases, information from the IRS has been destroyed under their record disposition program. So we are in the process of trying to learn more about some of the things you have talked about. We had a limited amount of time to get ready.

Mr. MATSUI. Because you are not under this prohibition, it is the FCC, Treasury, and IRS.

Mr. KIES. That is correct.

Mr. MATSUI. So whatever information they provide you as raw data, it cannot be through a study or investigation?

Mr. KIES. That is correct.

Mr. MATSUI. Thank you.

Chairman JOHNSON. Thank you.

Mr. Herger.

Mr. HERGER. Thank you, Madam Chair.

Thank you very much for your testimony, Mr. Kies.

Let me see if I understand this: the policy was originally set up to help minorities become at least minority owners or owners within these types of enterprises. Let me see if I understand this particular case. Is it right, as far as the cost benefit, that the taxpayers are paying $400-plus million in this situation for a minority to own an interest for perhaps 1 year or less?

Mr. KIES. Well, in the case of the Viacom transaction, we do not know how long Mr. Washington plans to stay in the transaction. But we do know from a variety of reports that the amount of his investment is relatively small.

I want to clarify one thing. Our analysis of the total tax costs between $440 and $640 million also takes into account that States generally piggyback the Federal tax system for purposes of determining State tax liability. We have assumed an average State tax rate of 5 percent. So there is a State tax revenue loss in addition to the Federal revenue loss and that leads to the analysis of $440 to $640 million.

Mr. HERGER. These numbers are so large, it is hard to believe what we are hearing. In this one individual, to bring one individual and a minority member, we are talking about between State, and you mentioned this does have ramifications as far as State governments, who piggyback, but we are talking about taxpayers somewhere are having to make up for the $600 million for as little as 1 year of ownership in this one minority; is that correct?

Mr. KIES. That is basically correct. It is a substantial amount.

Mr. HERGER. I cannot believe anyone ever set up this program to work like this, and, Madam Chair, whether it was you or the chairman of the committee, I want to thank you for bringing this to our attention and having a hearing on this. If this situation can happen here, it undoubtedly can happen in other situations, and we certainly have to make a change and I thank you.

Chairman JOHNSON. Thank you. Mr. Hancock.

Mr. HANCOCK. Thank you, Madam Chairwoman.

In your testimony you mention that since 1978 the FCC has issued 378 tax certificates under this Code section; and then on the appendix table one, you show the numbers here.

Can we get further documentation of these various transactions? In other words, the total amounts of money of tax certificates that have been issued, how many times names are duplicated? Is it potentially a little select group of people that are familiar with this that have been using it over and over? Do we have that information? Can we get it documented?

Mr. KIES. Mr. Hancock, we have some information because we did get from the FCC copies of a number of the certificates that have been issued. But those tend to be relatively short, a two-page letter that says this transaction qualifies and it typically does not include the purchase price or any financial information.

We are in the process of asking the FCC for additional information so that we can do a little better analysis in terms of the dollar volume of the transactions and whether or not, for example, there have been multiple transfers of the same properties in these types of transactions.

So we are in the process of trying to gather that information right now.

Mr. HANCOCK. How long have you been trying to get this information?

Mr. KIES. We have been working on this for about 2 weeks now, and we have met with the FCC and they have been trying to pull it together. I think it is a fairly large amount of documentation that needs to be delivered to us.

Mr. HANCOCK. OK. Well, thank you very much. I will ask the same questions of the next panel.

Thank you.

Chairman JOHNSON. Thank you. Mr. Cardin.

Mr. CARDIN. Thank you, Madam Chairman.

Ken, there are several things that concern me about section 1071. You have brought out the economics. But let me talk about the tax policy being controlled by an independent agency rather than by the Treasury or Congress or the Internal Revenue Service.

Is it your testimony that you can only find one other similar provision to this, which is the State Department declaring a war zone? That is the only other comparable provision?

Mr. KIES. That is the only provision we found where there is a giving away of substantial discretion to actually implement a tax provision. The States have some role, for example, in administering low-income housing credits, but the terms under which you can issue low-income housing credits are fairly defined in the code. So they are just administering the code.

The difference with 1071 is that the words of 1071 literally say that the FCC can implement any current or future policy that it adopts through the issuance of tax certificates, and that degree of discretion does not exist anywhere else that we are aware of.

Mr. CARDIN. During the 50-year history of this section, has there been any evidence of Treasury being directly involved with FCC in setting up how these certificates should be issued?

Mr. KIES. I think the Treasury representatives are going to testify later. I think they will tell you that basically they pretty much accept whatever the FCC issues as conferring the tax benefit because of the open-ended nature of the statutory provision. So I do not think there has been much in the way of Treasury or IRS involvement.

The only extent to which they have been involved, and I think it has been in conjunction with the FCC, is when the provision has been expanded. It originally applied to radio properties and then was expanded to television and cable and now to these personal communications services. But other than that, I think Treasury's involvement has been relatively modest.

Mr. CARDIN. There are other provisions in the Internal Revenue Code that deal with forced transactions and deal with minority preferences, and in those cases, if I understand correctly those provisions, there are Treasury regulations and IRS administrations who carry out certain policies. Are you aware of any effort made on this section of the code to adopt or to work with Treasury or IRS to see if there is some consistency in policy?

Mr. KIES. I am not aware. Again, the Treasury and FCC representatives are probably in a much better position to respond to that, but at least the information we have gathered to date indicates that Treasury and IRS have had a relatively hands-off involvement.

Mr. CARDIN. So that if the FCC issues the certificate, it is fairly well accepted? It is never challenged by Treasury and the taxpayer gets the break and there is no ability of Treasury to use their normal enforcement mechanisms to see whether the goals or regulations are being complied with?

Mr. KIES. That is correct.

Mr. CARDIN. Now, let me just see if I understand how the tax provisions work. The seller gets the tax certificate and can, therefore, defer the tax or avoid the tax by reinvesting the proceeds in other entities. If the taxpayer chooses that course, then there is no reduction in the basis. We get a stepped-up basis on the properties. The buyers would get the stepped-up basis?

Mr. KIES. Let me explain that and just take a quick simple example.

If I have a property that has a tax basis of $10 million and I sell it for $50 million, the buyer gets the stepped-up basis to $50 million. Under current law—intangibles legislation, which was enacted a couple of years ago—that taxpayer would be amortizing most of that basis over a 15-year period.

The seller has a deferred $40 million gain. If the seller chooses the route of buying replacement property, the seller, when it buys that replacement property, gets a basis of only $10 million in the replacement property. However, as I pointed out in my testimony, it is possible that you can buy within your own consolidated group. If you were to buy stock within your own consolidated group, it is possible that the basis reduction would only affect the stock basis and not the inside basis of the assets that would still be depreciated in their regular course.

But if you go outside and buy a replacement property from an unrelated third party, you only get a basis of $10 million. So you get a lower basis for depreciation.

Mr. CARDIN. But the buyer would get the full basis; the stepped-up basis?

Mr. KIES. The buyer gets the stepped-up basis; correct.

Mr. CARDIN. In this case it would be based upon the 2.3—in the Viacom deal it would be based upon the $2.3 billion price?

Mr. KIES. That is correct.

Mr. CARDIN. Then if the neutral cost recovery were to go into effect, it could take advantage of the neutral cost recovery on $2.3 billion. I am just trying to figure out another reason to be opposed to the neutral cost recovery.

Mr. KIES. No comment.

Chairman JOHNSON. Mr. Ramstad.

Mr. RAMSTAD. Thank you, Madam Chair.

I think we would all agree that the intent of the minority tax certificate program from a policy standpoint is a worthy one. Certainly, we all want to increase minority influence in broadcasting, but I also think that it would be specious to argue if the minority involved in the program has no direct management of the purchased property, that that worthwhile policy objective is not attained.

My question is this, Mr. Kies: What constitutes an acceptable level of minority ownership to qualify for the tax certificate program?

Mr. KIES. Well, in the case of an entity that is a corporate entity, it requires that the minority own 50 percent or greater interest in the corporation. But in a partnership structure, which is the nature of the Viacom transaction, the only requirement is that the minority general partner own a 20-percent or greater profits interest in the partnership.

Because partnerships have a fair degree of flexibility in terms of structure, in this particular transaction it is possible to give Mr. Washington a 20-, 21-percent profits interest. But, as I said to the chairwoman, that does not mean he is receiving a 20-percent interest in $2.3 billion; rather, the $2.3 billion is probably structured as representing an interest that stands ahead of the profits interest.

Now, let me just say that we have not reviewed the transaction documents in this transaction. So we are making some judgment

about how we believe the deal is structured based on what we have seen in the published news reports and the press release which Viacom issued.

Mr. RAMSTAD. But is the contention that a $1 million investment in a $2.3 billion transaction meets this threshold?

Mr. KIES. Apparently the FCC standard is that as long as the general partner owns a 20-percent or greater profits interest or equity interest in the partnership, then that satisfies their requirement. I believe they will tell you that the reason they take that position is because, under those circumstances, the general partner, they believe, is in control of the entity and can control broadcast or programming decisions and things of that nature, and that is the basis for their policy.

Mr. RAMSTAD. I thank you for that clarification.

Thank you, Madam Chair.

Chairman JOHNSON. Thank you.

Mr. Zimmer will inquire.

Mr. ZIMMER. Thank you, Madam Chairman.

I would like to follow up on that line of inquiry. Mr. Ramstad has been inquiring as to the degree of ownership involved. But ownership, especially ownership where the profit is subordinated to senior debt and preferred stock, does not necessarily translate into control.

Does the FCC have a working definition of what actual control is above and beyond a mere ownership interest?

Mr. KIES. Well, their definition, and you may want to ask them about this with more specifics, but as we understand it, their definition is that control exists for purposes of section 1071 in those circumstances when a minority general partner has a 20-percent or greater interest in the partnership, because the minority is the general partner and general partner status confers the ability to control the decisionmaking of the business entity itself.

Mr. ZIMMER. That is a pretty legalistic definition. From my experience in the corporate world, control follows the golden rule, he who has the gold, rules. The FCC does not take into account the fact that here you have a multibillion dollar transaction where only $1 million of equity is being put up by a so-called control person. That is not taken into account, as far as you know?

Mr. KIES. As we understand it, they follow basically a mechanical rule rather than what I think you would refer to as more of a subjective rule. But that is the basis on which they administer this particular program.

Mr. ZIMMER. Here is a question you may not be able to answer, but could you give me your best estimate of how much of the financial benefit that is created by this tax certificate is going to Mr. Washington and how much of it is going to Viacom?

Mr. KIES. Well, our analysis, because it appears that Viacom is receiving a purchase price that is at or above fair market value, would lead to the conclusion that none of the tax benefit is going to Mr. Washington and all of it is going to Viacom.

There is testimony you are going to receive later this morning from one of the witnesses that has done some of these programs, and in his testimony he says that in these transactions none of the tax benefit goes to the minority purchaser and it all goes to the

seller. I don't know if that is reflective of all the transactions, but at least that is the testimony of one of the witnesses you are going to hear.

In looking at this particular deal, it appears to us that the tax benefit is going to Viacom and not to the minority purchaser.

Mr. ZIMMER. I would point out that testimony to Mr. McDermott as a reason why maybe we should be investigating this tax provision.

It seems to me this is, in theory, trickle-down economics but it is not even that in practice because nothing is trickling down. I would like to commend the chairwoman for starting off our hearings in the very first month of the new Congress by looking at what has been called by the administration, corporate welfare.

I know that the Secretary of Labor and I know that the Democratic Leadership Council have expressed a great interest in this subject. I hope this is not the last issue that we investigate along these lines. I hope some of the loopholes that we investigate will be those that spark the interest of Mr. McDermott and the concern of Mr. McDermott, as well.

Thank you very much.

Chairman JOHNSON. Thank you. Mr. McDermott.

Mr. MCDERMOTT. Thank you, Madam Chairman.

I find myself here trying to defend an entrepreneur. That is a little strange for me politically, but it seems like we ought to ask some questions.

One of the fascinating things, Mr. Kies—I know that you work for us, and so I know that what you have done is at the direction of somebody. It is amazing you can come up with this great big annotated study of all of the things—even with footnotes. I mean there are hundreds of footnotes in here about all these things, and have meetings with FCC and everything else, but you have no tax and revenue estimates on the Contract With America.

It seems like sort of an imbalance in your workload. I really feel sorry for you that they have spent your 2 weeks wasting your time on this issue when you should have been working on the Contract.

But I would like to ask a question, and that is this: In Chairman Archer's press release he said any changes—and this is a quote—"any changes in section 1071 may apply to transactions completed or certificates issued by the FCC on or after today, January 17, 1995."

Now, to what extent is that effective date retroactive?

Mr. KIES. Well, I would say retroactivity sometimes is in the eye of the beholder.

Mr. MCDERMOTT. I understand that, that is why I am asking the question. I want to know what I should see.

Mr. KIES. I would not purport to tell you what you should see, but I think that the effort or my guess is the intent of Mr. Archer was to try to put people on notice that if there is going to be action, it will apply to these transactions.

So I think it was an effort to avoid the situation that is deemed repugnant about retroactivity, and that is if people go forward in reliance on current law without being aware that there is a potential change of law that could change their result. In the case of the Viacom transaction, and, again, we have not reviewed the docu-

ments, but according to the press release, they themselves apparently recognize that the Archer press release has some significance because they have conditioned actually being able to close the deal on the ability to get the FCC certificate.

So I gather Mr. Archer was trying to fairly put people on notice that any action in this area could affect a transaction after that date.

Mr. MCDERMOTT. So would it be your judgment, then, that this is not retroactive at all? It just starts on January 17, anything from this point on? Nobody else has a deal out there that should be worried?

Mr. KIES. Well, it would be, I think, our judgment from a tax policy perspective that for transactions that had not even been signed prior to January 17 clearly, to the extent they are impacted, this would not represent retroactivity because they are on notice.

Mr. MCDERMOTT. I understand future and past, what I want to understand is when does the past begin. If they did a deal in December, would that—this would not hit them?

Mr. KIES. Well, no, it could, because if the deal was signed in December, according to—if the terminology of the press release were applied, there could be a transaction that was signed in December but the application for the FCC certificate might be pending, and not have been granted yet. So under the pure reading of that language, that transaction could be affected.

I think one of the decisions the subcommittee will have to make if they decide to enact this area is whether or not that situation would merit some kind of transition rule.

Mr. MCDERMOTT. Are you aware of any other tax certificates which are pending?

Mr. KIES. We have not—let me put it this way. We have been kind of busy on this and the Contract With America, so——

Mr. MCDERMOTT. I am glad to hear that.

Mr. KIES. So I have been getting a lot of phone calls I have not been able to return. Some of them may be from people who have transactions that are pending, and I have a feeling we will learn about those pretty quickly.

But we have not been able to compile a list. The FCC might be able to tell us how many FCC applications are pending for current deals. That is not information we have right now.

Mr. MCDERMOTT. I want to understand this issue. What is it about the Viacom deal that makes this one so important or so flagrant? Has there never been a deal like this before? Are we looking at the first time that somebody got in for a little bit of money?

Mr. KIES. Well, again, we have a limited amount of information about other transactions just because we are in the gathering stage. But it has been reported—I think, as a matter of fact, Mr. Matsui alluded to another transaction Mr. Washington was in with Jack Kent Cook that I believe the press reports was a $600 million deal.

This is an issue that the subcommittee, the Select Revenue Measures Subcommittee actually took testimony on, I believe in 1993. It is an issue that has been written about in Fortune Magazine and other places, a number of times in the past couple of years. So it is not—it is not the first time anybody has raised the

question of section 1071. This transaction, I believe, is larger than any other that has ever come through the FCC, although again, they would be better to ask about that.

But I think what has attracted a lot of attention to this transaction is its size and the fact that the minority investor does appear to have a relatively modest investment relative to the size of the transaction.

Mr. MCDERMOTT. I hope that in the testimony that we hear from other people, we will hear the answers to those questions, since I would grant you, you have had a few things to do since the first of the year and may not have all the data that is necessary on this.

It always seems to me that fairness is the issue. If you are going to do it to one person, you should do it to everybody. If you are going to do it here, in this place, you should do it in that place. You should not be picking and choosing.

I would like to know whether this is here because it is the worst deal that has ever been concocted with a Federal bureaucrat and some entrepreneur or is it just one of a whole series of things? As I pointed out before, there are all kinds of tax giveaways in this Tax Code of ours. This is not the only place where we have some egregious deals. We have oil and gas things that are totally unrelated to cost. The oil depletion allowance is a figment.

So I really—I want to know why this one is the one that triggers this great interest in roaring through here with something.

Thank you, Madam Chairwoman.

Chairman JOHNSON. Mr. Johnson will inquire.

Mr. JOHNSON of Texas. Thank you, Madam Chairman. I think in answer to your question, you might say that we have been trying to change some of these rules for some period of time and have not had the opportunity to do it and are doing it now.

I have two cases here in front of me which you may be aware of. One happened in Dallas, Tex., and the other in Washington with Jack Kent Cook which were deals where a minority put up some $30,000 for a deal over $600 million and got a certificate, because they, "gave him 51 percent." My question is, I guess, how many of these involve big companies? These two deals, the one in Dallas and here were Times Mirror. That is a pretty large company to be getting tax exemptions. It is not the minority that is benefiting, it is the big company that is benefiting.

If, in turn, the minority has 200,000 shares of stock that he can sell to a majority stockholder who is not a minority, does that tax exemption reduce the cost of the stock that he is selling, and then is it tax free? Is that money tax free from that point forward?

Mr. KIES. Mr. Johnson, are you asking whether the minority investor, if he sells his stock subsequently, whether that is tax free?

Mr. JOHNSON of Texas. Yes.

Mr. KIES. That transaction——

Mr. JOHNSON of Texas. You made a statement earlier that if the stock were, in fact, sold, the price would be reduced or could be reduced by the amount of the tax exemption.

Does that mean that if that happens, that the stock is sold at a lesser price, let's say; that that tax exemption then is wiped off the books?

Mr. KIES. If on January 1 a seller, like a Viacom, were to sell to this new entity and then have this deferred gain of let's say $1 billion, and it went and bought stock and got a lower basis and then were to sell that stock at its fair market value, that gain would be taxed, unless that was another transaction in which a 1071 certificate might be granted.

Mr. JOHNSON of Texas. But the original tax exemption is never recovered if that is applied to the stock sale and the price is reduced; is that true?

Mr. KIES. If the reinvestment of proceeds is in stock, the acquirer, like Viacom, will get a lower basis because of the rules that apply to the purchase of replacement property.

Mr. JOHNSON of Texas. Rightly.

Mr. KIES. So that when and if Viacom were to sell that stock interest, it would pay the tax, unless it was in another 1071 transaction. But it is likely——

Mr. JOHNSON of Texas. Or if there were no capital gains involved.

Mr. KIES. If the purchase price were so low that it was less than the basis. In most cases, people probably are not going to go out and sell the replacement property any time soon because they would have to pay the tax. But if they did, they would pay the tax at that point in time.

Mr. JOHNSON of Texas. OK. Are you aware of these two cases I mentioned?

Mr. KIES. I think the one you alluded to is the Jack Kent Cook.

Mr. JOHNSON of Texas. One of them is.

Mr. KIES. That I am aware of. I am not aware of the other.

Mr. JOHNSON of Texas. Well, there were two I think in Washington. But, nonetheless, it seems to me that we are talking about 40 and 60 million dollars' worth of taxes that were forgiven in those deals, and I know it is not as big as the one we are talking about now, but do you think that we should recover those dollars for the Federal Government as long as that tax is on the books and/or what is your opinion of the FCC having the sole authority to regulate that tax?

Mr. KIES. Well, as we said in our testimony, the discretion that is given to the FCC by the Internal Revenue Code appears to be fairly unique. I think from the standpoint of tax writing committees, that historically the tax writing committees have not been willing to give away the kind of discretion that is in this provision.

Mr. JOHNSON of Texas. Is that the only agency in the government that has that power?

Mr. KIES. It is the only one we are aware of other than the case where the State Department has the ability to designate combat zones, which only provides a benefit that allows military personnel that are stationed there to file their tax returns late. So that is relatively insignificant. But we are not aware of any other place where the code grants that kind of discretionary authority.

Mr. JOHNSON of Texas. Thank you. Thank you, Madam Chair.

Chairman JOHNSON. Thank you, Mr. Johnson, and thank you, Mr. Kies. Unless there are further questions.

Mr. HERGER. Madam Chair.

Chairman JOHNSON. Mr. Herger.

Mr. HERGER. Mr. Kies, just one further question. Putting this all in perspective, we are saying the only two examples that you know of in the Federal Government, one is where we have servicemen and women who are perhaps risking their lives in a combat zone, they can file their taxes a little bit later; and this situation where we see individuals, or at least the taxpayers losing out in this one case maybe as much as $600 million collectively, between State and Federal Government.

Also, it would appear that the major winners here are not really the minority, although it would sound like Mr. Washington is doing quite well, but it would really be the stockholders, who I am sure the vast majority are not minorities in these companies who are benefiting from all these hundreds of millions of dollars directly or indirectly; is that correct?

Mr. KIES. To the extent that the tax benefit is staying with the seller rather than the minority-controlled buyer, that is certainly correct.

I just might add one thing, and that is that this particular provision, when it was enacted in 1943 and all the way up to 1978, was really targeted at one very narrow problem and that was the situation where an owner had two broadcast properties in the same market that were competing against one another, and it was the FCC policy not to have that situation.

So from 1943 to 1978, it was administered in a fairly narrow fashion, although it was expanded to cable television and television properties. But at least up to that point, the discretion was not exercised to the extent it has been since 1978.

Mr. HERGER. One last quick question. It sounds like, at least under what we are allowing FCC to do right now, quite a good deal if you can get involved. I am curious, what is the FCC's criteria that they have established for a minority identity? How do we determine who qualifies for this?

Mr. KIES. Under the policy as adopted, a minority is defined as—I think I had it in my testimony—African-Americans, Asian-Americans, I believe Alaskan Indians, Asians—I may have left out one—and Hispanic Americans, thank you—they have also, in another expansion of the program, extended it to women, to some extent, as it relates to these personal communications systems. So there has been a little bit of an expansion there. I believe, not the tax certificate program but some other benefits are extended to rural telephone systems and small business.

But I do not think that is the tax certificate program. I think that is the rulings under which they are selling off these personal communications systems. They would be much better informed about that than I am.

Mr. HERGER. I just caught part of this, and maybe it is not pertinent, but in our bipartisan briefing yesterday afternoon you were mentioning something about an individual of Italian descent. Does that have anything to do with this?

Mr. KIES. There is a transaction that is reported in Forbes Magazine that indicates that the sale of a broadcast property from Storer Communications to—according to the article—the Liberman family qualified for a certificate because the Liberman family was

able to demonstrate that their descendants had been driven out of Spain in 1492 by Ferdinand and Isabella.

Now, I believe the FCC, because we did ask the FCC about this particular transaction, will tell us that that particular family is very visible in the Hispanic community. So unlike what the Forbes Magazine article implies, the only basis under which they got it was an event in 1492. I think the FCC, because we did ask them about it, has told us that part of their decision as to whether or not those purchasers qualified as a minority was affected by the role that they do play in the Hispanic community. Again, you may want to ask them about that because they are much more familiar with the specific facts of that transaction than we are.

Mr. HERGER. This seems to become more and more bizarre the more we get into it.

Thank you very much. I have no further questions.

Chairman JOHNSON. Thank you very much for your testimony, Mr. Kies. We would like now to hear from William Kennard, general counsel for the FCC, and Glen Kohl, the tax legislative counsel for the Department of Treasury.

We welcome you. We are interested in what you have to say about the really unique and remarkable latitude that the FCC has under these provisions and particularly with regard to the billions of dollars of public tax money at stake.

Mr. Kennard, why don't you proceed.

STATEMENT OF WILLIAM E. KENNARD, GENERAL COUNSEL, FEDERAL COMMUNICATIONS COMMISSION

Mr. KENNARD. Thank you very much, Madam Chair.

Thank you, and thank you members of the subcommittee for the opportunity to explain today the history and administration of the FCC's tax certificate policies.

Section 1071 of the IRS Code authorizes the FCC to permit sellers of broadcast properties to defer capital gains taxes on a sale or exchange if the sale or exchange is deemed by the FCC to be "necessary or appropriate to effectuate a change in policy of, or the adoption of a new policy by, the Commission."

We have heard a lot about the history of section 1071 from Mr. Kies, so I will not review the legislative history in detail. But I would like to clarify one statement made by Mr. Kies with respect to the use of tax certificates in the personal communications service, which is a fairly exciting new service that the FCC has authorized, and, in fact, as we speak today, we are auctioning off spectrum for that service.

The FCC was mandated by Congress to consider extending tax certificates to PCS to advance ownership by women and minorities. So I did want to clarify that was at the request of Congress and not something the FCC did on its own.

I would also like to provide a little history of the tax certificate policy as it has been used to promote minority ownership in broadcasting and cable. Promoting minority ownership has been a longstanding goal of both the FCC and the Congress. The Commission, the courts, and the industry began focusing in the late 1970s on the severe underrepresentation of minorities in the broadcasting industry. There was a feeling that this dearth of representation did

not promote diversity over the public airwaves. So in 1978, the FCC, at the request of the National Association of Broadcasters, adopted a policy statement which, for the first time, extended the use of tax certificates to promote minority ownership in broadcasting.

Congress has made very clear to us its view that this is an important policy goal, and, in fact, since 1988 Congress has expressly prohibited the Commission from spending any appropriated funds to modify or repeal any of its minority ownership policies, including the tax certificate policy.

Essentially, this is how the program works from the FCC perspective. The FCC controls the transfer of licenses. In connection with the transfer or assignment of an FCC license, if there is a tax certificate request, the seller and the purchaser come to the FCC, submit a pleading, typically in connection with the application to assign the license, and they request a tax certificate.

The Commission staff requires that there be certifications of minority ownership and control. Typically, the staff of the FCC is presented with the various financing documents, which govern these deals, and the Commission then determines whether in the context of a particular deal there is sufficient minority ownership and control to justify the issuance of a tax certificate.

Under the statutory scheme of section 1071, the Commission is required to certify whether a transaction would promote the minority ownership policy. That certification is done in the form of a tax certificate which is given to the seller. The seller then is required to file that tax certificate with its tax return to get the deferral benefits that you have heard about.

The tax certificate became an important cornerstone of the Commission's policies to advance minority ownership in broadcasting. In 1982 the Commission, under the leadership of Chairman Mark Fowler, convened kind of an industry-government summit to examine ways to improve minority ownership, not only in broadcasting but in other technologies. It was at that time in 1982 that the Commission extended the policy to encompass cable television.

In terms of the numbers of tax certificates granted, since we provided information to the subcommittee staff yesterday, we have been in a continuing process of trying to respond to data requests. We did find that the Commission has issued a few more tax certificates than we had told the subcommittee yesterday, so I just wanted to get that on the record, and note that since 1978 the Commission has granted approximately 390 tax certificates. Approximately 330 of those involve sales to minority-owned entities. The vast majority are for radio properties, 260. There are 40 for television stations, and approximately 30 have been granted for cable television station transactions.

Questions were asked earlier about whether these certificates that have been granted reflect grants to a diverse number of buyers. We have not massaged all that data yet and we welcome the opportunity to do that, but our preliminary comparison of the number of tax certificates granted with the actual lists of the numbers of minority owners suggest that it is a fairly diverse group. There are some individuals and companies who have taken advantage of the program multiple times, but that does not seem to be the rule.

We also have done some analysis of the average period of time that minority buyers hold stations and cable systems subject to a tax certificate. In broadcasting we have determined that even though there is a 1-year holding period, most minority buyers retain the licenses for much longer. The average is about 5 years. About a third of the tax certificates that have been granted for minority ownership, that is for about 100 deals, the stations are still being held by the minority purchasers.

The great majority of these transactions are quite small. We have heard a lot today about the Viacom transaction. That would certainly be, by far, the biggest minority tax certificate request ever made to the agency. The average sales price, that is sales price, not tax deferral, but the average sales price for a radio transaction is $3.5 million. For the 40 tax certificates we have granted with respect to television stations, the number is higher, it is about $38 million, average sales price.

Data is not available for the 30 cable transactions that we have processed.

To summarize, the minority tax certificate policy was designed as a way to provide incentives for established holders of broadcast and cable properties to sell those properties to minorities. It has emerged as probably the principle policy incentive for the sale of existing properties to minorities as opposed to licenses granted through the initial licensing process.

I am certainly not here to tell you that the program is perfect. There is considerable room for improvement in the program. I do note that the Commission has been severely constrained in its ability to make changes and reevaluate the program because of the appropriations rider that we are subject to. That rider, just to summarize, requires that the Commission not reexamine, change, modify, or repeal the policy, so we have been forced to continue to grant tax certificates under the policy in effect since 1986, subject only to expansions or improvements of the policy.

If given the authority by Congress to reevaluate this program, I am confident that there are many ways it could be improved, both in its administration and cost effectiveness. I would like to thank you once again for the opportunity to testify this morning, and I would be happy to answer any of your questions.

[The prepared statement and attachment follow:]

STATEMENT OF WILLIAM E. KENNARD, GENERAL COUNSEL
FEDERAL COMMUNICATIONS COMMISSION

Chairwoman Johnson and Members of the Subcommittee:

Thank you for the opportunity to explain how the Federal Communications Commission has used Section 1071 of the Internal Revenue Code to further the FCC's and Congress' policies.

I. Introduction and Overview

Section 1071 of the Internal Revenue Code authorizes the FCC to permit sellers of broadcast properties to defer capital gains taxes on a sale or exchange if the sale or exchange is deemed by the agency to be "necessary or appropriate to effectuate a change in a policy of, or the adoption of a new policy by, the Commission with respect to the ownership and control of radio broadcasting stations." 26 U.S.C. § 1071.

Section 1071 was enacted in 1943 to alleviate the hardship of involuntary divestiture associated with the Commission's newly adopted multiple ownership rules. Those rules limited radio licensees to ownership of one outlet per market, and, as a result, approximately 35 licensees were required to sell overlapping stations. Later, tax certificates were used in voluntary transfers as an incentive to licensees to divest themselves of properties grandfathered under another provision of the multiple ownership rules which limited the number of stations a single entity could own nationwide.

Since that time, the FCC has used tax certificates in other contexts to further the goals of national communications policy. Today, the FCC issues tax certificates to encourage:

- licensees to come into compliance with the FCC's multiple ownership rules
- microwave licensees to relocate to other frequencies to facilitate licensing of personal communications services
- owners of AM radio to divest themselves of licenses in certain frequency bands to reduce interference
- minority ownership.

I understand that this Subcommittee is most interested in the FCC's use of tax certificates to promote minority ownership of broadcasting stations and cable television systems so I will focus on that area in my testimony today.

II. The FCC's Minority Tax Certificate Policy

A. Development of the Policy

Recognizing that the viewing and listening public suffers when minorities are underrepresented among owners of broadcast stations, the Commission began working to encourage minority participation in this industry in the late 1960s. Its first step was to formulate rules to prohibit discrimination in hiring and, several years later, in response to a court decision, it began to consider minority status in comparative licensing proceedings.

The FCC's minority ownership policies have been supported and expanded by Congress over the years. For example, in 1982, Congress added Section 309(i)(3)(A) to the Communications Act, which directs the Commission to accord preferences to minority applicants participating in lotteries to award certain broadcast licenses.

The decision to grant tax certificates in sales involving minority buyers was prompted by requests from the broadcasting industry and others in the 1970s. In 1978, the Commission's Minority Ownership Task Force reported that although minorities constituted approximately 20 percent of the population, they controlled fewer than one percent of the 8500 commercial radio and television stations then operating in the United States. Thus, the

National Association of Broadcasters (NAB) proposed that the FCC establish a minority tax certificate policy to provide incentives for established broadcasters to sell radio and television stations to minority entrepreneurs.

The Commission agreed with NAB that underrepresentation by minorities contributed to a dearth of representation of minority views over the public airwaves. The Commission determined that an increase in ownership by minorities would inevitably enhance the diversity of programming available to the American public. Therefore, in 1978, the Commission issued a policy statement in which it determined that it would grant tax certificates to licensees that assign or transfer control of their authorizations to minority-controlled entities. Statement of Policy on Minority Ownership of Broadcasting Facilities, 68 FCC 2d 979 (1978).

In 1981, the Chairman of the FCC, Mark Fowler, began a review of the Commission's minority ownership policies with the goal of finding creative ways to advance minority ownership. To assist in this effort, he established the Advisory Committee on Alternative Financing for Minority Opportunities in Telecommunications. The Advisory Committee identified lack of access to capital as the largest obstacle to minority ownership and identified the tax certificate as a successful way to enable minorities to attract financing.

As a result, the Commission, by a unanimous vote, took a number of steps in 1982 to make the tax certificate policy more effective in providing meaningful opportunities for minorities to enter the communications business.

First, it extended the tax certificate policy to sales of cable television systems. The Commission determined that cable operators, like broadcasters, exercise discretion in determining which broadcast and non-broadcast signals they will carry and, thus, taking steps to increase minority ownership would help to ensure that the viewpoints of minorities are adequately represented in cable television system programming.

In expanding the tax certificate program to cable systems, Chairman Fowler emphasized in a separate statement endorsing the Commission's decision that such actions aim squarely at the problem of minority financing opportunities. Mr. Fowler noted: "As President Reagan has said, the best hope for a strong economic future rests with a healthy, growing private sector. And the private sector does best when all have opportunities to enter it." See Statement of Policy on Minority Ownership of CATV Systems, 52 R.R.2d 1459 (1982).

Second, the Commission modified the policy to allow issuance of tax certificates to investors in a minority-controlled broadcast or cable entity upon the sale of their interests, provided that the interests were acquired to assist in the financing of the acquisition of the facility. Commission Policy Regarding the Advancement of Minority Ownership in Broadcasting, 92 FCC 2d 849 (1982). The Commission found that by broadening the tax certificate policy in this manner "the pressing dilemma minority entrepreneurs face -- the lack of available financing to capitalize their telecommunications ventures -- is met and a creative tool of financing is created."

In 1990, the FCC's minority ownership programs were upheld as constitutional by the United States Supreme Court. The Court held that the Commission's policies designed to increase minority ownership were substantially related to the achievement of a legitimate government interest in broadcast diversity and that they did not impose an impermissible burden on nonminorities. Metro Broadcasting, Inc. v. FCC, 497 U.S. 547 (1990). Although the Court decision did not specifically involve tax certificates, the rationale for the decision clearly applies to this program.

B. Legislative Constraints on Changes to the Minority Tax Certificate Policy

Late in 1986, the Commission became concerned about the continuing validity of its

minority ownership programs and commenced a proceeding aimed at determining whether these programs were appropriate as a matter of policy and constitutional law. It asked for public comment on a number of issues, including whether the Commission should continue to grant preferences to minorities and what social or other costs might result from the policies. Reexamination of the Commission's Comparative Licensing, Distress Sales and Tax Certificate Policies Premised on Racial, Ethnic or Gender Classifications, MM Docket No. 86-484, FCC 86-549, released December 30, 1986.

Congress reacted to the Commission's attempt to reevaluate its minority ownership policies by attaching a rider to the FCC's 1988 appropriations bill explicitly denying the Commission authority to spend any appropriated funds "to repeal, to retroactively apply changes in, or to continue a reexamination of, the policies of the Federal Communications Commission with respect to comparative licensing, distress sales and tax certificates granted under 26 U.S.C. 1071, to expand minority ownership of broadcasting licenses . . . ." Congress also ordered the Commission to terminate the proceeding reexamining its minority ownership programs and to reinstate the prior policy. Pub. L. No. 100-202, 101 Stat. 1329 (1987). This rider has been reenacted by Congress each year since 1988.

In the 1994 appropriations legislation, Congress clarified in the House Conference Report that the prohibition on reexamination is "intended to prevent the Commission from backtracking on its policies that provide incentives for minority participation in broadcasting" but that it "does not prohibit the agency from taking steps to create greater opportunities for minority ownership." H. Conf. Rep. No. 103-708, 103d Cong. 2d Sess. 40 (1994) (emphasis added). Therefore, the Commission has been greatly constrained in its ability to review the administration and effectiveness of the tax certificate program.

C. Administration of the Tax Certificate Program

Because the rider to the FCC's appropriations bill prevents the Commission from spending appropriated funds to impose limitations on the minority tax certificate program, the Commission must consider tax certificate requests in accordance with the policy as it was in effect in 1986, subject only to changes that would expand the policy.

A tax certificate allows a seller to defer capital gains taxes incurred in the sale of a communications property. Under Section 1071 of the Internal Revenue Code, this deferral can be accomplished by treating the sale as an involuntary conversion under 26 U.S.C. § 1033, with the recognition of gain postponed by the acquisition of qualified replacement property, or by electing to reduce the basis of certain depreciable property, or both.

Thus, the certificate provides incentives to licensees to sell to minority entrepreneurs, while at the same time enhancing the buyer's bargaining position. Section 1071 also encourages reinvestment in communications infrastructure by requiring the seller to reinvest the gains from a tax certificate transaction in similar property.

A request for a tax certificate is submitted to the Commission in letter or petition form. In the broadcast context, the request is usually filed in conjunction with a sale and, thus, the parties also are required to submit applications for consent to assign or transfer control of the relevant license. Ownership information about both the seller and buyer is contained in these applications, and any interested party may oppose the grant of the tax certificate or of the sale.

To receive a minority tax certificate, the minority principals must demonstrate that they exercise both de facto and de jure control of the buyer. If the purchaser is a limited partnership, the minority general partner must own more than a 20 percent equity stake in the company. The minority status of individuals is determined by reference to the Office of Management and Budget's ethnic group or country of origin classifications.

The Commission reviews applications and tax certificate requests carefully and often asks the parties for additional information. The Commission has denied grant of tax

certificates when the parties failed to demonstrate minority control or to satisfy other criteria.

If the Commission determines that grant of a tax certificate is warranted under its tax certificate policies and prior tax certificate decisions, it will issue the certificate to the seller, which in turn submits it to the Internal Revenue Service with its tax return.

D. Results of the Tax Certificate Policy

Before 1978, minorities owned approximately .05 percent (40) of the approximately 8,500 total broadcast licenses issued by the FCC. A 1994 study performed by the National Telecommunications and Information Administration of the Department of Commerce indicates that as of September 1994, there were approximately 323 commercial radio and television stations owned by minorities, 2.9 percent of the total 11,128 licenses.

Industry Total	Black	Hispanic	Asian	Native American	Minority Totals
AM Stations 4,929	101 (2%)	76 (1.5%)	1 (0%)	2 (0%)	180 (3.7%)
FM Stations 5,044	71 (1.4%)	35 (.7%)	3 (.1%)	3 (.1%)	112 (2.2%)
TV Stations 1,155	21 (1.8%)	9 (.8%)	1 (.1%)	0 (0%)	31 (2.7%)
Cumulative Totals 11,128	193(1.7%)	120(1.1%)	5(0%)	5(0%)	323 (2.9%)

Between 1943 and 1994, the Commission has granted approximately 507 tax certificates; 390 were granted between 1978 and 1994. Approximately 330 of the total involved sales to minority-owned entities; 260 for radio station sales, 40 for television and low power television sales, and 30 for cable television transactions.

Although FCC regulations require the buyer of a property for which a tax certificate is issued to hold that station for one year, the overwhelming majority of minority buyers retain their licenses for much longer. Of the 290 broadcast transactions in which tax certificates were granted between 1978 and 1993, the average holding period was approximately five years. We have not included 1994 tax certificate transactions in this figure because those licenses have been held for less than one year. In more than 100 cases in which minority tax certificates were granted, the station still is held by the original purchaser.

The great majority of the transactions in which tax certificates are awarded are relatively small, averaging a sale price of $3.5 million for radio. The 40 tax certificates we have granted for television station sales have a higher average sale price of $38 million. Data is not available for the 30 cable sales, although we know that cable transactions tend to be larger.

III. Conclusion

The minority tax certificate policy is the cornerstone of the Commission's policies to remedy the underrepresentation of minorities in the ownership of broadcast and cable facilities. Most of the broadcast and cable television sales to minorities that took place after 1978 would not have occurred without the existence of the tax certificate policy. And there has been a marked increase in minority ownership since 1978. Further, the program does not seem to have suffered from rampant abuse, such as a lack of real minority control of licenses or quick "flipping" of facilities.

At the same time, as we have stated, the Commission has been constrained in its

ability to subject the program to a comprehensive reexamination. As with any program, this one could benefit from periodic review and improvement. If given the authority by Congress to undertake a reevaluation of the tax certificate policy, I am confident that the Commission could improve the administration and cost effectiveness of the minority tax certificate program.

This concludes my formal remarks. Once again, thank you for inviting the FCC to testify this morning. I would be happy to answer any of your questions.

Chairman JOHNSON. Thank you, Mr. Kennard. Your testimony was very, very interesting, particularly interesting that we would put something like that in the law as far back as 1988 and never do any oversight of the impact of that prohibition.

Mr. Kohl.

STATEMENT OF GLEN A. KOHL, TAX LEGISLATIVE COUNSEL, U.S. DEPARTMENT OF THE TREASURY

Mr. KOHL. Madam Chairwoman and members of the subcommittee, I am pleased to have this opportunity to present testimony on behalf of the Department of Treasury concerning section 1071 of the Internal Revenue Code. However, because the issues identified by the subcommittee relate primarily to the responsibilities assigned by Congress to the FCC, questions about section 1071 certificate program itself are more properly directed to Mr. Kennard. My testimony is intended simply to provide an overview of section 1071, including recent testimony on section 1071 and an explanation of the Internal Revenue Service's role in its administration.

In September 1993, the Ways and Means Subcommittee on Select Revenue Measures conducted a hearing on miscellaneous revenue measures, including an unspecified proposal "that would modify section 1017 by adding anti-abuse rules to ensure that tax incentives are available only for sales that actually foster minority ownership of broadcast stations." The assistant secretary for Tax Policy, Les Samuels, testified that we would not oppose a carefully targeted amendment to section 1071 that would prevent certain sellers, e.g., those who actually participate in sham transactions, from taking advantage of section 1071, provided the amendment did not deny such preferential treatment to innocent sellers, that is, taxpayers who participate in a sale that results in bona fide minority ownership.

Our position in this regard has not changed. Accordingly, we would be willing to work with the subcommittee or the FCC in attempting to craft anti-abuse provisions we could support. In addition, we would be pleased to consider in conjunction with the subcommittee and the FCC whether a cap or other limitations on the section 1071 benefits would be necessary and appropriate to target more precisely this tax provision to its desired objective.

Under section 1071, Congress has delegated authority to the FCC to issue section 1071 certificates. Under the statute, tax benefits under section 1071 are available if the taxpayer obtains a section 1071 certificate from the FCC. The IRS is not in a position to either participate in or exercise oversight over the FCC's determination that many a transaction waits a change in FCC policy. Consequently, as noted by Mr. Kies, the IRS's role is limited to administering, interpreting the technical requirements of section 1071 and section 1033, a provision which section 1071 incorporates by reference.

I would now like to address the potential for abusing section 1071. Please keep in mind, however, that because of, among other things, the lack of the IRS's participation in the certification process, my testimony should not be construed as commenting on any particular transaction, including recent transactions that have been covered in the press.

I should also point out that abusive transactions may arise in any statutory or regulatory context. As you are certainly aware, Treasury, the IRS, and the courts expend considerable energy and resources dealing with abusive tax transactions. Fortunately, the tax law, like other statutory regimes, is interpreted in a manner consistent with its spirit and purpose. Reflecting this rule of interpretation, tax doctrines have evolved in the common law to combat such abuse.

These doctrines include a prohibition against sham transactions, a rule that a transaction must be taxed in accordance with its substance and not merely how it is papered or its form, the substance-over-form doctrine; and a rule that certain related transactions are to be aggregated and treated as one overall transaction, the step transaction doctrine.

In addition, various provisions in IRS regulations have been adopted to address abuses because the common law doctrines have not been fully successful in combating abusive transactions. Certification under section 1071, however, is conducted by the FCC, not the IRS. I assume that, like any regulatory agency, the FCC deals with attempts to abuse its rules including the rules governing the issuance of section 1071 certificates.

In the absence of adequate safeguards against abuse, it is possible that an aggressive participant could devise a scheme that might enable parties to obtain a section 1071 certificate even in situations that do not meaningfully enhance the ownership of broadcasting properties by minorities or women. If such a scheme were to succeed, granting the section 1071 certificate would unfairly reward the participants of a tax avoidance scheme at the expense of both a bona fide minority ownership group and a nonminority ownership group that was unwilling to engage in an abusive transaction.

Once again, however, I am not in a position to comment on whether there in fact exists any transactions when the grant of a section 1071 certificate is not consistent with the intent or purpose of section 1071 or any regulations promulgated there under. Such a question is more properly directed to the FCC.

Nevertheless, as I previously stated, we would be pleased to consult with the FCC or this subcommittee in developing further safeguards against the abuse of the certification process, through anti-abuse provisions and/or specific measures, such as a more stringent holding period. We would also be pleased to work together toward other means of tailoring the section 1071 benefits, for example, some sort of cap, to more efficiently promote its objectives.

This concludes my remarks.

Thank you once again for affording me the opportunity to testify, and I am now available to answer any questions that the subcommittee may have.

[The prepared statement follows:]

STATEMENT OF
GLEN A. KOHL
TAX LEGISLATIVE COUNSEL
DEPARTMENT OF THE TREASURY
BEFORE THE
WAYS AND MEANS SUBCOMMITTEE ON OVERSIGHT
U.S. HOUSE OF REPRESENTATIVES

Chairwoman Johnson and Members of the Subcommittee:

I am pleased to have this opportunity to present testimony today on behalf of the Department of the Treasury concerning section 1071 of the Internal Revenue Code. In convening this hearing, the Subcommittee indicated its desire to examine four issues: (i) whether the Federal Communication Commission's (FCC) 1978 policy of promoting minority ownership is consistent with the underlying intent of Section 1071; (ii) whether the FCC's administration of section 1071 constitutes an impermissible exercise of legislative authority; (iii) whether the tax incentive provided in section 1071 fosters minority ownership of broadcast facilities; and (iv) whether the FCC policy is a necessary or appropriate means of achieving this goal.

Because the issues identified by the Subcommittee relate primarily to the responsibilities assigned by Congress to the FCC, my testimony is intended simply to provide an overview of Section 1071 -- including recent Treasury testimony on Section 1071 -- and an explanation of the Internal Revenue Service's (IRS) role in its administration.

In September, 1993, the Ways and Means Subcommittee on Select Revenue Measures conducted a hearing on miscellaneous revenue measures, including an unspecified proposal "that would modify section 1071 by adding anti-abuse rules to ensure that tax incentives are available only for sales that actually foster minority ownership of broadcast stations." The Assistant Secretary (Tax Policy), Leslie B. Samuels, testified that we would not oppose a carefully targeted amendment to section 1071 that would prevent certain sellers (e.g., those who actively participate in sham transactions) from taking advantage of Section 1071, provided the amendment did not deny such preferential tax treatment to "innocent" sellers -- that is, taxpayers who participate in a sale that results in bona fide minority ownership. Our position in this regard has not changed. Accordingly, we would be willing to work with the Committee or the FCC in attempting to craft anti-abuse provisions that we could support and which would not reduce the effectiveness of the program. In addition, although the Administration has no position on this matter, we would be pleased to consider with the Committee and the FCC whether a cap or other limitations on Section 1071 benefits would be necessary and appropriate to target more precisely this tax provision to its desired objective. We will also coordinate with other offices within the Administration, including the Commerce Department's National Telecommunications and Information Administration.

Overview of Section 1071

Section 1071 provides certain tax benefits (described below) to the seller of property if the sale or exchange is certified by the FCC to be "necessary or appropriate to effectuate a change in a policy of, or the adoption of a new policy by, the Commission with respect to the ownership and control of radio broadcasting stations." Since 1978, the FCC's policy has been to certify transactions as meeting this requirement where a sale of broadcast facilities is made to a minority individual or a minority-controlled entity.[1]

---

[1] We understand that the FCC defines (1) a minority-controlled corporation as a corporation in which more than 50 percent of the voting stock is held by minorities and (2) a minority-controlled limited partnership as a partnership in which (a) the general partner is a

In general, Section 1071 allows a taxpayer to postpone the recognition of gain realized upon the disposition of certain broadcasting property for which the taxpayer has obtained the necessary certificate from the FCC (Section 1071 Certificate). The tax-free treatment accorded by Section 1071 allows the taxpayer to defer the tax on the gain realized in the transaction (although in certain circumstances such deferral can be effectively permanent). In this regard, the benefits of Section 1071 are generally similar to the benefits accorded taxpayers who reinvest insurance proceeds following an involuntary conversion of property under Section 1033 (e.g., as the result of fire or flood), or, to a lesser extent, taxpayers who participate in tax-free exchanges of "like-kind" property under Section 1031.

To obtain the benefits of Section 1071, the taxpayer must file an election with its return that includes the Section 1071 Certificate. This election requires the taxpayer to choose one of three alternative methods for taking advantage of the Section 1071 deferral. The first approach is to apply a modified form of the involuntary conversion rules. Generally, gain is not recognized to the extent that replacement property which is similar or related in service or use to the property sold is acquired before the end of the second full taxable year after the year in which the disposition occurs. The second approach is to reduce the depreciable bases of other assets held by the taxpayer at the time of the disposition and acquired before the end of the taxable year in which the disposition occurs. Unless the taxpayer requests an alternative allocation, the bases of all depreciable assets are reduced on a pro rata basis. The third approach is to elect a combination of the first two approaches (i.e., defer a portion of the gain through the acquisition of replacement property and another portion through reducing the bases of other depreciable property).

The Limited Role of the IRS

Under section 1071, Congress has delegated authority to the FCC to issue Section 1071 Certificates. Tax benefits under Section 1071 are available only if the taxpayer obtains a Section 1071 Certificate from the FCC. The IRS generally accepts as valid any Section 1071 Certificate that is issued. The IRS neither participates in, nor exercises oversight over, the FCC's determination, and conducts no independent inquiry into whether, for example, minorities meaningfully participate in a purchasing group. Consequently, the IRS's role is limited to administering and interpreting the technical requirements of Section 1071 described above (including the rules of Section 1033 which Section 1031 incorporates by cross-reference).

Potential For Abuse

I would also like to discuss the potential for abusing Section 1071, but first I should reiterate that the Department of the Treasury does not participate in the FCC certification process. My testimony therefore should not be construed as commenting on the propriety of issuing Section 1071 Certificates in any particular circumstances or for any particular transactions, including recent transactions that have been covered in the press.

Abusive transactions may arise in any regulatory context. As you are certainly aware, Treasury, the IRS, and the courts expend considerable energy and resources dealing with abusive transactions. Fortunately, the tax law, like other statutory regimes, is interpreted in a manner consistent with its spirit and purpose. Reflecting this rule of interpretation, tax doctrines have evolved to combat such abuses. These doctrines include a prohibition against "sham" transactions, a rule that a transaction must be taxed in accordance with its substance and not merely its form (the "substance over form" doctrine), and a rule that certain related transactions are to be aggregated and treated as one overall transaction (the "step transaction doctrine"). In addition, various statutory provisions and IRS

---

minority or minority-controlled and (b) minorities own at least a 20 percent interest.

We also understand that the FCC generally requires those who acquire broadcast properties under Section 1071 to retain those properties for at least one year.

regulations have been adopted to address abuses because the common law doctrines have not been fully successful in combating abusive transactions.

Certification of transactions under Section 1071, however, is conducted by the FCC, and not the IRS. I assume that, like any regulatory agency, the FCC deals with attempts to abuse its rules, including the rules governing the issuance of Section 1071 Certificates. In the absence of adequate safeguards against abuse, it is possible that an aggressive participant could devise a scheme that might enable parties to obtain a Section 1071 Certificate even in situations that do not meaningfully enhance the ownership of broadcasting properties by minorities. If such a scheme were to succeed, granting the Section 1071 Certificate would unfairly reward the participants of a tax avoidance scheme, possibly at the expense of a bona fide minority ownership group and/or a non-minority ownership group that was unwilling to engage in abusive tax planning. Because the Treasury neither participates in nor reviews the certification process, however, I am not in a position to comment on whether there, in fact, exist any transactions where the grant of a Section 1071 Certificate is not consistent with the intent or purpose of Section 1071 or any regulations promulgated thereunder.

The issuance of Section 1071 Certificates is designed to further an FCC objective. Nevertheless, as I previously stated, we would be pleased to consult with the FCC or this Committee in developing further safeguards against abuse of the certification process (through anti-abuse provisions or specific measures such as a more stringent holding period requirement). We would also be pleased to work together towards other means of tailoring the Section 1071 benefits to more efficiently promote its objectives.

This concludes my remarks. Thank you once again for affording me the opportunity to testify. I am now available to answer any questions that the Committee may have.

Chairman JOHNSON. Thank you both for your testimony and also for your willingness to work with us on this issue to provide it with the oversight I believe it has needed and recreate for ourselves the authority that the legislature has traditionally had to oversee and adjust and clarify and modernize the law as circumstances change.

I would like to ask you, Mr. Kennard, in the background materials there is a chart that shows the number of FCC tax certificates issued for broadcast stations and cable television facilities from 1978 to 1994.

Up until 1987, there were, on average, something from the mid-teens to the low twenties in transactions. In 1986, there were 24. In 1987, there were 34. Then there were 34 for a couple of years and then it popped up to 42 and 43. Then it dropped back down in 1991 to 20 and the 11 and the high teens, a pattern of transactions that reflects the period from 1978 to 1986.

It is also interesting that the minority ownership data parallels the overall data. Would you comment on that explosion of transactions from 1987 to 1990?

Mr. KENNARD. I think it was a reflection of what was happening in the marketplace at the time. I was not in government at the time but was involved in a number of broadcast transactions, and I know there was a flurry of transactions that started in the mideighties and continued to the late eighties. Then, of course, we have had problems of recession in all of the communications industries and broadcasting was certainly not exempt.

I think those transactions that did take place in the early nineties, many of them were workout and foreclosure situations where there was no gain. So, accordingly, there would have been no need for a tax certificate. That is my best guess as to why there was a fall-off in the early nineties.

Chairman JOHNSON. Actually, it is in the late eighties you see this real explosion.

Mr. KENNARD. Then it fell off in the early nineties.

Chairman JOHNSON. So your response is that the activities of the late eighties was the consequence of the recession.

Mr. KENNARD. Yes, I think a lot of these deals were put into the pipeline starting in 1986 and 1987 and they were closing in 1988 and 1989. Then I think you see the effects of the recession hitting from 1990 to 1993 and there is a pretty significant dropoff after 1990.

Chairman JOHNSON. All right. Now, the FCC has a number of other ways of promoting minority ownership programs, and one of the ones that seems most interesting is their distress sale policy that allows a license that is approaching revocation hearings to be sold for substantially less than the fair market value if it is sold to a minority party.

How powerful has this been? How many transactions have there been under this distressed sale policy?

Mr. KENNARD. I think there have been approximately 30 or 35 transactions. We can get you the exact number in a moment.

Chairman JOHNSON. Over how many years?

Mr. KENNARD. Since 1978. I would say that it is an important—I was handed the exact number. It is 40 since 1978.

I would say that it is an important program but it has been of marginal effectiveness, principally because the only way that this program is triggered is if there is a licensee that gets in trouble with the FCC. Its license is designated for hearing. That licensee has a choice; either go through a full-scale administrative hearing, with all the expense and uncertainty that that process entails, or opt out for a distress sale to a minority owner at a below market price.

Two reasons why the program, I think, has had only marginal effectiveness: One is because there are just not that many designations of licenses for hearing; and second, those that get designated tend to be more marginal stations and not those that are the more attractive properties that would be important in promoting minority ownership.

Chairman JOHNSON. Thank you. That seems logical. It is interesting in that in the distressed sales situation, it is the licensee that takes the loss not the taxpayer. In other words, the person selling the station sells it below the market value, and so the minority incentive comes from the profit of the former owner rather than from the taxpayers. I think that is a significant and interesting difference.

What is your definition of minority?

Mr. KENNARD. Well, the FCC relies on the Federal statistics——

Chairman JOHNSON. Excuse me, minority control, I should say.

Mr. KENNARD. Oh, minority control, I am sorry. It is essentially the FCC looks at both de jure, that is legal, and de facto, factual control. The FCC has a lot of experience with this particular issue that far preceded the minority ownership policies with respect to the tax certificate. A lot of what the FCC does is license telecommunications facilities. So one of our central regulatory responsibilities is to ensure that we know who is controlling these licenses. So there are 60 years of case law and precedent that we rely on in determining whether a company or individuals are in control of a license.

Chairman JOHNSON. Well, generally, a minority-controlled corporation is one in which the minority owns 50 percent of the voting stock. A minority-controlled limited partnership is one in which the general partner must have at least 20 percent equity interest.

Now, if the Viacom deal that has received so much publicity is like other deals that have gotten tax certificates, there is neither the equity position nor the control position that are common to other minority-controlled transactions in other areas. Really, this has only been possible since 1978. So in this particular area, as distinct from other areas, how do you judge that minority control; and why is it that you have no statistics or data about what has happened as a consequence in however long control lasted?

You apparently have no information about whether when you granted a tax certificate the minority interest was sold 1 year after, 2 years after, 3 years after. So you have no oversight information from which we can evaluate the long-term impact on the goal of minority involvement in our communications system of this really very expensive, flexible policy of the FCC.

Mr. KENNARD. Let me answer your last question first. As I mentioned in my opening statement, we have looked at the average

holding periods of transactions involving the tax certificate. The average holding period is 5 years in most broadcast transactions. We do not have that information for cable. Again, we have been precluded by Congress from undertaking a wholesale reexamination of this policy. The legislation is quite clear on that point.

Chairman JOHNSON. Just for clarity, Mr. Kennard, what number of cable transactions have there been? What percentage of the transactions currently are cable?

Mr. KENNARD. Through the history of the cable tax certificate program, since 1982, there have been 30 cable transactions involving tax certificates.

Chairman JOHNSON. So it would not be an impossible task to research those and get appropriate information?

Mr. KENNARD. No, in fact the subcommittee has asked us and we are working on that matter right now.

Chairman JOHNSON. OK. Back to the issue of control.

Mr. KENNARD. Yes, the issue of control. To give you a little bit of historical perspective, when the Commission first adopted its minority ownership program in 1978, we adopted a very simplistic definition of control. We provided that if you are a corporate entity, you had to show that more than 50 percent of the voting stock was held by minorities.

When the FCC, under Chairman Fowler in 1982, convened another examination of the tax certificate policy, the marketplace had changed significantly and the FCC was kind of behind the times. A lot of deals were being done with limited partnerships, they were more highly leveraged transactions than we had been used to, so we adopted the policy with respect to limited partnerships to allow the policy to encompass and address the situation where you had a minority general partner who was in control of the enterprise but did not have over 50 percent of the equity. From that evolved this minimum 20 percent equity requirement in limited partnerships.

Now, that being said, I think that our knowledge of these deals has become increasingly more sophisticated, and in our minority ownership policies outside the tax certificate area, because again we have not been able to reexamine the tax certificate policy. But in other areas of our minority ownership policy, we have taken a far more sophisticated look at equity and defined minimum equity requirements for participating in these programs, looking at such things as profit and loss allocations as a determinant of equity ownership, liquidation preferences, and the like.

So it is an evolving concept, I think.

Chairman JOHNSON. It appears it does need to evolve in regard to these transactions.

We are going to start using the timeclock lights now, if we have that system lined up. It would be useful to us and I yield to Mr. Matsui.

Mr. MATSUI. Thank you, Madam Chairwoman.

Mr. Kohl, you have a $1.6 billion 5-year revenue loss for the program, apparently. It is my belief, and I would like you to perhaps take this back to Treasury, if you would not mind, and reestimate these numbers. Because it is frankly my belief that this is going to explode over the next 5 years, these kinds of transactions. I no-

ticed on a year-by-year basis that that is not necessarily demonstrated.

The reason I say this is that Viacom purchased Paramount Pictures and also Blockbusters. My understanding, again, because I do not have the ability to question the people involved in these transactions, Viacom had a cash-flow situation problem and that is why this transaction occurred. I would imagine with telecommunications exploding as it is, and with the whole deregulation of the industry, you will probably see a significant increase. So perhaps you might want to go back and reexamine this.

I have asked Mr. Kies to look at it as well. So I would just like you to do that. I have no further questions with respect to you.

Mr. Kennard, you indicated that in terms of broadcast, the average transaction is about $3.2 million; is that correct?

Mr. KENNARD. For radio, it is $3.5 million; for television, it is about $38 million.

Mr. MATSUI. For television, 38, but you have nothing on cable yet?

Mr. KENNARD. No.

Mr. MATSUI. You are able to do this even though you have the prohibition, appropriations prohibition?

Mr. KENNARD. Well, what we have done is we have just provided information that is a matter of public record.

Mr. MATSUI. I see just broad data. There is no analysis to it.

Mr. KENNARD. Right. We are providing the raw data.

Mr. MATSUI. OK, I would like to get back to the issue of control because that is a very important—by the way, do you have discretion to deny these certificates, or is it if they comply with whatever happens to be the regulations of the moment, you are obligated then to issue the certificate? Is that the correct understanding?

Mr. KENNARD. Yes, our understanding is that under our statute, Congress made it very clear that they did not want this policy to change from the way it was in effect in 1986. So since that time we have been applying the policy consistent with that congressional directive.

Mr. MATSUI. But you are obligated—as long as the minimum qualifications of the regs are fulfilled, you are then obligated to issue the certificate? You have no discretion once the terms are fulfilled; is that correct?

Mr. KENNARD. That is correct. Now, within those constraints, typically in these transactions, particularly the ones that are somewhat complex, the FCC staff spends quite a lot of time just trying to understand the transaction. So it is not a situation where someone comes in the door and certifies that he complies with the policy and a tax certificate is granted.

Mr. MATSUI. OK. Obviously, since the Viacom application is still pending, you have no idea whether you could or could not deny them a certificate, or whether you are obligated to grants it; is that correct?

Mr. KENNARD. My understanding is it has not even been filed with the agency as of this time.

Mr. MATSUI. OK. Let me get into the issue of control, because you said this is an evolving process.

I am trying to understand this, because, again, I hate to ask you, particularly, since you have the obligation of reviewing these things, but with respect to the Viacom situation, at least from what Mr. Kies has said, the 20-percent interest is satisfied but he was talking about a profit issue. In other words, he was talking about profit and losses. He was not talking equity interest, he was not talking about capital investment. It was basically the profit or losses he was speaking about in terms of the 20-percent interest.

Is that your understanding or do they have to have, the individual, have to have controlling interest or some kind of controlling interest or management interest in the venture?

Mr. KENNARD. Our threshold review is to determine whether the minority principals have control of the enterprise. That is, we start by analyzing the documents to make sure that the documents vest legal control in the enterprise in the minority principals. If it is a corporation, such things as the ability to hire and fire, elect a majority of the board of directors, things such as that.

Now, when it comes to equity, in a limited partnership——

Mr. MATSUI. If I can just finish off and ask a further question. I don't mean to interrupt you.

Mr. KENNARD. Certainly.

Mr. MATSUI. In other words, then, the individual, the minority participant must have a controlling interest. He or she will be in a position to fire, hire, make all of the decisions of that company that is purchased or that is——

Mr. KENNARD. That is our requirement. We look at such things as the ability to control budgets, to select programming, hire and fire key personnel. Those are kind of the bedrock attributes of control that we look to.

Mr. MATSUI. So the transactions that Mr. Johnson referred to, presumably the minority contractor has absolute control over all those management decisions, the programming and all that, as well.

Mr. KENNARD. Yes.

Mr. MATSUI. OK. You wanted to finish in terms of the equity interest.

Mr. KENNARD. Yes, I did just want to clarify that when it comes to equity, it is often difficult and I think the tax lawyers in this room would probably confirm this, it is often very difficult to define what equity means, particularly in the context of a complex partnership.

So what we have done at the FCC is we have required that individuals requesting tax certificates for a limited partnership deal demonstrate that the minorities in the deal control not less than 21 percent of the equity in the venture. In some of the other areas of our minority ownership policies, we have started bringing more sophistication into this analysis looking at such things as profit/loss allocations and liquidation values and the like.

Mr. MATSUI. If I may follow up on that, because you say, then, that if—I will use a hypothetical—if the minority contractor put $1 million on a $2.3 billion transaction, he then presumably, in order to fulfill your requirements of a 21-percent-plus equity interest in the venture, would then automatically have a $400-plus million eq-

uity interest? So if he sold the venture 13 months later, he would be able to reap a profit of——

Mr. KENNARD. Not under the tax certificate policy, no.

Mr. MATSUI. I thought that is what you said. Maybe I misunderstood you.

Mr. KENNARD. I am sorry if I am confusing you. Under the tax certificate policy, the Commission looks to see whether the minority principals have control, No. 1, and No. 2, in a limited partnership that they control—usually it is through a corporate general partner—that corporate general partner controls not less than 20 percent of the equity in the venture.

That does not mean that the minority individual has personally a 20-percent stake in the venture. But they control an enterprise which in turn controls not less than 20 percent.

Mr. MATSUI. That is why—now I kind of understand why this deal was structured the way it was. There was a number of different corporations and a number of different limited partners—well, there was a major limited partnership. But that is the way to maintain the control over the entity itself but not have necessarily an equity interest in the investment.

Mr. KENNARD. Yes.

Mr. MATSUI. OK.

Mr. KENNARD. In another context where we have defined minority ownership more recently, we have departed from that and said tell us how much equity the minority principals personally have in the venture. So it is a slightly tougher and different standard.

Mr. MATSUI. Well, it sounds to me like—well, I have nothing further.

Thank you very much.

Chairman JOHNSON. Before I recognize the next member of the subcommittee to question, I had not quite coordinated in my own mind the relationship between the Appropriations Committee language and the chart reflecting increased activity in 1987. The statutory language prohibited the spending of any appropriated funds to repeal, to retroactively apply changes in, or to continue a reexamination of its policies with respect to tax certificates granted under 1071.

So, apparently, we suspended any review that you were doing. The very year we did that, the number of tax certificates exploded.

Now, you had suggested that the explosion was the consequence of the recession and the deals that came to fruition, which undoubtedly was a factor. But it is very interesting that the Appropriations Committee action and the number of deals done do relate, and if you do not have the detail on the interrelationship now, it is certainly necessary for this subcommittee to understand that relationship.

Can you point to issues that were being reviewed by the Commission at that time that might have had to do with fraud and abuse or with an appropriate use of tax certificates, that when denied the right to exercise any judgment over whether the policy you had in place was reasonable and necessary or appropriate by the Congress, the numbers of deals exploded?

Mr. KENNARD. Well, I don't know if there was a causal relationship between those two events. It is really hard to speculate. I was

not at the agency at the time. I have researched the history and I know in 1986 the Commission commenced a proceeding to reexamine and reevaluate this particular policy.

Chairman JOHNSON. Do you know why the Commission commenced that reexamination?

Mr. KENNARD. From what I can gather at the time, the Commission wanted to take a look at both the constitutional and policy justifications for the policy in a rulemaking proceeding that was commenced in 1986.

Chairman JOHNSON. Would you look back on that in greater detail and report back to us?

Mr. KENNARD. I am not sure I understand precisely what your question is, Congresswoman.

Chairman JOHNSON. I want to know what were the red flags that led the Commission to realize that they perhaps ought to look at this. Is there a relationship between the questions that they were asking, the decision of the Congress to stop the reexamination, and the increased number of tax certificates granted? Because in earlier testimony, it has been clear and it has been your policy that if a deal meets the minority participation standards, you do not look at the tax consequences as a factor. That does not weigh in as to whether the deal is eligible.

Mr. KENNARD. We are not permitted to.

Chairman JOHNSON. Right. But it is important for us to know what the controversy was at that time that led to an appropriations rider and the relationship between that rider and the activity in this program. So if you could look back on that in greater detail and get back to us, I think it would be useful to us.

Mr. KENNARD. I would be happy to. At this point I am speculating, but there were a number of events in the industry at the time that contributed to an increase in the number of broadcast transactions. One is the one I mentioned, that the economy was stronger and the broadcast industry was feeling the effects of that.

Also, the Commission at the time had deregulated a number of its ownership rules. It had, for example, repealed a rule that required owners of broadcast stations to hold them for 3 years or more, and that contributed to a lot of interest in the broadcast marketplace by the lending community. I think that may explain why those numbers spiked, but we will be happy to look into that and report back to you.

Chairman JOHNSON. Thank you, I appreciate that.

[The following was subsequently received:]

FEDERAL COMMUNICATIONS COMMISSION
WASHINGTON, D.C. 20554

June 23, 1995

OFFICE OF GENERAL COUNSEL

WILLIAM E. KENNARD
GENERAL COUNSEL

(202) 418-1700 | FAX (202) 418-2822
INTERNET -- wkennard@fcc.gov

VIA COURIER

Ms. Traci Altman
Committee on Ways & Means
U.S. House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20515

Dear Traci:

Per your fax to my office of June 12 concerning information promised to the Committee during my testimony on January 27, 1995, I am enclosing the following materials:

1) Chairwoman's Johnson request

Chairwoman Johnson requested greater detail on the circumstances resulting in the FY 1988 appropriations rider that barred the Commission from examining or changing its policies fostering ownership of broadcasting licenses by women and minorities. I enclose the relevant pages from the Senate Report and the Conference Report on the appropriations bill, Senator Lautenberg's comments on the Senate floor concerning the bill, and the applicable provisions from the Public Law. These documents should help to illuminate Congress's thinking when it enacted the ban.

2) Congressman Hancock's Request

Congressman Hancock requested information to assess whether certain individuals had repeatedly used the Commission's minority tax certificate program. Between 1978 and 1994, we have identified 44 sellers of broadcast and cable facilities who benefitted more than once from the tax deferral conferred through the program. Also during that period, we have identified 46 minority individuals who on more than one occasion purchased broadcast and cable facilities with the assistance of the tax certificate program.

3) Congressman Zimmer's Request

Congressman Zimmer requested information on the number of tax certificate transactions involving former Commission personnel. As I explained during the hearing, the Commission does not ask for the personal histories of those requesting tax certificates.

I trust this information is responsive to the Committee's request for further information. Should you have additional questions, please call me on 418-1700.

Sincerely,

William E. Kennard
General Counsel

[Attachments retained in Committee Files.]

Chairman JOHNSON. I will now recognize Mr. Herger.

Mr. HERGER. Thank you very much, Madam Chair.

Mr. Kennard, if I could follow up on a question I asked earlier of Mr. Kies having to do with how you adopt your policies on how the FCC determines which minority group should be entitled to tax certificates or other preferences.

To be specific here, according to a recent article in Forbes Magazine, Storer Communications recently sold one of its stations to the Liberman family. Apparently, this family qualified as a minority because it was able to demonstrate that the family had been expelled from Spain by King Ferdinand and Queen Isabella during Spain's purge of its Jewish population in 1492.

The FCC represented to us that it approved the tax certificate because the family was able to demonstrate that it was actively involved in the Hispanic community. Could you comment on that, please?

Mr. KENNARD. Certainly. I think that article is somewhat misleading. I am familiar with the case. First of all, the FCC relies on the definitions of minority promulgated by the Office of Management and Budget. These are the definitions that OMB uses for all of the Federal statistics and program administration in this area.

With respect to the Storer case, the article is a little misleading because OMB defines a Hispanic as someone of Hispanic origin. It is true this family apparently had origins in Spain many years ago, but the family emigrated to Mexico in the 1920s and then to the United States. They were able to demonstrate to the FCC that they were of Hispanic origin, they were active in the Hispanic community, they spoke Spanish in the home. The FCC got evidence from the Department of Commerce's Minority Business Development Agency to determine that, in fact, this family was a recognized, leading family in the Hispanic community.

So there was—the article is a little misleading to suggest only that they had origins in Spain in the 15th century.

Mr. HERGER. Well, I appreciate your clarifying. That does make it a little better. But again everything we are hearing today does indicate or would appear to indicate some, to say the least, some very poor policies, I would say, in being fair with all taxpayers. As I travel around my district, constituents who come to me indicate over and over again that they do not mind taxation so much as long as they are treated fairly, as long as everyone is treated the same way.

I would have a question of you, Mr. Kohl, if I could, and that is, in your opinion, when we begin—when we hear of some of the outrageous examples, as we have been hearing throughout this morning, throughout the testimony on this particular issue that we are on, I guess my question is are we not leading up to this—do we not lead our Nation's tax attorneys into creating these type situations when we set up policies that would somehow set out one group over another as dealing with them, say in a more positive way than others?

Mr. KOHL. Mr. Herger, I have been a tax lawyer for a long time, mostly in private practice, and I do not think the problem is section 1071. I am personally thrilled to hear you mention that issue, be-

cause some tax lawyers have a real problem with distances—you give them an inch and they take a mile.

We have reports of many abusive transactions. Rent-a-partner schemes, which I cannot comment on whether they exist in the FCC context, but rent-a-partner schemes that exist in the law that we are trying to combat exist everywhere. There are reports of business ventures where you bring in a foreign partner for a year or two, accelerate and allocate the income to a foreign partner, and then the foreign partner leaves and you are left with a business venture that did not pay any U.S. tax, plus they are left with deductions.

So I am thrilled to hear that we have to deal with a tax abuse problem, because I do think it is a matter of fairness and I think if we do not address it, I do think it affects ordinary citizens, who start to feel like chumps, as other people who are willing to be aggressive take aggressive positions.

So I agree wholeheartedly, but it is certainly not limited to section 1071. There are many areas where we should look at this and we would love to work with the subcommittee to address these.

Mr. HERGER. Well, I want to thank you. Again we have heard specifically one individual. I have to believe there is more, specifically Mr. Washington. It is not just his deal here.

We are hearing there are other deals as well where this one minority individual, not an entire minority but one individual, I could see where other minorities would feel like, boy, this is not fair. Why is this one individual making millions? We are not able to.

Again, I get back to the question, perhaps the policy where somehow we are setting one group out, favoring them over another, are we not setting up an environment where we are actually either purposely or nonpurposely creating an environment where this becomes the norm rather than an exception?

Thank you.

Chairman JOHNSON. Thank you. Mr. Hancock.

Mr. HANCOCK. Thank you very much.

Mr. Kennard, did I understand you when you mentioned a 21-percent minority ownership, but not necessarily any equity investment by that minority individual? He qualifies as long as he has control of that 21 percent, even though he did not put any equity in himself?

Mr. KENNARD. That is essentially correct. The FCC staff, based on our case law under section 1071, looks to see that the minority principals do have a meaningful or significant economic stake in the venture. But that has not been defined precisely and the Commission, again, has not been permitted to go back and commence a rulemaking proceeding to flesh out in more detail what that means.

Mr. HANCOCK. Well, from what you are telling me, it means that if an individual wanted to get a tax certificate of some type, all he has to do is just find a straw partner that happens to be a minority.

Mr. KENNARD. Well, one, I don't think there is rampant abuse of this policy; and, second, there are incentives here. The purpose of the policy is to create incentives to get minority individuals into business.

Mr. HANCOCK. I understand the purpose but I also know the use of the minority situation can benefit people that are not minorities, and it seems in this situation that that is what is happening.

Mr. KENNARD. The only point I wanted to make, sir, is if you were to require the minority principals to make pro rata contributions based on their equity holdings, that amount of money would be prohibitive for most minorities in this country and you would not—the policy would be useless because you would not be able to bring many minorities into these deals.

Mr. HANCOCK. All right. Well, we can discuss that one for quite a while, too.

I asked Mr. Kies earlier about the information on the 378 tax certificates that have been issued since 1978. He indicated that he had been trying to get information or had started trying to assemble the information on that in the past 2 weeks, and I would appreciate it if your organization would assist him in assembling that information so we can get some specific details, case by case, if nothing else a random sampling, say, of 20 percent of them, or let us go 21 percent, that sounds like a good round figure, of just a random sampling of those so we can look and see. I want to know if there has been duplication. In other words, have there been cases where certain individuals have repeatedly used this same program.

I think we have one example, but I want to know if there are some other examples, and I would appreciate it if you could work to get that information available for him or for us as quickly as possible.

Mr. KENNARD. We would be happy to continue to work with the subcommittee in that regard.

Mr. HANCOCK. Thank you.

[Refer to the responses on page 58 of this hearing.]

Chairman JOHNSON. Mr. McDermott will inquire.

Mr. MCDERMOTT. Thank you, Madam Chair.

Mr. Kennard, I looked at the statutory language and it says radio broadcast systems. How did we get into television?

Mr. KENNARD. Well, in 1958, as I recall, the Congress specifically defined that term to include telecasting.

Mr. MCDERMOTT. So, something was done elsewhere in the Tax Code?

Mr. KENNARD. I believe there were some technical amendments to the code.

Mr. MCDERMOTT. Let me ask you another question. In your testimony, you have four categories: minority ownership, owners of AM radio, microwave licensees, licensees to come into compliance. These are the other areas where you grant these tax certificates.

Mr. KENNARD. Yes.

Mr. MCDERMOTT. How many of those have you granted?

Mr. KENNARD. Approximately 115.

Mr. MCDERMOTT. In those other three categories?

Mr. KENNARD. Yes, that is correct.

Mr. MCDERMOTT. If we wipe out 1071, we take them with us?

Mr. KENNARD. Certainly if 1071 were to be repealed, the Commission would not be able to grant tax certificates in these other areas as well; that is right.

Mr. MCDERMOTT. There have been a couple of terms thrown around here, and I have gotten to listening to words: Sham and abusive, sham relationships, abusive relationships. Do you have definitions either at Treasury or at FCC about what is a sham relationship or what is an abusive relationship?

Mr. KENNARD. Well, I think it is the same thing, but we define it more in terms of an abuse of process or an unauthorized de facto transfer of control. That is, if someone represents to us that one entity or individual controls an enterprise and really somebody else does, we define it as a de facto transfer of control. It is a violation of our rules, and we have the ability to take punitive enforcement action against that situation.

Mr. MCDERMOTT. Is that arguable in court? If I have one of these certificates and you come in and say, no, you are violating the rules, where do I go for adjudication of that?

Mr. KENNARD. Well, if it is discovered that someone sought a minority tax certificate and it was based on misrepresentations, that licensee's license would be at risk. They would subject themselves to the full panoply of the Commission's enforcement authority. That includes fines and forfeitures, designation for hearing, and eventual revocation of license and such.

Mr. MCDERMOTT. OK. Let me ask another question. I am interested in this business about who owns something. Let us suppose that a Southeast Asian came into this country as a legal immigrant—I emphasize the word legal—so they are now legally an immigrant and they gather together some money and they want to get involved in buying a radio station or want to get in one of these deals. How do you decide whether or not they have enough money invested in this to do it?

Mr. KENNARD. Well, we do not look to see whether they have enough money invested in the deal. We look to see whether they have sufficient equity to satisfy our control requirements. As I was saying earlier, in many of these deals, both in the minority and nonminority context, the promoters, the people who put the deal together often bring little money to the table, but they are able to leverage their ideas and their willingness to work hard and to put the deal together into an equity position. There is nothing unique about minority ownership.

Mr. MCDERMOTT. Being a legal immigrant would not be a problem? You do not have to be a full citizen to own a radio station?

Mr. KENNARD. Well, yes, you do, under a section in our act, the FCC cannot grant broadcast licenses to foreigners or representatives of foreign governments.

Mr. MCDERMOTT. If they are a legal immigrant, they are not eligible to own a station?

Mr. KENNARD. They would have to be U.S. citizens.

Mr. MCDERMOTT. Some, if they are in the process—if they get to be a naturalized citizen, then they can own?

Mr. KENNARD. That is correct. That is the case of Rupert Murdoch, who became a U.S. citizen to buy broadcast properties here in the United States.

Mr. MCDERMOTT. Can he be a citizen in more than one place?

Mr. KENNARD. I suppose so, but I am not sure. As long as you are a U.S. citizen, I believe you comply but I am not certain.

Mr. MCDERMOTT. You do not look beyond that. You do not look at whether he has three citizenships, one in Britain, one here, and one in Australia to qualify for things in three different places?

Mr. KENNARD. It has not come up in my practice, no.

Mr. MCDERMOTT. Now, let me ask about this equity business. If I come to the table with $1 million in cash, and there are probably some members here who could get into one of these deals.

People have said this deal is not very substantial. A million bucks sounds like a lot of money. I could not get into a deal, bring in $1 million to the table. I also could bring a tax certificate in my other pocket worth $400 million to the people who were buying it, or selling it to me. How do you evaluate that as what I am bringing to the table in the deal?

Mr. KENNARD. Well, we would want to make sure that in a deal like that we would very carefully scrutinize all of the documents to make sure that you had, if you were representing that you controlled a 21-percent equity interest in the deal, that you really did control it.

We cannot really get into valuing your relative contribution versus the investors, because that is a determination I don't think an administrative agency is really equipped to do.

Mr. MCDERMOTT. How do you decide that I have 21 percent of control? Is it that on Mondays I make the decisions and they make them on Tuesday through Friday?

Mr. KENNARD. No, you have to—control to us means that you have to have all the indicia of someone who controls the business. That is you elect the members of the board, you make the hiring and firing decisions. That cannot be diluted by clever supermajority provisions that give the investors the ability to effectively dilute your ability to make those decisions.

Mr. MCDERMOTT. But 20 percent is not enough to control everything. That is obviously one-fifth; right?

Mr. KENNARD. We draw a distinction between equity ownership and control.

Chairman JOHNSON. Excuse me. Would the gentleman yield?

Mr. MCDERMOTT. Yes.

Chairman JOHNSON. I am going to recess the subcommittee when the gentleman is done questioning. He can proceed as long as he feels he can. But in order to minimize the recess, I am going to go vote.

Mr. MCDERMOTT. OK. The control issue—it is 100 percent control.

Mr. KENNARD. Right; 100 percent control but not less than 20 percent equity. Control of equity. So we draw a distinction——

Mr. MCDERMOTT. Not being a lawyer, I have a lot of fun trying to figure out how your minds work because you can really slice a piece of baloney in some real thin slices.

I see that I am in charge of the subcommittee here and I will adjourn it for 10 minutes.

Mr. KENNARD. Thank you.

[Recess.]

Mr. ZIMMER [presiding]. Please be seated. We are reconvening the session. The chairwoman has asked me to continue the hearing

until she gets back from the vote, so I will ask a couple of questions at this point.

We will start off with Mr. Kennard. Mr. Kennard, how many of the tax certificates you discussed today involve participation by current or former FCC staff members? Mr. Kies told us that Mr. Washington, who is involved in the Viacom transaction, actually devised the current policy. How many other former FCC staff members or Commissioners have been involved?

Mr. KENNARD. Well, it is difficult to say definitively because we do not compile information when people come in and ask for a tax certificate. We do not ask them if they have worked for the agency before. So all I will say is what I know kind of anecdotally.

I know Mr. Washington did work at the FCC for a time in the early eighties. I think he left before the current policy came into being. That is with respect to cable television and limited partnerships that we are talking about today. I am only aware of one other individual who benefited from the policy, that is a minority principal who benefited from the policy, who had some former contact with the FCC, and that was a gentleman by the name of McKee, Clarence McKee.

But I might add that having worked at the FCC now for a little over 1 year, I am finding it is not at all unusual for people who come to the FCC, learn about our rules and policies, become expert to go out in the private sector and basically take advantage of the knowledge. That is certainly their right.

Mr. ZIMMER. It certainly is. I am concerned about, however, the problem of the revolving door in government in general, and I have introduced legislation dealing with the problem in Congress specifically, where people come back and it is not on the basis of what they know, but rather who they know that they are able to get access and influence, so I do believe it is a serious concern.

You had mentioned in passing in your own testimony that you had some involvement in FCC transactions before you came to the Commission. Were you involved in any that had tax certificates as part of the——

Mr. KENNARD. Yes, before I went into government, I was a communications lawyer in Washington for a dozen years or so, and like many communications lawyers in this town, I was involved in tax certificate deals both from the buyers' and the sellers' perspective.

Mr. ZIMMER. Is it possible for you to get us information at a later date in writing as far as the number of those tax certificate transactions that did involve former FCC personnel?

Mr. KENNARD. Congressman, really, I do not know if we have that data. Again, we do not ask for a personal dossier on people who come in and request tax certificates, nor do I think that we could actually identify every principal who was involved in one of these deals.

Are you asking for information with respect to just the minority participants or the nonminorities who may have benefited from the tax certificate as well?

Mr. ZIMMER. Both.

Mr. KENNARD. Both.

Mr. ZIMMER. Because the testimony here has been that the nonminorities get the major benefit.

Mr. KENNARD. Again, I don't believe that we have all that information, but I will confer with the staff to see if we can provide it.

[Refer to the responses on page 58 of this hearing.]

Mr. ZIMMER. In your initial testimony, you also said that you thought there was room for improvement in the program. I know you are constrained in some respects by the appropriations rider. How would you like to see the program improved?

Mr. KENNARD. Well, I think there are a number of things that we have done in other contexts at the Commission that would certainly benefit the tax certificate program. One area that I think bears some looking at is the holding period, perhaps extending the 1-year holding period to something longer than that. As I mentioned earlier, we developed a lot more sophistication about assessing equity and minimal equity requirements, and I think that probably bears some study.

In some of the other areas, we have also taken a hard look at how options and warrants are treated and we don't allow, for example, minority principals to option or sell a future interest in their equity in the deal. That is one area that I think bears some further study.

Mr. ZIMMER. Thank you.

Do you have any studies that indicate that minority ownership has resulted in different programming by the stations that are minority owned as a result of that ownership, empirical evidence shows that there is different programming?

Mr. KENNARD. There is actually a lot of empirical data developed by both government and the academic community. Probably the most notable one was a study that was done by the Congressional Research Service in 1988. With the cooperation of the FCC there was a survey taken of some 8,000 broadcast stations to determine whether there was a nexus between minority ownership and programming directed to a minority audience. They found a strong correlation between those two factors.

Mr. ZIMMER. Did that study focus on the type of ownership by the minority, for instance, what Mr. Kohl referred to as rent-a-partner situation? Was there a difference between owners that were only nominal owners where the vast majority of the capital came from nonminorities versus owners who had not only nominal or legal control but the majority of the equity?

Mr. KENNARD. As I recall, Congressman, the study focused on minority control, and they looked at stations that were, or certified they were, minority controlled and compared the amount of minority oriented program developed by those stations or aired by those stations compared to stations that did not have minority control. They found that with respect to African-American stations, for example, 65 percent of those stations that were controlled by African-Americans provided significant minority programming, whereas only 20 percent of stations that were nonminority controlled provided significant minority programming. Similar numbers were developed with respect to Hispanic ownership as well.

There have also been a number of studies to show that minority-owned stations tend to employ minorities in higher numbers, which is also an important policy goal of the Commission.

Mr. ZIMMER. Mr. Kohl, do you have your most current estimate of the tax expenditure involved with this tax certificate program?

Mr. KOHL. I believe Treasury comes in at about $300 million a year, Joint Committee comes in at $100 million a year.

That was, I think, referred to in the preparation of last year's budget.

Mr. ZIMMER. You don't have any more current information?

Mr. KOHL. No.

Mr. ZIMMER. The Viacom transaction aside, you don't have any reason to doubt the magnitude of those estimates?

Mr. KOHL. I think estimates are just that and they are based on information available at that time. I think as new information develops and if there were an unprecedentedly large transaction to occur, or perhaps in light of Mr. Matsui's observations over time, I think the estimates could change but I really can't comment on the estimate made at that time.

Mr. ZIMMER. Do you know if your estimate takes into account the FCC's recent expansion of the tax certificate program to include personal communications services?

Mr. KOHL. I do not know if it does. I do think the estimate is prepared in consultation with the FCC, but I don't know if it does or not.

Mr. ZIMMER. A final question of Mr. Kennard. I can understand how programming considerations would be important with respect to minority ownership of radio and TV. What is the social purpose behind the same incentives being given for personal communications services?

Mr. KENNARD. Well, in the personal communications service, there again Congress mandated in the 1993 Budget Act that the FCC ensure that there were opportunities for four categories of licensees to get into this business—minorities, women, small businesses, and rural telephone companies.

I think the concern there was that Congress was authorizing the FCC to conduct spectrum auctions for the first time. Prior to that, as you may know, the FCC gave away licenses for free, and commencing last year the FCC decided, with the authority of Congress, to auction spectrum for the first time. There was concern that if the FCC didn't have some sort of incentives to diversify ownership because people were paying for licenses, they would all end up in the hands of the established industry giants. So it is more diversification of ownership as an economic basis as opposed to a programming diversity rationale.

Mr. ZIMMER. So it was a different philosophical basis, more of a standard set-aside, rather than to have diversity in communications?

Mr. KENNARD. It would not have been a set-aside because the Congress did not mandate a set percentage of minority or women ownership.

Mr. ZIMMER. More like an affirmative action program then?

Mr. KENNARD. Yes. Right.

Mr. ZIMMER. Thank you.

Mr. Levin.

Mr. LEVIN. Thank you.

You were asked what recommendation you might have. Could I probe a little further than that. You mentioned several areas. You work with the laws and you see how they are implemented.

Do you have any other suggestions? For example, should there be some changes relating to the size of the transaction, the amount of the tax advantage that would be created?

Mr. KENNARD. First, let me say that I am constrained because of our appropriations language in my ability to conduct here or at any time a wholesale reexamination of this program. All I meant to suggest to Mr. Zimmer was that there are differences between the minority ownership program that we administer here and elsewhere, and the comparison might suggest ways to improve the tax certificate policy.

But to get to your specific question, I think that it is certainly a legitimate issue to put on the table and examine to see—kind of analyze the cost-benefit relationship between the benefits of diversity and the cost to the U.S. Treasury.

Mr. LEVIN. Obviously, I don't want to press you beyond your discretion here and you will be very discreet about that, but I think I hear you. It is legitimate for this subcommittee and committee and the Congress to look at cost-benefit analyses which would include taking into account the size of the transaction and how much that might be relevant to the benefit of the stated purposes of the program.

Mr. KENNARD. I think those are all legitimate questions to ask.

Mr. LEVIN. Do you think from the experience within the Commission there is legitimate reason for us to have concerns in that regard?

Mr. KENNARD. No, I really don't because I think that by and large these transactions are quite small, and I think if you are going to ask the question of getting into the cost-benefit analysis, you are really talking about a handful of deals and certainly not the majority of tax certificate transactions.

Mr. LEVIN. Well, but that I think is even more of a reason to look at the large ones.

Mr. KENNARD. Perhaps so.

Mr. LEVIN. I will leave it at that. Thank you.

Mr. ZIMMER. Mr. Rangel.

Mr. RANGEL. Thank you, Mr. Chairman. I came here for the sole purpose of introducing my dear friend Percy Sutton to the Ways and Means Committee, but I am so fascinated by the accomplishment of this Frank Washington who seems to have been so successful in allowing viewers to get a view of all Americans, including African-Americans, and it seems as though he has caused quite a bit of disturbance among some Members of Congress, this gentleman, Mr. Washington.

How many of these tax certificates have been issued to him in these so-called deals that we have been talking about?

Mr. KENNARD. I believe that he has participated in five such deals.

Mr. RANGEL. Now, in those five deals, how many of those deals is he the minority controller and in charge of?

Mr. KENNARD. All five. Presumably if he received tax certificates in five deals, the Commission certified that he controlled all of those deals.

Mr. RANGEL. So he has not been a front for anybody. He has done what the legislature tried to do, that is, to get diversity in terms of the ownership of broadcasting?

Mr. KENNARD. That is correct. At the time that the FCC looked at his deals, they were able to certify that they were minority-controlled deals.

Mr. RANGEL. Now, most of the time that I ask questions I know the answer, but this time if this Frank Washington got five deals and he is in charge of five majority holdings—and I assume they are sensitive to the needs of minorities—what is the big deal about Viacom?

Mr. KENNARD. Congressman, I really can't answer that question today because the Viacom transaction has not been filed at the FCC. We anticipate that it will be, based on the press reports that we have seen. When it is filed, the FCC will closely scrutinize it, as it does all the tax certificate requests, and I really don't think it would be appropriate for me to prejudge what the agency would do or what I would do, because I may be a decisionmaker in the matter.

So I really don't think it would be appropriate for me to answer the question.

Mr. RANGEL. Up to now there is not a scintilla of evidence, in your opinion, that Mr. Washington abused the system?

Mr. KENNARD. That is correct.

Mr. RANGEL. Thank you.

Chairman JOHNSON [presiding]. Thank you. I know Mr. Matsui has a question.

Mr. MATSUI. I know these gentlemen have to leave in 1 minute.

Mr. Kennard, I am still on the control issue because I think that is a significant issue. You were saying that it is an evolving matter as well.

How do you determine the control? I understand that 50 percent—you have to have management control of programming, programming control, the individual minority participant. How do you make that determination? Is it on the four corners of the paper, the application that is submitted, or is there an interview process with, for example, TCI in this case, or how does that actually—how was that done?

Mr. KENNARD. Typically, the parties file the request and the FCC staff asks for all the documents governing the deal. The purchase agreement for the systems, all the various financing documents, the limited partnership agreement is always key; and they analyze those documents and invariably in the more complicated ones the parties come in and they are questioned by the staff, and there is kind of a give and take so that the FCC can understand how the documents work and who has control.

Mr. MATSUI. I would imagine the financial interest of the minority applicant or participant is a consideration as well; in other words——

Mr. KENNARD. It is typically a prime consideration, yes.

Mr. MATSUI. Sorry.

Mr. KENNARD. It is typically a prime consideration.

Mr. MATSUI. That is interesting. So, in other words, it is—when you say "prime consideration," that means that it is a—again, I am trying to understand this—it is a significant issue in terms of the variables that you decide before you make the determination that the minority participant is in fact in control of the programming, the hiring and firing, and members of the board of directors, the purchase of other outlets or whatever the issue may be.

Is that correct?

Mr. KENNARD. That is correct.

Mr. MATSUI. So if a person has a 1/260th—no, 1/2600th of an investment, that would be a significant consideration?

Mr. KENNARD. It is a little bit confusing because you have to separate debt from equity. Often in a transaction that is fairly highly leveraged, a lot of the money will be coming in in the form of debt. You can't really assess what the equity holdings are until you look at that separately from the debt. So you can't just look at—if the total amount of the deal is $10 million, you can't look at what the general partner's contribution is and say it is $1 million, and it is a one-tenth interest.

Mr. MATSUI. I understand that, but you would have to assess what that individual's debt obligation is as well.

Mr. KENNARD. Yes. That is correct.

Mr. MATSUI. If the press reports show he has a $1.3 million obligation and the other partner, limited partner, has a $2.1 billion obligation, I would imagine that that would also be a factor in your ultimate determination about controlling interest as well.

Mr. KENNARD. That is right. Another thing we look at is how the minority principals are getting the money to put into the deal. If, for example, a minority principal is putting in, say, $10 million into a deal but borrowing it from the investors and there might be some restrictions in that loan agreement that effectively allow the investor to control the minority principal, that is something we would not permit and would look at very closely.

Mr. MATSUI. Are these parts of the regulations? In other words, you have specific language in the regulation, or is this very discretionary?

Mr. KENNARD. It is based on some decisions and all the various tax certificates we have granted, but also internal staff guidelines that have been developed.

Mr. MATSUI. Are those in writing?

Mr. KENNARD. I don't believe so. Some of them may be, but I would have to check on that.

Mr. MATSUI. I guess, in addition to the amount involved here, another consideration has to be—again, when you answered my question at the outset, it was that you have no discretion once the terms are complied with, it becomes a ministerial function on the agency's behalf.

On the other hand, there seems to be so much discretion built in, particularly if they are not in writing, that it is a discretionary action on behalf of the FCC.

I guess what troubles me is that, is that a proper delegation of a function of the legislative branch of the government? It would be one thing if we are talking about 1 or 6 million dollars' worth of

tax breaks, but potentially $600 million, it becomes a very, very interesting issue for us. Is that properly delegable?

I appreciate this, and I just hope that we are going to be able to allow you to do some analysis and investigation of this matter. I appreciate the fact that you are hamstrung now because you can't even give us any data or analysis as to whether this program is successful or unsuccessful or moderately successful because of the appropriations letter.

It is a shame that a group of attorneys must have gone to the Senate and had this provision put in the appropriations bills over the last few years.

Mr. KENNARD. I hope we will have that opportunity as well.

Mr. MATSUI. Thank you.

Chairman JOHNSON. I thank the panel for your input. I look forward to working with you. This represents an opportunity for us all, and we do need you to get back to us promptly both with the information that we have talked about over the course of the hearing and that you have been talking about with the staff, and also any recommendations you would want us to consider as a proposal to amend this law.

Mr. KENNARD. I'd be happy to do that.

Chairman JOHNSON. Thank you.

Chairman JOHNSON. We are going to go to the next panel and because of the timeframe and the fact that floor votes will conclude by 3 o'clock and many members have planes thereafter, we are going to try to move right along.

I am sorry that the initial panels have taken so long. I apologize to those in the latter panels but it is our opportunity to get the fundamentals firmly in mind.

On this panel, we have Bruce E. Fein, Great Falls, Va., attorney in constitutional, civil rights, and telecommunications law, and former general counsel of the FCC; J.D. Foster, executive director and chief economist, The Tax Foundation; James Gattuso, vice president for Policy Development for Citizens for a Sound Economy; and Bruce R. Wilde, Esq., Rogers & Wells.

I am going to recognize as the panel assembles, our colleague, Mr. Rangel, who has had the opportunity to join us for a few minutes here and would like to exercise a point of personal privilege before he has to return to his own hearing before the Human Resources Subcommittee.

Mr. Rangel.

Mr. RANGEL. Madam Chairlady, let me thank you for this courtesy that you have extended to me to introduce my long and dear friend Percy Sutton.

When I first started getting calls from constituents that a minority ownership in broadcasting was going to be in jeopardy, I tried to find out what subcommittee it was; and when I found out you were the chairperson, it reminded me of your freshman year here when one of the first pieces of legislation that you introduced was a bill to provide a monument for the black patriots of the American Revolution.

Since that time, I have had an opportunity to serve with you on problems that concern the poor, the aged, the disabled, and clearly

you have gained a reputation of voting for your conscience and not by party.

So as we come here with the Contract With America, I am impressed that the majority party intends to save money, build equity, and move forward to create jobs to make America more productive.

One of the more interesting pieces of legislation before our subcommittee is the capital gains tax cut which would allow us, if passed into law, to be more competitive and to involve and encourage savings and to create competition and to get jobs and praise the standard of living for all Americans. Unfortunately, the Treasury Department gives us figures that this is going to cost us $183 billion over a 10-year period. Sometimes I think when I go back to my other subcommittee that the reformation we are going through, those that have the benefits of the changes, get the benefits of the changes; but the SSI hearings I am holding, which involve the aged, the blind, the disabled, which involve the children—some born from irresponsible parents, they would be the losers in society and in this subcommittee.

But the issue before us, we don't have to discuss the cost because compared to the other costs, this is about 100 million a year lost revenue. But we can discuss the tax policy, and that is why Mr. Sutton is here, because as a kid the only thing I knew about people who looked like me was that they sang, they danced and shuffled, and they made people happy; and the only thing I knew about Africans is that if it were not for Tarzan and his significant other, why Africans would not be able to survive. Sadly, today, the portrayal I see on the news and documentary police force stories is that those creators of violence, of drug abuse, of irresponsible behavior, are really African-Americans.

I don't see students that work hard and achieve. I don't see men and women who try to make this a better America on television. That is why Ronald Reagan enacted and expanded a program that allows us, if we are not in the rooms to make the decisions as to what goes into the newspapers, if we are not there to make the decision as to what really goes on television, at least we should have a better-than-equal chance to be able to display all of America. I am a drum major for America; no country in the world would allow a poor guy like me from Lenox Avenue to even dream about sitting on this august subcommittee.

But, Mr. Sutton is, too. Mr. Sutton can trace his ancestry to slavery. He can say that he served as a fighter pilot in the U.S. Air Force and he was a lawyer for the poor, a civil rights leader. I might admit that the reason I care for him the most is that as he succeeded in politics, he made certain to look back and bring me along behind him—long behind him, but I was brought up, too.

He left as the chief executive elected official of the Borough of Manhattan—which some of us think is New York City, but it is not—and went into the broadcasting business to make us feel so proud that if we couldn't get on every station, at least we would be heard on his station. Owners, minority owners, Asian minority owners, all look to him as what can be done in America if given an opportunity.

So with you as the Chair and with witnesses like this, I feel pretty secure I can go back and try to protect those people who have nobody to testify for them.

Thank you, Madam Chairperson.

Chairman JOHNSON. Thank you very much, Mr. Rangel. It has been a pleasure to have you here for a few minutes. I appreciate your appearing to introduce your longtime friend and also to speak in support of affirmative action efforts. We both know what a difference they have made in the communications industry, without question. If you are not in the room, your perspective is not going to be heard by others.

So we do now see on programs like "Wall Street Week" as many black economists as white economists, as many women economists as men economists, so we are changing the world, and enlightened public policy is a part of that.

As I said in my opening remarks, this hearing is not aimed at the underlying policy of minority preference. It is aimed at an evaluation of the wise use of tax dollars. Part of our concern has been raised because unlike in the distressed sale policy of the FCC where the minority purchaser benefits because they get the asset at a lower cost, under this policy as it has evolved, the minority purchaser is not necessarily helped and may not necessarily have the voice and control the law requires.

I do think it is very interesting it has come out so clearly in this hearing that rather arbitrary legislation impeded the natural development of a sound policy in this area; and I am very pleased that there is going to be the opportunity for the FCC and the Treasury Department and this subcommittee to work together to make sure that abuse is not a problem, but that opportunity is the consequence.

So we look forward to your input as we move along. Thank you.

Mr. RANGEL. Let me join with you in that effort to make certain that we reach the objectives that the Congress wanted.

Thank you so much, Madam Chairman.

Chairman JOHNSON. First, we will have Bruce Fein.

STATEMENT OF BRUCE E. FEIN, ESQ., GREAT FALLS, VA., AND FORMER GENERAL COUNSEL, FEDERAL COMMUNICATIONS COMMISSION

Mr. FEIN. Thank you, Madam Chairman, and members of this subcommittee.

The racism fostered by the tax certificate policy of the Federal Communications Commission under section 1071 of the Internal Revenue Code is thoroughly pernicious and should be prohibited by Congress.

Chief Justice Harlan Fiske Stone lectured in *Hirabiyashi* v. *United States* that "Distinctions between citizens solely because of their ancestry are by their very nature odious to a free people whose institutions are founded upon the doctrine of equality."

On that score, the Chief Justice was echoing the stirring words of Justice John Harlan penned as a dissent in *Plessy* v. *Ferguson,* "In view of the Constitution, in the eye of the law, there is in this country no superior, dominant, ruling class of citizens." There is no

caste here. Our Constitution is colorblind and neither knows nor tolerates classes among citizens.

In respect to civil rights, all citizens are equal before the law. The humblest is the peer of the most powerful. The law regards man as man and takes no account of his surroundings or of his color when his civil rights, as guaranteed by the supreme law of the land, are involved.

Martin Luther King is heralded for his "I have a dream" speech in which he blessed the principle that "a person should be judged by the content of his character not by the color of his skin."

Congress itself has embraced the consensus of that rainbow coalition of civil rights deities in prohibiting any racial discrimination in the making of private contracts under 42 United States Code 1981. Senator Trumbell, sponsor of the bill, explained, "This bill applies to white men as well as black men. It declares that all persons in the United States shall be entitled to the same civil rights, the right to the fruit of their own labor, the right to make contracts, the right to buy and sell. The very object of the bill is to break down all discrimination between black men and white men."

The tax certificate policy of the Federal Communications Commission makes a mockery of equal justice and the constitutional imperative of color blindness. It rewards sellers of broadcast properties with lavish tax savings if the purchaser satisfies racial or ethnic criteria reminiscent of apartheid. In other words, the FCC bribes sellers to discriminate against buyers whose only sin is to have been born white. That bribery is an insult to the venerable standard of color blindness enshrined in both the Constitution and Federal statutes.

The justification for the racially discriminatory bribery is not help for the disadvantaged. If that were the case, buyers would be required to show disadvantage and there would be no color bar to eligibility. Neither is past racial discrimination a justification. If that were the case, the beneficiaries would be required to demonstrate they have been so victimized, and whites who have suffered from discrimination would not be excluded. Nor can the tax bribe be justified by enriching program diversity. Purchasers are not required to promise or implement programming changes; politically correct skin color, or ethnicity, simpliciter is sufficient to trigger the tax benefits of section 1071.

Within the human breast the craving for profit is colorblind. It thus wars with intuition and experience to assert that the race or ethnicity of a broadcaster is pivotal to programming content. Programming is driven by profitability, thus Hallmark Cards did not revamp the programming of stations purchased from Hispanic owners in markets with substantial percentages of Hispanic viewers.

The FCC itself has never been able to document any correlation between broadcast ownership and programming content. The reason for the failure is simple, there is no such thing as a "black," "Hispanic," "Asian" or other racially or ethnically identifiable viewpoint except perhaps in the eyes of racists.

Blacks in the United States, for instance, are emphatically not ideologically fungible. Associate Justice Clarence Thomas holds views sharply discrepant from Jesse Jackson and Barbara Jordan; the views of Gary Franks clash sharply with many in the Congres-

sional Black Caucus. Tom Sowell's views are not the echoes of Benjamin Hooks or Louis Farrakhan, and black ideological pluralism is no novelty. Booker T. Washington and W.E.B. Dubois were ideological antagonists for long years around the turn of the last century.

Ward Connerly, a black California businessman on the Board of Regents of the University of California, recently voiced objection to affirmative action programs as inequitable and unfair to certain people. He also expressed chagrin at the reflex encouraged by affirmative action to be viewed first and foremost as a member of a racial group rather than as an individual. Do Mr. Connerly's opinions reflect a black viewpoint in the mind of the FCC? To assert existence of such a viewpoint is to portray racial stereotyping that is more to be denounced than imitated.

Chairman JOHNSON. Your time has expired—I am sorry—because we have so many panelists.

Mr. FEIN. I think this is important, if I could say, it was Justice Clarence Thomas who recently voiced, I think, disgruntlement with the racial stereotyping encouraged by the idea that blacks think alike and therefore they can either be gerrymandered or treated as alike for diversity purposes.

I have gone on in my testimony to suggest that in my judgment, it is dubious under one Supreme Court decision, the *Metro Broadcasting* case, that the current composition of the Court would uphold the section 1071 racial preference program as constitutionally sufficient. There is, I think, a clear pronouncement by the U.S. Supreme Court that simply to increase representation of minorities in any profession or occupation for the sole purpose of increasing representation is not constitutionally satisfactory.

Let me conclude very quickly here.

The fact that tax certificate policy elicits hallelujahs within the business community is not surprising. It is a coveted tax avoidance device, and when money is at stake, Constitution or moral principles receive short shrift from the typical businessman. I do not recall that businessowners played heroic roles in the ugly days of Jim Crow, the Freedom Riders, and Bull Conner's dogs and horses.

Putting aside its constitutional deficiencies and entrenchment of racism, section 1071 seems a wildly profligate tool for advancing policies of the FCC. There is no limit on the amount of tax savings for racially favored transactions.

Chairman JOHNSON. I really do have to ask you to conclude, Mr. Fein.

Mr. FEIN. Yes.

Chairman JOHNSON. Your entire testimony will be placed in the record and it will be available for review by the members.

Mr. FEIN. I understand.

I think the reason why this kind of approach to entrusting to agencies the authority to give tax certificates is exceptionally unwarranted and unwise is because the Commission has not been asked, like other agencies, to recover the tax revenues lost through their own administration of the program. That is why I think it has—I think, extravagantly expanded the program beyond broadcast into cable and PCS without, in my judgment, any clear directive from Congress.

In sum, in my judgment, section 1071 is twice cursed, fosters racial polarization and stereotyping, and promotes fiscal profligacy in an era of austerity.

[The prepared statement follows:]

STATEMENT OF BRUCE FEIN
FORMER GENERAL COUNSEL OF THE FEDERAL COMMUNICATIONS COMMISSION AND ASSOCIATE DEPUTY ATTORNEY GENERAL

Ms. Chairperson and Members of the Subcommittee:

The racism fostered by the tax certificate policy of the Federal Communications Commission under section 1071 of the Internal Revenue Code is thoroughly pernicious and should be prohibited by Congress. Chief Justice Harlan Fiske Stone lectured in Hirabiyashi v. United States (1943) that: "Distinctions between citizens solely because of their ancestry are by their very nature odious to a free people whose institutions are founded upon the doctrine of equality." On that score, the Chief Justice was echoing the stirring words of Justice John Harlan penned as a dissent in Plessy v. Ferguson (1896): "[I]n view of the Constitution, in the eye of the law, there is in this country no superior, dominant, ruling class of citizens. There is no cast here. Our Constitution is color-blind, and neither knows nor tolerates classes among citizens. In respect of civil rights, all citizens are equal before the law. The humblest is the peer of the most poweful. The law regards man as man, and takes no account of his surroundings or of his color when his civil rights as guaranteed by the supreme law of the land are involved." And Martin Luther King is heralded for his "I have a dream" speech in which he blessed the principle that a person should be judged by the content of his character not by the color of his skin."

Congress has embraced the consensus of that rainbow coaltion of civil rights deities in prohibiting any racial discrimination

in the making of private contracts under 42 U.S.Code 1981. Senator Trumbell explained: "[T]his bill applies to white men as well as black men. It declares that all persons in the United States shall be entitled to the same civil rights, the right to the fruit of their own labor, the right to make contracts, the right to buy and sell...[T]he very object of the bill is to break down all discrimination between black men and white men."

The tax certificate policy of the Federal Communications Commission makes a mockery of equal justice and the constitutional imperative of color-blindness. It rewards sellers of broadcast properties with lavish tax savings if the purchaser satisfies racial or ethnic criteria reminiscent of apartheit. In other words, the F.C.C. bribes sellers to discriminate against buyers whose only sin is to have been born white. That bribery is an insult to the venerable standard of color-blindness enshrined in the Constitution and section 1981.

The justification for the racially discriminatory bribery is not help for the disadvantaged. If that were the case, buyers would be required to show disadvantage and there would be no color bar to eligibility. Neither is past racial discrimination the justification. If that were the case, the beneficiaries would be required to demonstrate that they have been so victimized, and whites who have suffered from discrimination would not be excluded. Nor can the tax bribe be justified by enriching programming diversity. Purchasers are not required to promise or implement programming changes; politically correct skin color or ethnicity,

simpliciter, is sufficient to trigger the tax benefits of section 1071.

Within the human breast, the craving for profit is color-blind. It thus wars both with intuition and experience to assert that the race or ethnicity of a broadcast owner is pivotal to programming content. Programming is driven by profitability; thus, Hallmark Cards did not revamp the programming of stations purchased from Hispanic owners in markets with substantial percentages of Hispanic viewers. The F.C.C. itself has never been able to document any correlation between broadcast ownership and programming content. The reason for the failure is simple: there is no such thing as a "black," "Hispanic," "Asian," or other racially or ethnically identifiable viewpoint, except perhaps in the eyes of racists. Blacks in the United States, for instance, are emphatically not ideologically fungible. Associate Justice Clarence Thomas holds views sharply discrepant from those of Jesse Jackson and Barbara Jordan. The views of Congressman Gary Franks clash with many in the Congressional Black Caucus. Tom Sowell's views are not echoes of Benjamin Hooks or Louis Farrakhan. And black ideological pluralism is no novelty. Booker T. Washington and W.E.B. Dubois were ideological antagonists for long years around the turn of the last century.

Ward Connerly, a black California businessman on the Board of Regents of the University of California, recently voiced objection to affirmative action programs as inequitable and unfair to certain people. He also expressed chagrin at the reflex encouraged by

affirmative action to be viewed first and foremost as a member of a racial group, rather than as an individual. Do Mr. Connerly's opinions reflect a "black" viewpoint in the mind of the F.C.C.?

To assert the existence of such a viewpoint is to betray racial stereotyping that is more to be denounced than imitated. To paraphrase the eloquence of Justice Clarence Thomas in Holder v. Hall (1994), the programming assumptions behind the F.C.C.'s section 1071 tax certificate policy "should be repugnant to any nation that strives for the ideal of a color-blind Constitution." They presume all blacks think alike. There may be better ways to inflame race relations, but if there are, they do not readily come to mind.

It is arguable that the tax certificate policy would pass constitutional muster under the Supreme Court's narrow 5-4 precedent in Metro Broadcasting v. F.C.C. (1990). But three members of the Metro majority have since departed the High Court, and I believe that the precedent is destined for overruling. In any event, a racist policy that passes constitutional scrutiny is still repugnant and should not be tolerated. That is a lesson the nation learned from its odious treatment of loyal citizens of Japanese ancestry during World War II which received the constitutional blessing of the Supreme Court. Congress later made partial amends for the racism in the Civil Liberties Act of 1988 which granted $20,000 to the victims or their families.

It seems clear under the Supreme Court's ruling in Regents of University of California v. Bakke (1978) that the F.C.C.'s tax

ceertificate policy cannot be constitutionally justified by a desire to increase minority ownership of broadcast properties, without more. As Justice Lewis Powell elaborated in Bakke, to seek some specified percentage of a particular group in a student body, occupation or otherwise "merely because of its race or ethnic origin...must be rejectd...as facially invalid. Preferring members of any one group for no reason other than race or ethnic origin is discrimination for its own sake. This the Constitution forbids."

The fact that the tax certificate policy elicits hallelujahs within the business community is unsurprising. It is a coveted tax avoidance device, and when money is at stake constitutional or moral principles receive short-shrift from the typical businessman. I do not recall that business owners played heroic roles during the days of Jim Crow, the Freedom Riders and Bull Conner's dogs and hoses.

Finally, putting aside its constitutional deficiences and entrenchmant of racism, section 1071 seems a wildly profligate tool for advancing policies of the F.C.C. There is no limit on the amount of tax savings for a racially favored transaction; indeed, neither the F.C.C. nor the Department of Treasury makes any effort to calculate the tax loss of a section 1071 sale. Thus, the section probably confers monetary benefits vastly exceeding the amount needed to catalyze a sale to a minority-controlled investment group. The gold-plated tax certificate of Viacom is exemplary.

The prodigality of the F.C.C. under section 1071 is

predictable. The Commission is not tasked to discover new sources of revenue to offset section 1071 tax losses, unlike Congress. When the cost to the F.C.C. of granting tax certificates is zero, a healthy incentive for frugality is lost. That seems at least a partial explanation of the Commission's extension of section 1071 to cable properties in the face of statutory language confining its scope to "radio broadcasting stations." The section is an extravagance that the nation cannot afford when cries for a balanced federal budget is the voice of the people.

In sum, section 1071 is twice-cursed: it fosters racial polarization and stereotyping; and, it promotes fiscal profligacy.

Chairman JOHNSON. Thank you.
Next is Mr. Foster.

STATEMENT OF J.D. FOSTER, PH.D., EXECUTIVE DIRECTOR AND CHIEF ECONOMIST, TAX FOUNDATION

Mr. FOSTER. Thank you, Madam Chairman. I am J.D. Foster; I am the executive director and chief economist of the Tax Foundation, a nonprofit, nonpartisan research and education organization.

I am going to restrict my remarks to the economic aspects of this issue and leave the debate about social and communication policies to others more qualified. I am not going to try and argue for or against the program or any changes to the program. I intend simply to present the underlying economics as best I have been able to determine them.

The situation is this, as I understand it: We have a transaction, specifically, the sale of a broadcast facility; and as the result of the sale, the FCC has authority to give tax relief intended to benefit the seller or buyer. In this case, the form of the relief is not particularly relevant; the question is really whether the tax relief can be justified on economic grounds.

A fundamental tenet of good tax policy is that taxation should be neutral and should not micromanage the economy. Tax neutrality is important because when taxes distort how resources are employed, the result is almost always lower wages, fewer jobs, and lost output. The Federal tax system is replete with nonneutralities, and some impose a very heavy tax burden on the economy, such as the tax burden on savings. However, others are much narrower, such as the FCC tax certificate program, the subject of this hearing.

These certificates allow the taxpayer to reduce or defer capital gains tax liability, in general, and in most cases the taxation of capital gains is highly distortionary. There is a direct tax on capital, reducing the incentive to save and invest, and broad-based reductions in the base improve the neutrality of the Tax Code. Targeted reductions in the capital gains improve neutrality of the system by reducing distortion against savings and investment. On the other hand, targeted reductions distort allocation of capital by shifting capital to tax-favored uses.

In general, such a targeted tax benefit is only warranted on economic grounds if it compensates for particular shortcomings in the marketplace, called an externality. Increasing minority ownership of broadcast facilities is a social policy and not a response to an economic externality. Therefore, the FCC tax certificate program is an instance of micromanagement of the economy which cannot be supported on the basis of the need to offset a peculiar economic condition.

Another possible economic justification has to do with private property rights. I think this probably goes back to the history of the original FCC program. To the extent FCC policy results in the involuntary sale of a broadcast facility, even if at fair market price, some form of compensation is appropriate. Thus, whenever the FCC requires the sale of a facility and the transfer is purely voluntary, then the tax benefits conferred by the tax certificate could be considered an appropriate form of compensation.

The problem, however, is that the tax benefit is only partly enjoyed by the seller of the asset. In the marketplace, since buyer and seller are both aware of the possible tax benefit, the value is considered by both parties in establishing a sales price.

For example, suppose the value of a facility in the absence of the tax certificate was $50 million and the value of the certificate is $5 million. The final sales price could fall anywhere between $45 and $50 million, depending on which side gets most of the tax benefit. The share of the benefit enjoyed by each party will vary by case, but it is almost certain that in every case there will, in fact, be a sharing. Therefore, the just compensation argument supports the program only to the extent the entire benefit of the tax is conferred on the sellers of the facilities since it is their loss of control of the asset which justifies the benefit.

Therefore, it appears that this program is either largely or entirely a tax subsidy to the transfer of an asset—in this case, the broadcast facility—and therefore, the program is equivalent to any other designed to benefit a special interest such as our financial markets or merchant shipping subsidy, except the beneficiary group is determined by race or gender rather than industrial classification.

Many Federal programs ultimately have a significant rent seeking quality, that being the expression for actions of an individual or group that seeks a special benefit from the government. Whether a particular group should be granted a special benefit is again a social policy and not an economic policy. Common sense, however, provides a simple test of the extent to which a program has a significant rent-bestowing character: who favors the program and do they receive a financial benefit from the program? In the case of the FCC tax certificate, this hearing and the testimony given offers the clearest evidence of who may be rent seeking.

In conclusion, the program to expand minority ownership of broadcast facilities reflects three policy decisions, the first of which is to increase the number of minority-owned broadcast facilities and, as such, is almost entirely a social policy.

The second is to compensate the former owners of the facility for the loss of control of their property when the sale is made involuntarily. This compensation, however, only arises to the extent the purchase price of the facility is not reduced to reflect a sharing of the tax benefit.

The third policy reflected is to subsidize the purchase of broadcast facilities through shared tax benefits granted by the certificates. There is no economic justification for such a subsidy program, which, like all attempts to subsidize or penalize economic activities, distorts the allocation of precious resources.

Therefore, the subsidy, too, must be regarded purely as a social policy decision.

Thus, I conclude that the policy is a social policy which carries a cost in the form of a tax distortion; and the political question and not the economic question is whether the price is worth what you are getting for the policy.

Chairman JOHNSON. I think you phrased it very well, Mr. Foster.

[The prepared statement follows:]

Statement of

J.D. Foster, Ph.D.
Executive Director and Chief Economist

Tax Foundation

on

The Economics of Section 1071: The FCC Tax Certificate Program

January 27, 1995

Madam Chairwoman and Members of the Committee, my name is J.D. Foster and I am the Executive Director and Chief Economist of the Tax Foundation. The Tax Foundation is a non-profit, non-partisan research and public education organization that has been monitoring fiscal policy at all levels of government since 1937. I would like to emphasize to the Committee that the Tax Foundation is not a "grass-roots" organization, a trade association, or a lobbying organization. We do not take positions on specific legislation or legislative proposals. Our goal is to explain as precisely and clearly as we can the current state of fiscal policy and the consequences of particular legislation in the light of specific tax principles so that you, the policy makers, may make informed decisions.

I appreciate the opportunity to appear before you today to discuss Section 1071 of the Internal Revenue Code which allows the Federal Communications Commission (FCC) to grant tax relief with respect to the sales of radio, television, and other properties under certain circumstances. This demonstrates, I think, that even at a time when such fiscally colossal issues like a balanced budget amendment and the "Contract with America" dominate our attention, there remain many important issues that should not be neglected, even though they may never appear above the fold on the morning paper. I commend the Committee for taking the time to address this issue.

Madam Chairwoman, I will restrict my remarks to the economic aspects of this issue and leave the debate about the social and communications policy to others more familiar with those aspects. It is not my purpose today to argue in favor of or against the program, or for or against any changes in the program, but rather to present its underlying economics as best as I have been able to determine them.

The FCC Tax Certificate Program

Under Section 1071, the FCC has the authority to grant a tax certificate to the former owners of certain broadcast facilities when the sale or exchange of those facilities is certified by the FCC "to be necessary or appropriate to effectuate a change in a policy of, or the adoption of a new policy by, the Commission with respect to the ownership and control of radio broadcasting stations..." Since 1978, the FCC has used this provision as a tool for its announced policy of promoting minority ownership of broadcast facilities. The tax certificate gives the taxpayer the right to elect to treat the sale or exchange as an involuntary conversion under Code Section 1033. The tax benefit generally is to allow the former owner to defer the realization of capital gain on the sale or exchange of the asset if the proceeds from the sale are used to purchase similar property. To the extent the taxpayer does not utilize the involuntary conversion rules, the capital gain resulting from the sale or exchange of the asset shall nevertheless not be recognized, if the taxpayer so elects, because the taxpayer may reduce the basis for determining gain or loss on sale or exchange of property if the property would qualify for depreciation under I.R.C. Section 167.

Tax Neutrality

Madam Chairwoman, when it was founded some 58 years ago the Tax Foundation established six Principles of Taxation to guide its analysis. One of these principles was that the tax code should not be used to micro-manage the economy. That is, the tax code should be as neutral as possible with respect to economic decision making. Tax neutrality is important because when taxes distort how resources are employed, the net result is almost always a lowering of wages, fewer jobs, and lost output. Thus, a non-neutral tax removes resources from the private sector in two ways: through the collection of the tax itself and through the income lost because of the mis-allocation of resources–what is called the deadweight loss.

Border tariffs offer a classic example of the deadweight loss from taxation. Tariffs are external taxes and, as such, distort the prices of foreign goods and services relative to domestic goods and services, thereby distorting the allocation of domestic resources like capital and labor. The history of modern trade policy is a nearly continuous effort to reduce tariffs because to do so results in an expansion of trade and an expansion of national output through the more productive use of resources.

Another example of a non-neutral tax and its deadweight loss involves the taxation of capital. Some states, for example, impose a specific tax on plant and equipment located within the state. These taxes on real capital reduce the amount of capital employed. Consequently, the workers in those states have less capital with which to work. We know that workers are generally paid more as the tools they work with improve (a fisherman generally will catch more fish with a net than with a single line, for example), so one consequence of this tax is that wages in these states are depressed relative to what they would otherwise be.

The federal tax system is replete with non-neutralities, almost all of which result in less output, fewer jobs, and lower wages. Some of these, such as the heavy tax burden on saving, are very broad in application and carry steep price tags. Others are much narrower, such as the FCC tax certificates which are the subject of this hearing.

It is important to note that there are occasions when the tax code is non-neutral by design. In many instances, the underlying policy is an attempt to address an economic externality through the tax code. An externality arises when the individuals involved in an activity are unable to enjoy all the economic benefits or do not bear all the economic costs of an activity. An example of the former would be a software manufacturer whose products are pirated; an example of the latter would be a restaurant which has a band that plays music so loud that it drives away customers from the restaurant next door.

The Research and Experimentation Tax Credit exemplifies a tax provision enacted in recognition of a positive externality. Even with patent and copyright protection, many of the economic benefits that follow from R & E activity cannot be captured through product sales or pricing by the company doing the work. As a result, a lower level of R & E activity is performed than would be socially desirable. This is an externality which the tax credit seeks to offset.

There are also many examples of taxes imposed to address negative externalities. One such is the gasoline excise which attempts to force the users of gasoline to pay for the amount of the resource they consume through the product's price, but also for the economic cost of the pollution that is thereby generated through the gasoline excise.

To summarize, through its non-neutralities the current tax code severely distorts the allocation of national resources, thereby reducing output, wages, and employment. While most of the non-neutral provisions in the tax code are the by-products of other policy choices (a desire for a progressive tax system, the choice of income as a tax basis, and so forth), some are deliberate attempts to use the tax code to capture economic externalities. Good tax policy should seek to eliminate the former and to target the latter most carefully.

The Taxation of Capital Gains

In general and in most cases, the taxation of capital gains is highly distortionary. Except in instances in which the capital gain arises directly as a result of reinvesting income, such as corporate retained earnings, the capital gains tax is a levy on capital and not on the income accruing to capital. As a direct tax on capital, the capital gains tax reduces the incentives to save and invest. Therefore, broad-based reductions in the tax improve the neutrality of the tax code.

The capital gains tax can be reduced in three ways: by reducing the tax rate which is applied to taxable gains, by reducing the amount of a taxable gain that is subject to tax (either through a percentage exclusion, by indexing the basis for inflation, or by a simple increase in the basis), or by allowing the taxpayer to defer the recognition of the capital gain. Deferral arises most notably when home owners sell one home and buy another, though it also arises in private saving arrangements such as Individual Retirement Accounts. The deferral of tax is one of the tax benefits conferred on qualifying sales of broadcast stations. A step-up in basis, which occurs in the tax code most notably in levying the estate tax, is a second tax benefit recipients of FCC tax certificates enjoy.

Targeted reductions in the capital gains tax on the one hand improve the neutrality of the tax system by reducing the distortion against saving and investing. On the other hand, however, targeted reductions in the capital gains tax can distort the allocation of capital by shifting capital to tax-favored uses. In general, such a targeted tax benefit would generally only be warranted on purely economic grounds if it were used to offset some externality as discussed above.

To the extent the FCC tax certificate program is attempts to capture an externality, and in this regard is similar to attempts to address other externalities such as polluting emissions, it must be recognized that the program seeks to address a social condition and not an economic externality, in which case economic arguments do not apply. Increasing minority ownership of broadcast facilities is social policy and not a response to an economic externality. Lacking any externality aspects, therefore, the FCC tax certificate program represents an instance of micro-management of the economy which cannot be supported on the basis of the need to offset an anomalous economic condition.

Property Rights and the Certificate Program

Property rights are the very backbone of our economic system. Much of our judicial system exists to protect private property from confiscation or loss of value through the actions of either individuals or governmental entities. Whenever an individual believes his or her private property can be taken without due process and just compensation, their economic energy and vitality diminishes.

The FCC tax certificate program is intended, in part, to diversify ownership of broadcast facilities to encourage greater minority control. To the extent this government policy goal results in the involuntary sale by private individuals of broadcast facilities to any other party, even if at a fair-market price, some form of compensation is appropriate. Thus, in any case where the FCC requires that a private individual or group sell a broadcast facility, for whatever reason, to another individual or group, and the transfer is truly involuntary, then the tax benefits conferred by the FCC tax certificate program could be considered an appropriate form of compensation.

Sharing The Benefit

The tax benefits are conferred on the former owners of broadcast facilities by the FCC tax certificate in the sense that the tax benefits are theirs to claim. In the marketplace, since both the buyer and the seller are aware of the possible tax benefit, the value of the benefit will be considered by both parties in establishing the sales price. For example, suppose the value of a broadcast facility in the absence of capital gains tax deferral is $50 million, and that the value of the deferral to the seller is deemed to be $5 million. The final

sales price could fall, therefore, anywhere between $45 million, in which case the buyer gets the full benefit of the deferral, or $50 million in which case the seller gets the full benefit. The share of the benefit enjoyed by the seller and the buyer will vary case-by-case, but, it is likely that in nearly every case both the buyer and the seller will enjoy some portion of the tax deferral benefit.

Therefore, the argument that the FCC tax certificate is just compensation for the involuntary nature of the sale or exchange, to the extent it was in fact involuntary, supports the program only to the extent the entire benefit of the tax is conferred on the sellers of the broadcast facilities since it is their loss of the control of the asset which has given rise to the need for the benefit. However, since in most markets it is not possible to guarantee the entire amount of the tax benefit will be retained by the former owner, the tax benefit loses its character of compensation for involuntary conversion and becomes a simple subsidy to the new owners.

Rent-Seeking and the FCC Tax Certificate

The foregoing discussion leads to the conclusion that the FCC tax certificate program can only be justified on economic grounds in those cases in which the sale of the broadcast facility is truly involuntary and in which the entire tax benefit is enjoyed by the seller of the facility. In the absence of any other economic rationale, the tax certificate program becomes the equivalent of any number of subsidy programs designed to benefit some special interest. In other words, except under the narrow conditions described above (involuntary conversion and seller beneficiary), as an economic matter the FCC tax certificate program becomes indistinguishable from farm subsidies or merchant shipping subsidies, except that the beneficiary group is determined by racial rather than by industrial classification.

There are many federal programs which ultimately have a significant rent-seeking quality. (Rent seeking is the economic expression for the actions of any individual or group that seeks special benefits from a governmental entity). Strictly speaking, whether a particular group should be granted special benefits a matter of social policy, rather than economic policy, and to this extent outside the purview of economic analysis.

Common sense provides a simple test, however, of the extent to which a program has a significant rent-bestowing character. This test is unnecessary in most cases since, like farm subsidies, it is easy enough to determine who the rent seekers are, namely the farmers. In the case of the FCC tax certificate program, however, the existence and definition of the rent-seekers is less clear and so the test is more helpful.

The simple rent-seeking test is this: Who favors the program and do they receive a financial benefit from the program? In the case of the FCC tax certificates, this hearing and the testimony given may offer the clearest evidence of who may be rent-seeking, a matter I will leave to the Committee to decide.

Conclusion

The FCC tax certificate program to expand minority ownership of broadcast facilities reflects three policy decisions. The first is to increase the number of minority owned broadcast facilities and, as such, is almost entirely a social policy. The second policy is to compensate the former owners of the facility for the loss of control of their property when the sale was made involuntarily. This compensation arises, however, only to the extent that the purchase price of the facility is not reduced to reflect a sharing of the tax benefit between purchaser and seller.

The third policy reflected by the program is to subsidize the purchase of broadcast facilities through the shared tax benefits granted by the tax certificates. There is no economic justification for such a subsidy program which, like all attempts to subsidize or penalize particular economic activities, distorts the allocation of precious resources. Therefore, the subsidy, too, must be regarded purely as a social policy decision.

Chairman JOHNSON. Mr. Gattuso, I would appreciate if you could focus your remarks very tightly so that we could dismiss this panel before we have to leave to vote in about 10 minutes.

STATEMENT OF JAMES GATTUSO, VICE PRESIDENT, POLICY DEVELOPMENT, CITIZENS FOR A SOUND ECONOMY

Mr. GATTUSO. I will do my best.

Thank you for inviting me here today. I am James Gattuso, vice president, Policy Development at Citizens for a Sound Economy, a 250,000-member nonpartisan, nonprofit consumer advocacy group that promotes market-based solutions to public policy problems.

I want to first summarize the points I want to make.

I believe the FCC's tax certificate program is a failed program. It has benefited the rich and well-connected, not the disadvantaged. It has failed to increase diversity in programming. It raises some troubling questions regarding the government's role in matters of speech.

First, the beneficiaries of this program are not people whom one usually thinks of as being in need. Rather, the individuals who benefit from the current FCC program are those who already have substantial resources or connections. Simply put, the poor do not buy communications companies. Those who have been beneficiaries of this program include not only large corporations such as Viacom, but also include individuals such as Bill Cosby, outfielder Dave Winfield, and even talk show host Oprah Winfrey. These are not people trapped by economic disadvantage or their ethnic heritage. They are not people who require compensation for past wrongs. They are not people the American taxpayers should be asked to help. Yet these are the types of people who have benefited the most.

There is also little evidence this program has increased diversity in programming. The FCC's policy is based on the premise that change in ownership will lead to a change of programming. The evidence for such a connection is tenuous at best. Common sense tells us the demands of consumers, not the owner, is the primary determinant of programming.

Madam Chairman, communication executives are business people; regardless of color, race, or ethnicity, they provide programming that generates the largest profits. Conversely, white-owned firms can and do offer diverse programming when that is what consumers demand.

I would like to mention one well-known example of this, the growing Fox Network. This network owes much of its success to its ability to attract minority audiences. Several of its shows now rank in the top ranks of black viewership, for example. Fox's diverse programming is not due to any government program, but instead to a recognition of the economic benefits of providing what consumers want to see. This issue is discussed in more detail in my written statement.

I would like to point out, however, that more information would be available on this point but for Congress itself. Several years ago when the FCC decided to research this matter, Congress forbade it from acquiring the information. I understand it has continued that prohibition every year thereafter.

The FCC policy also has some serious First Amendment implications. How did the FCC determine that the term "minorities" should be limited to blacks, Hispanics, American Indians, Alaska Natives, Pacific Islanders? The lack of Polish polka radio stations, Pakistani sitcoms, and Australian documentaries is quite apparent in the United States. Yet these groups don't meet the minority standards set by the FCC.

I don't mean to trivialize this issue. I just want to point out that in making these decisions, the FCC is forced to make decisions as to the relative merits of different types of speech.

The FCC is saying certain types of speech are favored and other types are not favored. Such a role for the government is troubling even if meant to advance a good cause.

Ending this program doesn't mean the government should not work to increase program diversity and opportunity for minorities in telecommunications. I would suggest that there are several steps the Congress could take to lower existing barriers to minority ownership and diversity in communications. One such step would be a tax reduction, across-the-board tax reduction, perhaps in the area of capital gains which would help spur investment in small and medium size companies, a category that includes most minority-owned firms.

Congress should also look at communications regulations which hinder the growth of programming diversity. A good place to start, although it is outside the jurisdiction of this subcommittee, would be the Cable Act of 1992. The reduction in industry investment caused by that Act threatens to curb the growth of the small, specialized cable channels which have helped increase program diversity so much in recent years.

Madam Chairman, the results of last November's elections were clear: The American people want an end to special interest politics as usual. Repeal of the FCC tax certificate program would send a signal that Congress has heard that message. Created with good intentions, this program serves as a welfare program for some of the wealthiest members of society, while utterly failing to help disadvantaged minorities.

Congress should put an end to it.

Thank you for the opportunity to speak to you, and I will be open to any questions you may have.

[The prepared statement follows:]

STATEMENT OF JAMES GATTUSO
VICE PRESIDENT FOR POLICY DEVELOPMENT
CITIZENS FOR A SOUND ECONOMY

Good morning. Madame Chairman and Members of the Subcommittee on Oversight. My name is James Gattuso, and I am Vice President for Policy Development at Citizens for a Sound Economy, a 250,000 member non-partisan, non-profit consumer advocacy group that promotes market-based solutions to public policy problems. Thank you for inviting me here today to discuss the Federal Communication Commission's (FCC) tax certificate program. As you know, this provision allows broadcasting and cable firms to defer payment of capital gains taxes when their property is sold to a minority-owned entity. This deferral can be made permanent if profits from the sale are reinvested in "qualified" media properties within two years and if the minority owner maintains controlling power for a least one year .

This program was established seventeen years ago to boost minority ownership of broadcasting and communication businesses. The goal was to increase broadcast and cable "diversity," and increase the amount of broadcast and cable programming serving the needs and interests of minorities.

The program, however, has failed. It has benefitted the rich and well-connected, not the disadvantaged; it has failed to increase diversity in programming; and it raises serious questions regarding free speech.

FROM RICHES TO RICHES

The tax certificate program has helped bring in some minority owners in particular cases. However, the beneficiaries are not people that one usually thinks of as being in need. Rather, the individuals that benefit from the current FCC program are -- almost by definition -- those who already have substantial resources. Simply put, the poor do not buy communications companies. A potential buyer must be financially well-endowed and well-supported just to be considered a serious purchaser. This financial position places most potential buyers in the high income brackets of society.

Thus, in addition to large corporations such as Viacom, the beneficiaries of this program have included the likes of comedian Bill Cosby, outfielder Dave Winfield, and talk show host Oprah Winfrey. These are not people trapped by economic disadvantages or their ethnic heritage. These are not people who require compensation for past wrongs. These are not people whom the American taxpayer

should be asked to help. Yet these are the type of people who benefit the most.

One extreme example of the problems of this program was the 1987 sale of WTVT in Tampa, Florida. The FCC granted WTVT owner Gaylord Broadcasting Co., a $116 million tax break on the sale. Gaylord had sold WTVT to communications investor George Gillet, Jr. and to black lawyer Clarence V. McKee, a former FCC staffer who helped write the tax certificate rules and who had no television operations experience. McKee maintained controlling power of WTVT for one year, after which he sold his share to Gillet for $1 million. The end result was a $116 capital gains deferment for Gaylord Broadcasting Co., large profits for McKee and other investors, but no increase in minority ownership. Gillet was also involved in a similar deal with Alaskan Eskimos during the sale of a Nashville TV station in winter of 1988 and 1989.

This is not to say that these men and women do not have the right to own and sell communications companies. What is wrong is federal support for their investments.

BUT WHAT'S ON T.V.?

One of the goals behind the FCC's incentive package was to increase programming "diversity". A change is ownership would, the FCC believed, lead to changes in programming. The evidence for such a connection is tenuous at best. To the contrary, common sense tells us that the demands of consumers, not the race of the owner, is the primary determinant of programming decisions. If there were a market for Eskimo music or shows about Pacific Islanders, then these programs would be offered.

This is the essential idea behind the concept of supply and demand. Producers will supply what consumers demand. Communication executives are businesspeople, regardless of color, race, or ethnicity. They will provide programming that draws the largest audience and generates the largest profits. When an Hispanic man takes over a previously white owned company, he will not automatically start showing more Hispanic soap operas. At least, he won't if that's not what his audience wants.

Conversely, white-owned firms can and do offer diverse programming when that is what consumers demand. For example, the growing Fox network owes much of its success to its ability to attract minority audiences, with several of its shows in the top ranks of black viewership. Fox's diverse programming is not due to any government program, but instead stems from a recognition of the economic benefits of providing what consumers want to see.

There is little academic evidence showing a correlation between an owner's ethnicity and programming. Speaking on the relationship between minority-owned communication companies and minority programming, Christopher H. Sterling of George Washington University reports that "what research has been done so far comes up showing no significant difference[s]."

It is noteworthy that more information would be available on this point but for Congress itself. Several years ago, when the FCC decided to research this

matter Congress forbade it from acquiring the information, and has continued the prohibition every year thereafter.

WHAT IS GOOD SPEECH?

The FCC policy also has some serious First Amendment implications. How did the FCC determine that "minorities" should be limited to "Blacks, Hispanics, American Indians, Alaska Natives, Asians, and Pacific Islanders?" The lack of Polish polka radio stations, Pakistani sit-coms, and Australian documentaries is apparent in the United States. Yet these ethnic and racial groups do not meet the "minority" standards set by the FCC. Are the diversity needs of these sub-groups less important than those certified by the FCC?

In making these decisions, the FCC is forced to make decisions as to the relative merits of different types of speech. It is saying that certain types of speech are favored, and that other types are not favored. Such a role for the government is troubling, even if meant to advance a "good cause".

BETTER SOLUTIONS

Ending the FCC tax certificate program does not mean that the government should not work to increase program diversity and opportunities for minorities in telecommunications. There are, in fact, a number of steps which Congress could take which would be both fairer and more effective than this program. An across-the-board tax reduction, especially a reduction in capital gains taxes, would help spur investment in small- and medium-sized companies, a category which includes most minority-owned firms.

Congress should also look at communications regulations which hinder the growth of programming diversity. A good place to start -- although it is outside the jurisdiction of this committee -- would be the Cable Act of 1992. The reduction in industry investment caused by this act threatens to curb the growth of small, specialized cable channels, which have helped increase program diversity tremendously in recent years.

CONCLUSION

The results of last November's elections were quite clear: the American people want an end to special interest "politics as usual." Repeal of the FCC's tax certificate program would send a signal that Congress has heard that message. Created with good intentions, this program has served as a welfare program for some of the wealthiest members of society, while utterly failing to help disadvantaged minorities. Congress should put an end to it. Thank you for allowing me this opportunity to speak, and I am open to any questions you may have.

Chairman JOHNSON. Thank you. We appreciate it. Very good remarks.

Mr. Wilde.

STATEMENT OF BRUCE R. WILDE, ESQ., ROGERS & WELLS, NEW YORK, N.Y.

Mr. WILDE. Thank you, Madam Chair, and members of the subcommittee. I make my living as a corporate and securities lawyer at a Wall Street law firm. I want to state I am not here on behalf of my employer or any client. I am here stating personal views.

Several years ago when I was in law school, I became interested in the policies the FCC had adopted to promote minority ownership of broadcasting facilities. I studied those policies, including the tax certificate program under section 1071.

I came to the conclusion then that the existing policies, especially the certificate program, are not very well designed and are vulnerable to abuse. I wrote an article in the University of Pennsylvania Law Review criticizing the tax certificate program, which was published in 1990. I am submitting a copy of that piece for the record and for the subcommittee's use. I would like to summarize the points I made back in 1990, which I think are still valid criticisms today, and most, indeed, have already been referred to by some other witnesses.

[The University of Pennsylvania Law Review article is retained in committee files due to its size.]

Mr. WILDE. I believe that the tax certificate program is constitutional today by virtue of the Metro Broadcasting decision (497 U.S. 547 (1990)), but I think it should be understood that its constitutionality is dependent upon the continued blanket endorsement that the Congress provided through the appropriations rider. Were that to be withdrawn, I think that a different level of scrutiny would apply to the program, and I doubt that it would survive the scrutiny which would then be applied.

Tax certificates are, as has been mentioned earlier, an uncontrolled, open-ended drain on tax revenues. It is like an entitlement program. We really don't know what it is costing us or what it might cost us in the future. Also, the benefit that the seller gets is determined by the amount of capital gain realized; the benefit may be far more than would be necessary to encourage the sale to the minority enterprise, which is what we want, and that, of course, is a waste.

The best answer, I think, would be to replace the program with a direct spending program such as loan subsidies to help qualified minority entrepreneurs get into the broadcasting business. That way, Congress could determine how much to spend on the program and the FCC could direct the aid where it would do the most good in terms of increasing minority ownership.

If the program is to be kept within the tax system, there are several improvements that should be made. The amount of deferred capital gains should be limited to no more than 30 percent of the selling price of the broadcast property. I think that would be ample incentive.

Another problem is that the seller can get a tax certificate without showing that the minority persons will direct the day-to-day op-

eration of the station after the sale, or that viewpoint diversity actually will be increased. If we want minority viewpoints on the air, we would have to require that the buyer have minority management, as well as ownership, as well as some kind of showing of how viewpoint diversity would be increased by the transaction. This is a reform the FCC can and should adopt.

I also see a danger that after a station is sold to a minority buyer and the seller gets the tax certificate, the station may not stay minority owned. If minority ownership is only temporary, we may have paid a big tax price for very little social benefit. The FCC should adopt a policy that after a tax certificate sale, it won't approve another sale or transfer of that facility except to another minority owner for a good, long period—I suggest 5 years—unless the seller has made a diligent effort and cannot find another minority buyer.

I hope the Congress will encourage the FCC to reexamine its minority preference programs in light of some of the criticisms that have been made over the last several years. If the FCC does not act, I think Congress should adopt reforms through appropriate legislation.

Thank you very much.

[The prepared statement follows:]

STATEMENT OF BRUCE R. WILDE
BEFORE THE COMMITTEE ON WAYS AND MEANS
SUBCOMMITTEE ON OVERSIGHT
January 27, 1995

My name is Bruce Wilde. I make my living as a corporate and securities lawyer at a Wall Street law firm, but I am here today in my individual capacity, stating personal views, not those of my employer or any client. Incidentally, I worked as a news broadcaster in radio and television for 13 years before I became a lawyer.

I have always regarded myself as a liberal in political matters. I support color-blind action by government to protect civil rights and promote equal opportunity for all citizens of our country. However, I am troubled when the government uses race-conscious remedies in pursuit of social goals. Several years ago, when I was in law school, I became interested in the policies the FCC had adopted to promote minority ownership of broadcasting facilities. I studied these policies -- the tax certificate program under section 1071 of the tax code -- distress sales to minority buyers -- and the minority preference in choosing among competing applicants for broadcast licenses. I am not sure the FCC should have such policies at all. They violate the constitutional principle of equal protection, and it's always a question whether such violations are justified by the policy they seek to advance -- in this case increasing minority viewpoints on radio and television.

I came to the conclusion that the existing policies -- especially the tax certificate program which is the subject of this oversight hearing -- are not well designed and are vulnerable to abuse.

I wrote an article criticizing the tax certificate program which was published in the University of Pennsylvania Law Review. I am submitting a copy for the record and the Subcommittee's use. I would like to summarize the points I made then, which I think are still valid criticisms today, and the suggestions I made for reform of the program. I would like to point out that I do not currently practice communications or constitutional law, and therefore I do not hold myself out as a expert in these fields.

I believe the constitutionality of the program is doubtful. It was saved only by the blanket endorsement provided by Congress in the 1987 supplemental appropriation. I believe Congress should now withdraw that endorsement -- which I think would expose the program to much stricter due process scrutiny and encourage the FCC to adopt reforms.

Tax certificates are an uncontrolled, open-ended drain on tax revenues -- like an entitlement program. We really don't know what it's costing in lost tax revenues or what it might cost in the future. Also, the benefit the seller gets from a tax certificate is determined by the amount of capital gain realized by the seller. The benefit may be far more than would be necessary to encourage the sale to a minority enterprise -- and that's a waste.

The best answer, I think would be to replace the program with a direct spending program -- such as loan subsidies to help qualified minority entrepreneurs buy broadcast stations. That way Congress could determine how much to spend on the program and the FCC could direct the aid where it would do the most good in terms of increasing minority ownership.

If the program is to be kept in the tax system, there are some improvements that should be made.

The amount of deferred capital gain should be limited to no more than 30% of the selling price. I think that's plenty of incentive.

Another problem is that a seller can get a tax certificate without showing that minority persons will direct the day-to-day operation of the station after the sale or that viewpoint diversity will be increased. If we want minority viewpoints on the air, we need to require that the buyer have minority management as well as ownership as well as some showing of how viewpoint diversity will be increased. This is a reform the FCC should adopt.

I also see a danger that after a station is sold to a minority buyer and the seller gets a tax certificate, the station may not stay minority-owned. If minority ownership is only temporary, we've paid a big tax price for very little social benefit. The FCC should adopt a policy that after a tax certificate sale it won't approve a another sale or transfer of control of the station except to another minority buyer for a long period -- say five years -- unless the seller has made a diligent effort and can't find a minority buyer.

I hope that Congress will encourage the FCC to re-examine its minority preference programs in light of the criticisms that have been made and, if the FCC does not act, I think Congress should adopt reforms through appropriate legislation.

Thank you.

Chairman JOHNSON. Thank you very much.

I have only about 4 minutes to vote, so I am going to forgo questions of this panel and allow us to move on to the next.

But your testimony on the various points has been very clear on both the economics of this deal and some of the ways in which it could be restructured to overtly serve a social purpose, but in a way that was far more responsible economically.

Thank you. I appreciate it.

[Recess.]

Chairman JOHNSON. The subcommittee will come to order.

I appreciate the next panel being settled, and if the room will quiet down, please. I have to say I have a plane at 3:07. The Congress is adjourning at 3 o'clock, so we do want to have a chance to hear everyone's testimony.

Mr. Sutton, if you will begin, please. Welcome particularly on behalf of my colleague, Mr. Rangel, and his kind introduction of you.

I welcome you, sir.

STATEMENT OF PERCY E. SUTTON, CHAIRMAN EMERITUS, INNER CITY BROADCASTING CORP., NEW YORK, N.Y., ON BEHALF OF THE NATIONAL ASSOCIATION OF BLACK-OWNED BROADCASTERS, INC.

Mr. SUTTON. Thank you very much, Madam Chairperson. I am delighted to be here. I am most appreciative of my colleague, Congressman Rangel, who was here to introduce me. He is our Congressperson where I live, in the heart of Harlem, and I have come here because I think it important that this tax policy be sustained. I had a speech I wanted to deliver, Madam Chairperson, but I should now just place it in the record.

Chairman JOHNSON. Without objection, we certainly will do that.

Mr. SUTTON. I will deal with some of the issues, because I have heard fairness stated many times here. May I give you some background? I come from a place called Texas, and as a child I used to walk around on a farm with my 14 brothers and sisters, mother and father, and I used to talk into a corn cob: Good afternoon, ladies and gentlemen, this is Percy Sutton from high in the clouds of the Smith/Young Tower in San Antonio, Tex.

That was a dream. I could not even go into that radio station in San Antonio. I could not walk in. I could not walk on the sidewalk.

There is a river that runs through San Antonio now called the San Antonio River. It was just a creek when I was a child, but there was a large brown bear that swam in that creek known as the San Antonio River every day. But I could only visit that bear and that creek one day out of the year. That was called Juneteenth. June-teenth, June 19, was when blacks in Texas were notified of the emancipation proclamation. So we were allowed to go there.

It is against that background that I grew up; segregated schools. My father was my junior high school principal. My mother was my first grade teacher and six of my older brothers and sisters were my teachers before I graduated from high school. I was the youngest of the Suttons. My father and mother believed every little Sutton was going to learn through here, if possible; through here, if necessary.

We learned. My father said if you speak properly, do not put your elbows on the table while you eat, do not pick your nose in public, you will be accepted. I don't and I never did put my elbows on the table while I ate, don't pick my nose in public, and I try to speak the American English.

That, however, did not keep me from serving in the military for my country in World War II, as the Congressman described, but in a segregated unit, being put in jail because I sought to go into an officers' club, though I was an officer, and sought to exercise my right working to save the world for democracy.

I returned to the military after finishing law school and entered into the Korean conflict. I have a son, who is the present chairman of our company now, who served in Vietnam. I mention all of this because we talk about fairness.

I have spent enough years in government, both in the State legislature of New York, and as a chief executive of The Borough of Manhattan in New York City; we have made enough grants; I have participated in enough tax abatements to special groups, for the good of the whole, it was said. I participated, Madam Chairperson, in developing this policy that is before us now. I helped create the climate for it.

I want to talk about role models. I can attest to you, Madam Chairperson, that every owner, every black owner of a radio or television station in this country, whether gained by tax certificates or otherwise, is a role model in the community.

In my own community in central Harlem, across from Harlem Hospital, I live in a middle-income development. I have chosen not to move from Harlem. I live next door to a low-income development. Every morning there are at least five supplicants at my door who see me as a role model. Much of my time, three-quarters, I have evaluated my time, is spent working as a surrogate parent, participating in group discussions or otherwise seeking to advance my neighbors. I suggest to you that this is the role of all minority owners.

Now, I don't know Mr. Frank Washington. I know of him. I have seen him once. But I can say this to you, the focusing on Mr. Washington or an Oprah Winfrey or someone of that consequence, of that circumstance, is to injure the process. Why? Because that is indeed an aberration. One billion some-odd-dollar purchase price? Mr. Washington, I am proud of him. I am proud of him as someone from my community.

Why am I proud? Because it took me 8 years to buy my first radio station because no one would lend me money. I went to 67 institutions, including insurance companies.

In your State and in my State of New York and in Texas, I toured this country trying to raise $2.5 million to buy my first radio station. My first cable television station, my only one, it took me 7 years to raise the money. Why? Because blacks and minorities as a whole do not have access to money.

The purpose of this legislation, or the rule, was to see that minorities would have greater access and there would be diversification, if you will. I am tonguetied. However, with regard to the tax policy, this is minuscule. The amounts of money invested here in

the public policy issue is minuscule compared to the other tax benefits and losses that occur to this treasury.

[The prepared statement follows:]

STATEMENT OF PERCY E. SUTTON
CHAIRMAN EMERITUS
INNER CITY BROADCASTING CORPORATION
ON BEHALF OF THE NATIONAL ASSOCIATION
OF BLACK-OWNED BROADCASTERS, INC.

GOOD MORNING CHAIRMAN JOHNSON, AND MEMBERS OF THE SUBCOMMITTEE ON OVERSIGHT. ON BEHALF OF THE NATIONAL ASSOCIATION OF BLACK OWNED BROADCASTERS, INC. ("NABOB"), I THANK YOU FOR THE OPPORTUNITY TO PRESENT TESTIMONY TODAY.

I AM A LAWYER AND A BUSINESSMAN.

I WORK AND LIVE IN THE VILLAGE OF HARLEM IN NEW YORK CITY. HARLEM, THE HOME OF THE SCHOMBURG COLLECTION, THE APOLLO THEATRE, AND THE ANCESTRAL HOME FOR AFRICAN-AMERICAN CULTURE.

I AM A TRIAL LAWYER, AND I OPERATE A NUMBER OF BUSINESSES AROUND THE COUNTRY; SOME OF THAT BUSINESS IS IN RADIO OWNERSHIP AND OPERATION, TELEVISION PROGRAMMING AND CABLE TV OWNERSHIP.

I HAVE BEEN FASCINATED BY THE FIELD OF COMMUNICATIONS SINCE I WAS A CHILD IN TEXAS, LIVING WITH A MOTHER AND FATHER AND 14 BROTHERS AND SISTERS ON A FARM OUTSIDE OF SAN ANTONIO, TEXAS -- AND PRETENDING, OFTTIMES, THAT I WAS A DISC JOCKEY ON A MAJOR RADIO STATION IN SAN ANTONIO. IN WHICH AS A BLACK

PERSON, I WAS NOT EVEN ALLOWED TO ENTER.

NEVERTHELESS, I PRETENDED BY HOLDING A CORN COB TO MY MOUTH, AND STATING: "GOOD AFTERNOON LADIES AND GENTLEMEN, I AM PERCY SUTTON FROM HIGH IN THE CLOUDS IN THE SMITH/YOUNG TOWER IN SAN ANTONIO, TEXAS."

THOUGH I PRETENDED TO BE A DISK JOCKEY, I COULD NOT; AS THERE WERE NO OPPORTUNITIES FOR BLACKS (NEGRO, COLORED, OR AFRICAN-AMERICAN) TO BECOME DISK JOCKEYS IN SAN ANTONIO, TEXAS.

IN SPITE OF THE ABSENCE OF OPPORTUNITY, MY DREAM CONTINUED UNTIL AFTER SERVING IN BOTH WORLD WAR II AND THE KOREAN CONFLICT, I GAINED ACCESS TO AN ON-THE-AIR, VOLUNTEER POSITION WITH A LOCAL RADIO STATION, WLIB, IN HARLEM -- WHICH I LATER, THROUGH THE COURTESY AND ASSISTANCE OF THE OWNER, WAS ABLE TO BUY.

I AM HERE IN SUPPORT OF SECTION 1071 OF THE INTERNAL REVENUE SERVICE CODE WHICH HAS BEEN UTILIZED BY THE FEDERAL COMMUNICATIONS COMMISSION IN ITS TAX CERTIFICATE POLICY SINCE 1943, AND IN ITS OVERALL MINORITY OWNERSHIP POLICIES SINCE 1978.[1] AS THE OSTENSIBLE PURPOSE OF THIS HEARING IS TO ADDRESS THOSE ASPECTS OF THE COMMISSION'S TAX CERTIFICATE

---

[1] SEE, STATEMENT OF POLICY ON MINORITY OWNERSHIP OF BROADCAST FACILITIES, 68 F.C.C. 2d 979, 42 RR 2d 1689 (1978).

POLICIES THAT ARE INTENDED TO PROMOTE DIVERSIFICATION OF OWNERSHIP THROUGH MINORITY PARTICIPATION, I SPEAK FIRMLY IN SUPPORT OF A POLICY THAT HAS PROVIDED SOME DESIGNATED BENEFITS TO MINORITIES. HOW CAN I SAY "BENEFITS"? HOW CAN SUCH TALK BE JUSTIFIED? I HOPE TO MAKE THAT POSITION CLEAR TO YOU THIS MORNING.

MY TESTIMONY TODAY IS PRESENTED IN TANDEM WITH THAT OF MR. JAMES WINSTON, THE EXECUTIVE DIRECTOR OF THE NATIONAL ASSOCIATION OF BLACK-OWNED BROADCASTERS (NABOB), AN ASSOCIATION OF WHICH I WAS A CO-FOUNDER AND REMAIN A STAUNCH SUPPORTER. I MENTION THIS BECAUSE I WILL ADDRESS THE BROAD POLICY CONSIDERATIONS, WHILE MR. WINSTON WILL ADDRESS THE LEGAL CONSIDERATIONS.

AS A VETERAN OF THE CIVIL RIGHTS ERA, I REMAIN VERY ACTIVE IN THAT COMMUNITY AND TRAVEL THIS COUNTRY SPEAKING TO VARIOUS ORGANIZATIONS, MANY OF WHICH ARE PROFOUNDLY TROUBLED BY WHAT ARE PERCEIVED TO BE VERY UNSUBTLE ATTEMPTS TO "ROLL BACK THE CLOCK" ON AFRICAN-AMERICANS. I OWN A TALK RADIO STATION IN THE CITY OF NEW YORK, AND I AM VERY UNSETTLED BY THE NUMBER OF OUR CALLERS WHO SINCERELY FEAR THAT THE MUCH TOUTED "CONTRACT WITH AMERICA" IS REALLY A VEILED "CONTRACT ON MINORITIES."

IT'S NO SECRET THAT MINORITIES, SPECIFICALLY MINORITIES OF

AFRICAN DESCENT, HAVE NOT HAD THE "TRADITIONAL" OPPORTUNITIES MADE AVAILABLE TO THEM HISTORICALLY. IN FACT, IN THE PAST I HAVE REFERRED TO THIS AS OUR "BLACK TAX." WHEN I SAY "BLACK TAX" I DO NOT SAY THIS TO BE OFFENSIVE. NO. I SAY THIS SADLY BECAUSE IT IS A SIMPLE REALITY THAT AFRICAN-AMERICANS, AND PERHAPS CERTAIN OTHER GROUPS IN AMERICA, LIVE IN VASTLY DIFFERENT WORLDS. BUT THIS IS ESPECIALLY TRUE OF AFRICAN-AMERICANS, BECAUSE WE ARE ALWAYS "DISTINGUISHABLE" AND WE HAVE YET TO ESCAPE THAT STATUS OF BEING FIRST AND ALWAYS DISTINGUISHED BY THE COLOR OF OUR SKIN. HISTORICALLY, THAT DISTINCTION HAS DETERMINED WHERE WE LIVED, WHAT TYPE OF JOBS WERE OPEN TO US, AND WHAT OPPORTUNITIES MIGHT BE AVAILABLE TO US.

RECOGNITION OF THE EFFECT THAT CERTAIN HISTORICAL DISTINCTIONS HAD UPON MINORITY REPRESENTATION IN BROADCASTING LED THE COMMISSION TO ATTEMPT IN 1978 TO ADDRESS THE NEED FOR DIVERSITY OF OWNERSHIP BY ISSUING ITS POLICY STATEMENT ON MINORITY OWNERSHIP OF BROADCAST FACILITIES (THE "POLICY STATEMENT"). IN THAT STATEMENT, THE COMMISSION ACKNOWLEDGED THE "DEARTH OF MINORITY OWNERSHIP IN THE BROADCAST INDUSTRY" AND SOUGHT TO PROMOTE OWNERSHIP PRINCIPALLY THROUGH RELIANCE UPON THE TAX CERTIFICATE. WHAT THE COMMISSION TRIED TO ACCOMPLISH WAS

THE CREATION OF A CLIMATE IN WHICH THE INDUSTRY WOULD FIND IT ATTRACTIVE TO DO BUSINESS WITH MINORITIES, JUST AS THE INITIAL USES OF §1071 MADE IT ATTRACTIVE TO FURTHER OTHER COMMISSION POLICIES, SUCH AS THE BAN ON CROSS-OWNERSHIP. THE GOVERNMENT HAS ALWAYS USED INCENTIVES OF ONE FORM OR ANOTHER TO MOVE BUSINESS. WHETHER IT IS THE INTEREST RATE OR THE GATT TREATY, IT IS CLEARLY UNDERSTOOD THAT THE "CARROT AND STICK" WORKS. (THE FALLACY IN THE ATTACKS ON INCENTIVE POLICIES IS THAT THEY ATTEMPT TO SUGGEST THAT YOU CAN ACCOMPLISH CHANGE WITHOUT CHANGING ANYTHING. THE CIVIL RIGHTS ACT OF 1968 WAS PASSED LESS THAN 30 YEARS AGO. AS MUCH AS ALL OF US WOULD LIKE TO THINK OF AMERICA AS A FREE AND OPEN SOCIETY, 30 YEARS IS TOO SHORT A TIME IN WHICH TO ERASE THE PROFOUND EFFECTS OF INSTITUTIONAL RACISM. IT WAS ONLY TEN YEARS AFTER THE ACT'S PASSAGE THAT THE COMMISSION ENACTED ITS POLICIES).

SUBSEQUENT TO THE ISSUANCE OF THE 1978 POLICY STATEMENT, THE COMMISSION ENTERED INTO ITS "DEREGULATORY" PHASE. THROUGHOUT THE 80'S, WE EXPERIENCED THE RELAXATION OF THE RULES GOVERNING BROADCAST STATION OWNERSHIP, THE INCREASE IN COMPETITION FROM NEW AND NON-BROADCAST SERVICES, AND CONTINUAL ASSAULTS ON EVERY ASPECTS OF THE MINORITY OWNERSHIP POLICIES. THE EFFECT OF EACH OF THESE ACTIONS UPON

MINORITIES WAS TO ENDANGER THE FEW GAINS THAT MINORITIES HAD MADE, AND MAKE IT THAT MUCH MORE DIFFICULT FOR COMPANIES TO BECOME, OR REMAIN, COMPETITIVE -- EVEN THOSE MINORITY COMPANIES WHO MIGHT HAVE APPEARED TO HAVE "MADE IT." JUST LAST WEEK, SENATOR PRESSLER, CHAIR OF THE SENATE COMMERCE COMMITTEE, INVITED MOST OF THE "MAJOR" TELECOMMUNICATIONS COMPANIES TO WASHINGTON TO DISCUSS THEIR CONCERN OVER HIS PROPOSED "SUPERHIGHWAY" LEGISLATION. NO MINORITY COMPANIES WERE PRESENT. WHAT WOULD THESE MULTIBILLION DOLLARS CORPORATIONS VIEW AS AN ISSUE OF CONCERN? THEIR CONTINUING ABILITY TO REMAIN COMPETITIVE IN A CHANGING REGULATORY ENVIRONMENT. ARE THEY SEEKING "PREFERENTIAL" TREATMENT? OF COURSE THEY ARE! I AM NOT SO NAIVE AS TO THINK THAT IN ATTEMPTING TO PLACATE THE PROBLEMS THAT THE TELCOS HAD WITH THE 1994 LEGISLATION THAT SOME "BENEFITS" WERE NOT PUT ON THE TABLE. I AM JUST AS CERTAIN THAT THE HOUSE'S CURRENT BILL WILL REFLECT A SIMILAR WILLINGNESS TO MEET THE DEMANDS AND THE "NEEDS" OF THE TELCOS AND CABLE COMPANIES WHO HAVE BEEN INVITED TO PARTICIPATE IN THE DRAFTING OF THE LEGISLATION. THERE WILL SURELY BE PROVISIONS INCLUDED TO ENSURE THAT THESE POWERFUL COMPANIES WILL NOT SUFFER WHILE MAKING THE TRANSITION INTO COMPLIANCE WITH THE NEW ACT. ANY SUCH PROVISIONS WILL

AFFECT THE TREASURY. AND YET, THESE EFFORTS ARE LAUDED BY ALL PARTIES AS NECESSARY FOR THE FUTURE GROWTH OF THE TELECOMMUNICATIONS INDUSTRY. WHILE THE VERY CLEAR SIGNAL OF THE TELCO BILL NEGOTIATIONS IS THAT THIS IS SOMETHING THAT IS GOOD FOR BUSINESS, DESPITE THE BENEFITS THAT WILL BE ACCORDED TO CERTAIN OF THE INDUSTRIES, ASSAULTS UPON THE FEW INCENTIVES DIRECTED AT MINORITIES SENDS A VERY DIFFERENT SIGNAL. THE CLEAR MESSAGE IS THAT ENDORSEMENT OF MINORITY PARTICIPATION IS GONE, REPLACED BY AN ATTITUDE THAT ESSENTIALLY STATES: "BE THANKFUL FOR WHAT YOU'VE GOT."

THE PUBLIC, THE INDUSTRY, AND THE PRESS ARE ALL VERY ATTUNED TO GOVERNMENTAL SIGNALS. WILL THERE BE A SIGNAL THAT MINORITY OWNERSHIP REMAINS A POSITIVE FOR THIS COUNTRY?

AS MINORITY BUSINESSES BECOME LARGER AND MORE VIABLE, THERE IS A DIRECT IMPACT UPON THE ECONOMIC HEALTH OF THEIR SURROUNDING COMMUNITIES. EVERY ACQUISITION BY A MINORITY CAN PROVIDE A NEW SOURCE OF EMPLOYMENT, A NEW HEALTH PLAN, A BETTER CHANCE OF BECOMING A TAX-PAYING MEMBER OF SOCIETY. BUT OUR BUSINESSES CANNOT GROW ON WISHES AND PRETENDING. WE CANNOT PRETEND THAT HISTORIC AND INSTITUTIONALIZED RACISM MAGICALLY DISAPPEARED IN 1968. NOR CAN WE IGNORE THEIR LINGERING EFFECTS UPON OUR ACCESS TO CAPITAL, OR OUR

ABILITY TO PARTICIPATE IN THE LARGER OPPORTUNITIES. RACE NOT WITHSTANDING, NO ONE ENTERS AN INDUSTRY WITH THE INTENT TO BECOME ITS PERMANENT UNDERCLASS. IN TODAY'S PARLANCE, EVERY ONE SEEKS TO "GROW" THEIR BUSINESS, AND GROWTH MEANS LARGER OPPORTUNITIES TO EXPAND. AND JUST AS THE TWO TELECOM SUBCOMMITTEES HAVE RECOGNIZED, BUSINESS TRADITION SUGGESTS THAT MOST DEALS REQUIRE SOME INCENTIVE ON THE PART OF EACH PARTY TO GO FORWARD IF AN AGREEMENT IS TO BE REACHED.

I WILL CLOSE WITH WHAT I FEEL IS A CLEAR EXAMPLE OF THE COMMISSION'S APPROACH TO ACHIEVING PARITY. WHEN JUST TEN YEARS AGO THE COMMISSION DECIDED TO BREAK-UP AT&T'S MONOPOLY OVER THE TELEPHONE INDUSTRY, IT DID SO BECAUSE IT DECIDED THAT COMPETITION WAS GOOD AND THAT THE "OTHER COMMON CARRIERS" WERE DISADVANTAGED BY THAT MONOPOLY. THE COMMISSION FURTHER DETERMINED THAT BECAUSE OF THAT HISTORIC DISADVANTAGE, IT COULD ACT ON BEHALF OF THE OTHER CARRIERS AND JUSTIFIABLY ENACT POLICIES THAT WOULD ACCORD THE OTHER COMMON CARRIERS CERTAIN ADVANTAGES OVER AT&T AND ITS LOCAL PHONE SUBSIDIARIES. ONE OF THOSE "POOR" OTHER COMPANIES WAS TODAY'S GIANT MCI. THE TAX CERTIFICATE POLICY, IN BOTH ITS MINORITY AND NON-MINORITY APPLICATIONS, WORKS BECAUSE IT PROVIDES A NECESSARY INCENTIVE FOR BUSINESSES TO MOVE COMMISSION POLICIES FORWARD, WHETHER THOSE POLICIES BE

CROSS-OWNERSHIP, CABLE/BROADCAST BREAKUPS, OR MINORITY OWNERSHIP. THE POLICY, IN ANY OF ITS MANIFESTATIONS, HAS ALWAYS BEEN DIRECTED AT THE FACT OF THE TRANSACTION, NOT THE SIZE. MINORITY ENTREPRENEURS ARE BUSINESSPEOPLE NOT UNLIKE ANY OTHER ENTREPRENEURS. WHAT WE LACK AND NEED IS ACCESS TO THE MAJOR MARKETPLACE. WE SEEK ONLY WHAT MCI AND THE NON-BELL COMMON CARRIERS SOUGHT--SOME INCENTIVE OR MECHANISM TO OVERCOME AN HISTORIC UNEQUAL DISTRIBUTION OF OPPORTUNITY. THANK YOU.

ONCE AGAIN I THANK YOU FOR THE OPPORTUNITY TO MAKE THIS PRESENTATION.

Chairman JOHNSON. Thank you, Mr. Sutton.

I appreciate your testimony and your eloquence as to the importance of access into markets. The importance of role models and the importance of people succeeding so others can see success are absolutely important to me.

I think it is concerning that we have in place a public policy that we know so little about. We do not know to whom it gave money, we don't know how much it gave, we don't know whether it affected diversity, we don't know whether there was real management control. Now, that is not to undermine the importance of the policy, but it is to say we have not been doing our job and we should find out.

To the extent you are interested, we will be happy to share with you the information we get from the agencies as they provide us with better information and look at how we can make this policy more accountable, but at the same time, achieve its goal.

Mr. SUTTON. You did note in the testimony that very few minorities actually benefit. What that does, the policy does, is it gives access to the persons who may be willing to sell, even though we may have to pay market price in buying it.

Chairman JOHNSON. I understand that. Thank you very much.

Mr. Winston.

STATEMENT OF JAMES L. WINSTON, EXECUTIVE DIRECTOR AND GENERAL COUNSEL, NATIONAL ASSOCIATION OF BLACK-OWNED BROADCASTERS, INC.

Mr. WINSTON. Good afternoon, Chairman Johnson, members of the subcommittee. On behalf of the National Association of Black-Owned Broadcasters, thank you for the opportunity to present testimony today on section 1701 of the Internal Revenue Code.

Chairman JOHNSON. Excuse me, could you pull the microphone closer?

Mr. WINSTON. Sure. I have the distinct disadvantage here of having to speak after Mr. Sutton.

Chairman JOHNSON. You also will be more severely controlled by the 5-minute limit. Out of respect, he was given latitude.

Mr. WINSTON. But it is a pleasure to have the opportunity to follow his comments, because he is one of the role models that has guided NABOB since 1976.

It has been suggested that the FCC has not implemented the tax certificate policy in a manner which has promoted the ownership of broadcast facilities by minorities. One of the theories espoused by the opponents of the policy is the policy has been abused in sham transactions in which companies identified to the FCC as minority owned are actually controlled by nonminority individuals, who put forth minority individuals to front for them.

The history of the minority tax certificate policy refutes this claim.

As noted, the minority tax certificate policy has been operated by the FCC since 1978. During that time the FCC has issued approximately 300 tax certificates. During that same period, the FCC has approved approximately 15,900 transactions. Tax certificate transactions, therefore, constituted only 1.9 percent.

Chairman JOHNSON. Those were not all license transactions.

Mr. WINSTON. Beg pardon.

Chairman JOHNSON. Those were not all license transactions, were they?

Mr. WINSTON. What do you mean? I am not sure I understand the question.

Chairman JOHNSON. Licensure transactions.

Mr. WINSTON. Oh, yes. In other words, you have to understand there are approximately 11,000 broadcast facilities in America today. So those are transactions of broadcast stations being bought and sold: 15,900.

Chairman JOHNSON. Thank you.

Mr. WINSTON. OK. Therefore, to suggest that—if this program is such a boondoggle, it would generate a lot more activity than it has.

The fact is the vast majority of these tax certificates were issued to companies which were all almost 100 percent minority owned. The entrepreneurs who controlled these companies put together their transactions and built their companies with little or no attention from or support from the nonminority media. However, it now appears that press speculation of one or two possible abuses of the policy have galvanized a tidal wave of opposition to the policy. Such opposition is unfounded.

The FCC, on occasion, may be presented with a proposed transaction in which individuals may seek to circumvent the intent of the policy. However, this subcommittee and most certainly the full committee, has adopted over the years numerous tax policies which favor one group of individuals or companies with tax benefits.

When the subcommittee and full committee adopt and renew such policies, you are obviously mindful such policies must be implemented by the Internal Revenue Service in a manner such that unscrupulous persons would not be allowed to abuse those policies. Thus, you have given the IRS extensive enforcement authority and resources to detect and prevent such abuses.

The FCC, like the IRS, has the authority and resources to detect and prevent abuses of the tax certificate policy. The FCC uses that authority to effectively preclude such abuses.

This subcommittee does not routinely eliminate important tax benefits for individuals in industries for which it has created tax initiatives merely because the IRS may uncover some attempts to abuse those policies. The subcommittee should similarly take no such action against the minority tax certificate policy.

The FCC's tax certificate policy, in any announced transaction which may be causing this subcommittee concern, has received so much publicity that the FCC will be forced to scrutinize any new tax certificate applications extremely thoroughly to assure that no abuse of the policy is occurring. We are certain that the FCC will reject any transactions which fail to comply with the objectives of the policy. NABOB fully supports such close scrutiny.

The only parties who will suffer by elimination of the policy are the honest, dedicated entrepreneurs who will never get an opportunity to use the policy because of this subcommittee's concern about potential abuses. We are left, then, to determine if there are other concerns which warrant elimination of the policy.

We have heard this is not a minority ownership issue but a deficit reduction issue. But is a potential loss of revenues for the Treasury a reason to single out the minority tax certificate policy for elimination? No. This subcommittee and the full committee routinely approve tax measures which result in lost revenues to the Treasury. Congressman McDermott gave several examples earlier today.

Our objective in pointing out these provisions is not to question any of them, to suggest that any of them constitutes bad policy. Rather, the purpose is to point out there is nothing in the FCC tax certificate that is outside the realm of the kinds of policies this subcommittee approves each year.

The question has been asked today should the policy be abolished because there are ways of encouraging minority ownership other than allowing nonminority companies tax deferrals resulting to minorities. The simple answer is, we in the FCC have been looking for almost 20 years and we have yet to find one.

[The prepared statement follows:]

TESTIMONY
OF
JAMES L. WINSTON
EXECUTIVE DIRECTOR AND GENERAL COUNSEL
OF
THE NATIONAL ASSOCIATION
OF
BLACK OWNED BROADCASTERS, INC.
BEFORE
COMMITTEE ON WAYS AND MEANS
SUBCOMMITTEE ON OVERSIGHT

January 27, 1995

Good morning Chairman Johnson, and members of the Subcommittee on Oversight. On behalf of the National Association of Black Owned Broadcasters, Inc. ("NABOB"), I thank you for the opportunity to present testimony today on Section 1071 of the Internal Revenue Code.

NABOB was organized in 1976 as a response to the abysmal underrepresentation of Black Americans in the communications industry. Since its inception, NABOB has grown into a major trade association representing the interests of 178 Black-owned commercial radio stations and 20 commercial television stations around the country. Additionally, NABOB counts among its associate membership: law firms, station brokers, national rep firms, financial institutions and a variety of other organizations involved in broadcasting, cable television and common carrier services.

As the voice of the Black broadcast industry, NABOB has been instrumental in shaping national government and industry policies to improve the opportunities for success for Black and all other minority station owners.

The press coverage in anticipation of this hearing has positioned this as a hostile attack upon Section 1071. I hope that through our testimony today, we can demonstrate to the Subcommittee that there is no reason for this Subcommittee to be hostile toward Section 1071. Indeed, we believe that this Subcommittee should embrace Section 1071 as legislation which both Republican and Democratic members of the House have supported in the past and should strive to improve in the future.

It is apparent that one recent proposed transaction has generated a great deal of press interest in Section 1071, and this, in turn, has focused this Subcommittee's attention. However, a review of the history of Section 1071 clearly demonstrates that Section 1071 has been accomplishing precisely what it should be doing and that it should be preserved and possibly expanded.

Chairman Johnson's press advisory setting forth the focus of this hearing asks a series of questions which the Subcommittee will seek to answer today. Those questions can serve as an efficient tool for understanding and appreciating the importance and value of Section 1071.

The first question asked in the press advisory is: "Whether the FCC's 1978 policy is consistent with the underlying intent of Section 1071?" First it should be pointed out that Section 1071 was enacted in 1943. In 1943, the communications industry was owned and controlled and completely dominated by non-minorities. Indeed, at the time of the adoption of Section 1071, all of American life, including this House and this Subcommittee were similarly controlled and dominated. Moreover, 1943 was eleven years before the Supreme Court's decision in Brown v. Board of Education, 347 U.S. 483 (1954), which means that legal segregation as approved by the U.S. Supreme Court in 1896, in Plessy v. Ferguson, 163 U.S. 537 (1896) was still the law of the land.

Therefore, if the question this Subcommittee seeks to have answered today is: "Did Congress direct the FCC to create the minority ownership policy using Section 1071, when Congress adopted Section 1071 in 1943?" this hearing can be over very quickly. However, we submit that this is not the correct manner for viewing the question raised in the press advisory. The proper method for viewing the question raised in the press advisory is: "In light of Congress's treatment of Section 1071 over the seventeen years since the FCC adopted the minority ownership policy, is the FCC's 1978 policy consistent with the underlying intent of Section 1071?" The answer to this question is a resounding "yes," and it is this history on which this Subcommittee should focus.

As the Subcommittee is well aware, Section 1071 was not a new provision when the FCC included the promotion of minority ownership as a policy which could be used to allow a grant of a tax certificate. Section 1071 was adopted by Congress in 1943 to allow the gain from the sale or exchange of broadcast facilities to be deferred in cases where the sale or exchange is certified by the FCC "to be necessary or appropriate to effectuate a change in a policy of, or the adoption of a new policy by, the Commission with respect to the ownership and control of radio broadcasting stations . . . ." 26 U.S.C. § 1071(a) (1988).

After its enactment in 1943, the Commission used Section 1071 to promote its policy of diversification of ownership and control of the broadcast industry. The FCC allowed companies to obtain a tax certificate under section 1071 to defer the gain on the sale of broadcast stations in circumstances in which the FCC determined that a station owner possessed too great a control over the dissemination of news and information in a single market. Thus, when the FCC determined that a single owner held an excessive degree of ownership and control over daily newspaper, radio stations, television stations and/or the cable television systems in a given market, the FCC granted a tax certificate to the owner if the owner sold certain of its broadcast holdings.

In 1978, the FCC turned to Section 1071 to address a related issue of diversification of ownership of the mass media. The nature and magnitude of the problem which confronted the Commission in 1978 was fully considered and analyzed by the United States Supreme Court in 1990, when the Court addressed the constitutionality of the minority ownership policies adopted by the Commission in 1978. In that case, Metro Broadcasting v. FCC, the Supreme Court observed that the

FCC adopted its minority ownership policy after several years of consideration of the problem of the lack of participation by African Americans and other minorities in the ownership and control of broadcast facilities. Metro Broadcasting v. FCC, 497 U.S. 547 (1990).

In Metro, the Court noted that in 1968, the FCC first addressed the lack of involvement of African Americans and other minorities as employees in the broadcast industry. Id. at 554-555. The Court pointed out that the FCC, in 1968, recognized that a diverse work force in the broadcast industry was essential if minorities were to be able to achieve their First Amendment right to freedom of expression. Id. The Court noted that, after several years of developing, implementing and enforcing equal employment opportunity ("EEO") rules, the FCC realized that it had not achieved any significant increase in minority control of broadcast facilities. Id. at 554-556. The Court pointed out that it was only after its inability to increase control of broadcast facilities by minorities through its EEO rules between 1968 and 1978, that the FCC turned its attention to policies designed to further ownership of broadcast facilities by minorities. Id.

The Court then analyzed two aspects of the FCC's minority ownership policy, other than the tax certificate. The Court noted that the petitioner in the Metro case challenged the constitutionality of the minority ownership policy as not having been created and implemented within the FCC's statutory authority from Congress. The Court examined the extensive legislative history surrounding the minority ownership policy and determined that the FCC had developed and implemented the policy with statutory authority from Congress. Specifically, the Court reviewed the numerous legislative determinations, beginning in 1988, by Congress that the minority ownership policy as adopted by the FCC in 1978, and as amended and expanded up to that date, should not be altered by the FCC. Id. at 560. The Court ruled that this series of successive legislative actions established fully that the policy as adopted by the FCC in 1978 reflects the intent of Congress on this issue.

This analysis by the Supreme Court allows this Subcommittee to fully answer all of the questions raised in the press advisory: (1) the tax certificate policy is consistent with the underlying intent of Section 1071, in that it furthers an important public policy objective; (2) the FCC's administration of Section 1071 has been approved by Congress and does not constitute an impermissible exercise of legislative authority; (3) Section 1071 fosters minority ownership of broadcast facilities; and (4) the policy is a necessary and appropriate means of achieving this goal.

Therefore, NABOB submits that those who oppose the continued operation of Section 1071 to foster minority ownership must come forward with justification for reversing the determination of the U.S. Supreme Court that promotion of minority ownership is an appropriate public policy objective for the FCC. We submit there is no basis for reversing that determination.

To support an elimination of Section 1071, the opponents of the policy should demonstrate either that: (1) the objective of the policy has been achieved and the

policy is no longer needed, or (2) the FCC's administration of the policy has not actually promoted minority ownership.

The record clearly refutes either such assertion. First, the objective of the policy has not been accomplished. The objective of the minority tax certificate policy is to help facilitate ownership of broadcast facilities by African Americans and other minorities at a level commensurate with their proportion in the American population. The circumstances which led the FCC to adopt the tax certificate policy in 1978 have not changed significantly. In 1978, African Americans constituted approximately 10% of the American population, and yet owned less than 1% of all then licensed radio and television stations.

Today, the National Telecommunications and Information Administration reports that, while now comprising approximately 12% of the American population, African Americans own less than 2% of all television and radio stations. Report of the National Telecommunications and Information Administration, September 1994. These numbers clearly demonstrate that the situation which necessitated the adoption of the minority tax certificate policy has not changed significantly since the adoption of the policy. In fact, just this past September, Vice President Al Gore stated at the NABOB Fall Conference that these current ownership statistics are "a disgrace." Broadcasting & Cable, September 19, 1994, page 6.

The next ground upon which the opponents would seek to over-turn the policy is that the FCC has not implemented the policy in a manner which has promoted the ownership of broadcast facilities by minorities. The theory espoused by such opponents of the policy is that the policy has been abused in "sham" transactions in which companies identified to the FCC as minority owned are actually controlled by non-minority individuals who put forward minority individuals to "front" for them. The history of the minority tax certificate policy refutes this claim.

As noted, the minority tax certificate policy has been operated by the FCC since 1978. During that time, the FCC has issued approximately 300 tax certificates. During that same period, the FCC has approved approximately 15,900 transactions. See Broadcasting & Cable, March 7, 1994, p. 37, and January 2, 1995, page 46. Tax certificate transactions therefore constituted only 1.9% of broadcast transactions since 1978.

Moreover, the vast majority of these tax certificates were issued to companies which were all or almost 100% minority owned. The entrepreneurs who controlled these companies put together their transactions and built their companies with little or no attention from or support from the non-minority media. However, it now appears that press speculation of one or two possible abuses of the policy have galvanized a tidal wave of opposition to the policy. Such opposition is unfounded.

The FCC on occasion may be presented with a proposed transaction in which individuals may seek to circumvent the intent of the policy. However, this Subcommittee, and most certainly the full Committee, has adopted over the years numerous tax policies which favor one group of individuals or companies with tax

benefits. When the Subcommittee and full Committee adopt and renew such policies, you are obviously mindful that such policies must be implemented by the Internal Revenue Service in a manner such that unscrupulous persons will not be allowed to abuse those policies. Thus, you have given the IRS extensive enforcement authority and resources to detect and prevent such abuses.

The FCC, like the IRS, has the authority and the resources to detect and prevent abuses of the tax certificate policy. And the FCC uses that authority to effectively preclude such abuses. This Subcommittee does not routinely eliminate important tax benefits for individuals and industries for which it has created tax policy initiatives, merely because the IRS may uncover some attempts to abuse these policies. The Subcommittee should similarly take no such action against the minority tax certificate policy.

The FCC's tax certificate policy, and any announced transaction which may be causing this Subcommittee concern, have received so much publicity that the FCC will be forced to scrutinize any new tax certificate applications extremely thoroughly to assure that no abuses of the policy are occurring. We are certain that the FCC will reject any transactions which fail to comply with the objectives of the policy. NABOB fully supports such close scrutiny.

The only parties who will suffer by an elimination of the policy, are the honest, dedicated entrepreneurs, who will never get an opportunity to use the policy, because of this Subcommittee's concern about potential abuses. The Subcommittee should not punish those who can properly benefit from the policy, when the FCC has been preventing, and can in the future continue to prevent, any potential abuses.

We are then left to determine if there are other concerns which warrant an elimination of the policy. We have heard that this is not a minority ownership issue, but a deficit reduction issue. But, is the potential loss of revenue for the Treasury a reason to single out the minority tax certificate policy for elimination? No.

This Subcommittee and the full Committee routinely approve tax measures which result in lost revenues for the Treasury. In fact, the staff of the Joint Committee on Taxation prepares a report of the Estimates of Federal Tax Expenditures each year, which shows this Committee an estimate of the tax expenditure consequences of its various policies. The November 9, 1994 report shows dozens of tax provisions which result in lost potential income to the Treasury which this Subcommittee has approved. For example:

- Exclusion of income of foreign sales corporations -- $1.4 billion
- Deferral of income of controlled foreign corporations -- $1.1 billion
- Inventory property sales source rule exception -- $3.5 billion
- Expensing of exploration and development costs -- $0.5 billion

- Exclusion of investment income on life insurance and annuity contracts -- $0.8 billion

- Special treatment of life insurance company reserves -- $2.1 billion

- Deduction of unpaid property loss reserves for property and casualty insurance companies -- $1.6 billion

- Depreciation of rental housing in excess of alternative depreciation system -- $1.0 billion

- Depreciation of equipment in excess of alternative depreciation system -- $19.9 billion

- Reduced rates for first $10,000,000 of corporate taxable income -- $43.9 billion

Included in this report is a mere $0.1 billion estimate for the FCC minority tax certificate policy. Therefore, if the objective is to eliminate the budget deficit, there would appear to be many much "fatter" policies to review.

Then perhaps the problem is not the size of the cost to the Treasury, but a "social engineering issue." Well, again this would not seem to justify singling out this policy. The Tax Expenditure Estimate also lists numerous provisions which clearly constitute social engineering:

- Deductibility of mortgage interest on owner-occupied residences -- $53.5 billion

- Deductibility of property tax on owner occupied homes -- $13.7 billion

- Exclusion of capital gains at death -- $12.7 billion

Our objective in pointing out these provisions is not to question any of them or to suggest that any of them constitutes bad policy. Rather, the purpose is to point out that there is nothing in the FCC tax certificate that is outside the realm of the kinds of policies this Subcommittee approves each year.

The next question then is: should the policy be abolished because there are better ways of encouraging minority ownership than allowing non-minority companies tax deferrals for selling to minorities? The simple answer is that we and the FCC have been looking for almost twenty years, and we have yet to find one. As stated above, the FCC adopted the tax certificate policy after ten years of trying to promote meaningful participation by minorities in broadcasting. What the FCC found was that the only time minorities learned that desirable broadcast facilities were for sale was after the deal was signed and the sale was announced in the trade press. The trading in the most desirable broadcast facilities was, and still is, conducted in a closed circle of the largest companies.

No one called minorities to buy the most desirable facilities, because they were the most expensive. It was assumed that a minority buyer would have difficulty obtaining financing for a major acquisition, and the seller would have to wait for the minority to go to several lending sources before he could finance a deal, if he could finance it all. And, unfortunately, that assumption was usually correct.

But, the tax certificate caused the telephones of some minority buyers to start ringing. Non-minority sellers realized that, if they could defer paying capital gains taxes, it would be worthwhile waiting for the minority buyer to arrange financing. The result is that the tax certificate generated some telephone calls to minority buyers. It did not produce a flood of such calls (300 tax certificate deals out of 15,900 broadcast deals since 1978). But it produced some where none had been received before. If the policy is eliminated, many prospective minority buyers can plan to disconnect their telephones, because no one will be calling to sell them broadcast facilities.

Then, we get to the final question which seems to be driving this hearing: At some point should a deal be considered too "big" to justify a tax certificate? To answer this question the Subcommittee must consider the underlying purpose of the tax certificate policy. The policy is intended to enable minorities to have an effective means of asserting their First Amendment rights through the ownership and control of broadcast facilities. To date, the tax certificate policy has fallen far short of producing such a result. The companies which control the dissemination of news, information and opinion in this country are all multibillion dollar businesses. If minorities are to be able to compete with the companies which currently dominate this industry, they must have at least some companies of substantial size.

In its seventeen year history, the tax certificate has never had an impact which could be said to have allowed minorities to gain a substantial ownership position in this industry. Although minorities own approximately 3% of broadcast stations, that ownership represents only approximately 0.5% of the gross revenues of the broadcast industry. One transaction will not significantly change that situation. At such time as the policy produces minority ownership in the broadcast industry which even approaches the proportion of minorities in this society, we would agree that some sort of limit should be placed on the policy. For now, such a result is nowhere in sight.

Therefore, we submit that the Subcommittee should take no action against the FCC's minority tax certificate policy. The policy has been approved by the Congress as consistent with the intent of Section 1071, the FCC has Congressional authority to continue the policy, the policy is a necessary and appropriate means of achieving minority ownership, and it does foster minority ownership. In fact, the policy should be expanded rather than curtailed.

Thank you.

Chairman JOHNSON. Thank you for your testimony.

Close scrutiny does matter, and if you have any thoughts about how we go about that, you are welcome to submit them.

We are going to have to reduce the time to 3 minutes. I am sorry about that, but in order for everybody to be heard, we do have to do that. So if you will proceed promptly.

STATEMENT OF TYRONE BROWN, ESQ., ON BEHALF OF BLACK ENTERTAINMENT TELEVISION, SYNCOM FUNDS, AND RADIO ONE, INC.

Mr. BROWN. Madam Chair, my name is Tyrone Brown. I was a Commissioner at the FCC when the tax certificate policy was established. I worked for it within the Commission. I supported it. I voted for it and I continue to support it now.

We just heard that in the 17 or so years since the policy was established, we have had a total of 300 tax certificate transactions out of 15,000, nearly 16,000 total transfers. If this policy were providing major windfalls, as a general matter, to either side of the transaction, we certainly would see many, many more transactions structured around the tax certificate than have occurred. I will come back to that at the end of my points, if I may.

Chairman JOHNSON. Mr. Hancock will be able to stay so we will be able to resume the 5 minutes.

Mr. BROWN. OK. I will still try to stay——

Chairman JOHNSON. That is all right, your experience is very interesting.

Mr. BROWN. I got into the broadcasting field as a lawyer for the Washington Post broadcast operations. When I got into the field, one of the early transactions that I was involved in on behalf of the Post was the acquisition of a television station. That acquisition took place the way that all transactions, radio and television, took place at that time.

It was a small group of very courtly people, very courtly men, who acted through brokers, who had all the information about which broadcast stations were available and which ones were not. There were not any black people, there were not any Hispanics, there were not any women. That was the way we did business in America in 1974 and 1975.

Now, I should say about the Washington Post, at the same time I was involved in that transaction, they transferred an FM station to Howard University. That station has become one of the most successful, leading minority-controlled stations in this community. So I am not knocking the Washington Post.

But, they did television transactions the way transactions were done at that time. No black, no Hispanic, no Native American, no female-based business was going to get the information to be able to get into this marketplace.

Well, 4 years after that, I went to the FCC as a Commissioner. When one young man named Frank Washington came to me and said, well, what about section 1071 and what about if the Commission did try to do something about the one-half of 1 percent—because that is what it was then—of these licenses passed out by government that are in the hands of minorities?

What if the Commission said we will encourage that; could they then operate under section 1071? I said, "Hey, maybe that will work. You know what it will do? It will mean that minority individuals will get information about available stations. When they indicate an interest in getting into the business, and in order to do that, they will have to have the wherewithal, they will have to have some kind of access to capital, they will have to have experience. But somebody will talk to them because they are carrying a piece of paper. Someone will talk to them. These brokers will let them know that the opportunities are out there. When they knock on the door of a banker, maybe somebody will open the door because they have a piece of paper in their hand."

Now, Madam Chair, this program has not been a windfall. It has not been a rip-off. There have been 300 transactions in nearly 20 years. The overwhelming majority of those 300 transactions have been radio transactions, small radio transactions.

The overwhelming majority of the individuals involved in those transactions are still in the business today. Now, we have——

Chairman JOHNSON. When you say the overwhelming majority of transactions, do you mean of the 15,000 or the 317?

Mr. BROWN. Of the 317 transactions. They are still in business today. Some of them have traded up in terms of the number of stations, but they are still in the business today.

Then, Madam Chair, we look at the big transaction that gets all of the press coverage. Well, that transaction is an aberration in terms of the pattern that we have seen under this policy. But beyond that, I would bet the family jewels that this transaction would never have resulted in a $280 to $400 million tax. The transaction would have been done with somebody else, it would have been done as a merger, it would have been done as a tax-free reorganization, it might not have been done, it might have been done as a swap. But the fact of the matter is that the transaction would not have occurred with tax consequences on the order of $300 to $400 million.

Madam Chair, the Treasury was never going to get that money. This is not a loss to the Treasury. What happened here is what happens in any transaction. You consider all of the factors that go into deciding whether you are going to dispose of property, when you are going to dispose of it, what kind of liabilities you are going to pick up, what kind of liabilities you are going to pass to other people; if you are a public company, you consider what impact the transaction will have on your stock and your shareholders, what you are going to do with the cash. You look at all those factors and you decide this is the way I am going to do the deal.

You change one of the major factors, like the tax consequences, you do it a different way or you do not do it. Four hundred million dollars? Nobody dislikes money. Nobody is going to give it to the Treasury if they can find a way not to do it.

Madam Chair, I will stop at this point and submit my written testimony for the record.

[The prepared statement follows:]

STATEMENT OF TYRONE BROWN, ESQ.,
ON BEHALF OF BLACK ENTERTAINMENT TELEVISION, RADIO ONE, INC., AND THE SYNCOM FUNDS

1. Statement of Interest, Summary of Position.

Madam Chairperson, Members of the Subcommittee:

My name is Tyrone Brown. I am submitting this Statement for myself and on behalf of Black Entertainment Television, Radio One, Inc., and The Syncom Funds.

I am an attorney engaged in telecommunications practice with the Washington, D.C. law firm of Wiley, Rein & Fielding. From 1977 to 1981, I served as a Commissioner of the Federal Communications Commission.

Prior to my tenure at the FCC, I was Vice President, Legal Affairs of Post-Newsweek Stations, Inc., the broadcast subsidiary of the Washington Post Company which operates television broadcast stations in a number of cities. After leaving the FCC, I helped to organize and manage District Cablevision, Inc., the cable television service provider in the District of Columbia. I have never had an interest in any transaction involving the issuance of a tax certificate under section 1071 of the Internal Revenue Code.

Since 1978, and beginning during my tenure as a Commissioner, the FCC, acting under section 1071, has issued a "tax certificate" (entitling the recipient to a deferral of taxable gain) to any taxpayer desiring such a certificate who sells a radio or television station, or a cable television system, to a minority individual or a minority-controlled firm. The purpose of this hearing is to assess the FCC's legislative authority to issue tax certificates in these circumstances, and to assess the effectiveness and appropriateness of the FCC's approach in fostering the goal of increased minority ownership of broadcast and cable television outlets.

Madam Chairperson, I respectfully submit that both the FCC's interpretation of section 1071 and its authority to issue minority ownership tax certificates are well established under current law. The FCC's interpretation and its authority have been repeatedly confirmed in appropriations legislation enacted by the Congress annually since 1988.

Of course, Madam Chairperson, this Subcommittee may initiate changes in the law. I respectfully urge the Subcommittee not to recommend dismantlement of the minority ownership tax certificate program. The FCC, through two Republican and two Democratic Administrations, has painstakingly developed this program, and it works. I would request that, based upon input from the FCC and interested parties, the Subcommittee report only such prospective changes, if any, as it concludes will make more effective the FCC's administration of minority ownership tax certificates under section 1071.

The FCC's program has led directly to a five-fold increase in minority ownership of radio and television broadcast stations, and to an increase in minority ownership of cable television systems as well. Elimination of this initiative would signal that increased minority ownership of electronic media of mass communications no longer is a priority with the Congress. This would be a wholly inappropriate message. Even with the tax certificate, minorities today control no more than three percent of the nation's broadcast outlets, and fewer still of its cable television systems.

2. **The FCC's Tax Certificate Policy Effectively and Appropriately Furthers the Goal of Minority Ownership.**

Madam Chairperson, I stated that minorities today own approximately three percent of the nation's broadcast stations. In 1978 when the FCC adopted its initial Statement of Policy on Minority Ownership, minority ownership was not much more than one-half of one percent.

In the light of the impact that the broadcast and cable technologies have on all the diverse, smaller communities that make up our national community, in my capacity as an FCC Commissioner I considered the minority ownership situation that existed in 1978 to be unacceptable. Frankly, Madam Chairperson, I consider the minority ownership situation that exists today to be not much better. However, it is better. And, I am convinced that the little

improvement that has occurred is in large part attributable to the availability of the minority ownership tax certificate.

In making the tax certificate the centerpiece of its initial effort to achieve greater minority ownership in broadcasting and, later, in cable television, the FCC adopted a device that is precisely tailored to overcome, to some to a degree, the two missing ingredients that typically frustrate the minority entprepreneur's attempt to become involved as an owner of a broadcasting or cable television outlet. These two missing ingredients are, first, lack of information and, secondly, lack of access to capital.

Madam Chairperson, quite simply, the tax certificate converts the minority entrepreneur into someone whom a prospective seller may want to talk with, and into someone who will not necessarily confront only closed doors when he or she ventures into the capital markets.

The certificate does not confer wealth upon the minority entrepreneurs through a reduction in selling price. Nor does it deny the Treasury a tax, since taxes are merely deferred and not reduced or eliminated. On the other hand, economic activity is stimulated through the retention of funds in gainful private sector activity.

This is what the tax certificate secures for the minority entrepreneur, and it is all that it secures for him or her. But the open door, and that access to the prospective supplier of capital, may be (after his or her own dogged determination) the minority entrepreneurs's most important asset.

Madam Chairperson, it is for this reason that I strongly urge the Subcommittee to support continued availability of the minority ownership tax certificate under section 1071.

3. The FCC Possesses Explicit Authority To Issue Minority Ownership Tax Certificates.

Madam Chairperson, because the Subcommittee has raised a number of questions about the FCC's current authority to issue minority ownership tax certificates, I also feel the need to address this issue of legislative authorization.

There have been suggestions that the FCC, in the 1978 Statement of Policy, abruptly and impermissibly altered its prior interpretation of section 1071 of the Internal Revenue Code. The implication is that prior to 1978 the FCC issued a tax certificate only when the taxpayer was compelled to dispose of broadcast property due to new agency policy, but in announcing the minority ownership policy the Commission for the first time extended section 1071 treatment to voluntary dispositions.

Madam Chairperson, I want to assure the Subcommittee that adoption of the tax certificate policy in 1978 did not involve any expansion of the Commission's interpretation of section 1071. As we specifically stated in the 1978 Policy Statement, under preexisting agency practice the FCC had routinely issued tax certificates in connection with certain voluntary dispositions of broadcast properties that furthered agency policy.

In any event, Madam Chairperson, if doubts once existed about the FCC's authority to issue tax certificates in connection with transfers of broadcast and cable outlets to minorities under current law, those doubts now have been resolved in favor of such authority.

In each fiscal year since 1988, the FCC appropriations legislation has not only expressly acknowledged the existence of the Commission's minority ownership tax certificate policy, but it has also expressly forbidden use of appropriated funds to repeal or retroactively change that policy. The fiscal 1995 legislation, for example, states that appropriated funds may not be used to repeal or retroactively change the FCC's minority ownership initiatives, "including those established in the Statement of Policy on Minority Ownership of Broadcasting Facilities . . . ."

Under the circumstances, Congressional endorsement of the FCC's interpretation of its authority under section 1071 could hardly be more clear.

4. The FCC's Minority Ownership Policies Have Evolved in a Spirit of Bipartisanship and Cooperation.

Madam Chairperson, the FCC has never treated its minority ownership policies as static rules that are good for all circumstances or for all time.

The original tax certificate policy was an initial response that grew out of a first conference on minority ownership sponsored by the FCC in 1977 under the leadership of Richard Wiley who chaired the Commission during the Nixon and Ford Administrations.

Extension of the tax certificate policy to sales of cable television systems occurred in 1982 under President Reagan's Chairman Mark Fowler, as a result of recommendations from an Advisory Committee headed by then-Commissioner Henry Rivera.

Most recently, Congress' enactment of spectrum auction legislation, and its mandate to the FCC to assure opportunities for minority ownership participation in the auctioned spectrum (as well as ownership participation by female-controlled firms and small businesses) has required the Commission to undertake what is perhaps its most comprehensive reexamination of its minority ownership policies to date.

Hopefully, this process of re-examination and refinement will continue. In that process this Subcommittee has an appropriate oversight role to assure that section 1071 is not abused.

5. Conclusion.

Madam Chairperson, members of the Subcommittee, in closing I wish to reemphasize that I, as well as Black Entertainment Television, Radio One, Inc., and The Syncom Funds, strongly urge the Subcommittee to support the continued availability of the minority ownership tax certificate under section 1071.

Thank you for this opportunity to share my views in this very important area.

Chairman JOHNSON. I appreciate your comments. It does appear we still need a record. We still need to know what in fact——

Mr. BROWN. I would agree with that.

Chairman JOHNSON. Who has had ownership. The fact we have none of that, does matter. But I hope it is as you say.

Mr. BROWN. I would be glad to include in the record a list of all of the companies that have received tax certificates.

Chairman JOHNSON. That would be interesting.

Mr. BROWN. Since the inception of the program, because I have it available and will be glad to do that.

Chairman JOHNSON. If you know all the principals in those companies, that would be useful, too.

Mr. BROWN. I am not sure I do, but to the extent I can.

Chairman JOHNSON. Because the government has a hard time coming up with that information. Any information you can give us along that line is helpful.

[The following was subsequently received:]

Summary of Tax Certificate Data (as of 2/2/95)

Before 1978, minorities owned approximately one half of one percent (40) of the approximately 8,500 total broadcast licenses issued by the FCC. In fact, the National Association of Black Owned Broadcasters (NABOB) reports that approximately 2 to 3 minority broadcast transactions were consummated each year prior to the implementation of the FCC minority tax certificate policy in 1978. Today, a 1994 study performed by the National Telecommunication and Information Administration at the Department of Commerce, indicates that there are approximately 323 radio and television stations owned by minorities, 2.9% of the total 11,128 licenses held in 1994. This represents a 700% increase in the number of licenses issued to minorities since the application of section 1071 to minority owned broadcast and cable properties (15 years).

Industry Total	Black	Hispanic	Asian	Native American	Minority Totals
AM Stations 4,929	101 (2%)	76 (1.5%)	1 (0%)	2 (0%)	180 (3.7%)
FM Stations 5,044	71 (1.4%)	35 (.7%)	3 (.1%)	3 (.1%)	112 (2.2%)
TV Stations 1,155	21 (1.8%)	9 (.8%)	1 (.1%)	0 (0%)	31 (2.7%)
Cumulative Totals 11,128	**193(1.7%)**	**120(1.1%)**	**5(0%)**	**5(0%)**	**323 (2.9%)**

Of the total number of licenses currently held by minorities the data available indicates that up to 30% of the radio stations were acquired with the use of a tax certificate and up to 90% of the television stations were acquired with the use of a tax certificate. Data is unavailable for cable. Also, NABOB reports that the vast majority of existing minority broadcast owners have utilized tax certificates during the past 15 years either: 1) as an incentive to attract initial investors; 2) to purchase a broadcast property; or 3) to sell a broadcast property to another minority.

During the past 15 years, the issuance of minority tax certificates has resulted in the sale or transfer of over 260 radio licenses, 40 television licenses and 30 cable licenses, totalling approximately 330 tax certificates issued for minority deals. In contrast, approximately 117 non-minority tax certificates have been issued during the life of Section 1071.

Type of License	Certificates Issued	of Total
Minority Radio	260	58%
Minority TV	40	9%
Minority Cable	30	7%
Non-minority	117	26%
Total	447	100%

There was a significant increase in the number of minority tax certificates issued between the years 1987 and 1989. This increase corresponds with the robust trading experienced by the broadcast and cable industry during this period. The level of tax certificate activity also declined significantly in 1991 when federal restraints were placed on highly leveraged transactions and access to capital became a problem for the industry as a whole.

Year	Certificates Issued	of Total
1978	4	1%
1979	12	4%
1980	10	3%
1981	15	5%
1982	15	5%
1983	10	3%
1984	11	3%
1985	17	5%
1986	18	5%
1987	33	10%
1988	33	10%
1989	45	14%
1990	46	14%
1991	18	5%
1992	14	4%
1993	21	6%
1994	8	2%
Total	330	100%

Diversity of Ownership:

Ownership data is available for approximately 55% (142) of the tax certificates issued in minority radio transactions. From this sample, there are approximately 77 separate owners (54%) of radio properties listed. Ownership data is available for approximately 98% (39) of the tax certificates in television transactions. From this sample there are approximately 21 (54%) separate owners listed. Ownership data is available for all 40 of the tax certificates issued in cable television transactions. From this listing, there are 20 (66%) separate owners of cable properties. In sum, the data indicates that well over half of

the broadcast and cable properties receiving tax certificates are owned by different individuals or companies.

The racial allocation of the minority tax certificates are as follows:

African Americans	64%
Hispanics	23%
Native American	1%
Alaskan Native	4%
Asian	8%

Holding Period:

Although FCC regulations require the buyer of a property for which a tax certificate is issued to hold that station for one year, the overwhelming majority of minority buyers retain their licenses for much longer. Example, of the total certificates issued, minority buyers of radio and television properties have held their licenses for an average of 5 years. Cable is excluded from these figures because there is insufficient data available on the holding period. However, the Communication Act requires that all cable systems be held for a minimum of three years following either the acquisition or initial construction of such system. Holding period information is available for approximately 83% of the minority radio stations and all of the minority television stations.

Size of Transactions:

After reviewing a sample consisting of 55% of radio stations and 78% of television stations, the data indicates that the great majority of the sales transactions in which tax certificates are awarded are relatively small, averaging a sales price of $3.5 million for radio stations and $38 million for television stations. Data is not available for the 30 cable deals, although we know that cable deals tend to be larger transactions.

FCC has no data available on the amount of tax gains actually deferred.

Other Findings:

Although the tax certificate program is not the only FCC program designed to encourage transfer of licenses to minorities, it is the most frequently used program and is often used in concert with the other programs. In addition, various entrepreneurs and industry associations have submitted testimony to FCC which indicates that: "But for the tax certificate program the acquisition of existing broadcast and cable properties by minorities would be significantly more difficult to consummate."

[Tax Certificate chart retained in Committee files.]

Chairman JOHNSON. Mr. Alarcon.

STATEMENT OF RAUL ALARCON, JR., PRESIDENT AND CHIEF EXECUTIVE OFFICER, SPANISH BROADCASTING SYSTEM, INC.

Mr. ALARCON. Good afternoon, Madam Chairwoman, members of the Oversight Subcommittee. My name is Raul Alarcon, Jr., president and chief executive officer of the Spanish Broadcasting System. I thank you for the opportunity of addressing you here today.

In your hearing announcement you stated that these hearings would examine, among other things, whether the tax incentive provided in section 1071 of the Internal Revenue Code, in fact, fosters minority ownership of broadcast facilities. It is precisely this question that I wish to address today. Let me state at the outset that the tax certificate program, in my opinion, is a tremendously valid and beneficial policy and a tribute to the Congress that mandated it and to the FCC that implements it.

Let me tell you a little about the Spanish Broadcasting System. SBS is a family-owned and operated radio company founded in 1983. My father, one of the founders, was born in Cuba, as I was, where he owned a chain of radio stations that were seized by the Castro government in 1960. We emigrated to the United States with very few possessions and became U.S. citizens. For 20 years my father worked his way up in the Spanish language radio and, for him, the purchase of our first station in 1983 represented the fulfillment of his dream to return to the business of owning and operating broadcast stations.

Our first station was a small AM station licensed in Newark, N.J. The owners of SBS, who are all Hispanic, mortgaged everything they had to start this station. However, we would never have emerged from the starting gate if not for the government's tax certificate program. The tax certificate policy encourages sellers to take the risk of selling to small, less well-known companies and allows minority-controlled entities to gain a foothold in an industry that is dominated by historically established major media corporations.

Today, 12 years after we purchased our first station, we are the largest Hispanic-owned media company in the United States. We operate 7 radio stations in the major markets—New York City, Los Angeles, and Miami. Each of these stations provides Spanish language programming and public service that is targeted to the community it serves. WSKQ FM, our New York FM, is in fact the only Spanish language FM station in New York City.

I am proud to say that our stations are public service oriented and financially successful. We own the No. 1-rated radio station in Los Angeles, Calif., surpassing all other English and Spanish language competitors. We are the fifth-rated radio station in the highly competitive New York market, making us the first foreign language station to break into the top 10 in the history of New York City audience ratings.

The FCC's tax certificate policy made all this possible. Without the tax certificate, it is highly questionable whether any of the sellers would have sold their stations to SBS. Each of the SBS stations was purchased under the issuance of a tax certificate. We believe

that the company itself, SBS, is proof of the success of the tax certificate policy.

The fact of the matter is that it is hard for anyone to break into the broadcast industry. Many of the barriers to entry are created by the simple fact that the radio spectrum is limited and broadcast licenses are a scarce and highly valued commodity, especially in the major markets where Hispanic listeners are concentrated. Available stations are getting harder to find, particularly for the minority buyer. The FCC's decision to relax the duopoly ownership rules has created a new group of in-market buyers, in effect, foreclosing many opportunities for minorities in the future.

The tax certificate policy is the least intrusive way for the government to accomplish the goal of increasing minority ownership of broadcast stations. It involves no government loans, no government loan guarantees, no set-asides, and no government mandates, nor is it a giveaway. It is, as many commentators have observed, a deferral—a deferral—not a waiver of tax. It works. The advantages offered by the tax certificate make it possible for minority buyers to compete for and purchase broadcast stations.

Let me dispel a common myth. There is an assumption that the tax certificate allows minority buyers to purchase stations at a discount. This has not been my experience. Spanish broadcasting has paid market prices for its stations. But without the ability to defer the gain on a sale, many station owners would not sell their stations at all, let alone to a minority buyer with limited resources.

What difference does Hispanic ownership make? As broadcasters, we believe it makes a big difference. I have heard people say Hispanic ownership is of no real consequence. If this is true, why was there no Spanish language FM station in New York before we inaugurated WSKQ FM 5 years ago? Similarly, why were Asians the first to establish Asian language stations? Why were African-American broadcasters pioneers in introducing the urban format in major cities?

The fact is we care about the communities we serve. I have heard complaints about minorities buyers making quick sales following tax certificate transactions. In 12 years of operations, we have never sold a station. We are invested in this business, committed to the business, and committed to the communities we serve.

During the gulf war, during Hurricane Andrew, the California earthquake, and the civil disturbances in Los Angeles, we provided news and information in Spanish to our communities in New York, Florida, and California. These broadcasts included information regarding emergency relief services and fundraising efforts on behalf of thousands of victims in need of assistance. No mainstream broadcasters speak to this community in the way we do, nor, in my view, are they capable of doing so.

Also, we provide jobs, new jobs, both for on-air as well as administrative personnel. We provide market opportunities and revenues for the businesses that advertise on SBS radio stations, and we showcase talent that would not otherwise receive air play or recognition.

I have one more paragraph, Madam Chair.

Chairman JOHNSON. OK.

Mr. ALARCON. As I have said, the tax certificate program made all of this possible. In our opinion, an opinion that is shared by millions of Spanish radio listeners, the tax certificate program works and works well. It should be retained.

Indeed, if we are to measure the effectiveness of government programs by the many social benefits they engender, then the tax certificate program should not only be retained, but other even more far-reaching and innovative measures to encourage minority ownership in the media should be investigated and implemented.

Thank you, Madam Chair.

[The prepared statement follows:]

STATEMENT OF RAUL ALARCON, JR.
PRESIDENT AND CHIEF EXECUTIVE OFFICER
SPANISH BROADCASTING SYSTEM, INC.
before the
Subcommittee on Oversight
Committee on Ways & Means
United States House of Representatives
Washington, D.C.
January 27, 1995

Madame Chairman and Members of the Oversight Subcommittee. My name is Raul Alarcon, Jr. I am the President and Chief Executive Officer of Spanish Broadcasting System, Inc. I am pleased to have this opportunity to testify before the Subcommittee concerning the government's policy of issuing tax certificates on the sale of certain telecommunications facilities. This program has several purposes, one of which is to encourage the sale of telecommunications properties to minority owned or controlled companies.

In your hearing announcement, you stated that these hearings would examine, among other things, "whether the tax incentive provided in section 1071 [of the Internal Revenue Code] in fact fosters minority ownership of broadcast facilities." It is this question that I wish to address today.

Let me begin by telling you something about Spanish Broadcasting System. SBS is a family-owned and operated radio company, founded in 1983. My father, one of the founders, was born in Cuba, as I was. In Cuba, he owned a chain of radio stations that were seized by the Castro government. We emigrated to the United States with very few possessions. We became United States citizens, and for twenty years my father worked his way up in Spanish language radio, working jobs in programming, sales, and advertising. For him, the purchase of our first station in 1983 represented the fulfillment of his dream to return to the business of owning and operating broadcast stations.

Our first station was a small, AM station licensed to Newark, New Jersey. This station was the first Spanish-language station introduced into the New York/New Jersey radio market in more than a quarter century. The owners of SBS, who are all Hispanic, mortgaged everything they had to start this station. However, we would never have emerged from the starting gate if not for the government's tax certificate program. The tax certificate policy encourages sellers to take the risk of selling to small, less well-known companies, and allows minority controlled companies to gain a foothold in an industry that is dominated by successful, established, and well-financed companies.

Twelve years after we purchased our first station, we are the largest Hispanic-owned media company in the United States. We operate seven radio stations in major markets: WSKQ-AM and FM serving New York, KXED-AM and KLAX-FM in Los Angeles, WCMQ-AM and FM serving Miami, and WZMQ in Key Largo. Each of these stations provides Spanish language programming and public service that is targeted to the community it serves. WSKQ-FM is, in fact, the only Spanish-language FM station in New York City.

I am proud to say that our stations are public service oriented and financially successful. We own the number-one rated radio station in Los Angeles, California, beating out all other English and Spanish-language competitors. We are the fifth-rated radio station in the highly competitive New York market, making us the first foreign language station to break into the Top Ten in the history of New York City audience ratings.

The FCC's tax certificate policy made this possible. Without the tax certificate policy, it is highly questionable whether any of the sellers would have sold their stations to SBS. Each of the SBS stations was purchased under a tax certificate -- and we believe that SBS is proof of the success of that policy.

In 1978, when the FCC announced that it would use its authority to grant tax certificates as a means of encouraging minority ownership of broadcast facilities, the Commission observed that "diversification in the areas of programming and ownership ... can

be more fully developed through ... encouragement of minority ownership of broadcast properties."[1]

We recognize that this policy has been controversial. Yet even its most vociferous critics have cited Spanish Broadcasting as one of the program's success stories. It is important to keep in mind, therefore, that this success is a direct result of the tax certificate policy. The tax certificate made it possible for us to buy each station we own -- and made it possible for us to offer Spanish language programming that serves America's large and growing Hispanic community. In the case of each purchase, the seller has made the issuance of a tax certificate a condition of the sale.

The fact of the matter is that it is hard for anyone to break into the broadcast industry. Many of the barriers to entry are created by the simple fact that the radio spectrum is limited -- and broadcast licenses are a scarce and highly valued commodity. Barriers to entry are especially high in the major markets where Hispanic listeners are concentrated. Competition is keen. Stations in the Top Ten radio markets range in price from $40 million to $150 million.

Available stations are getting harder to find, particularly for the minority buyer. The FCC's decision to relax the duopoly ownership rules has made it possible for broadcasters to buy second, third, and fourth stations in markets that were previously closed to them -- thereby creating a new group of buyers -- and foreclosing many opportunities for minorities. In this environment, Blacks, Hispanics, and other minorities that have historically lacked access to capital markets are now faced with even more limited opportunities to acquire and operate radio stations, and -- in many cases -- are forced to bid against media giants with vast resources.

The tax certificate policy is the least intrusive way for the government to accomplish the goal of increasing minority ownership of broadcast stations. It involves no government loans, no government loan guarantees, no setasides, and no government mandates. Nor is it a giveaway. It is, as many commentators have observed, a deferral -- not a waiver -- of tax. And it works. The advantages offered by the tax certificate make it possible for minority buyers to compete for and buy broadcast stations.

The tax benefit goes to the seller -- not to the minority buyer. And let me dispel one common myth. There is an assumption that the tax certificate allows minority buyers to buy stations at a discount. This has not been my experience. Spanish Broadcasting has paid market price for its stations -- but it was the tax certificate that made the deal possible. Without the ability to defer the gain on a sale, I know from experience that many station owners would not sell their stations at all -- let alone to a minority buyer with limited resources.

What difference does Hispanic ownership make? As broadcasters, we believe it makes a big difference. I have heard people say that Hispanic ownership is of no real consequence -- that any smart broadcaster will program to the Hispanic market. If this is true, why was there no Spanish-language FM station in New York before we started WSKQ-FM five years ago? Similarly, why did it take Asians to establish the first Asian language stations? Why are some of the highest-rated urban formatted stations owned by Black broadcasters?

The fact is -- we care about the communities we serve. I have heard complaints about minority buyers making quick sales following tax certificate deals. In 12 years of operation, we have never sold a station. We are invested in this business, committed to it and to the communities we serve. The tax certificates have made it possible for SBS -- a 100% Hispanic-owned company -- to address the needs, interests, and problems of the Hispanic community.

During the Gulf War, during Hurricane Andrew, during the California earthquake and the civil disturbances in Los Angeles, we provided news and information -- news of special interest to the Hispanic communities -- in New York, Florida, and

---

[1] Statement of Policy on Minority Ownership of Broadcasting Facilities, May 25, 1978, FCC 78-322, at 4.

California. Our AM stations have morning news blocks dedicated to news and local affairs. We sponsor community events. We are involved in the fabric of the community and its neighborhoods, and our numerous public service awards attest to our standing in the community. No mainstream broadcasters speak to this community in the way that we do, nor -- in our view -- are they capable of doing so.

We provide jobs -- new jobs -- both for "on-air" as well as administrative personnel. We provide market opportunities and revenues for the businesses that advertise on SBS radio stations. We provide a showcase for talent that would not otherwise receive airplay or recognition. If other, mainstream stations are now discovering Hispanic markets and Hispanic programming, it is because we pointed the way -- and continue to lead. In 1983, when we purchased our first station, there were fewer than 100 Spanish-language radio stations in the United States. Today, there are more than 300 Spanish-language formatted stations.

The tax certificate program, like all programs, has its failures and its successes. SBS is a success story. There are others. We can only speak from our experience, but -- in our view -- doing away with the tax certificate program, as some have suggested, would be short-sighted -- and offers no real guarantees of new tax revenues.

First, as noted, the tax certificate program only permits a deferral of tax -- not a waiver. Second, it cannot be assumed that, but for the tax certificate program, each and every sale to a minority owner would have generated tax revenues in the year of the sale. Many sales would never happen in the first place. Many owners would not sell their properties at all if they couldn't defer the taxes -- or they would search for other tax-favored ways to sell their properties.

Finally, to the extent minority owners have turned stagnant properties into money-making ventures, created jobs, and opened new markets, the tax certificate program has generated taxes -- and keeps doing so, year in and year out. The tax certificates facilitate such new investment, and bring new ideas and new voices to the broadcast community, a community that must be -- by definition -- a reflection of America's pluralistic society.

The tax certificate program made it possible for us to buy our first radio station. It enabled us to grow from one small station to become the largest Hispanic media company in the nation -- and a market leader in the largest radio markets in the United States. We are proud of our accomplishments -- and we are proud of our record of service to the community.

In our opinion, an opinion that is shared by millions of Spanish radio listeners, the tax certificate program works and works well. It should be retained. Indeed, if we are to measure the effectiveness of government programs by the many social benefits they engender, then the tax certificate program should not only be retained, but other, even more far-reaching and innovative measures to encourage minority ownership of the media should be investigated and implemented.

We thank you for this opportunity to present our views.

Chairman JOHNSON. Thank you very much.
Ms. Sutter.

STATEMENT OF DIANE SUTTER, PRESIDENT, SHAMROCK TELEVISION, BURBANK, CALIF., ON BEHALF OF AMERICAN WOMEN IN RADIO AND TELEVISION, INC.

Ms. SUTTER. Thank you. Good afternoon Chairperson Johnson and members of the subcommittee. I am Diane Sutter, president of Shamrock Television and past national president of American Women in Radio and Television. Shamrock Television and Shamrock Broadcasting operate radio and televisions stations in the United States and are seeking to acquire additional stations.

I appear before this subcommittee today on behalf of AWRT, and to express AWRT's strong support for the use of tax certificates by the FCC to increase minority ownership of broadcast and other mass media properties. Since our testimony has been filed with this subcommittee, I will summarize it.

AWRT is a nonprofit national organization of professional men and women working in the electronic media.

Chairman JOHNSON. You don't have to feel rushed. You do have your 5 minutes.

Ms. SUTTER. Thank you. The mission of AWRT is to enhance the impact of women in the electronic media. AWRT strongly supports the policies to promote the ownership of broadcast and other communications properties by women and minorities, including the FCC's award of tax certificates pursuant to section 1071 to increase minority ownership.

Consistent with the underlying intent of section 1071, tax certificates have proven to be a valuable incentive that furthers the FCC's policy of increasing ownership of broadcast stations and cable properties by qualified minorities. AWRT also supports the extension of the FCC's tax certificate policy to include the availability of section 1071 certificates to investors and qualified women-owned companies to advance diversity which does not now exist.

Based on my experience in the broadcast industry, I can tell you firsthand that the availability of tax certificates can be a pivotal factor in evaluating a broadcast sale or an investment.

AWRT supports rigorous review by the FCC of the eligibility of companies for tax certificates. The potential for abuse should not be used as a basis to eliminate an appropriate and effective market-based incentive for increasing minority ownership of broadcast stations and an incentive that could appropriately be used to increase ownership of broadcast stations and other mass media facilities by women.

As you have heard, and will hear today, the use of tax certificates has directly buttressed the FCC's important goal of increasing minority ownership and diversity of broadcast and cable facilities. Tax certificates have added the value of stimulating investment in mass media properties by minority-owned companies.

By requiring the recipient of a tax certificate to reinvest the sale proceeds in a qualified property, the awarding of 1071 stimulates economic growth, specifically 1071's requirement of investing the proceeds in a qualified replacement properties to defer tax investments not to eliminate them.

Tax certificates also provide a direct market-based incentive for investment in minority-owned companies. Market-based incentives that increase access to capital are essential to redressing the underrepresentation of minorities and women in the broadcast industry.

Statistics on women-owned businesses demonstrate the continued barriers that women face in raising capital required to acquire broadcast and cable properties. The discrimination that exists against women entrepreneurs has been recognized by Congress. Congress' recognition of the barriers faced by women in obtaining financing for business ventures, as well as in statistics included in our testimony on the low level of representation of women ownership in broadcast stations, fully supports the extension of the FCC's policy of awarding 1071 tax certificates to qualified women-owned companies seeking to acquire broadcast and cable facilities to provide incentives for women ownership of broadcast and cable properties.

The statistics demonstrate what Congress clearly recognized when it enacted the Omnibus Budget Reconciliation Act of 1993, and in the order to the FCC to use spectrum auctions to award licenses for the commercial mobile radio services; that the dissemination of spectrum licenses among a wide variety of applicants, including businesses owned by women, is an important and legitimate government interest.

The same congressional concern about underrepresentation by women, and the provision of spectrum-based services that resulted in that congressional mandate, warrants the use of section 1071 tax certificates as an incentive to increase female ownership of broadcast and cable facilities.

AWRT has encouraged the FCC to conduct a survey and study the current level of women ownership of broadcast facilities. The FCC has not conducted such a survey since 1982. Such a study would enable the FCC and Congress to identify the trends in broadcast ownership and provide an important foundation for future policy decisions.

We would like to work with this subcommittee and to supplement our testimony by providing additional written comments in relation to things we have heard today, and we encourage the subcommittee to look for ways in which we can increase the diversity which we believe minority certificates have brought to the picture by including women.

[The prepared statement follows:]

TESTIMONY OF DIANE SUTTER
ON BEHALF OF
AMERICAN WOMEN IN RADIO AND TELEVISION, INC.
BEFORE THE
HOUSE WAY AND MEANS COMMITTEE
SUBCOMMITTEE ON OVERSIGHT

JANUARY 27, 1995

Good morning, Chairwoman Johnson and members of the Subcommittee. I am Diane Sutter, President of Shamrock Television and past national president of American Women in Radio and Television, Inc. ("AWRT"). Shamrock Television is the owner of a small market network television station. Shamrock also is actively engaged in seeking to acquire additional small and medium market television stations. Shamrock Broadcasting, Inc., our affiliate, owns 18 major market radio stations. It is an honor for me to appear before this Subcommittee today on behalf of AWRT and to express AWRT's strong support for the use of tax certificates by the FCC to increase minority ownership of broadcast and other mass media properties.

AWRT is a non-profit, national organization of professional women and men who work in radio, television, cable, advertising -- essentially the electronic media -- and closely allied fields. The mission of AWRT is to enhance the impact of women in the electronic media and allied fields by educating, advocating, and acting as a resource to its members and the industry. AWRT strongly supports appropriate policies to promote the ownership of broadcast and other communications properties by women and minorities. AWRT believes that the FCC's award of tax certificates pursuant to Section 1071 to increase minority ownership of broadcast and cable properties is an example of just such an appropriate market-based policy. Consistent with the underlying intent of Section 1071, tax certificates have proven to be a valuable incentive that furthers the FCC's policy of increasing ownership of broadcast stations and cable properties by qualified minorities. AWRT also supports the extension of the FCC's tax certificate policy to include the availability of Section 1071 certificates to investors in qualified women-owned companies seeking to acquire broadcast and cable properties and to companies that sell their existing broadcast and cable properties to qualified women-owned companies.

Since adoption of the FCC's policy to award tax certificates to increase minority ownership of broadcast properties in 1978, tax certificates have proven to be one of the most valuable financial incentives in broadcast acquisitions. As of October 1994, 283 tax certificates have been awarded by the FCC for broadcast stations while 25 have been issued for cable sales. Based on my experience in the broadcast industry, I can tell you first hand that the availability of tax certificates can be a pivotal factor in evaluating a broadcast sale or investment.

To ensure the appropriate use of Section 1071 certificates, AWRT supports rigorous review by the FCC of the eligibility of companies for tax certificates. Stringent case-by-case review of the ownership and qualifications of a company on which an application for a tax certificate is based can be conducted by the FCC to weed out any potential abuses of the FCC's tax certificate policy. The general, unsubstantiated fear of such abuses should not be used as a basis to eliminate an appropriate and effective market-based incentive for increasing minority ownership of broadcast stations and an incentive that could be appropriately used to increase ownership of broadcast stations and other mass media facilities by women.

Past studies have shown that the use of tax certificates has directly buttressed the FCC's important goal of increasing minority ownership of broadcast and cable facilities. Tax certificates have the added value of stimulating investment in mass media properties and minority-owned companies. By requiring the recipient of a tax certificate to reinvest the sale proceeds in "qualified replacement property," the awarding of Section 1071 tax certificates stimulates economic growth. Specifically, Section 1071's requirement of reinvesting the proceeds of the tax certificate in "qualified replacement property" to defer taxation fuels

additional investment by the seller. This investment, rather than the mere pocketing of the sale proceeds, stimulates additional economic growth in the form of economic expansion, additional job growth and the creation of new and greater market opportunities. Tax revenues also are derived even if the investor who receives a tax certificate elects to reinvest the proceeds of the tax certificates in other existing media properties rather than new properties because the investment in the existing property will trigger a taxable sale of that existing property.

The tax revenues gained from the multiplier effect of this additional investment and the continued operation of the broadcast and cable properties by minority-owned companies may well offset the revenue losses from deferral of taxation permitted by the award of a Section 1071 tax certificate. In addition, award of a Section 1071 certificate merely permits deferral of the tax. The tax ultimately will be realized upon the sale of the replacement property.

Tax certificates also provide a direct market-based incentive for investment in minority-owned companies. Initial investors in minority-owned companies are eligible for a Section 1071 certificate on the sale of their interests. Market-based incentives that increase access to capital are essential to redressing the under-representation of minorities and women in the broadcast industry. Statistics on women-owned businesses demonstrate the continued barriers that women face in raising the capital required to acquire broadcast and cable properties. The discrimination that exists against women entrepreneurs has been recognized by Congress. Seven years ago, due in large part to the leadership of women in Congress, Congress enacted the Women's Business Ownership Act of 1988. In 1992, Congress again sought to redress the hurdles that women and minorities face in raising capital by enacting the Small Business Credit and Business Opportunity Enhancement Act of 1992. Congress' recognition of the barriers faced by women in obtaining financing for business ventures as well as statistics on the low level of representation of women in ownership of broadcast stations fully support extension of the FCC's policy of awarding Section 1071 tax certificates to qualified women-owned companies seeking to acquire broadcast and cable facilities and to provide incentives for women-ownership of broadcast and cable properties.

Thirty-two percent (32%) of all small businesses were owned by women in 1991 according to the U.S. Small Business Administration.[1/] Despite these encouraging general statistics, this business growth has not been mirrored or even suggested in the broadcast industry. In 1987, the latest year for which relevant statistics currently are available, only 26 television stations were owned and controlled by women out of 1,342 television stations operating in the United States.[2/] In other words, in 1987 only 1.9% of all television stations were owned and controlled by women. Out of the 10,244 radio stations operating in the United States at that time, only 394, or 3.8% of all radio stations, were owned 50% or more by women.[3/] Thus, in 1987, only 420 out of a total of 11,586 broadcast stations were owned and controlled by women.

Other studies confirm the low level of representation of women in the ownership ranks of broadcast facilities. A Congressional Research Service Study entitled "Minority Broadcast Station Ownership and Broadcast Programming: Is There a Nexus?," released in 1988, found that women held a 51% or greater ownership interest in 7.1% of the broadcast stations surveyed. A study commissioned by the FCC in 1982 found that women held 50% or more of the stock of the licensees of 8.5% of the AM stations, 9% of the FM stations and 2.8% of the television stations across the country. Although the 1982 study and the 1988

1/ *See Women Business Owners*, Congressional Caucus on Women's Issues (1992).

2/ *See Women Owned Business*, U.S. Department of Commerce (1990) (based on 1987 economic census); *see also* 1988 *Broadcasting/Cablecasting Yearbook*, p. A-2. More recent statistics on women-owned businesses are expected to be released by the Bureau of the Census in June 1995.

3/ *Id.*

Congressional Research Service study are not directly comparable because they use different definitions of control (50% and 51%), the comparison is still useful. The rough comparison reveals that women controlled 7.9% of stations in 1982 and only 7.1% in 1988 -- if not a decline, then certainly a stagnation, in the number of women-owned broadcast stations.

These numbers obviously are at odds with the number of women in the United States and in the U.S. workforce. According to the 1990 U.S. Census, women represented 46% of the civilian labor force in the United States. The FCC's latest employment statistics also indicate that women and minorities continue to be employed in the broadcasting industry at levels significantly below their representation in the overall workforce. In 1993, women constituted only 39.6% of the broadcast workforce, with 32.8% at the professional managerial level. In the cable industry, total employment of women decreased from 41.7% to 41.6, 30.9% of the professional/managerial jobs in the cable industry are held by women.[4/]

These statistics demonstrate what Congress clearly recognized when it enacted the Omnibus Budget Reconciliation Act of 1993 and authorized the FCC to use spectrum auctions to award licenses for commercial mobile radio services -- that the dissemination of spectrum licenses among a wide variety of applicants, including businesses owned by women, is an important and legitimate government interest. The same Congressional concern about under-representation by women in the provision of spectrum-based services that resulted in that Congressional mandate warrants the use of Section 1071 tax certificates as an incentive to increase female ownership of broadcast and cable facilities.

Finally, AWRT has encouraged the FCC to conduct a survey and study on the current level of women ownership of broadcast facilities. A study on female ownership of broadcast licenses has not been undertaken since the FCC's study in 1982. Such a study would enable the FCC and Congress to identify trends in broadcast ownership and provide an important foundation for future policy decisions.

AWRT looks forward to continuing to work with the Congress and this Subcommittee on issues of importance to women in the communications industry. I appreciate the opportunity to testify and would be pleased to respond to any questions.

4/ *FCC Equal Employment Opportunity Trend Report* (June 22, 1994).

Chairman JOHNSON. Thank you very much. Thank you for your input.

My colleague, Mr. Hancock, does have a question for the panel, so he has gone to vote. He will come back. If you would be so kind as to wait, he has a question, and then we will invite the other panel.

Unfortunately, I cannot return after this vote, so I will review the other testimony in writing.

I do, though, invite you all to submit, having heard the substance of the hearing, your thoughts about how this law can be improved. It clearly has some strengths, it clearly has some weaknesses. We have very little record to go on. The role of congressional oversight in this area has not been an honorable one in the last few years, and so we will be making some changes in this law, and I invite your input into those changes so that we may preserve its strengths and correct its weaknesses.

Thank you for your participation.

Re: Section 1071
Supplement to Hearing Testimony

Dear Chairman Johnson:

As you will recall, I was privileged to testify at the Subcommittee's January 27th hearing on the Federal Communications Commission's use of Section 1071 tax certificates to increase minority ownership of broadcast facilities. This letter supplements that testimony, and I ask that a copy be included in the record to the Subcommittee's hearing.

First, during the hearing, the observation was made that tax certificate sales increased substantially in the 1980's, and some questioned the reason for this uptick. I submit that the reason for this increase was the overall health of the economy in the 1980's. During the 1980's, money was available for entrepreneurs looking for investment properties -- including minority buyers with tax certificates -- and a

substantial number of television and radio stations were bought and sold. Some were tax certificate sales, but I suspect that the number of tax certificate sales is directly related to the number of sales generally, and ebbs and flows with the market for broadcast stations.

Second, during the hearing it was noted that the Section 1071 tax certificate is not the only means by which the FCC seeks to increase minority ownership. In particular, mention was made of the FCC's distress sales policy, which allows broadcasters at risk of losing their license to sell their stations to qualified minority buyers at a price equal to 75% or less of the station's fair market value.

It is true that the FCC has used its distress sales policy to encourage sales to minority buyers -- but the distress sales policy could never substitute for the tax certificate. First, few stations are threatened with license revocation in any given year, let alone designated for a revocation hearing.* Second, of the small number, even fewer stations are available in markets with sizable minority audiences. I speak from experience.

Several years ago, on procedural grounds, I lost the chance to purchase a New York area station under the distress sale policy when the Commission, after a prolonged proceeding, decided to revoke the broadcaster's license, thereby foreclosing any distress sale. After that sale fell through, it was ten years before I again had an opportunity to buy a New York station -- at a cost of $55 Million, one of the highest prices ever paid for a New York City station. Even then, I was only able to purchase the station because I could offer the buyer the tax certificate.

---

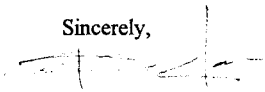
* *In his testimony before the Subcommittee, FCC General Counsel William Kennard stated that "approximately 330" tax certificate sales between 1978 and 1994 involved sales to minority-owned entities. During that same time period, according to the FCC, only 42 distress sales have been approved. In the Matter of Policies and Female Ownership of Mass Media Facilities, FCC 94-323 (Released January 12, 1995), at 4.*

Honorable Nancy Johnson
February 6, 1995

The tax certificate program has come under serious criticism in recent weeks -- and, as you suggested in statements during the hearing -- it may be appropriate for the Subcommittee to consider ways in which the policy can be made more accountable. Speaking, however, as an Hispanic-American broadcaster who has purchased every one of his stations with a tax certificate, who has never sold a station, and who has programmed every one of his stations to reach the Hispanic audience, I urge you to resist efforts to undertake wholesale repeal of Section 1071.

I am available to discuss this and other issues with you at your convenience.

Sincerely,



Raul Alarcon, Jr.

cc: Honorable Charles Rangel
Honorable Robert Masui

[Recess.]

Mr. HANCOCK [presiding]. Thank you very much for sticking around for a few minutes. I apologize, but there were a couple of questions that I had on my mind that I would like to ask, even though I was not here for all of your testimony.

Mr. Sutton, you indicated in your testimony that you had been involved in various situations involving the tax benefit of the minority enterprise. How many have you been involved in?

Mr. SUTTON. In both instances I sold to minorities to encourage others to get into the business; two instances.

Mr. HANCOCK. OK. You say in two instances.

Mr. SUTTON. Yes.

Mr. HANCOCK. Have you been involved in more than one?

Mr. WINSTON. I am the executive director of the trade association. I am not a station owner, sir.

Mr. HANCOCK. OK. Have you been involved in one?

Mr. BROWN. I have never been involved in it.

Mr. HANCOCK. OK.

Mr. ALARCON. Yes, Congressman, I have been involved in five transactions where tax certificates have been issued.

Mr. HANCOCK. OK. Here again, I apologize for asking you to wait for 10 or 15 minutes, but Mrs. Sutter, there is one question. Are you making a real good case here for capital gains for everybody?

Ms. SUTTER. Well, interestingly enough, one of the arguments for the minority tax certificate is that it can, in the same way capital gains is designed to, encourage reinvestment and the stimulation of the economy, that this serves that same purpose. So I would see the likeness to it, in that it can also be a spur to getting investment in the economy, and doing that while at the same time creating diversity, which of course capital gains does not.

Mr. HANCOCK. Well, I want to get this in as part of the record. There are people that say that capital gains only benefits the rich, and yet the situation and the case we are making here is that capital gains treatment, through tax deferment, benefits minorities pretty strongly.

This is similar to capital gains. In effect, it would apply in basically the same way, except it is earmarked as a tax benefit rather than just an across-the-board capital gains.

Ms. SUTTER. Well, it is a tax deferment subject to reinvestment in the economy.

Mr. HANCOCK. Which, in effect, is what the principle of capital gains is. It defers the taxes and that way it creates more investment and creates more economic stimulation.

Ms. SUTTER. Right. The difference with this is that it is mandated as a prerequisite to getting the tax certificate.

Mr. HANCOCK. Right. In other hearings we will be talking about capital gains and the capital gains treatment, so I just wanted to get it into the record.

Thank you very much. I appreciate it. I apologize again for keeping you here so long.

Yes, sir.

Mr. WINSTON. Mr. Hancock, may I speak to the last point you raised about the general capital gains tax reduction and how it would compare with respect to the tax certificate?

The critical point that needs to be understood about the tax certificate is that the tax certificate causes the transaction to occur to a minority. What happens is, if I am looking to sell a desirable broadcast facility, there are potential buyers lined up. Many of those potential buyers can just call their bank and have the funds wired the next day, if I strike a deal with you.

The problem is that, for minorities, it means going out, raising funds, dealing with bankers you have never dealt with before, and it takes time. If I have a desirable property to sell, I do not want to waste time waiting for a minority to get the money. But if a minority is going to give me a tax certificate, then there is a time value that comes with that tax certificate, and I am willing to wait for him or her to get their money together to make that transaction occur.

So if it is not uniquely geared toward minorities, minorities will not get those transactions. Someone will get a tax capital gains benefit but it will not be the minorities.

Mr. HANCOCK. I appreciate the point that you are making, and there is no question that it works that way. But one of the things that is happening right now in our economy is there are a lot of transactions that are just on the verge of being closed, that are waiting now to see what the U.S. Congress does on capital gains. So the whole thing fits together.

Like I say, I just wanted to make sure that we understand that capital gains, if we get it through up here, benefits everybody, including minorities. That is the only point, and I wanted it in the record.

Thank you very much for your testimony.

I guess this is the final panel for the day. I am assuming most of you have been here since the hearing started this morning and know there has been a lot of testimony. As you have been here, you know we are going to stick fairly close to the 5-minute time limit. Your written statements will become part of the record, and we would appreciate it if you would keep your verbal testimony as concise as possible so we can abide by the 5-minute testimony rule.

We are not going to cut you off. You have taken your time to be here, and we want to make sure that you have the opportunity to make your full statement.

So with that, Mr. Oxendine.

STATEMENT OF JOHN E. OXENDINE, PRESIDENT AND CHIEF EXECUTIVE OFFICER, BROADCAST CAPITAL FUND, INC., AND PRESIDENT AND CHIEF EXECUTIVE OFFICER, BLACKSTAR COMMUNICATIONS, INC.

Mr. OXENDINE. That is correct, thank you. Thank you Congressman Hancock, and I really appreciate the opportunity to be here today. I have my comments for the record and I am just going to make a few points.

Right now I am president of the Broadcast Capital Fund. We have funded, made 50 commitments to minorities over the last 14 years I have been running the company; two-thirds black station owners and one-third Hispanic small deals. We have used tax certificates.

I am also president of a company called Black Star Communications. I own three little television stations. I also spent the last 2 years on the Small Business Advisory Committee at the FCC, working on what we could do for small businesses, women, and rural telephone companies.

I would just like to say for the record that I certainly support the minority tax certificate, even though it has its challenges, for two major reasons.

The first is that it is important for diversity. In the 50-some-odd deals that we have done, we have found that it is important to have ownership. When you look at the 300-plus television markets around the country, if we, as minorities, do not have the No. 1, 2, 3, or 4 stations in terms of ratings and market share, it is important that we be able to find financing so we can own some of the smaller stations in the market. We usually own or can purchase most of the smaller stations in the market.

Most of our deals have been in the small to medium markets and the tax certificates have been very, very important there. Where the owners are there and live in the city of license, we have seen a real change. Because if the ownership is there and there is a diversity of ownership, there is a diversity of message to the community. I have seen that in the 14 years I have been in broadcasting.

Importantly, the tax certificate has facilitated small business development because these are some small radio stations that otherwise would not have been bought.

With regard to the tax certificate, we have seen the tax certificate used primarily to help us (minorities) access capital. It has allowed us to have a "buy-in" to the game. Like Mr. Winston said, in most instances it is the chicken or the egg scenario. If you have a deal, you have to have money. When we go for the deal, if we don't have money, the sellers won't close the deal. So tax certificates have made us attractive.

In the instances where we have used the tax certificate, if a property costs $10 and the majority of the population can pay $10, we come along and offer $7 because there is minimally a 30-percent tax to pay. Usually the seller doesn't give it to us for $7. We get it for $8.5. So the loss, or the deferral of taxes, is really not as much as it could be. It is only $1.50 instead of $3.

In the instances where there are tax deferrals, it is usually in the interest of the seller to reinvest, whether it is the small deals I deal with or the major deal that people are alluding to down the road. If you are an entrepreneur and you have an opportunity to take a tax deferral, if you do not reinvest that money, you are going to have to amend your tax returns for that year and pay interest. Smart entrepreneurs, rather than having their money sitting around idly for 2 years, will invest it in something that will make some money and provide a good return.

So from our experience, the tax certificate has not only been good in generating business in providing access to capital and motivating people to invest in minority-owned companies, but the seller is also motivated to do something entrepreneurial with his tax services. Hopefully, that seller would do so in the community.

Most of our tax certificates have been small. When I came into the business 14 years ago, there were less than 50 minority-owned

broadcast properties, and now there are close to 300-plus. That is still less than 3 percent. Of the 11,000 properties in the United States, anywhere between 500 to 1,000 get bought and sold every year. The couple hundred that represent the tax certificate deals over the past 15 years have not been bad or very costly.

But when you look at radio, TV, cable—radio, financing radio transactions has worked very effectively because when you own radio you have to be part of the community or you will not make it. With television station ownership, you do not have as much control in programming, but if you are the owner, your feelings and concerns are reflected in the community for the things that are important to us (minorities). For cable, it is a little more difficult because it is larger and less local. But our experience overall has been pretty good, and I will defer to my colleagues.

House of Representatives
January 27, 1995

Madam Chairman and members of the Subcommittee, thank you for the opportunity to testify today as you begin to examine tax certificates in communications ventures under Section 1071 of the Internal Revenue Code.

As the President of Broadcast Capital Fund, Inc. ("**Broadcap**"), a venture capital company which has financed nearly forty minority broadcasters, and as the President of Blackstar Communications, Inc. ("**Blackstar**"), a minority owned and controlled company which has three television stations, let me express my strong support for the use of tax certificates to increase diversity among the trustees of the public's airwaves.

Let there be no doubt that the FCC's tax certificate policy has directly led to a significant increase in diversity of broadcast ownership in the United States. For more than seventeen years, the Federal Communications Commission has used tax certificates to promote broadcast ownership by new entrants previously precluded from ownership through historical patterns of discrimination. Both the Congress and the Supreme Court have approved this goal of diversity in broadcast ownership. When the FCC began its minority tax certificate policy, minority-owned stations numbered fewer than fifty -- less than one percent of all broadcast stations. We now have over 320 minority-owned commercial broadcast stations. The FCC has issued approximately 280 tax certificates with respect to broadcast stations. While I don't know precisely how many of those acquiring broadcast stations through tax certificates currently own and operate the same broadcast stations today, the FCC's tax certificate policy contributed significantly to a broader, more diverse, and more competitive broadcast marketplace.

Let there also be no doubt that much remains to be done to tear down the barriers to wider participation in broadcast ownership and to foster a level, competitive playing field in which opportunities are available for broad participation in this industry. Tax certificates are vital to this important effort. For example, even with the nearly eight-fold increase in broadcast ownership by African-Americans, Asian-Americans, Hispanic Americans, and Native Americans, these Americans combined own and control less than three percent of the more than eleven thousand commercial broadcast stations in the United States. Yet, since 1978 their representation in our population increased from 20 percent to 23 percent, three percentage points. During the same period, however, their representation in broadcast

ownership only increased about two percentage points, from less than one percent to just under three percent.

Why have we not achieved greater diversity in broadcast ownership? Study after study lays the blame on lack of access to capital. Minority business borrowers have less equity to invest, receive fewer loan dollars per dollar of equity investment, and are less likely to have alternative loan sources. Broadcap came into being as a private initiative formed within the broadcasting industry to help tear down that single greatest barrier to broader and more diverse participation in industry ownership. As the President of Broadcap, I can assure you that the FCC's tax certificate policy has contributed to our successes in fostering diversity in broadcast ownership by funding new entrants. The tax certificate policy does what it is designed to do: it encourages existing owners seeking a buyer to look beyond the usual prospects, and it attracts investors.

What is the tax certificate, and why does it work? Section 1071 of the Code empowers the FCC to certify that a sale or exchange of property is necessary or appropriate to effectuate a change in its broadcast ownership policies. A tax certificate enables the seller of a broadcast station to defer recognizing the gain realized upon a sale, either by: (1) treating the sale as an involuntary conversion with the recognition of gain deferred by the reinvestment of the proceeds in qualified replacement property, or (2) electing to reduce the basis of certain depreciable property, or both. The FCC issues tax certificates to those who sell broadcast stations to minority-controlled buyers. Those providing start-up capital that permits a new minority broadcast venture also can receive tax certificates when they sell their non-controlling interests.

The availability of tax certificates promotes diversity in broadcast ownership in two ways. First, it encourages licensees to consider selling their stations to new entrants. These licensees might otherwise continue to hold their properties or sell to others without considering qualified buyers outside their customary circle of business acquaintances. Second, the availability of the certificate helps these new entrants attract much needed financing so that they can acquire their stations and compete in the marketplace.

Quite simply, no measure that Congress or the FCC has ever taken to foster ownership diversity in the broadcast industry comes anywhere close to the tax certificate program in its effectiveness. Take away the minority-controlled broadcast stations that came into being through the help of tax certificates and you take away a significant portion of the gains that minorities have made in station ownership since 1978. This history of success does not mean that the tax certificate program cannot be improved. I strongly urge, however, that you not allow unsupported allegations of isolated abuse to blind you to the unquestioned good that this program is accomplishing.

The costs of the program are often overstated. A tax certificate does not give the seller a tax credit, but merely permits deferral of the tax on the gain from the sale. If the seller only decided to sell his property because of the availability of a tax certificate, then diversity of ownership has been encouraged without any loss of tax revenue because without the tax certificate, the sale would not have occurred. In any event, the tax certificate holder has a limited period to reinvest in qualified replacement property or to reduce the tax basis in depreciable property already held. The reinvestment itself is often a taxable transaction in which a third party will recognize gain. The cost of the program through postponement of taxation thus may be far less than many have assumed.

Newspapers report only on big tax certificate transactions. The list of the station sales for which the FCC has issued tax certificates, however, includes relatively few major market stations. Most tax certificate transactions have involved medium and small market stations, many licensed to communities not familiar to those outside the state. The huge tax certificate transaction does not typify the usual type of transaction aided by tax certificates. We should not hamstring the entire tax certificate program based upon false assumptions that tax certificates just support megadeals.

I also have heard the concern that the FCC requires only a one-year holding period before a station acquired under the minority tax certificate policy can be sold. In the first place, that concern does not do justice to the FCC. To be sure, the FCC has a one-year bar against the sale of such a station. That rule, however, does not mean that the FCC accepts tax certificate transactions that provide for the controlling parties to withdraw after one year. Rather, the FCC looks for meaningful, long-term gains in diversity of ownership and looks askance at proposals that include mechanisms by which long-established broadcasters can buy out the new enterprise at an early stage.

Some transactions may well have slipped through the FCC's review. The answer to these abuses, however, is not to terminate the program, but to strengthen enforcement and review by the FCC. In December 1994, the FCC began a rulemaking proceeding to consider how to improve the effectiveness of its current programs to promote ownership diversity, including the tax certificate program. In that proceeding, the FCC is well able to consider whether it needs to limit devices that might permit well-established broadcasters to buy out the new entrants fostered by the tax certificate policy, and to obtain the benefits of tax certificates without contributing to the important objective of increasing ownership diversity. If the FCC should find that stations acquired with tax certificates are lapsing back into the control of long-established broadcasters, it could impose a longer required holding period, with appropriate exceptions.

In short, I urge you not to dismiss an entire program because of isolated abuses or perceptions of abuse. Instead, allow the FCC -- the expert agency that Congress established -- to complete the proceeding that it began in December. If the FCC's action does not address this Subcommittee's concerns, it is of course your prerogative to revisit the program. Then, however, you will have the factual record of the FCC's proceeding to guide you in any necessary action to ensure that the merits of the tax certificate program are preserved.

Mr. HANCOCK. Thank you.

STATEMENT OF DOROTHY E. BRUNSON, PRESIDENT, BRUNSON COMMUNICATIONS, INC., PHILADELPHIA, PA., AND PRESIDENT, ASSOCIATION OF BLACK-OWNED TELEVISION STATIONS

Ms. BRUNSON. Mr. Chairman, my name is Dorothy Brunson. I am the president of Brunson Communications, Inc., which owns and operates a station, channel 48, in Philadelphia, Pa. I am also the President of the Association of Black Television Station Owners.

I have worked for 32 years in the communications industry, and during that time I have vigorously worked to bring new business ventures into the marketplace, created new jobs, and promoted economic growth.

To deviate from my remarks one bit, it is very important that we view this tax certificate policy as an economic stimulus and not as a social issue. It is no different from any other policy which stimulates growth, whether it be at the Federal level for various and sundry departments of our government, or whether it be at the State level.

When I started my company, I had to divest everything that I owned and put at risk my entire 20-some-odd years of business. I had a very difficult time borrowing, simply because the complexities of dealing with the broadcast industry by traditional lenders makes the process for minorities, especially those with little experience or who have never owned before, a very difficult one. In spite of that, and the fact that I could not borrow the kinds of funds that were necessary, I succeeded and now employ 20-plus people.

Section 1071 is an important mechanism for helping minorities to gain access to capital. Now, that statement presents a very different kind of view than what you might have heard earlier, but minorities have always been allowed to own properties. Mostly very low grade properties, very unacceptable, and the properties themselves have not really gotten us into mainstream. What it has done is gotten us in trouble and created a mechanism by which we have failed because the properties themselves were inferior.

Section 1071 gives us access to capital, because for once we are able to get quality properties, and those properties can give us the kind of cash-flow and the kind of benefits where we can pay back huge debts. Therefore, lending institutions look at us and look at our deals in a more traditional sense as opposed to looking at it as a broadcast deal where it is one that "I don't understand the complexities of," or one that doesn't make economic sense. It has cash-flow and it has the other components that make a significant difference in terms of access to capital that we would never be able to have without section 1071.

The situation created by selling to a minority is that it allows this minority to provide growth to a division of a company. Historically, when a division is sold off, that smaller division has grown and expanded into a larger division. If you were to allow me to read from my paper, some years ago the FCC required CBS to spin off a small business it operated in the cable television and program syndication field. Those spun-off businesses became the basis of

Viacom. From that modest beginning, Viacom has today grown to a size at least as large as its beginning. Now Viacom has focused its energy on businesses other than cable television. It wants to sell to a minority individual who wants to do and is doing the same kind of thing.

It is my experience, after having worked in this industry for over 32 years and worked in the economic development arena for over 40 years, that any time one uses tax to stimulate small business growth, it is good for America. Further, it provides the kind of economic benefit and the kind of jobs and growth opportunity and tax base for the community it is in by stimulating growth for that community. That is what section 1071 does.

Section 1071 stimulates economic growth in other ways. It allows communications firms to defer recognition of capital gains. It encourages those firms to invest in businesses and facilities that will yield long-term growth, which is one way to stabilize America's tax base. This is much like the capital gains tax and other measures that are being favored by Congress. But under section 1071 the tax will, will eventually be paid. It is not something that is deferred and then goes away forever, as many of the government programs which exist to help other agencies within the government.

This effect is also similar to that of many other provisions in the Tax Code. Those provisions also stimulate investment through targeted treatment of capital gains, and that is what we are talking about, targeted treatment of capital gains.

Unlike section 1071, many of those targeted treatment of capital gains provisions do not require eventually full payment of the capital gains tax. In each case, Congress has determined that in the long term, tax revenues will be increased, not reduced by policies that promote economic growth. Section 1071 accomplished this precisely with the exact same results as any other division.

I appreciate the opportunity to talk with you today and hope these remarks will be considered.

[The prepared statement follows:]

January 27, 1995

TESTIMONY OF DOROTHY E. BRUNSON
President, Brunson Communications Inc.
(WGTW TV, Philadelphia, PA)
President, Association of Black Owned Television Stations

Before: Subcommittee on Oversight
Committee on Ways and Means
United States House of Representatives
Hon. Nancy L. Johnson, Presiding

Good morning Madame Chairperson and members of the committee. I am Dorothy Brunson, President of Brunson Communications Inc., which owns and operates a television station on channel 48 in Philadelphia, Pennsylvania. I am also President of the Association of Black Owned Broadcasters. I have worked for 32 years in the communications industry. In that time, I have worked vigorously to bring new business ventures into the marketplace, creating new jobs and promoting economic growth. But, Madame Chairperson, no one can create new business enterprises without access to capital.

Let me tell you about my recent experience in starting up TV channel 48. Two and one half years ago, I struggled to construct TV 48. Even with a construction permit in the fourth largest market, I could not borrow from any lending institution. Banks and other lenders would not do loans for a specialized business like broadcasting--certainly not for a start-up company like ours. To get on the air, I had to sell everything I owned, including my life insurance policy. We also set up a private placement funding instrument to repay our investors, which netted out to a very high rate of return. All those steps allowed us to put our station on the air. We now employ 20 people.

Even with the great sacrifices I have had to make, I was lucky. TV 48 is a reality today because of my 30 years of experience in the broadcast industry. But the sad fact is that for many minorities, access to capital remains a major hurdle. It is a hurdle that keeps many minority entrepreneurs from ever starting up their enterprises. When those enterprises are not started, everyone is robbed of the jobs and economic growth they would have provided.

Section 1071 is an important mechanism for helping minorities gain access to capital. Large communications firms receive the right to defer recognition of their own capital gains. In exchange, they help minorities acquire smaller parts of their communications businesses. Those minorities, given a

chance to build something of their own, focus all their energy and entrepreneurial spirit on those businesses. They grow the businesses. The prior owners, who have focused their attention elsewhere, would never have expanded these businesses in anything like the same proportions.

Here is a case in point. Some years ago, the FCC required CBS to spin off small businesses it operated in the cable television and program syndication fields. Those spun-off businesses became the basis of Viacom. From that modest beginning, Viacom has today grown to a size at least as large as CBS itself. Now Viacom has focused its energies on businesses other than cable television. It wants to sell that business to a minority individual with a proven record of operating successful cable television systems. If that individual is permitted to acquire Viacom's cable systems, he will, I believe, build upon them in the same way Viacom built upon CBS's spun-off businesses twenty years ago.

The result will be a bigger and better company--providing more jobs--than would otherwise exist. And that will not occur without the tax certificate policy.

Section 1071 stimulates economic growth in another way. By allowing communications firms to defer recognition of capital gains, it encourages those firms to invest in businesses and facilities that will yield long term growth. This effect is very much the same as the effect of reducing the capital gains tax, a measure favored by many in Congress. But under Section 1071 the full tax must eventually be paid.

This effect is also similar to that of many other provisions in the tax code. Those provisions also stimulate investment through targeted treatment of capital gains. Unlike Section 1071, many of those provisions do not require eventual full payment of the capital gains tax. In each case, Congress has determined that in the long term, tax revenues will be increased--not reduced--by policies that promote economic growth. Section 1071 accomplishes precisely the same result.

Madame Chairperson, I appreciate the opportunity to talk to the committee today. I know the committee will deliberate carefully on this important issue, and I hope I have contributed to those deliberations.

Mr. HANCOCK. Thank you, Ms. Brunson.
Mr. Cornwell.

STATEMENT OF W. DON CORNWELL, CHAIRMAN AND CHIEF EXECUTIVE OFFICER, GRANITE BROADCASTING CORP., NEW YORK, N.Y.

Mr. CORNWELL. Thank you, Mr. Chairman, for allowing me to testify today. I am Don Cornwell, chairman of the Board of Directors and chief executive officer of Granite Broadcasting Corp. In addition to my duties at Granite, I am also active in the broadcasting industry as a member of the television board of the National Association of Broadcasters, and I appreciate the opportunity to appear today before you in support of section 1071 of the Tax Code.

The development and growth of Granite into the largest African-American controlled company in the television station ownership business in this country is a testament to the success of the tax certificate and section 1071. To date we own and operate six network affiliated television stations across the country, in California, Illinois, Minnesota, Wisconsin, Indiana, and New York. We are closing on a seventh station in Texas next week and expect to complete the acquisition of a station in Michigan in June.

Let me explain how we got started. In 1988, Granite bought its first and smallest stations in Duluth, Minn., and Peoria, Ill. We started small because my own equity capital combined with that of family, friends, and former employers was used to purchase these stations. My investment, which represented then and today virtually all of my family's net worth, bought the majority of the voting stock in Granite. No one has the right to buy my equity position or to exercise any of my rights as the controlling shareholder.

Over time, our reputation has grown, and, as a result, we have been able to attract the large amounts of capital necessary to acquire larger stations. I want to emphasize to the subcommittee that our objective since 1988 has been to build a strong company, a company which can compete in the 21st century. Thus, we continue to own each station we have acquired to date, despite receiving many attractive offers to sell.

My own experience tells me that the minority tax certificate program accomplishes the FCC and Congress' goal of encouraging program diversity. There is no doubt in my mind that editorial policy does follow ownership. While I am careful, I might add, not to inject myself into station manager's programming decisions, since we really do believe in localism, in several instances there is no question but that our ownership has resulted in programming that was more diverse than that provided by previous owners.

Now, I might add, we give some examples that will be in the written comments submitted into the record.

The tax certificate program has been extremely important in the development and growth of our enterprise. While valuation and certainty of financing ultimately, frankly, determines the willingness of a seller to choose our proposal, clearly the tax certificate has been very helpful in persuading owners to pay close attention to a proposal from us.

For example, we were able to persuade companies such as Pulitzer, Landmark Communications, and Meredith to sell us tele-

vision stations which they, frankly, had not intended to sell. I might just add as an aside that I disagree with the gentleman on the previous panel, because we have gotten benefits in the pricing. Some would say I am a pretty tough negotiator despite the smile on my face.

The certificate's value depends solely on the seller. At the outset of our negotiations we cannot be sure that a seller will find our proposal the most attractive. The seller must consider whether they expect to realize any taxable gain and whether they intend to reinvest the proceeds of a sale in acceptable like-kind property. The certificate's actual value can be uncertain, and sometimes not large in dollar terms. However, I must assure you that in each of our six acquisitions to date, and the two currently under discussion or under way, there would be no deal without the certificate.

We share the concerns of the Congress and the FCC about potential abuses of this program, and we welcome an opportunity to work with you to develop ways to ensure that the spirit of this program is satisfied. We believe that satisfaction of that spirit requires at least three standards:

First, a significant at-risk investment by minority investors at the inception of the enterprise. Second, executive management control. Third, the absence of any mandatory rights by nonminority investors to buy out the controlling minority investor.

Further, we believe that the Congress, the FCC, and the IRS should require a written representation and warranty from the recipient of the tax certificate, i.e. the seller, that these or other appropriate standards have been met to the best of their knowledge.

Granite has set an additional standard for itself for participation in this program. Our standard is inappropriate as an act of legislation, but we would like to go on record as to what our practice has been.

We believe that our company has realized and our shareholders have realized benefits from the program and, therefore, one should expect more from us than one might expect from an average company in our industry. Thus, we have gone out of our way, despite the fact that we are not a rich company, to stretch to create paid station employee opportunities as a means of providing young people, mostly minorities, I might add, an opportunity to gain entry level employment in our company and this industry.

In addition, we have contributed significantly to industry-supported foundations which are designed to encourage minority students to enter the broadcasting field.

We also have made available our station and management to assist in training minorities who participate in a Commerce Department program for prospective owners. It is a training program.

This concludes my remarks. Thank you for allowing me an opportunity to testify.

[The prepared statement follows:]

STATEMENT OF

W. DON CORNWELL

CHAIRMAN OF THE BOARD AND CHIEF EXECUTIVE OFFICER
GRANITE BROADCASTING CORPORATION

Chairwoman Johnson, Congressman Matsui, and Members of the Subcommittee on Oversight, my name is Don Cornwell. I am Chairman of the Board of Directors and Chief Executive Officer of Granite Broadcasting Corporation ("Granite"). In addition to my duties at Granite, I am also active in the broadcasting industry as a member of the television board of the National Association of Broadcasters. My company is also a member of the National Association of Black Owned Broadcasters. I appreciate the opportunity to submit testimony on section 1071 of the tax code, which the Federal Communications Commission ("FCC") has used to issue tax certificates which encourage greater ownership by minorities of radio, television and other properties.

Background on Granite's Operations

The background information on our operations highlights the benefits of the FCC tax certificate program. Granite owns and operates six network affiliated television stations across the country, all of which were acquired under this program. We have stations in California, Illinois, Minnesota, Wisconsin, Indiana and New York. We are also in the process of acquiring stations in Texas and Michigan.

We bought our first and smallest stations in 1988. These stations, which are located in Duluth, Minnesota and Peoria, Illinois, are necessarily small because my own equity capital, combined with that of family, friends and a former employer, was used to purchase them. Over time, Granite was able to develop a strong reputation enabling it to attract the amounts of capital required to acquire larger stations.

Over the next four years, we acquired four additional network affiliated television stations and a large interest in a fifth station. In 1989, we acquired stations in Fort Wayne, Indiana and San Jose, California. In 1993, we acquired stations serving Fresno, California and Syracuse, New York, and the largest equity stake in the leading television station serving Buffalo, New York.

By the end of 1995, Granite will consist of eight stations (plus our equity interest in the Buffalo station) competing in television markets ranging in size from Grand Rapids-Kalamazoo-Battle Creek, Michigan to Duluth, Minnesota-Superior, Wisconsin. These markets range in size from the 36th to the 128th market. We will employ approximately 750 individuals; and, after six years, we will have become the largest African-American controlled company in the television station ownership business.

Our objective is to ensure that Granite is strong enough to compete in the electronic media market in the 21st century. We will remain builders; and, thus, we have not and will not engage in the trading of stations. We continue to own each station we have acquired to date. We have done this despite receiving attractive offers to sell.

We believe that our ownership of each of these stations has made a difference. Each station, while affiliated with one of the three traditional networks, is directed to become the leading provider of local news, weather, and sports information in our communities of service. In addition, we pride ourselves on the strength of our involvement in our local communities.

Development of Section 1071

In the press release announcing this hearing, you indicated that the Subcommittee will examine the FCC's 1978 policy and the implementation of section 1071. Following is a brief background description of the history behind enactment of Code section 1071 and the current tax certificate program. We believe that the history shows that the minority tax certificate program does fit within and further the original goals of section 1071.

The predecessor to section 1071 was enacted in 1943.1/ This provision emanated from the adoption of FCC ownership regulations prohibiting common control of certain directly competing radio stations.2/ These ownership rules were directed toward ensuring diversity in the content of broadcasts.3/ As a result of the new policy prohibition, a number of licensees that held interests in two stations were required to dispose of one of these interests.4/ Lawmakers enacted the predecessor to section 1071 (old section 112(m)) to afford relief, through issuance of tax certificates, to taxpayers who were required to dispose of certain broadcast holdings. Since 1943, the FCC has expanded its multiple ownership rules to prohibit a number of cross-ownerships.5/ Ironically, in more recent years, the FCC has again reversed itself and liberalized the multiple ownership and cross-ownership rules in markets where sufficient diversity of viewpoints is available.

In 1978, the FCC expanded its program to promote diversity of viewpoints. Under this new program, the FCC announced it would issue tax certificates for sales of broadcast facilities to "parties with a significant minority interest" in cases where "there is a substantial likelihood that diversity of programming will be increased."6/ Congress did not change the language in section 1071 when the FCC's new policy was put into effect. Much like its 1943 action in breaking up cross-ownership arrangements because they limited diversity of viewpoints in the marketplace, extending the tax certificate program to minorities was an acknowledgement that its prior actions in granting licenses had failed to take into account the importance of minority ownership and control of licensees in achieving the desired diversity of viewpoints in the marketplace.

1/ Former section 112(m) was enacted as part of the Revenue Act of 1943, Pub. L. No. 78-235, § 123, 58 Stat. 21 (1944).

2/ See S. Rep. No. 627, 78th Cong., 1st Sess. 53-54 (1943), reprinted in J. Seidman, Legislative History of Federal Income and Excess Profits Tax Laws, 1953-1939, at 1602-03 (1954); Statement of Policy on Minority Ownership of Broadcasting Facilities, 68 FCC2d 979, 983 n. 19 (1978) ["1978 Policy Statement"] (tax certificates originally used to remove hardship of involuntary transfer resulting from divestiture imposed by FCC's multiple ownership rules); 47 C.F.R. § 3.35, 8 F.R. 16065 (1943). Before that time, some radio station licensees owned more than one station in the same city. See G.C.M. 37430 (1978).

3/ See, e.g., In re Radio Corp of America, 10 F.C.C. Reports 212, 213 (1943).

4/ See F.C.C. 56-919, 21 Fed. Reg. 7831 (1956).

5/ See Blake & McKenna, Section 1071: Deferral of Tax on FCC Sanctioned Dispositions of Communications Properties, 36 Tax Law Review 101, 104-06 (1980) (citing examples such as elimination of cross-ownership of AM radio stations, FM radio stations, and television stations in same market).

6/ See 1978 Policy Statement, 68 FCC2d 979, 982-93.

Description of Current Minority Tax Certificate Program

Current section 1071 is restrictive and is helpful only in those cases where the seller is in a tax position to use the certificates. If qualified, the tax certificate program can provide effective incentives for a station owner to sell to a minority or for an investor to provide financing for the minority owner.

As currently drafted and implemented, the FCC is allowed to issue a tax certificate only to two classes of taxpayers: (1) a seller of a broadcast station upon the sale or exchange of the broadcast property to a minority-controlled company, or (2) an initial investor who provides the necessary "start-up" financing to a minority-controlled purchaser of a broadcast station.7/ The tax certificate enables the qualified taxpayer (i) to defer payment of capital gains tax on the sale of the broadcast property or interest, provided that the taxpayer reinvests the proceeds in qualified replacement property,8/ or (ii) to reduce the basis of certain depreciable property remaining in the taxpayer's hands immediately after the sale of broadcast property or interest, or acquired in the same taxable year.9/

To qualify under the FCC's minority tax certificate policy, the minority company must demonstrate that it is minority controlled. Traditionally, the test with respect to corporate applicants has been whether minorities10/ own more than 50% of the voting stock.11/ More recently, the FCC has expanded the eligibility requirements to permit limited partnerships with minority general partners to qualify, provided that the minority partner owns at least 20% of the partnership's total equity.12/

Additionally, the issuance of a tax certificate is dependent upon the timing of certain events. A seller of a broadcast property can be issued a tax certificate only after the sale or exchange has actually occurred. Initial investors in a minority-

---

7/ For an initial investor to qualify for a tax certificate, the investment must meet the following criteria: (1) the investor must have provided "start-up capital" to the minority enterprise, defined as funds provided within one year of the company's acquisition of a broadcast property; (2) the investor must have sold its interest in the company; and (3) the company must qualify as a minority-controlled company both before the investor purchases the interest and after the investor sells the interest in the company.

8/ Qualified replacement property must be "similar or related in service or use" to the converted property. Thus, such property may consist of hard assets (e.g., broadcast or cable assets) or stock in a corporation whose income is primarily derived from broadcasting or cable operations.

9/ Gain may still be recognized under other Code sections (e.g., depreciation recapture under sections 1045 or 1050. See Glazer & Fisher, Section 1071: FCC-Certified Transactions Involving Minority-Controlled Entities, 47 Tax Lawyer 91, 110-11 (1994).

10/ For the purpose of the FCC's tax certificate policy, the term "minority" includes Blacks, Hispanics, American Indians, Alaskan Natives, Asians, and Pacific Islanders. Minority Ownership in Broadcasting, 92 FCC2d 849, 849 n. 1 (1982) ["1982 Policy Statement"].

11/ 1978 Policy Statement, 68 FCC2d at 983 n.20.

12/ 1982 Policy Statement, 92 FCC2d at 853-55.

controlled purchaser of a broadcast station can be issued a tax certificate only after the sale of their interests in the minority-controlled buyer.13/ A minority company that obtains a broadcast station involving a tax certificate must retain the station for at least one year. This restriction does not apply if a minority company proposes to sell the station to another minority company within the one-year period.

Tax Certificate Program's Significant Impact on Development and Growth of Company

Although we recognize that a number of factors have helped our business succeed, the minority tax certificate program has been extremely important in the development and growth of our enterprise. The program has allowed Granite to acquire each of its existing stations, so that now we are large enough to offer minorities real employment and business opportunities.

Valuation and certainty of financing ultimately determine the willingness of a seller to accept any of our acquisition proposals; however, Granite's experiences indicate that the tax certificate program clearly has been helpful in persuading owners to consider and accept our proposals. For example, we were able to persuade companies such as Pulitzer, Landmark Communications, and Meredith to sell us television stations which they originally had not intended to sell at all.

However, there is no guarantee that the tax certificate will make our proposal the most attractive to a particular seller. In some cases, the seller does not expect to realize any significant taxable gain. In other cases, the seller is going out of business and has no interest in reinvesting the proceeds of the sale in "like kind" property acceptable to the IRS in order to realize the tax certificate's benefits.

Potential Abuses of Program Raises Concern

Granite shares the concerns of the Congress and the FCC about potential abuses of the minority tax certificate program. In that regard, we were extremely careful in the creation of Granite to satisfy what we perceived as not only the letter, but also the spirit, of the FCC's policy.

When I founded Granite in 1988 with a partner, the investment I made represented then and today virtually all of my family's net worth. My investment bought the majority of the voting stock in Granite, and no one has the right to purchase my equity position or exercise any of my rights as the control shareholder. Further, not only do I operate as the Chairman and CEO of the Company, we also have significant minority representation on our Board of Directors.

When we have acquired stations, in many instances the seller has spent a considerable amount of time conducting their own due diligence regarding the structure of Granite. I specifically recall the transaction where Granite acquired our Fort Wayne, Indiana station, WPTA-TV, where the seller's counsel insisted that Granite prove its strict compliance with the law. Such due diligence should be a requirement in every transaction.

My own experience tells me that the minority tax certificate program accomplishes the FCC's goal of encouraging program diversity. While I am careful not to inject myself into my station managers' programming decisions, since we believe in localism, I know of cases where my ownership has resulted in programming that was more diverse than that provided by previous non-minority

---

13/ 1982 Policy Statement, 92 FCC2d at 858.

owners. For example, one of our stations, which had never commemorated Black History Month, produced and aired profiles of prominent, local African-Americans during Black History Month, featuring unsung heroes in the community, after the station had been purchased by Granite Broadcasting. Although there is no overt link in this case, I believe that a station's editorial policies in general reflect its ownership's views. The Supreme Court believes so as well.14/

Granite has set an additional standard for itself when it participates in this program. While this standard would be inappropriate as an act of legislation, we would like to go on record as to our practice. We believe that the benefits realized by our Company from the tax certificate policy require us to exceed expectations, that otherwise might exist from the average company in our industry, with regard to helping increase minority representation and thus promoting diversity of viewpoints in the broadcast medium. We are not a rich company, despite our rapid growth. However, we have stretched financially to create paid station employee opportunities as a means of providing young people -- mostly minorities -- an opportunity to gain entry level employment. In addition, we have contributed significantly to industry-supported foundations which are designed to encourage minority students to enter the broadcasting field. We also make available our stations and management to assist in training minorities who participate in a Commerce Department program for prospective owners of new stations.

We welcome an opportunity to work with the Subcommittee and the Administration to develop ways to ensure that the spirit of this program is satisfied. We believe that satisfaction of that spirit requires a significant at-risk investment by minority investors at the inception of the enterprise, executive management control, and the absence of mandatory rights by non-minority investors to buy out the controlling minority investor. Further, we believe that the Congress and the FCC should require a written representation and warranty from the recipient of the tax certificate that these or other appropriate standards have been met to the best of their knowledge.

Another Suggestion to Improve Section 1071

As long as you are examining section 1071, we would like to offer a suggestion to improve the tax administration of this provision. An important requirement of the provision is that the holder of a certificate must reinvest the proceeds in "property similar or related in service or use to the property converted." For this purpose, "stock of a corporation operating a ... broadcast station, whether or not representing control of such corporation," is considered property eligible for reinvestment and tax deferral. In Rev. Rul. 66-33, 1966-1 C.B. 183, the Internal Revenue Service interpreted section 1071 to require that stock in a corporation which holds its licenses and conducts operations through wholly-owned subsidiaries rather than directly, is not "property similar or related in service or use", even when the sole assets of the parent are stock in subsidiaries which hold licenses and operate broadcast stations.

This interpretation is too restrictive. At present, Granite holds one of its licenses directly; the others are owned in subsidiaries. Our lenders are constantly demanding that we hold all of our licenses in separate subsidiaries in order to protect their interests as creditor. Since the Supreme Court has held that

---

14/ See, e.g., Metro Broadcasting, Inc. v. F.C.C., 497 U.S. 547, 570-71 (1990) (citing TV 9, Inc. v FCC, 495 F2d 929, 938 (D.C. Cir. 1973), cert. denied, 419 U.S. 986 (1974)).

they cannot acquire a security interest in the licenses itself, they can best protect their interests if they have a pledge of the stock of the subsidiary holding the license, along with negative pledges. It is important that a company like Granite be considered property similar or related in service or use in order to attract additional capital from sellers seeking to reinvest. Yet, lending restrictions make that difficult to maintain and, in many cases, impossible.

No harm would be done to the intent of section 1071 if Rev. Rul. 66-33 were overruled by amending the statute explicitly to permit stock in a corporation primarily engaged in operating radio broadcast stations, directly or through subsidiaries, to be investments eligible for deferral of gain. We would welcome discussions with you or your staff to determine if a resolution of this problem is possible.

Conclusion

Granite's experience with the minority tax certificate program shows that the program serves the intended goals of encouraging minority ownership in the broadcast industry and thus promoting diversity of content in broadcasts. The program has been very important to the growth and development of our Company, and has also encouraged the re-circulation of capital in our economy.

Granite shares Congress' and the Administration's concerns about potential program abuses. The Company has taken great pains to comply with both the letter and spirit of the program. We welcome this opportunity to work with the Congress and the Administration to develop ways to ensure that the program continues to serve its intended purposes, both from a communications policy and tax policy perspective.

Thank you for allowing me an opportunity to testify. I would be pleased to answer any questions.

Mr. HANCOCK. Thank you, Mr. Cornwell.
Mr. Bustos.

STATEMENT OF AMADOR S. BUSTOS, PRESIDENT AND CHIEF EXECUTIVE OFFICER, Z-SPANISH RADIO NETWORK, INC., CAMERON PARK, CALIF.

Mr. BUSTOS. Yes, that is correct.

Mr. Chairman, Mr. Hancock, the tax certificate was intended for people, entrepreneurs, like us. In your rush or eagerness to not reward Viacom with a lot of money, please do not sacrifice us. I can see your concern and the subcommittee's concern, but do not sacrifice the people that otherwise would be benefiting from this kind of program.

My name is Amador Bustos, as you mentioned, and I am the president and chief executive officer of Z-Spanish Radio Network. Z-Spanish was formed only 2 years ago, 2 years and a couple of months. So even though some of the companies here have a lot longer trajectory, we are a smaller company and a newer company, which is part of the reason why the tax certificate was so important and crucial to us.

Currently, we operate and own a radio network of eight stations in the western United States. They are all Spanish and we produce a network that is delivered via satellite to all of our stations. Now we currently employ approximately 80 people and 90 percent of those employees are Hispanic.

On behalf of Z-Spanish and all other minority broadcasters in the United States, I urge the Congress to allow the survival of the tax certificate even if they may be modified to be improved, because it has the most effective role in prying open the door for access to ownership to broadcasting radio licenses to bona fide minority entrepreneurs. The prying, the opening of the door, is really the issue of access, because if you do not have at least that window of opportunity, then you do not have access.

For 20 years I have worked to become an owner of radio broadcast properties. As is evidenced by the attachment in my statement, you have a plan for the development and acquisition of broadcast stations for the Latino community, which Mr. Joseph Aguayo and myself presented to the FCC when they had their conference on minority ownership on April 26, 1977, that is 1 full year before the minority tax certificate was implemented, while I was already before the FCC as a graduate student trying to get the minority access to the broadcast industry.

A lot of that came also from reading and being a student during the days of the Civil Rights Commission and reading the documents on window dressing on the set, and all of the other things that went along with the Commission reports. So 20 years later, here I am again.

Our statements in 1977 urged the Small Business Administration to repeal its Opinion Molder Rule which effectively banned the SBA participation in loans in the broadcast industry. Our advice was not heeded then. It took almost 18 years, until last year, when they finally repealed that rule.

Our 1977 statement also urged the FCC to take steps to provide minority businessmen and women access to the growing television

and cable industry. Our advice was not heeded very well either, because the minority representation in that industry is very small.

For us, the issue in 1977 was access and opportunity, fairness and justice. In 1995, the issue remains exactly the same, Mr. Hancock. In 1977, minorities owned approximately, as you heard, 1 percent. Now it is about 3 percent.

There has been some minor improvement, and that improvement, I think, has to do mainly with the effectiveness of the tax certificate. The effectiveness of the tax certificate resides in the fact that it stimulates the existing owners of broadcast and cable properties to actually talk to us, to seek minorities, to assist us in qualifying to actually purchase their properties.

This policy is truly driven by the market economy and the private negotiations of a buyer and seller. It is also one of the policies that, from a regulatory standpoint, the FCC can afford to offer to minorities—a very short turnaround period from where they can become nonowners to owners. People have talked ability, some of the other benefits or other preferences that the FCC has. Those are not as effective.

The broadcast properties are extremely limited commodities. Even if I had the money, I could not simply start my radio station in a community of my choice. The top 100 markets are virtually all taken. A minority entrepreneur has now only two choices: he can either seek a license from the FCC or buy an existing one. The seeking of the license is a very long process and it is also very costly. Litigation is very expensive and time consuming.

I have, for 10 years, applied for construction permits through the FCC and I have not gotten a single one. The fact is that people always litigate you to death and for one reason or another.

On the other hand, the view of a tax certificate policy, the seller will provide in the owner—or the potential brokers will call you from all parts of the country to try to offer you properties because they know they have that tax certificate.

So the basic principle; do not sacrifice the many, many entrepreneurs that are new to the industry, that are coming in, because there is one big mega deal. There may be something you can do about the mega deals, but the greatest majority of people that are benefiting from the certificate is ourselves. I have a track record of 20 years of trying to get properties and not being able to succeed until 2 years ago and that is because of the access of capital.

Typically, in those circumstances back before the tax certificate, white men sought to sell their properties to other white businessmen. They did not even offer the properties to us, and it was only the tax certificate that made the difference in terms of being able to bring those to the table.

To conclude, I know the battle of the minority issues of the sixties and seventies are out of fashion with many policymakers today. However, when we juxtapose the study I presented to the FCC two decades ago with the situation today, it can be seen that only very little has changed, and that minorities control very few stations. However, if you want to modify the certificate, do not repeal it and only improve it.

Because if you repeal it, Congress would be tantamount to saying that minorities have now gained equal status, have equal oppor-

tunity, have equal access, and that racism has been eradicated from the United States, which is clearly not the case.

My appeal to this subcommittee, and I am going to conclude, and this Congress, as it attempts to reshape this country with its Contract With America, that it be sure it includes all Americans: Black Americans, Hispanic Americans, Asian Americans, and Native Americans. The Speaker, I heard him last night at the dinner on television, he spoke to that effect; that the Contract With America was going to include all Americans. Because if it does not, it will become a contract on America, and a death warrant to the ideals of equality and justice that this country was built on.

Thank you, sir.

[The prepared statement and attachments follow:]

TESTIMONY OF AMADOR S. BUSTOS
TO THE WAYS AND MEANS COMMITTEE,
UNITED STATES HOUSE OF REPRESENTATIVES
CONCERNING THE FCC'S MINORITY TAX CERTIFICATE PROGRAM

My name is Amador S. Bustos. I am President and Chief Executive Officer of Z-Spanish Radio Network, Inc. (Z-Spanish). Z-Spanish was formed just over two years ago. It is headquartered in the Sacramento, California metropolitan area. Z-Spanish currently owns and operates eight radio stations in the western United States. Z-Spanish established and operates "La Zeta", the first United States-based Hispanic-owned radio network, offering Spanish-language music and entertainment nationwide via satellite. Z-Spanish currently employs approximately 80 people, of whom 90 percent are of Hispanic origin (See Exhibit A).

On behalf of Z-Spanish and all other minority broadcasters in the United States, I urge Congress to permit the survival of the Minority Tax Certificate Program[1] because it has been one of the most effective tools to "pry" open the door for access to ownership of broadcast radio licenses by *bona fide* minority entrepreneurs.

---

[1]See 26 U.S.C. §1071; ***Statement of Policy on Minority Ownership of Broadcast Facilities,*** 68 FCC 2d 979 (May 25, 1978).

For twenty years I have worked to become an owner of radio broadcast properties. As evidence of this please see Exhibit B, "A Plan for the Development and Acquisition of Broadcast Stations for the Latino Community", which Mr. Joseph Aguayo and I presented on behalf of National Latino Media Coalition to the FCC Conference on Minority Broadcast Ownership on April 26, 1977, one full year before the Minority Tax Certificate Program was adopted.

Our 1977 statement urged the Small Business Administration to repeal its "Opinion Molder Rule", which effectively banned SBA participation in loans for the acquisition and operation of broadcast station. Our advice was not heeded until last year when the SBA finally repealed the rule. Our 1977 statement also urged FCC to take steps to provide minority businessmen access to the then-growing cable television industry.

For us, the issues in 1977 were access and opportunity, fairness and justice; in 1995, the issues remain the same[2].

---

[2]The Supreme Court of the United States in ***Metro Broadcasting, Inc. v. FCC***, 497 U.S. 547, 610-11, wrote: "Our history reveals that the most blatant forms of discrimination have been visited upon some members of the racial and ethnic groups identified in [FCC minority preference] programs. Many have lacked the opportunity to share in the Nation's wealth and to participate in its commercial enterprises. It is undisputed that minority participation in the broadcasting industry falls markedly below the demographic representation of those groups . .

In 1977, minorities owned approximately 1 percent of the then-existing broadcast stations. Eighteen years later, minority individuals and/or companies today own less than 3 percent of the commercial radio and television stations in America.[3]

In my view, the single most effective instrument in achieving the modest gains which have occurred over the past two decades, of all the minority incentives given by the FCC, has been the tax certificate.

Its effectiveness resides in the fact that it stimulates existing owners of broadcast and cable properties who desire to sell their stations or systems to actively and aggressively seek out and assist qualified minority entrepreneurs. This is a policy that is truly driven by a free market economy and the private negotiations between

---

. . . and this shortfall may be traced in part to the discrimination and the patterns of exclusion that have widely affected our society. As a Nation we aspire to create a society untouched by that history of exclusion and to ensure that equality defines all citizens' daily experience and opportunities as well as the protection afforded to them under law."

[3]In its January 12, 1995 "Notice of Proposed Rulemaking" in MM Docket Nos. 94-149 and 91-140, ***Policies and Rules Regarding Minority and Female Ownership of Mass Media Facilities***, FCC 94-323, 10 FCC Rcd --, at paragraph 5, the FCC reports that, as of June 30, 1994, "minorities represented almost 23 percent of the national workforce but control only 2.9 percent (323) of the 11,128 commercial radio and television stations on the air. Similarly, of the approximately 7,500 cable operators, 0.2 percent (15) are minority-controlled." [footnotes omitted].

seller and buyer. It is also one of the only policies that, from a regulatory standpoint, the FCC can offer which are truly effective and help to place minority entrepreneurs into broadcast ownership in relatively small period of time.

As you know broadcast licenses are an extremely limited commodity. Even if I have the money, I cannot simply start my own radio station in a community of my choice. In virtually all of the "top 100" media markets, all existing and available space in the broadcast spectrum is occupied by operating stations. A minority entrepreneur such as myself has only two options: (1)to seek a license from the FCC[4]; (2) or to buy an existing one. Despite all the minority preferences provided by the FCC in the comparative hearing it is extremely difficult to get a license through this method. In my case I have filed numerous applications for construction permits for new FM stations for almost 10 years and have not gotten a single one through a decision of the

---

[4]The only way this can be done in most markets is to file an application in competition with the renewal of license application of an existing station (radio licenses are renewed every seven years; television licenses are renewed every five years); in most cases, unless the existing licensee has a demonstrated record of violations of the Commission's Rules or has been convicted under narcotics trafficking statutes, such a challenge generally is futile, as the FCC has a "renewal expectancy" policy which generally favors the granting of the renewal application and the denial of the challenger's application.

FCC. Rather, because of the length of time the process takes and its high expenses, I have been "beaten by money". In other words, in most cases I have been forced to settle because our competitors have had more money and resources.[5]

On the other hand, in view of the tax certificate policy, sellers of broadcast and cable properties are incentivized to make their properties available to minority entrepreneurs. In my own experience, I receive calls from both owners of stations and business chance brokers specializing in the mass media industry at least once a week, informing me of properties for sale throughout the country and soliciting me to purchase them. These calls do not just come from the state of California, but from brokers all over the nation. For example, we recently purchased an AM/FM combination in the Fresno, California market after being solicited by a broker from Tampa, Florida. Twenty years ago, this type of business climate did not exist in

---

[5]I am a non-voting stockholder in an application for a new station which has been pending at the FCC since 1987 and has still not been resolved; I am also an individual applicant in a challenge against an existing station's renewal application which has been pending since February, 1990. Despite the FCC's rhetoric in which it publicly claims to be interested in helping minorities, its staff's performance in the processing of hearing cases would not lead one to believe that the FCC is truly interested in increasing minority ownership.

our country. Typically, white businessmen sought out and sold their properties to other white businessmen. They did not even think to offer their properties for sale to members of the minority communities in this country. The tax certificate policy ensures, for economic reasons, that a competent businessman will always give a fair shake to a minority businessman to purchase his property.[6] The FCC then processes applications for its consent to the assignment of licenses of radio and television station typically in a 60-90 day period.

The issue of the Minority Tax Certificate is not an economic issue of quantifying how much the treasury is losing because the issuance of a certificate does not provide a tax credit. The issuance of a tax certificate only involves a tax deferral, generally for no more than 3 years, and only if the gain from the sale of the broadcast station to a minority-controlled company is reinvested in the communications industry. This program does not deprive the federal Treasury of revenues by forgiving a tax that might otherwise be due on the gain after a sale of a

---

[6]Unlike renewal applications, applications for the sale of broadcast properties cannot be challenged by competing applications (although they are subject to petitions). *See* 47 U.S.C. §310(d).

broadcast property. Rather, taxes are deferred. The minority tax certificate program is both good public policy and good tax policy, because (1) it brings qualified minorities into the broadcasting industry, thereby diversifying control of the mass media and continuing to keep the door open for minorities to have a voice and access to the vital means of communication, and (2) it keeps money flowing through the mass media industry and sustains it as a dynamic and growing industry which is the best of its kind in the world and provides great service to the public. The same theoretical argument that is use to justify the reduction in the capital gains tax applies to the protection of the tax deferral given by the Tax Certificate; provides capital for expansion, employment, productivity, consumption and eventual revenues for the treasury through sales and income taxes.

To conclude, I know that a lot of the minority issues of the 1960s and 1970s are "out of fashion" with many policy makers today. However, when one juxtaposes the study that I presented to the FCC some two decades ago with the situation today, it can be seen that only very little progress has been made. Minorities own a controlling interest in just 323 of the 11,128 commercial broadcasting

stations and just 15 of the 7,500 cable television systems in the nation. This extremely low percentage fails to come close to the 23 percent of the workforce which minority individuals comprise. The tax certificate policy has been a singularly successful means of bringing new minority entrepreneurs into the mass media industry. It has been said that non-minority investors have been abusing the system by using "minority" front persons. The Commission has means available to detect "shams" and to prevent abuses; for example, it could designate tax certificate applications for hearings before administrative law judges to determine whether the minority in question is *bona fide*.[7] Clearly, it is in the public interest for Congress and the FCC to develop means to curb abuses of otherwise beneficial programs.

However, a repeal of the tax certificate would be tantamount to Congress saying that minorities have now

---

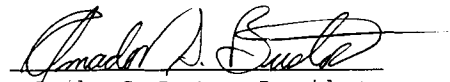
[7]The Supreme Court of the United States noted in ***Metro Broadcasting, Inc. v. FCC***, 497 U.S. 547, 595, n. 48, that FCC minority preferences are subject to administrative scrutiny to identify and eliminate from participation those applicants who are not bona fide. The FCC's adjudicatory staff has well over 10 years experience in ferreting out those applicants who seek minority preferences by "sham" ownership devices but who are in fact undeserving of those preferences. See e.g. ***KIST Corp.***, 99 FCC 2d 173, 186-90 (FCC Rev. Bd. 1984), *affirmed as modified* 102 FCC 2d 288, 292-93 and n. 11 (1985).

gained equal status, have equal opportunity, and equal access, and that racism has been eradicated from the United States, which is clearly not the case at this time. The tax certificate policy works, enhances minority ownership of and participation in the mass media, and in the long run does not result in a government forgiveness of tax liabilities. It is good tax policy and good social policy, and Congress ought to let it stand.

My appeal to this committee and the Congress as it attempts to reshape this country with its "Contract with America" that it be sure to include all Americans, Black Americans, Hispanic Americans, Asian Americans and Native Americans. Without fair access for all citizens will become a "contract on America;" a death warrant on the ideals of equality and justice that this country was built upon. Those are the precious principles that the founding fathers embodied in the Constitution that you have sworn to uphold. So, when you deliberate the fate of the tax certificate policy, be sure that tomorrow's America continues to be the land of opportunity for all, not just for the rich and famous; that America continues to be the land that rewards the entrepreneurial spirit, not only the concentration of capital into "mega"-companies; and that tomorrow's America

continues to be the land of equality and justice, not tyranny and discrimination.

Respectfully submitted,



Amador S. Bustos, President
Z-Spanish Radio Network,
Inc.

DATED: January 27, 1995

Z-Spanish Radio Network!

What's Driving Hispanic Market Growth?

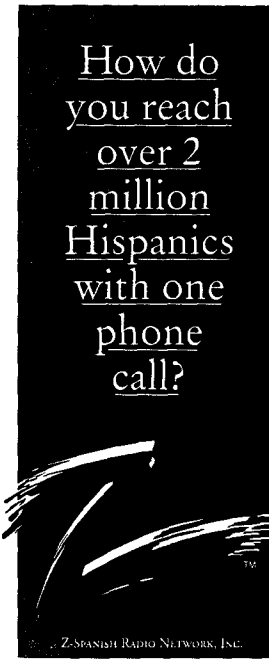
- More Hispanics were added to the population during the 1980s than all other minorities combined.
- Hispanics increased *seven times faster* than the rest of the population during the past decade.
- In two decades Hispanics will outnumber African Americans and become the nations largest minority group.
- Hispanic purchasing power swells to over $200 Billion.

Why Spanish Language Media?

- Hispanics make up one-quarter of the California population and represent 46% of the population growth in California.
- Over 75% prefer to speak Spanish.
- Strong desires to maintain cultural roots.

Contact your Z-Spanish Radio Representative.

Z-Spanish Radio Network, Inc.
340 Brannan Street, Suite 101
San Francisco, CA 94107
Tel: (415) 284-9200
Fax: (415) 284-9205



"La Z's" Program Director hand picked his "Dream Team." The combination of a distinctive format and nationally renowned talent, coupled with state-of-the-art technology to deliver a flawless, CD quality sound, give "La Z" a sophisticated, modern sound.

Raul Brindis
6am - 12pm
Raul has a team of supporting characters that make the morning at La Z "wackier" than any "morning zoo." Their high energy, jokes, character impressions, gossip on entertainers, and laughter wake up the audience and gets them in a good mood for the day ahead.

Salvador Homero Campos
3pm - 7pm
Sal's powerful air presence and magic touch for mixing music has commuters dancing in their seats during the drive home. He has three distinctive programs: "La Hora del Trabajador" (Workers Hour), "Los Grandes Anos del Rock" (Spanish Rock greatest hits), and "La Hora de Los Novios" (Love Lines).

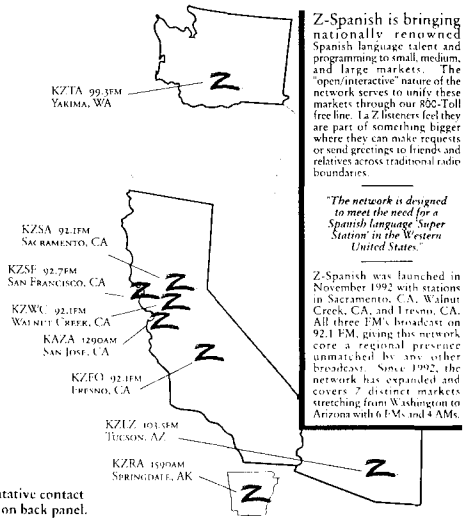
Gonzalo Siles
7pm - 12midnight
Gonzalo is the creator of "La Hora Romantica" (Romantic Hours) where listeners read original poems during an hour of pure love tunes.

Rafael Vasquez
12midnight - 6am
"Late Night with Chico Suave" brings high energy to keep the late night audience awake and dancing.

Elias Conde
10am - 3pm
Elias' smooth voice and infectious good humor keep the audience moving through the day and glued to La Z. On a regular basis Elias has live interviews with established and up-and-coming recording artists.

Talent and format are Z advantage.

Z Spanish Hit Radio is a music intensive format developed by R&M award winning Program Director Salvador Homero Campos. This format can best be described as a blend of three established radio formats: Contemporary Hit Radio (CHR), Contemporary Country (Banda/Ranchera), and Top 40/Dance. "La Z's" unique sound comes from the lively danceable tunes mixed with the quick and witty style of our radio personalities. The tight DJ interventions, and heavy rotation of new releases appeals to everyone from 12+, but the bulk of our audience is in the primary demographics of 18-49.



Z-Spanish is bringing nationally renowned Spanish language talent and programming to small, medium, and large markets. The "open/interactive" nature of the network serves to unify these markets through our 800-Toll free line. La Z listeners feel they are part of something bigger where they can make requests or send greetings to friends and relatives across traditional radio boundaries.

"The network is designed to meet the need for a Spanish language 'Super Station' in the Western United States."

Z-Spanish was launched in November 1992 with stations in Sacramento, CA, Walnut Creek, CA, and Fresno, CA. All three FM's broadcast on 92.1 FM, giving this network core a regional presence unmatched by any other broadcast. Since 1992, the network has expanded and covers 7 distinct markets stretching from Washington to Arizona with 6 FMs and 4 AMs.

See representative contact information on back panel.

EXHIBIT B

A PLAN FOR THE DEVELOPMENT AND ACQUISITION OF BROADCAST STATIONS FOR THE LATINO COMMUNITY

Presented to the F.C.C. Conference on
Minority Broadcast Ownership
Washington, D.C.

April 26, 1977

By the National Task Force On
Latino Broadcast Ownership Of The
National Latino Media Coalition

Amador Bustos

Joseph M. Aguayo

STATEMENT:

The Latino population of the U.S. now stands at 23 million strong. The same group of 23 million now earns $30 billion per year and spends $27 billion on consumer goods primarily advertised through the media of TV, radio and newspapers -- as does most of the American public.

It is also noteworthy that the distribution of the Latino population corresponds with the top 50 TV, radio and newspaper markets of the nation -- thus, the Latino community is often a dominant market segment in leading market areas.

Of the 954 television stations in the U.S. as of mid-June of 1975, more than 100 provide some amount of Spanish-language programming. The Spanish International Network (Channel 41 in New Jersey) and its almost eleven affiliate stations provide mostly Spanish language programming produced in Mexico for syndication through Central and South American including Puerto Rico.

In terms of the radio market, more than 200 stations broadcast in Spanish with programming for at least 30 hours per week. The number one radio and TV market of New York City has at least two stations with 24 hours and 18 hours of only Spanish-language programming.

Given this scope of population and buying power, the extent of Latino ownership and management of broadcast stations poses a national scandal. Presently, only six television

stations are owned and operated by Spanish-speaking interests, with two new additional licensees pending.

The National Latino Media Coalition has, at its Fifth Annual Conference in New York City, constituted a National Task Force on Latino Broadcast Ownership, and proposes to the Federal Communications Commission, the following recommendations which, if accepted by the FCC, should be sent to President Carter and also the various federal agencies indicated:

I. FINANCING OF LATINO BROADCAST VENTURES

A. That the Small Business Administration's present policy of disallowing loans and loan guarantees for broadcasting be changed by either administrative correction or legislative amendment. The SBA should be empowered to provide specific set-asides for minority broadcast ownership.

B. That the Corporation for Public Broadcasting provide radio start-up monies for Latino ownership as well as sufficient monies from its community service grants and minority training grants for the training of Latino broadcast personnel and the hiring of professional staff.

C. That the Educational Broadcast Facilities Division of the Office of Education specifically set a priority of funds for the purchase of broadcast facilities for potential Latino and other minority entrepreneurs.

II. FEDERAL COMMUNCIATIONS COMMISSION

A. That the FCC commit itself to both VHF and UHF drop-in frequencies and channels for specific use and ownership by Latino owners in key Latino markets.

B. That the FCC allow for public access to its computer data on frequency allocations as to selected Latino markets, as well as existing financial, and other station market data as contained. It is likewise recommended that the FCC's Office of Consumer Affairs be assigned to handle this responsibility.

C. That the FCC give public priority to both pending and future licensing applications by Latino and other minority owners.

D. That the FCC streamline and give priority status to the processing of licensing application from Latino owners and other minority groups.

E. That the FCC should immediately undertake to hire Latino professionals in its various divisions who will be able to respond and handle licensing and other applications with adequate care and sensitivity.

The National Task Force on Latino Broadcast Ownership of the NLMC recognizes the leadership commitment of the Federal Communications Commission in the broadcasting field and recommends that a similar conference on Minority Ownership of Cable Broadcast Media be convened in the immediate future.

The National Latino Media Coalition commends the FCC on its unprecedented conference on Minority Ownership in the Broadcasting Field and urges the FCC to exercise its commitment on those federal agencies (SBA, Corporation for Public Broadcasting, Office of Education, etc.) to ensure that the above-mentioned areas are issues and resources realized.

Mr. HANCOCK. Thank you, Mr. Bustos.
Mr. Montero.

STATEMENT OF FRANCISCO R. MONTERO, COUNSEL, AMERICAN HISPANIC-OWNED RADIO ASSOCIATION AND RADIO BROADCASTERS ASSOCIATION OF PUERTO RICO

Mr. MONTERO. Yes, that is correct. Thank you, Congressman Hancock. I know I am the caboose on this train, so I will try to keep it short.

My name is Francisco R. Montero and I am a communications attorney and a partner with the law firm of Fisher, Wayland, Cooper, Leader & Zaragoza, and I represent, among others, the American Hispanic-Owned Radio Association, which is a nonprofit trade association made up of Hispanic-owned commercial radio stations. I also represent the Radio Broadcaster's Association of Puerto Rico and also counsel members of the Hispanic National Religious Broadcasters.

My comments will focus on the difficulty minority-owned broadcasters face in gaining entrance to the broadcasting industry. I will save a rehash of what section 1071 says. I think we are all pretty familiar with it now. However, in applying that section to the FCC's policies of diversity, localism and minority participation in broadcasting, I think the FCC reasonably exercised discretion. As a means of promoting the FCC's policies, minority tax certificates are both cost effective and inexpensive to administer.

It is a bitter irony, I think, that one of the fastest growing segments of the population, that is Hispanic Americans, is one of the most underrepresented in the broadcasting industry. Yet because of the language barrier that they face, Hispanics are frequently most in need of effective media outlets.

The Hispanic population comprises approximately 9.9 percent of the U.S. population, and is expected to be the largest ethnic minority in the country by the turn of the century. Hispanics are culturally and politically diverse on both ends of the aisle; however, they stand united in their desire to participate in American society and commerce.

Also, they are united in that their countries of origin share a common tongue, and that is Spanish. It is estimated that 97 percent of Hispanic Americans speak at least some Spanish, and 51 percent speak it exclusively. This is a demographic which has not been lost on nonminority broadcasters. Two of the three national Spanish language radio chains are non-Hispanic owned; and the two major Spanish language television networks in the United States are not owned by Hispanics. MTV, CNN, HBO, NBC, and CBS have all formed Spanish language-programmed networks or channels, but Hispanics do not own these.

While Hispanic broadcasters admire and applaud the efforts of these non-Hispanic companies to serve the Hispanic community, there needs to be equal growth in the numbers of Hispanic broadcasters who understand and respond to the subtle issues affecting the Hispanic American community.

As the Hispanic population of the United States has grown, so has the spread of Spanish-speaking communities in cities and States which have not previously seen Hispanic populations. The

Hispanic populations of most American cities goes without printed news and information in Spanish, and must consequently rely on radio and television broadcasts for local news and information. It is the Hispanic broadcasters that usually serve this need. They are the ones that tell the Hispanic community in Spanish about which schools are closed during snow storms and where to go during national disasters.

Also, it should be noted that virtually all of the noncommercial Hispanic-owned radio and TV stations are programmed in Spanish, and they serve the educational and religious needs of the communities.

The minority tax certificate policy assists minorities to gain an ownership stake in the broadcasting industry and carries out the FCC's policy of promoting localism and diversity on the airwaves and, ultimately, benefits the tax base. Through ownership, these broadcasters have grown and provided employment to the Hispanic community. Thus, the benefits of the certificate trickle down throughout the community and the marketplace.

I was going to cite a graphic example, an anecdotal example of the benefits of the tax certificate, but I think Amador Bustos and Raul Alarcon and several of the others on the panels this morning are shining testaments of the success stories created by the FCC's tax certificate policy.

Often Hispanics, like other minority groups, do not have the track record to obtain the financial backing to outbid nonminority broadcasters in the open market. Capital and financing are extremely difficult to come by. The large nonminority-owned broadcasters have the credit and collateral to outbid the minority broadcasters. Without the existence of the minority tax certificate program, many successful Hispanic broadcasters would not have had the opportunity to compete with the larger, better financed, nonminority-owned broadcasters to acquire their first station.

As a final matter, there is another interesting point here with Hispanic broadcasters. It should be noted that Hispanic American broadcasters face some of their fiercest competition from Latin America. Mexican stations reach Texas, New Mexico, and California. Dominican stations reach Florida, Puerto Rico, and the U.S. Virgin Islands. These stations are not subject to the stringent Federal regulations that Hispanic American broadcasters face. Also, they usually undercut Hispanic American broadcasters in their advertising rates because of reduced overhead costs.

It is tragic that several State governments actually advertise with Mexican stations because they are cheaper to reach the Hispanic population in the United States than buying time on stations owned by Hispanic Americans. Programs like the tax certificate help stem that tide. The program helps Hispanic Americans enter the market so that they can compete and serve as a growing and productive segment of the American society, and this in turn helps keep American advertising dollars in the United States where they belong.

For these reasons, the FCC's tax certificate policy should be preserved and endorsed. I am available to answer any questions if you have any. Thank you.

Testimony of Francisco R. Montero
Counsel to the American Hispanic Owned Radio Association
and the Radio Broadcasters Association of Puerto Rico
before The Subcommittee on Oversight
of the Committee on Ways and Means
Presiding Congresswoman Nancy L. Johnson (R-CT)

Good morning Ladies and Gentlemen. My name is Francisco R. Montero. I am a communications attorney and partner with the Washington law firm of Fisher Wayland Cooper Leader & Zaragoza L.L.P. My primary practice area involves the representation of Hispanic broadcasters before the Federal Communications Commission. I represent the American Hispanic Owned Radio Association ("AHORA"), a non-profit trade association made up of Hispanic owned commercial radio stations, as well as the Radio Broadcasters Association of Puerto Rico. Also, I have counseled members of the Hispanic National Religious Broadcasters.

My comments will focus on the difficulty minority owned broadcasters face in gaining entrance to the broadcasting industry. Congress gave the FCC wide discretion in the implementation of Section 1071 of the Internal Revenue Code. The Section provides that the FCC may issue a tax certificate that permits sellers of broadcast properties to defer capital gains taxation on a sale or exchange of property whenever it determines that such a sale or exchange is "necessary or appropriate to effectuate a change in a policy of, or the adoption of a new policy by the Commission with respect to the ownership and control of radio broadcasting stations..." The minority tax certificate policy is consistent with the original intent of Section 1071. In applying Section 1071 to promoting the FCC's policies of diversity, localism, and minority participation in broadcasting, the Commission reasonably exercised its discretion with Congressional endorsement. As a means of promoting the Commission's policies, minority tax certificates are both cost effective and inexpensive to administer. The policy should, therefore, remain intact. Moreover, it should be noted that the FCC has initiated a rulemaking proceeding regarding its minority tax certificate policy. Comments and reply comments on the Commission's rulemaking proceeding are due on April 17 and May 7, respectively. As such, the Congress should consider the comments that are filed in that proceeding.

It is a bitter irony that one of the fastest growing segments of the population, Hispanic Americans, is one of the most under-represented in the broadcasting industry. Yet, because of the language barrier they face, Hispanics are frequently most in need of effective media outlets. The Hispanic population comprises approximately 9.9% of the U.S. population, and is expected to be the largest ethnic minority in the country by the turn of the century. Hispanics are culturally and politically diverse. However, they stand united in their desire to participate in American society and commerce. Also, they are united in that their countries of origin share a common tongue,

Spanish. It is estimated that 97% of Hispanic Americans speak at least some Spanish and approximately 51% speak it exclusively.

This is a demographic which has not been lost on non-minority broadcasters. Two of the three national Spanish language radio chains are non-Hispanic owned. The two major Spanish language television networks in the United States are not owned by Hispanics. MTV, CNN, HBO, NBC, CBS have all formed Spanish language programmed networks or channels. None are Hispanic owned. While Hispanic broadcasters admire and applaud the efforts of these non-Hispanic companies to serve the Hispanic community, there needs to be equal growth in the numbers of Hispanic broadcasters who understand and respond to the subtle issues effecting the Hispanic American community. The greatest obstacle Hispanics face in entering the broadcasting industry is a lack of capital which makes it nearly impossible to enter into and grow in the market. This reality has been recognized by various Federal, state, and local efforts to help Hispanics and other minority groups gain access to vital news and public service information in Spanish.

As the Hispanic population of the U.S. has grown, so has the spread of Hispanic communities in cities and states which were not previously known for their Hispanic populations. Cities like New York, Los Angeles, Miami, Chicago and Washington are known to have very large Hispanic populations. However, we are seeing the growth of Hispanic communities in cities such as Portland, New Haven, Nashville, Oklahoma City, and Salt Lake City to name a few. Unlike many other minority populations in the country, however, the Hispanic community faces a real obstacle in gaining access to local news and information in the Spanish language. The existence of local Spanish language media outlets to provide local news, weather and information in Spanish is essential.

The only cities in the country with regular Spanish language newspapers are the largest metropolitan areas with major Hispanic populations. As such, the growing Hispanic population of most American cities go without printed news and information and must, consequently, rely on radio and television broadcasts for local news and information. It is the small Hispanic broadcasters that usually serve this need. In fact, most Hispanic broadcasters program their stations in Spanish. They usually own their station in their home town and frequently serve as their own general manager. It is the small Hispanic broadcaster who will tell the Hispanic community in Spanish about which schools are closed during a snow storm or where to go during a natural disaster. While there are national Spanish language broadcasting chains, very few provide local news and information and only one is Hispanic owned.

The minority tax certificate policy assists minorities to gain an ownership stake in the broadcasting industry and carries out the FCC's policy of promoting localism and diversity on the airwaves, and ultimately benefits the tax base. Over the past five years, there have been over a dozen instances in which Hispanic Americans have used the tax certificate policy to help them acquire a station. Through ownership, these broadcasters have grown and provided employment to the Hispanic community. Likewise, they have provided an advertising outlet for other local businesses which serve the Hispanic community. These businesses have, in turn, grown. Finally, because of the limitations placed on minority tax certificates, the purchase price paid for the station is usually reinvested into the country's communications infrastructure. In short, the policy helps minority businesses succeed, serves the community and generates tax revenues. Thus, the benefits of the certificate trickle down throughout the community and the marketplace.

A graphic example of the benefits of the tax certificate policy involves a client of mine who acquired his first AM station in Laredo in 1990. He is from Laredo and still lives in Laredo. Because he could offer the previous owner a tax

certificate, he was able to lower his bid and, thus, afford to buy the station. He is an Hispanic American and he programs the station in Spanish. He is the general manager of the station and his mother answers the telephone. His station was such a success that in 1993 he bought an FM station in Laredo which he also programs in Spanish. Most recently he has acquired an interest in an AM station near San Antonio which is also programmed in Spanish. Without the assistance he received from the tax certificate program, he would never have been able to afford the first station, and the industry would have lost a successful, tax paying participant.

The FCC has long recognized the need and value of encouraging diversity and localism as strong public policy objectives. In furtherance of this policy, the FCC has long recognized the need and value of encouraging Hispanic and other minority ownership in broadcast facilities. However, minority broadcasters have continually faced obstacles in obtaining the necessary financial assistance to compete. The fact that non-Hispanic broadcasters are entering the Spanish language broadcasting market to the virtual exclusion of Hispanics is testimony to the problem. Often, Hispanics, like other minority groups, do not have the track record to obtain the financial backing to out-bid non-minority purchasers in the open market. Capital and financing are extremely difficult to come by. The large non-minority owned broadcasters have the credit and collateral to out-bid minority broadcasters. While the FCC is to be commended in its efforts to encourage minority ownership, without the existence of the minority tax certificate program, many successful Hispanic broadcasters would not have had the opportunity to compete with larger, better financed non-minority owned broadcasters to acquire their first station.

As a final matter, it should be noted that Hispanic American broadcasters face some of their fiercest competition from Latin America. Mexican stations reach Texas, New Mexico and California. Dominican stations reach Florida and Puerto Rico. These stations are not subject to the stringent Federal regulations that Hispanic American broadcasters face. Also, they usually undercut Hispanic broadcasters in their advertising rates because of reduced overhead costs. It is a sad example that the State of California purchases Spanish language advertising time from stations in Mexico to reach the Hispanic American communities in San Diego and other cities, frequently to the exclusion of Hispanic American broadcasters in those American cities. Thus, Hispanic American broadcasters, who serve this vital role of providing the Hispanic American community with local Spanish language news and information, are being beat out by Latin American competitors. Programs like the tax certificate policy help stem the tide. The policy helps Hispanic Americans enter the market so they can compete and serve this growing and productive segment of the American society. This, in turn, helps keep American advertising dollars in the United States where they belong. For these reasons, the FCC's tax certificate policy should be preserved and endorsed. I am, of course, available to provide any additional information that the Committee may request.

Mr. HANCOCK. Well, thank you very much for your testimony. That will become part of the record.

I would just like to make the statement that this hearing was not called for the express purpose of eliminating something that is beneficial to the economy and beneficial to minorities. And, it is not only to determine the justification for a specific situation that maybe should or maybe should not occur.

The testimony I have heard today, in my own opinion, has been very informative. I think this panel and the previous panels understand that we do have a problem which we are going to try to address. I think that is what the public expects of us under the Contract With America.

Your particular company, Mr. Oxendine, you are a venture capital company and you evidently also own three television stations. Are you into radio also or just television?

Mr. OXENDINE. I finance radio and I own TV.

Mr. HANCOCK. Is your Capital Fund incorporated? Is this a minority enterprise, also?

Mr. OXENDINE. Yes, it is. It was started by the broadcast industry. ABC, NBC, CBS, and 73 other broadcasters invested in the company. So it is called Broadcast Capital Fund. We went to the SBA and asked for a license. We have a MESBIC and we use that. So we took that, and in the last 14 years we have been lending to minorities.

Mr. HANCOCK. Broadcast Capital Fund is primarily funded by major——

Mr. OXENDINE. By the broadcasters.

Mr. HANCOCK.—broadcasters. Fine.

Mr. OXENDINE. It is a not-for-profit private initiative.

Mr. HANCOCK. Private venture capital?

Mr. OXENDINE. Yes.

Mr. HANCOCK. Do any of the witnesses have anything that you would like to add, briefly?

Mr. BUSTOS. Congressman Hancock, you keyed on a particular aspect that I also had cut out of my dissertation because it was a little bit longer, and that is the similarity to the capital gains tax.

The deferral is very closely—has the same effect of allowing that company to save to reinvest in another portion of the economy, or generally the communications industry as well, which will then produce jobs in that industry, which increases productivity and so forth. The whole cycle goes to productivity, to employment, and then to eventual taxation through tax or employment income taxes. So it does have a close parallel and since it is also a deferral and not a credit, I think it has even a healthier benefit.

Mr. OXENDINE. Congressman Hancock.

Mr. HANCOCK. Yes, sir.

Mr. OXENDINE. I just wanted to say something with regard to the FCC and we, as minorities. I think that it is important to understand that when we go before the FCC to ask about whether or not we qualify for a tax certificate, I think, Don Cornwell, you alluded to what his company does, but I think the FCC in making its comments to the subcommittee was kind of remiss in saying what they do, because they really are good electronic policemen policing the airwaves.

When you talk about the minority control issue before the FCC, you have to make the distinction between equity control and voting control. A limited partnership is one thing, and a regular corporation is another in terms of equity participation and voting control requirements.

The limited partnership mirrors a regular business. Regular business people come to an investor and say, "Look, I have an idea; I want to finance something. You put up 90 cents, I will put up 10 cents; let me have voting control and together we will make some money."

When we go before the FCC we are asked two things: Are you a minority-controlled organization? To be minority controlled, you have to have 51 percent of the voting stock of your company. That is not difficult to determine. The problem comes with regard to the amount of equity the minority provides. When you look at a limited partnership, you may have 10 limited partners who each put up $10 million. That is not what is important. You have a general partner corporation, which usually includes the minority interest, that is really important.

I think that what you have to look at and ask is: Does the minority really have 20 percent equity in the company? You can have a general partnership corporation of the limited partnership that has only $10,000 as the total equity. So any minority can find $2,000 or $2,100, which could qualify as 21 percent of the equity in the company, and then the majority would put up the balance of $8,000. The problem is that in that general partner corporation assignment, you could also have a preferred stock portion where someone could put up $5 million for an interest in the company.

So I think the question you might want to ask in the future when you examine minority-controlled organizations, is not only do you have voting control, but how does the equity that the minority contributes compare to the entire amount being funded.

I hope you do not pass a law that requires us to put up 51 percent of the equity in a deal. No one does that. The FCC, they have a notice of proposed rulemaking asking for comments from the public regarding minority initiatives. I think one requirement is that we as minorities should put up substantial equity, whatever that number is. I think, Don Cornwell, that is what you were talking about. There should also be some real management control for the minority group, as well as voting control.

The FCC should review the approval rights of the other investors. Too often, when you look at the underlying documents to a particular financing, you find out that the other partners have so much control you, as a minority, are not really in charge. The above are the issues that lots of folks have not looked at, and I think those are easy things to do. Ask some simple basic questions of minorities and their partners and you will find out what is a sham and what is real. The mechanism is there.

Ms. BRUNSON. I would like to bring to your attention the concept that we are costing the government, costing the consumer, costing the public money by using this deferral process. I would like to reemphasize that we are never costing the government if the leveraging of the funds and sale exponentially extends the growth to where you bring in five or six or seven times the impact of jobs

and revenue in terms of the economic base. In this way you are really using the mechanism to create for the consumer a much healthier economic environment.

So that when we start using terms where we are saying we are taking this money out of the pocket of America, we must also weigh the concurrent benefit that is being brought to the table by the expansion of these businesses by those of us who are given the opportunity to own a small property, and then put our 150 percent energy into growing those properties to a greater degree than the person who is spinning it off, who may not have the same intensity to do the kinds of things that we will do.

Not only do we bring an economic benefit to the whole process, but we bring an underlining benefit where we provide the training and the development for the next generation of broadcasters coming in so that they will have the wherewithal to be able to understand how to penetrate this medium so that we will have continuous voices of African-American owners and operators.

So I would like for us to look at the process of weighing that which we say we are taking away with that which is also being put on the table by the combined effort of those of us who grow these into much, much larger businesses than they were when we got the tax certificate in the first place.

Mr. HANCOCK. Well, Ms. Brunson as a small businessman before I came to the Congress, you may rest assured that I am familiar with what is called sweat equity. Very familiar with it.

Well, thanks again for your testimony, and this hearing is adjourned. Thank you.

[Whereupon, at 3:15 p.m., the hearing was adjourned.]

Re: Hearing to Examine the Operation and Administration of Code Section 1071, FCC Tax Certificate Policy

Dear Mr. Moseley:

We respectfully submit this written statement for the printed record of the January 27, 1995 hearing by the Subcommittee on Oversight of the Committee on Ways and Means ("Subcommittee") to examine the operation and administration of Section 1071 of the Internal Revenue Code of 1986, as amended ("Code"). In accordance with your instructions, six (6) copies are enclosed.

In view of the numerous comments received by the Subcommittee in connection with the hearing, we have not provided an overview of Code Section 1071.[1] Instead, we have assumed familiarity with the Code Section and will respond directly to the inquiries raised.

[1] For an excellent discussion of the mechanics of Code Section 1071, please see, Edward L. Glazer and Stephen D. Fisher, *Section 1071: FCC-Certified Transactions Involving Minority-Controlled Entities*, 47 Tax Law. 91 (1993).

THE FCC'S 1978 POLICY IS CONSISTENT WITH THE UNDERLYING INTENT OF CODE SECTION 1071

The 1978 Policy

On May 25, 1978, the Federal Communications Commission ("FCC") issued its *Statement of Policy on Minority Ownership of Broadcasting Facilities*, 68 F.C.C.2d 979 (1978) (hereinafter cited as the "*1978 Policy Statement*"). The expressed policy was "to increase significantly minority ownership of broadcast facilities." The ultimate goal of this policy was to increase programming diversity so that it more accurately reflected the viewpoints of all Americans. Ownership was preferred as a means of furthering program diversity because it does not require direct governmental intrusion into programming. This policy was consistent with several court decisions,[2] and its ideals are part of the 1934 Communications Act and inherent in the First Amendment.[3]

One of several steps the FCC selected to implement this policy was the use of its authority to grant tax certificates under Code Section 1071 in circumstances the FCC determined appropriate. *1978 Policy Statement*. Appropriate circumstances include those where a sale of media is proposed to parties with a significant minority ownership interest and where there is a substantial likelihood that diversity of programming will be increased.

The policy of using Code Section 1071 to enhance opportunities in the broadcasting industry was expanded to cable television systems in recognition of the technological revolution occurring in the communications and broadcast industries. In December 1982, in a *Policy Statement on Minority Ownership of Cable Television Facilities*, the FCC stated a new policy:

> "Believing that minority ownership of cable television systems is a significant additional means of fostering the inclusion of minority views in programming, and noting the relative scarcity of minority owned cable systems presently operating, the [Federal Communications] Commission adopts a policy of encouraging

---

[2] *See, Citizens Communications Center v. F.C.C.*, 447 F.2d 1201 (D.C. Cir. 1971); *TV 9 Inc. v. F.C.C.*, 495 F.2d 929 (D.C. Cir. 1973).

[3] In the Communications Act of 1934, Congress assigned to the FCC exclusive authority to grant licenses, based on "public convenience, interest, or necessity," to persons wishing to construct and operate radio and television broadcast stations. 47 U.S.C. §§ 151, 301, 303, 307, 309 (1982 ed.).

> minority ownership of cable systems, utilizing the Commission's tax certificate authority as a form of subsidization of minority entrepreneurs seeking to enter the cable television market." 52 Rad. Reg. 2d (P & F) 1469 (1982).

The FCC acknowledged that "[T]he functions that cable television system operators perform for their subscribers are, to a large degree, similar to those performed by broadcast licensees for their respective audiences." Id. at 1470. The FCC also recognized that greater efforts were necessary to achieve the goal of diversified programming contemplated by the Communications Act of 1934, and stated, "despite our previous efforts to ensure program diversity, it appears that additional measures in the area of cable television are appropriate." Id. at 1471.

In September 1985, the FCC expanded the application of Code Section 1071 to include non-wireline cellular transfers. The FCC explained:

> "although cellular systems do not constitute "radio broadcasting stations" within the meaning of the [Communications] Act [of 1934], a broad reading of the language of the tax statute (Section 1071 of the Internal Revenue Code) is appropriate in light of the general congressional intent underlying the statute's passage and radical transformation of the telecommunication marketplace since the statute's adoption." *In re Telocator Network of America*, 58 Rad. Reg. 2d (P & F) 1443, 1448 (1986).

In responding to the technological innovations occurring in communications and broadcasting industries, the FCC held:

> "In light of the legislative intent of Section 1071, the dramatic changes in telecommunication marketplace since its original enactment and Commission precedent, we conclude that the phrase "radio broadcasting station" is illustrative of the more general congressional intent to facilitate the effectuation of the Commission's policies rather than restrictive, and the scope of the phrase is properly construed as expanding with the extension of the Commission's pro-competitive policies. Accordingly, we hold that the phrase does not bar the issuance of tax certificates in connection with transfers of non-wire cellular partnership interests in cellular markets 31 through 90." Id. at 1450.

Thus, in fulfilling its role in a rapidly evolving industry, the FCC would have been remiss if it had failed to allow its application of Code Section 1071 to evolve in a commensurate manner into the new telecommunications technologies.

Intent of Code Section 1071

Code Section 1071 was originally enacted in 1944 as Section 112(m) of the Internal Revenue Code of 1939 ("1939 Code"). Act of February 25, 1944, Ch. 63, Section 123(a), 58 Stat 40-43, 46. In Code Section 112(m), as originally enacted, Congress delegated to the FCC the authority to grant tax certificates as:

> " . . . necessary or appropriate to effectuate the policies of the Commission with respect to the ownership and control of radio broadcasting stations . . ." 1939 Code Section 112(m).

This section was passed to help the FCC implement a "new policy" that prohibited ownership of more than one radio station in a single market. Senate Finance Committee Report, 78th Cong., 1st Sess., S. Rept. 627 (1943). Congress intended it to provide relief for licensees who had to sell or exchange such stations as a condition of obtaining license renewal. Id. Congress did not specify any limits to this delegation of authority. Thereafter, the FCC exercised its broad regulatory authority to make and change policies concerning the ownership and control of broadcasting stations with the aid of tax certification.

Section 112(m) was recodified without material change as Section 1071 in the Internal Revenue Code of 1954. H. Rep. No. 1337, 83rd Cong., 2nd Sess., reprinted at 1954 U.S. Code Cong. & Ad. News 4621, 59072. However, the Senate Report accompanying the bill did specifically comment on the definition of "radio broadcasting":

> "The form of 'radio broadcasting' as used in the Bill and in the 1939 Code has an established meaning in the industry and in the administration of the Federal Communications Act which is sufficiently comprehensive to include telecasting." S. Rep. No. 1622, 83rd Cong., 2nd Sess., reprinted at 1954 U.S. Code Cong. & Ad. News 4261, 5072.

Clarifying language, in the form of a technical amendment, was substituted into Section 1071 in 1958. This amendment provided that tax certificates would be granted as "necessary or appropriate to effectuate a change in a policy of, or the adoption of a new policy, by the Commission." Technical Amendments Act of 1958, Pub. L. No. 85-866, § 48, 72 Stat. 1606, 1642 (1958); H.R. Rep. No. 775, 85th Cong., 1st Sess. 29 (1957). This change facilitated the FCC's usage of Section 1071 to implement evolving policies, such as that to increase the diversity of broadcast licensees.

Committee on Ways and Means
U.S. House of Representatives
February 7, 1995

Consistency between 1978 Policy Statement and Code Section 1071

The intent underlying Code Section 1071, namely, to provide the FCC with a tool to effectuate its policies, is entirely consistent with the 1978 Policy Statement. Indeed, Code Section 1071 remains an essential tool at the disposal of the FCC in its attempts to increase minority ownership of broadcast facilities. It is difficult to conceive of many industries that have changed as significantly as the communications industry has over the last fifty years. The FCC would have been remiss if it had not expanded the scope of the tax certificate program to keep pace with the rapid developments in the communications industry.

Recently, attention has been focused on the size of the tax benefits expected to be granted under the tax certificate program. Certainly, it is quite difficult to quantify the social benefit derived from the tax certificate program in any meaningful way. To attempt to assess this benefit against a hypothetical tax cost is pointless. The magnitude of the transactions now being undertaken in the deployment of the National Information Infrastructure, however, are indicative of the importance of the communications industry in our society today. Now, more than ever, it is essential that the tax certificate program be endorsed to ensure universal access to telecom facilities. Code Section 1071 indisputably remains an essential tool in diversifying the ownership of broadcast licenses.

THE FCC'S ADMINISTRATION OF CODE SECTION 1071 DOES NOT CONSTITUTE AN IMPERMISSIBLE EXERCISE OF LEGISLATIVE AUTHORITY

The FCC's administration of Code Section 1071 constitutes a permissible exercise of legislative authority. This has been examined by academics, the courts and by Congress on more than one occasion. In each case, the conclusion reached is that it is a legitimate exercise of legislative authority.

Court Decisions

Prior to the 1978 policy, the Review Board, in an opinion accepted by the FCC, had taken the view that the "Communications Act, like the Constitution, is color blind." *Mid-Florida Television Corp.*, 33 F.C.C 2d 1, 17 (Rev. Bd.), *aff'd*, 37 F.C.C.2d 559. The issue of what the FCC should consider in awarding broadcasting licenses arose in *TV 9, Inc. v. FCC*, 495 F.2d 929

(D.C. Cir. 1973), *cert. denied*, 419 U.S. 986 (1974). In *TV 9*, the FCC, in awarding a license, gave little weight to the fact that the losing applicant was minority-owned. In considering the reasoning of the FCC, the appeals court stated:

> "To say that the Communications Act, like the Constitution, is color blind, does not fully describe the breadth of the public interest criterion embodied in the [Communications] Act. Color blindness in the protection of the rights of individuals under the law does not foreclose consideration of stock ownership by members of a Black minority where the [Federal Communications] Commission is comparing qualifications of applicants for broadcasting rights . . ." *Id.* at 936.

Similarly, the same court, in *West Michigan Broadcasting Co. v. FCC*, 735 F.2d 601 (D.C. Cir. 1984), *cert. denied*, 470 U.S. 1027 (1985), considered a situation in which two companies filed mutually exclusive applications to build a new FM radio station in Michigan. One of the companies was owned by a minority who would fully participate in the station's management. In that case, the appeals court held that the FCC could give merit to a minority applicant regardless of whether there was a substantial minority-group population in the city where the license was located. *Id.* at 609. Further, increased media ownership by minorities, the court decided, should conclusively be presumed to advance the public interest. *Id.*

More recently, the Supreme Court upheld the constitutionality of two policies that enhance the opportunities for minorities to acquire FCC licenses. *Metro Broadcasting, Inc. v. F.C.C.*, 110 S. Ct. 2997 (1990). In evaluating two related FCC policies to increase minority ownership, the Supreme Court consolidated *Metro* with *Astroline Communications Company Limited Partnerships et al. v. Shurberg Broadcasting of Hartford, Inc. et al.* The policies in question were 1) the FCC program of awarding enhancement for minority ownership in comparative proceedings for new licenses; and 2) the distress sale program permitting a limited category of existing radio and television stations to be transferred only to minority-controlled firms.

In finding both FCC policies constitutional, the Supreme Court held that minority ownership programs had been specifically approved and mandated by the Congress, and as such required judicial deference. *Id.* at 3008. Additionally, FCC minority ownership policies promote programming diversity. *Id.* at 3009, 3010. Further, programming diversity serves important First Amendment values, and remains consistent with the 1934 Communications Act. *Id.* at 3010, 3012.

Congressional Action

As part of Section 115 of the Communications Amendments Act of 1982, Congress authorized the FCC to choose by lottery among competing qualified applicants for certain licenses as an alternative to lengthy comparative proceedings. Pub. L. No. 97-259, § 115, 96 Stat. 1087, 1094-95 (codified at 47 U.S.C. § 309(i) (1982). Nevertheless, Congress required that:

> "significant preferences will be granted to applicants or groups of applicants, the grant to which of the license or permit would increase the diversification of ownership of the media of mass communications. To further diversify the ownership of the media of mass communications, an additional significant preference shall be granted to any applicant controlled by a member or members of a minority group." *Id.*

The legislative history of this provision acknowledges the FCC's continuing minority ownership policy and diversity of viewpoint rationale, and clearly shows that Congress intended to ensure that a similar minority preference was applied in any random selection licensing system. H. Conf. Rep. No. 765, 97th Cong., 2d Sess., 40, reprinted in 1982 U.S. Code Cong. & Admin. News 2261, 2284.

Since 1987, using appropriations legislation, Congress has prohibited the FCC from using any of its appropriated funds to repeal, retroactively apply changes in, or to reexamine any of its race or gender preference programs. Act of Dec. 22, 1987, Pub. L. No. 100-202, 101 Stat. 1329. This prohibition applies to the tax certificate, distress sale, and comparative licensing programs, respectively. *Id.* The limitation did not prevent an expansion of the programs. Thus, Congress has answered the statutory authority question by effectively ratifying the Commission's interpretation of the public interest standard and adopting a legal presumption that minority ownership produces more diverse programming that better serves the public interest.[4]

There can be no question that the FCC's administration of Code Section 1071 is a permissible exercise of legislative authority. Notwithstanding the judicial decisions and Congressional action, it is disturbing that questions are now being raised by the Subcommittee about the legislative authority to administer a Code section that has been in force and effect for more than fifty years.

---

[4] In Comment, *FCC Tax Certificates For Minority Ownership of Broadcast Facilities: A Critical Re-examination of Policy*, 138 U. Pa. L. Rev. 979 (1990), the author correctly concludes that the FCC's administration of the program is within its statutory authority. *Id.* at 999.

McMANIMON & SCOTLAND

Phillip D. Moseley, Chief of Staff
Committee on Ways and Means
U.S. House of Representatives
February 7, 1995

THE TAX INCENTIVE PROVIDED IN CODE SECTION 1071 IN FACT FOSTERS MINORITY OWNERSHIP OF BROADCAST FACILITIES

In our experience as counsel to clients engaged in the broadcasting and communications industry, we emphatically affirm that the tax certificate program has provided opportunities for minority individuals to participate in the broadcasting and communications industries. Moreover, it has served to spark investment in the entire telecommunications industry. In examining the effectiveness of the program, it is noteworthy that the National Telecommunications and Information Administration reported that minorities held .5% of broadcast licenses in 1978, and as of 1994 held 2.9% of them. See, National Telecommunications and Information Administration, United States Department of Commerce, *Analysis and Compilation Minority-Owned Commercial Broadcast Stations*, 1994. Also, the FCC has reported that 378 tax certificates were issued for broadcast stations and cable television facilities from 1978 to 1994.

THE FCC POLICY IS A NECESSARY OR APPROPRIATE MEANS OF ACHIEVING THIS GOAL

The 1978 Policy remains as important today as it was in 1978, if not more so. While there have been significant improvements in minority ownership of broadcasting facilities and greater diversity in programming over the past sixteen years, there is still a long way to go. *See, Metro, supra at 3003-05.* The tax certificate program is one of several effective measures in achieving the FCC's policy objectives and as such should not be repealed or replaced.

The tax certificate policy permits more broadcast and cable properties to reach their highest valued use, thereby creating jobs and generating investment and tax revenues. The policy's reinvestment feature retains capital in the media industries, where it helps build the nationa's growing communications infrastructure. Furthermore, the policy helps small businesses enter the competitive marketplace and ultimately become large taxpayers themselves.

The FCC, working closely with the IRS, possesses the expertise to review and improve upon the tax certificate policy. The FCC is obtaining public comment on the policy, with comments due on April 17, 1995. Among the matters the FCC might consider are the need for additional data on the policy's long and short range tax consequences, the optimal holding period for facilities obtained under the policy, and procedures for additional scrutiny of the bonafides of tax certificate applicants. Congress should defer additional action on this matter until it receives the FCC's report and order.

JOHNSON ANNOUNCES HEARING ON INTERNAL REVENUE SERVICE BUDGET PROPOSAL FOR FISCAL YEAR 1996 AND 1995 TAX RETURN FILING SEASON

Congresswoman Nancy L. Johnson (R-CT), Chairman of the Subcommittee on Oversight of the Committee on Ways and Means, today announced that the Subcommittee will conduct a hearing on the Internal Revenue Services's budget proposal for fiscal year 1996 and the 1995 tax return filing season. **The hearing will be held on Monday, February 27, 1995, in room B-318 Rayburn House Office Building, beginning at 10:00 a.m.**

This hearing will feature invited witnesses only. In view of the limited time available to hear witnesses, the Subcommittee will not be able to accommodate requests to testify other than from those who are invited. Those persons and organizations not scheduled for an oral appearance are welcome to submit written statements for the record of the hearing.

BACKGROUND:

The fiscal year 1996 budget request for the Internal Revenue Service totals $8.2 billion and will support the activities of almost 115,000 employees. These resources will support the IRS's operations in collecting nearly $1.3 trillion in revenue and in administering the federal tax laws. The $8.2 billion budget request includes $830 million to process the tax returns which taxpayers will file in 1996; $1.6 billion to examine tax returns; $909 million for collection activities; and $1.9 billion for information systems.

The 1995 tax return filing season refers to the period of time between January and April 15th when American taxpayers are expected to file 116 million tax returns. Approximately 82 million taxpayers are expected to receive an average refund of over $1,100 in 1995.

The Subcommittee on Oversight held two hearings last year on the subject of income tax refund fraud. The Subcommittee learned that criminals were exploiting the tax system to receive fraudulent refund payments from the IRS. Two factors appear to have fueled a rapid expansion of refund fraud schemes. First, the refundable nature of some tax credits, such as the earned income tax credit (EITC), make them particularly susceptible to refund fraud. The U.S. General Accounting Office has said that the EITC is a factor in over 90 percent of fraudulent refund claims. Second, the advent of the electronic filing of tax returns has led some tax return preparers and banks to provide what are generally called "refund anticipation loans" (RALs) to taxpayers who file electronically. With RALs, banks lend money to a taxpayer based on his or her anticipated tax refund and not on the credit worthiness of the person as a borrower. Criminals sometimes can exploit the rapid turn-around time of a RAL to receive a refund before the IRS can complete its cross-checks and identify a fraudulent refund claim. At an October 6, 1994, Subcommittee hearing, Ronald K. Noble, the Under Secretary for Enforcement at the Department of the Treasury, testified that the refund fraud problem could be as high as $5 billion.

The Adminstration has taken several steps to curb income tax refund fraud during the 1995 filing season.

In October 1994, the IRS announced that it would suspend the issuance of direct deposit indicators (DDIs) to tax return preparers who file returns electronically. The DDI informs the tax return preparer that the taxpayer's refund is not subject to offset for delinquent government loans or child support. In the past, the receipt of a clean DDI often was a pre-condition for a bank to issue a refund anticipation loan.

The IRS also has increased its scrutiny of EITC claims. In particular, it is performing extensive cross-checks of all names and social security numbers to determine whether or not they match. A taxpayer's failure to supply accurate social security numbers could result in a delay of the person's tax refund.

DISCUSSION:

The IRS fiscal year 1996 budget request represents an increase of 888 employees and $726 million over the comparable levels in fiscal year 1995. The Subcommittee will review how these resources will be applied to carry out the mission of the IRS. In particular, it will review the status of the Tax System Modernization (TSM) program which is earmarked to receive over $1 billion in fiscal year 1996. TSM is the program to upgrade the computer and information handling capability of the IRS.

The Subcommittee also will review the staus of the 1995 tax return filing season. Special attention will be paid to the steps which the IRS is taking to curb refund fraud. It will review the consequences of the decision to suspend the issuance of DDIs and the closer scrutiny of EITC claims. It also will examine ways to reform the EITC to reduce fraud.

DETAILS FOR SUBMISSION OF WRITTEN COMMENTS:

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement by the close of business, Monday, March 13, 1995, to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filing written statements wish to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Subcommittee on Oversight office, room 1136 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

Each statement presented for printing to the Committee by a witness, any written statement or exhibit submitted for the printed record or any written comments in response to a request for written comments must conform to the guidelines listed below. Any statement or exhibit not in compliance with these guidelines will not be printed, but will be maintained in the Committee files for review and use by the Committee.

1. All statements and any accompanying exhibits for printing must be typed in single space on legal-size paper and may not exceed a total of 10 pages.

2. Copies of whole documents submitted as exhibit material will not be accepted for printing. Instead, exhibit material should be referenced and quoted or paraphrased. All exhibit material not meeting these specifications will be maintained in the Committee files for review and use by the Committee.

3. A witness appearing at a public hearing, or submitting a statement for the record of a public hearing, or submitting written comments in response to a published request for comments by the Committee, must include on his statement or submission a list of all clients, persons, or organizations on whose behalf the witness appears.

4. A supplemental sheet must accompany each statement listing the name, full address, a telephone number where the witness or the designated representative may be reached and a topical outline or summary of the comments and recommendations in the full statement. This supplemental sheet will not be included in the printed record.

The above restrictions and limitations apply only to material being submitted for printing. Statements and exhibits or supplementary material submitted solely for distribution to the Members, the press and the public during the course of a public hearing may be submitted in other forms.

Note: All Committee advisories and news releases are now available over the Internet at GOPHER.HOUSE.GOV, under 'HOUSE COMMITTEE INFORMATION'.

******

Chairman JOHNSON. Good morning, Commissioner, and welcome everyone to this morning's hearing on the fiscal year 1996 budget proposal for the IRS (Internal Revenue Service), and on the 1995 tax return filing season.

The size of the budget increase sought this year is noteworthy. The budget will move from $8.2 billion and almost 115,000 employees to collect $1.3 trillion in revenue to a 10-percent dollar increase and a 922-person increase in the work force.

The size of the increase is noteworthy for several reasons: First, the increase is much larger than the inflation rate. Therefore, the budget proposal goes far beyond keeping pace with inflation and, instead, contains real growth in spending.

Second, the increase in the work force comes at a time when the overall Federal work force is undergoing a major downsizing. The fact that the IRS budget runs counter to the prevailing trend in Federal budgeting is no accident, but the expression "it takes money to make money" applies to the IRS as it applies to the business world.

This morning we want to learn how the IRS intends to use its resources in fiscal year 1996. Most IRS programs show only small changes but a few programs have significant increases. The budget proposal proposes a $441 million, or a 67-percent increase in the TSM (tax systems modernization) program.

The modernization program is supposed to upgrade and expand the IRS' computer and information handling capability. While it is absolutely essential to do so, it is important to understand the enormity of the challenge that the IRS faces year after year. Without this modernization program, it would certainly be crushed by the burden of processing over 1 billion documents every year.

Something I read mentioned that if you put the documents the IRS processes end to end you could circle the globe 36 times. It is a powerful amount of paper that has to be processed accurately, and so, Commissioner, we are very interested in the tax systems modernization program and in the progress you are making, as well as the problems you are encountering. Unfortunately, it is one of those programs that must be done, but a small mistake, as in the space program or other complex programs, could also have catastrophic consequences.

Second, the 1995 tax return filing season is now well under way and one major feature of this year's filing season is the activity of the IRS to curb fraudulent refund returns. The administration's testimony before the subcommittee in October 1994 revealed that refund fraud could be a $5 billion problem. We could fund most of the IRS' budget out of money the government is currently failing to collect.

Furthermore, a lot of the refund fraud is associated with the electronic filing program. In addition to the fact that 43 percent of the fraud is associated with electronic refunds, as I understand it, a large percentage of that fraud is associated with the EITC (earned income tax credit). It is important for this subcommittee to understand, because refundable tax credits are apparently turning out to be much more vulnerable to fraud than other kinds of taxes. With a number of refundable credits before us, this hearing today

is not only relevant to the IRS' efforts to curb this fraud but also to decisions that we might make in coming weeks.

The action to delay refunds for 16 percent of the tax returns, that is one out of every six returns, has created some problems and we will get into those problems today.

Commissioner, with you and later in the hearing with those affected by them, we hope to understand the problems that have been created by your antifraud efforts and look at whether there are any ways that we could alleviate some of those problems as well as understand fully the rationale for your actions.

I welcome you, Commissioner Richardson. It is a pleasure to have you and your staff before us, and I yield to my colleague, Mr. Matsui, the ranking member of this subcommittee, for an opening statement.

Mr. MATSUI. Thank you very much, Madam Chairwoman.

I want to endorse the statements that you made in your opening comments. I would like to just make a couple observations, some are redundant from what you have indicated.

The IRS is asking for a budget increase of $739 million from the last fiscal year, and that would include a 922-person increase in employment. I think, as you said, however, that whenever the IRS seeks additional funds, it is usually to increase collections, and so certainly we will support an effort such as that.

In addition, we have the tax systems modernization program that the Commissioner has been pursuing for several years. This is something that I support. One issue I think that we need to resolve, however, is just what kind of savings we will see out of this. The service says approximately $9 billion will be achieved over a period of 5 years, and the GAO (General Accounting Office), who we will be hearing from today, has indicated that they are not able to make that determination. We need to find out about what we will actually save.

Of course the third area, I think, is the area of fraud. I think the earned income tax credit and others have created some problems, and I think the Service is attempting to deal with those.

With that, I would also like to tell the Commissioner that we look forward to hearing her testimony and of course working with her throughout this tax filing period and throughout the year. Thank you.

Chairman JOHNSON. Do other members of the subcommittee wish to make opening statements?

Commissioner.

STATEMENT OF HON. MARGARET MILNER RICHARDSON, COMMISSIONER, INTERNAL REVENUE SERVICE, ACCOMPANIED BY MIKE DOLAN, DEPUTY COMMISSIONER; LARRY WESTFALL, MODERNIZATION EXECUTIVE; PHIL BRAND, CHIEF COMPLIANCE OFFICER; BOB WENZEL, CHIEF STRATEGIC PLANNING AND COMMUNICATIONS; AND JUDY VAN ALFEN, CHIEF TAXPAYER SERVICE

Ms. RICHARDSON. Thank you, Madam Chairwoman, and other distinguished members of this subcommittee.

I would like to introduce the people who are with me today. Mike Dolan, who is the Deputy Commissioner is on my right, your left;

Larry Westfall, who is the modernization executive for the Internal Revenue Service and in charge of the TSM program; I also have with me Judy Van Alfen, the chief, taxpayer service; Phil Brand, who is our chief compliance officer; and Bob Wenzel, who is the chief, strategic planning and communications.

We really do appreciate the opportunity to be here today to talk about our 1996 budget request and also the 1995 filing season.

I believe that the United States currently has the best tax administration in the world, but we at the Internal Revenue Service do recognize we can no longer do business as usual. We believe that American taxpayers have a right to fair and efficient tax administration from a customer service-oriented organization. For that reason, we feel we must be able to take advantage of technology and business system innovation to collect the revenue owed at the least possible cost and with as little burden as possible for taxpayers. The challenges that face us today—a growing population, rapid changes in technology, a global economy, and increasing sophistication in business practices—require innovative and creative approaches to achieve efficient and effective tax administration.

Fiscal year 1996 is a pivotal year for us. Our fiscal year 1996 appropriation will not only shape the agency's future, but, in my opinion, it will affect the quality and the effectiveness of tax administration in this country for many years to come.

Madam Chairman, this morning, I would like to give you and your colleagues a sense of the range of our business and what we are doing to operate more effectively and efficiently today and on into the next century. The progress toward a more effective tax administration system today, however, including the steps that we took to get ready for the 1995 filing season, will pale in comparison to the potential the tax systems modernization program will offer us when it is completed in a timely fashion.

In a few minutes, I am going to ask Mr. Westfall to talk to you a little more about our tax systems modernization program, but before he does, I would like to tell you a little bit about how we accomplish our mission today, and also our plans for accomplishing our mission in the year 2001.

I often say that the IRS is like a large multinational corporation—and we are larger than all but a handful of corporations—and like other large multinationals, we engage in many lines of work in order to accomplish our mission. We are in the financial services business—like a bank or a credit card company—but unlike most banks and credit card companies, we have to maintain and service approximately 200 million taxpayer accounts. We respond to taxpayers' account questions, we adjust accounts, we send out bills, and we process payments. We also process tax returns and payments.

For instance, during this filing season, during 1995, we will process approximately 1.1 billion information documents and approximately 208 million returns. Our gross receipts, if you will, are close to over $1.2 trillion. To accomplish the monumental processing task, we currently use an assembly line-like process.

Today, processing takes place at 10 service centers and 2 computing centers, and, during the height of the filing season, we work

round-the-clock, 7-day-a-week shifts. In those days just before and right after April 15, mountains of mail arrive at our service centers brought by convoys of tractor trailers.

Between 1986 and 1994, the number of tax returns filed increased by almost 15 million, while the staff processing these returns decreased—a real productivity improvement of 12.6 percent during that 8-year period. The result of this focus on productivity is that our 10 service centers today are currently operating at virtually their maximum levels of efficiency and quality within the limits of the current system. There is little or no further room for productivity increases at the service centers without technological enhancements.

TSM has already begun to help us meet the increased demands on our other burdened infrastructure by providing alternative methods of filing and receiving tax returns and payments. Today, a paper return must travel by mail to the service center, be processed through our mailroom, transported to a data entry clerk, and then keypunched into the system. This process is not only outdated and labor intensive, but it is also proned to errors by both taxpayers and by the Internal Revenue Service.

In contrast, nearly 16 million electronically filed documents, including 14,000,000 individual tax returns, bypassed these costly and inefficient steps last year. As a result, these electronically filed documents were processed with an accuracy rate of 99.5 percent, significantly higher than the accuracy rate for paper returns. Errors, by both IRS and taxpayers, represent rework at a significant cost and burden to the Service and possible cost and burden to taxpayers if we have to contact them in order to correct the errors.

By changing the way we do business through increased productivity and various alternative electric filing methods, we are already processing some tax returns and payments more efficiently. Although we are making significant progress by modernizing the way we conduct our business, we do need your continued support to completely transform our sixties assembly line processing operation into an automated, efficient operation worthy of the 21st century. Funding for our fiscal year 1996 budget request will help to ensure that the TSM program is completed in a timely fashion.

Another way we are changing the way we do business is by finding new and better ways to interact with taxpayers. Recognizing that correspondence is labor intensive, costly, and burdensome, the IRS has focused on making significant, meaningful improvements to our telephone operations. We do believe that taxpayers should be able to get through to the IRS on the first call and they should be able to have their issues resolved on that call.

To improve the way we interact with taxpayers, we have studied and are implementing some of the best practices of private industry. For example, today we can now transfer telephone traffic among 27 sites nationwide that helps us balance our workload and maximize the service availability to taxpayers.

Even though we have made progress in the way we interact with taxpayers, we are acutely aware of the fact that we can and must do more. Much of the progress to date can be credited to tax systems modernization, but to continue this process, we must fully implement the modernization program by the year 2001.

Future tax systems modernization improvements planned specifically to help the IRS better interact with taxpayers include adding interactive capabilities with our telephone system, which will provide taxpayers with secure, self-help account information capabilities, much like those available today with other financial institutions in the private sector.

For example, taxpayers will be able to use their telephone keypad 24 hours a day to access their accounts, to determine any outstanding balances, receive refund status, or arrange for a tax payment plan, in addition to being able to file their tax returns using their touch tone telephones, as some taxpayers in 10 States can actually do this year.

In making our tax administration system as effective and as efficient as possible, we understand that it is not enough just to modernize our information systems and business systems without updating our 40 year old structure. We are beginning to consolidate the returns processing operations that are now done in 10 service centers into 5 submission processing centers, and we are consolidating the 44 locations where we had 70 phone and correspondence operations into 23 customer service centers. We will be operating with 3 computing centers instead of 12. We are very close to finalizing recommendations about the number and primary functions of our district offices.

The combination of organizational streamlining, business change, and state-of-the-art technology will move us from a paper-based, labor-intensive system to an electronic filing and payment system.

In addition to our financial services and processing lines of business, the IRS is also charged with enforcing the law, both civil and criminal, and collecting taxes that are not paid voluntarily. Although it is only one of our lines of business, our compliance function is probably the best known part of what the IRS does. We estimate that about 83 percent of the taxes due are paid voluntarily, another 3½ percent, or a total of 86.5 percent, is collected annually through compliance and enforcement efforts.

In fiscal year 1994, total enforcement revenue collected by the Internal Revenue Service was $33.7 billion, of which $23.5 billion was a direct result of IRS collection efforts. Total revenue collected last year through compliance was more than four times as much as our entire budget.

We also know that examinations, collection actions, and criminal investigations are, and I fear always will be, essential to demonstrate to those who do comply with the tax law that those who do not comply will be caught. The IRS is continuing to improve its compliance efforts to maximize the revenue collected. Enhancing our research capabilities, the linchpin of future compliance efforts, will enable us to measure voluntary compliance levels nationally and locally to identify broad market segments in industries that are noncompliant and affect taxpayer behavior through a combination of information, education, and enforcement.

Research is helping our compliance employees select the most productive cases for examination, and it is increasing their effectiveness during those examinations, improvements which will not only produce additional revenue but will also reduce taxpayer burden caused by an inefficient audit process.

We also have other tax systems modernization projects under way to increase compliance and reduce taxpayer burden. In addition to automation and compliance efforts, carefully crafted statutory changes relating to the administration of the tax law can also dramatically affect the amount of revenue collected by the IRS.

For example, the 1993 tax legislation changed the point of taxation for diesel fuel from the distributor to the terminal and authorized the dyeing of tax-exempt diesel fuel which reduced fraud and increased dramatically the amount of excise taxes collected. Through the first three-quarters of calendar year 1994, the tax dollars from taxable diesel fuel sales reported on excise tax returns increased by 34.6 percent over the same period in calendar year 1993, even after adjustment for the recent rate increase. That was an additional $1.09 billion.

Although some of the increase in sales reported may be attributable to improved economic conditions, we believe that almost all of the increase is due to greater compliance achieved by moving the collection point from the distributor to the terminal rack, from the dyeing of diesel fuel used for nontaxable purposes, and from greater enforcement efforts.

We could increase collection of excise taxes even more with your help. Diesel fuel fraud, particularly when it involves organized crime, must be addressed through undercover operations that are initiated by our criminal investigation activity. As I testified before this subcommittee last October, undercover fraud operations, particularly diesel fuel fraud investigations, are expensive and currently they must be paid for with appropriated funds.

The Department of Treasury supports giving the IRS authority to use the proceeds of undercover operations to finance them. We had this so-called "churning" authority at one time but the statute lapsed and we think it needs to be reinstated. We are currently the only Federal law enforcement agency without this authority.

Last year with the support of this subcommittee, Congress funded a 5-year compliance initiative for additional compliance programs that have afforded us the first opportunity since 1991 to undertake a multiyear effort to collect the revenue that is owed. Over a 5-year period we estimate conservatively that tax revenue from this initiative will be $9 to $10 billion. This initiative is focused heavily toward the collection of delinquent accounts, with special emphasis on reaching taxpayers quickly by telephone if we have an indication of a delinquency.

I should add that even with the additional compliance initiative staffing in 1995, in the fiscal year we are in now, we are operating with about 3,800 FTE (full-time equivalent) positions fewer than we had in 1992. So we actually have come down over the years in staffing.

We have set an ambitious goal to increase overall compliance to 90 percent by the end of 2001, a goal that will provide an additional $40 billion in tax revenues by 2001 and every year thereafter. With your continued support of the 1995 compliance initiative and tax systems modernization, we are convinced that we can achieve this goal.

I would like now to turn briefly to this year's filing season.

The filing season begins with taxpayers filling out their returns and sending them to the IRS. Earlier, I described what we are already doing to process some returns more efficiently. I also want to describe some steps we have taken to make filling out forms and complying with the law less burdensome for taxpayers.

We recognize that an easier filing season starts with simpler, more understandable forms and instructions. We have concentrated especially on making improvements in forms for small businesses. Examples of those improvements to date include a new streamlined schedule C–EZ for sole proprietors and a much simpler form 940, which is the Federal unemployment tax return, that can be used by two-thirds of all the form 940 filers.

Last year I created an Office of Small Business Affairs, run by Barbara Jenkins, who I believe is here with me today. Her office is working with small businesses to address paperwork and regulatory problems and looking for opportunities to apply technology and increase communications with small business communities.

We are also working with the Social Security Administration and the States to simplify the tax and wage reporting system to eliminate the need for multiple reporting. Last year, the Social Security Administration extracted wage information from the W–2s submitted from 12 States and redistributed this information not only to us, but also to some of the States, eliminating the need for employers to send paper W–2s to those States. This filing season, 28 States have enrolled in the program.

Where we can, we are using technology to get information to taxpayers as quickly and as easily as possible. For example, we now can provide the public with a CD–ROM version of tax forms, publications, and instructions. This means that copies of forms, publications, and instructions, even seemingly hard to find ones, can be printed on demand without having to leave your home or your office. This year forms and instructions, as well as up-to-date information, are available on the information superhighway through FEDWORLD, which is an electronic bulletin board service. That gives the public access to files of tax forms, instructions, and publications which they can print out on their own computers.

This year we expect to respond to 70 million taxpayers through our phone centers. Our telephone assisters will respond to 36 million taxpayer inquiries over our toll-free system, but regrettably this is still only 52 percent of the customers who will request the services of an assister. We want to be able to serve those other 48 percent, too.

Because we understand and feel very strongly that taxpayers must be informed if they are going to file accurate and complete returns, I often say that the front end of compliance really is our taxpayer service function. We are planning to answer 1.3 million more calls this year than we were given the money to do. Unfortunately, as you will hear later from the General Accounting Office, this is still far short of the demand.

We have also expanded our hours of service this filing season. Our telephone lines are now open at least 10 hours a day each work day, and all IRS telephone sites will provide telephone help during three Saturdays in April.

TSM funds are allowing us to replace our equipment with a state-of-the-art telephone system that provides the capability to transfer calls among our toll-free sites so that we can reduce delays and answer more calls. Where that system has been installed, we are already improving productivity by 10 percent, allowing us to answer more taxpayer calls. We also have after hours routing to our automated Tele-Tax system that can address 140 tax topics, as well as provide refund status information.

We are going to be responding to more than 22 million pieces of correspondence this year, and we expect to help more than 7 million taxpayers at our walk-in assistance sites. To further our goal to reduce the burdens on taxpayers, we have expanded the number of our assistant sites this year, offering no-cost electronic filing from the 42 we had last year to 232 this year. Electronic filing at no cost is also available at over 1,000 volunteer income tax assistance sites.

Clearly, our biggest challenge this filing season has been to put in place better methods to protect the tax revenue from those who want to commit fraud. Although the IRS has addressed tax refund fraud through its questionable refund program for many years, technology has significantly improved the capabilities of both government agencies and private financial institutions to deliver money faster. Those shorter payment cycles, coupled with the capacity for electronic payments, require both public and private institutions to be more vigilant than ever in guarding against fraud.

Since 1990, the IRS has steadily increased its efforts to control refund fraud. Significantly more fraud has been identified and stopped by the IRS and more new schemes have been identified. In May 1993, shortly after I was confirmed, I appointed an IRS executive, Ted Brown, right behind me, to coordinate our refund fraud prevention and detection efforts, and we established a coordinating group to assure that our entire organization worked in concert to address problems contributing to refund fraud.

Last spring, in consultation with this subcommittee, the Secretary of the Treasury established a special task force to further study the problem of refund fraud and propose additional preventive actions. In reporting to the Congress last October, the task force estimated that erroneous and fraudulent returns could be costing the Treasury between $1 and $5 billion a year. Since the hearing on the subject of refund fraud before this subcommittee last February, we have taken many steps as part of an agencywide strategy to protect the revenue.

For example, we established new qualification criteria for electronic return originators. We have used both IRS and outside expertise to analyze patterns indicative of erroneous or fraudulent refunds, and we have reprogrammed a series of filters and screens into our processing system. Also, we have made additional staff available to our processing criminal investigation and examination activities to reinforce our refund protection strategy.

One thing all experts on fraud will tell you is that fraud is everchanging. We will continue to use the knowledge we gain about fraud to identify indicators of questionable refunds.

With the Los Alamos National Laboratory, the premier authority in computerized pattern protection, we are building even more so-

phisticated screening techniques than we have today. Obviously, we cannot discuss the specific screens without compromising the effectiveness of these new tools.

This filing season we are carefully reviewing all returns, paper and electronic, to ensure that only those taxpayers who are entitled to refunds receive them. We have spent a lot of time, both before the filing season began and since it got under way, urging taxpayers to use accurate Social Security numbers for themselves and for their dependents, because we are verifying those numbers on all returns.

If you think about an ATM machine at the bank, you cannot get your money out if you do not use the correct PIN number and refunds should be subjected to the same kinds of scrutiny.

We are, as we have repeatedly said we would be doing, slowing down the process to allow us additional time to verify claims before we issue refunds. We estimate that as many as 8 percent of all refunds may be delayed this year. Although some refunds are being delayed in whole or in part, the vast majority of the refunds claimed to date have been paid, and I want to emphasize that they have been paid within the customer service standards that we spelled out in our tax packages: 21 days for electronically filed returns and 40 days for paper returns.

We regret that for some taxpayers, perfectly legitimate refunds will be delayed this year because the initial screening criteria will flag their returns. But I want to emphasize that taxpayers who are entitled to refunds will receive them and those refunds will be sent out as soon as possible. When we have delayed a refund in whole or in part, we are letting taxpayers know why. Our notice explains that the full refund or remaining refund amount will be sent within 8 weeks unless we determine additional contact with the taxpayer will be necessary to verify the claim.

I also want to point out that for true hardships we have our problem resolution program, which is available to provide assistance to taxpayers.

At our hearing before this subcommittee last February, we outlined our four-part refund fraud strategy. First, we felt we needed to develop a better understanding of patterns of fraud and our work with the Los Alamos National Laboratory is an example of this. They are using the same kinds of pattern detection techniques that they did in developing some of the Star Wars technology.

Second, we wanted to prevent recurrences of error or fraud. Checking the accuracy of the Social Security numbers and tightening our policies and procedures for screening electronic return originators are examples of fraud prevention.

Third, we wanted to detect fraud before refunds are paid.

Fourth, we wanted to take vigorous action when we uncover fraud. Working with the Department of Justice and the U.S. Attorneys, we are actively pursuing criminal violations. As I state, we have spent a lot of time this filing season urging taxpayers to be very careful to file accurate returns using correct Social Security numbers for themselves and for their dependents.

In addition to including this cautionary information in our tax packages and all of our filing season publicity, we also worked extensively with the tax preparer community, with financial institu-

tions, before the 1994 season even ended, to let them know we would be taking additional steps this filing season to protect tax revenues against fraud. We also would be soliciting their assistance about how to better accomplish this goal in a way that would be less burdensome to taxpayers.

One subject that I would like to touch briefly on is one we have worked very hard to promote, and that is claiming the earned income tax credit on an advanced basis. Workers who qualify for the advanced earned income tax credit can get up to $105 a month in their paychecks. They can get it whether they are paid weekly, biweekly, monthly or whatever, and they can do it by filling out a simple form W–5, the Earned Income Tax Credit Advance Payment Certificate, and providing it to their employers.

By claiming the earned income tax credit in advance, eligible taxpayers can have the use of the additional money throughout the year. They can also avoid potential delays when they claim the credit after the yearend. In other words, they do not have to wait until they file their returns to get that credit.

Turning to modernization, a fully implemented tax systems modernization program is an integral and necessary part of the IRS' future. For that reason, I understand and all of us at the IRS understand that it is essential that tax systems modernization be effectively managed.

In addition to the progress that we have made toward modernizing the tax system, the IRS has also made significant improvements in our overall management of TSM. Because of the very large financial commitment we are asking for TSM, we understand the need to assure Congress and the American taxpayers that the IRS can indeed implement this program.

In recent testimony before our House Appropriation Subcommittee, the General Accounting Office expressed three basic concerns it had about the successful completion of TSM. The first concern focused on technical and management expertise and skills.

Madam Chairman, we have worked very, very hard to assure that we not only have the IRS personnel necessary to do that job, but that we are also including outside experts in the project.

Probably the most important step I have taken as Commissioner in connection with TSM has been the appointment of Larry Westfall as the modernization executive. On June 30, 1994, I issued a memorandum throughout the Internal Revenue Service detailing his role in managing TSM. He reports directly to me, and my memorandum made it very clear that everyone in the IRS reports directly to him in all matters concerning tax systems modernization. In other words, he is our TSM program manager and has the responsibility for overseeing every aspect of modernization, including the use of outside contractors.

About 75 percent of the proposed TSM budget would pay for contractor-provided products and services. Two major support contractors, the Illinois Institute of Technology and the TRW Corporation, have worked with us for some time to develop and manage our TSM effort. We are also relying heavily on oversight and guidance from the National Research Council and from the General Accounting Office.

GAO's second concern was that new technology would be introduced without making improvements in underlying business processes. We recognize that upgrading information systems alone is not the answer to meeting current and future challenges. Consequently, we have rethought the fundamental way we carry out our mission.

As I briefly touched on a few minutes ago, we are not only redesigning our business systems, but are also reorganizing to take full advantage of modern technology. Taxpayers are already benefiting from the combination of new business approaches and applied technology, for example, with more filing and payment choices and, I think, improved customer service is also out there.

Addressing the GAO's third concern that the IRS set system development priorities and establish performance measures, under Mr. Westfall's leadership, we are establishing management control processes for modernization that demonstrate our commitment to change and our understanding of what it takes to make change happen. We now have schedules for implementing TSM, monitoring the program, and measuring its success. We have plans and schedules against which our performance can be monitored and the success of TSM determined.

Madam Chairman, I stated at the outset that fiscal year 1996 is a pivotal year for us as we continue with our plans to acquire and implement major new systems. What happens to our fiscal year 1996 budget will impact the tax administration system of the future, shaping our ability to effectively administer the tax law and collect all the revenue that is due. TSM will influence most every aspect of this business: Our processing capabilities and the filing season, the effectiveness of our customer service efforts, and our compliance capabilities, including fraud detection and prevention.

I would also like to reemphasize a point that I have made to you and Chairman Archer and many of your colleagues on this subcommittee as I have met with you. I realize that the 104th Congress is considering making changes to the Internal Revenue Code and one of my concerns is that before any legislation becomes final, we be given an opportunity to advise you about issues relating to any burden possible changes may have on taxpayers as well as on the tax administration system. Particularly when legislative changes occur late in the year, the effect on the next filing season can be very significant. Some of that burden that is placed upon taxpayers might be avoided if we could consult with you during the formative stages of the legislation.

I know, Madam Chairman, that you and members of the subcommittee have many questions, but if it fits with your schedule, I would like to ask Mr. Westfall to give you just a brief overview of where we are with TSM and then we would also be delighted to answer your questions.

Chairman JOHNSON. Commissioner, if I may, thank you very much for your thorough overview of the challenges that face the IRS and the great variety of initiatives that you and your staff have developed to address them.

[The prepared statement and attachment follow:]

STATEMENT OF

MARGARET MILNER RICHARDSON
COMMISSIONER OF INTERNAL REVENUE

BEFORE THE

SUBCOMMITTEE ON OVERSIGHT
HOUSE COMMITTEE ON WAYS AND MEANS

FEBRUARY 27, 1995

Madame Chairman and Distinguished Members of the Subcommittee:

With me today are Mike Dolan, Deputy Commissioner; Larry Westfall, Modernization Executive; Phil Brand, Chief Compliance Officer; Bob Wenzel, Chief Strategic Planning and Communication; and Judy Van Alfen, Chief Taxpayer Service. We appreciate the opportunity to be here today to discuss the Internal Revenue Service's FY 1996 Budget request and the 1995 Filing Season.

The United States currently has the best tax administration system in the world. But government at every level is facing new and different challenges. We at the IRS recognize that we can no longer do business as usual. American taxpayers have a right to fair and efficient tax administration from a customer service-oriented organization. To provide this, the IRS must be able to take advantage of technology and business system innovation to effectively collect the revenue owed at the least possible cost and with as little burden as possible for taxpayers. The challenges facing the IRS today -- a growing population, rapid changes in technology, a global economy, and increasing sophistication in business practices -- require innovative and creative approaches to achieve efficient and effective tax administration.

The IRS is at a crossroads, and FY 1996 is a pivotal year for us. Our FY 1996 appropriation will not only shape the agency's future, but, in my opinion, it will affect the quality and effectiveness of tax administration in this country for many years to come.

OUR BUSINESS AND THE NEED TO MODERNIZE

Madame Chairman, this morning, I would like to give you and your colleagues a sense of the range of the IRS's business and what we are doing to operate more effectively and efficiently today and into the next century. The progress toward a more effective tax administration system today, including steps we took to get ready for the 1995 filing season, will pale in comparison to the potential the Tax Systems Modernization program (TSM) will offer us when it is completed in a timely fashion.

Several years ago, with the strong bipartisan support of Congress, the IRS embarked on a plan to update its technology and change its business practices to meet the challenges of tax administration for the rest of the decade and into the next century. That plan, Tax Systems Modernization, is an integrated program to upgrade the IRS's technology and systems in ways that most effectively and efficiently allow us to accomplish our mission which is to collect the proper amount of taxes at the least cost while reducing the burden on taxpayers.

TSM will revolutionize three central processes: 1) capturing data from tax returns and other documents as completely and economically as possible; 2) storing and analyzing data to

improve IRS's ability to maintain accurate taxpayer accounts and correct errors; and 3) providing access and information to authorized employees to improve customer service and compliance.

TSM is an integrated approach that combines updated business practices with updated technology to improve the current tax administration system. Some TSM projects are already a reality. Without this integrated approach to modernization, the IRS will be forced to merely replace in a piecemeal fashion the antiquated system we have today without overall improvement. Despite the progress made so far, we recognize that we have more work to do. As I am certain each of you recognizes, taking full advantage of technology and business system innovation is not an easy task; it takes much careful planning and investing over time.

Before turning to specific details about TSM, I would like to share with you how we accomplish our mission today, and our plans for accomplishing our mission in the year 2001. The IRS is like a large multi-national corporation -- larger than all but a few Fortune 50 companies -- and, like other large multi-nationals, the IRS engages in many different lines of work to accomplish its mission.

We are in the financial services business -- like a bank or credit card company -- and we maintain approximately 200 million taxpayer accounts. As part of this line of business, the IRS responds to taxpayers' account questions, adjusts accounts, sends out bills and processes payments.

PROCESSING RETURNS AND PAYMENTS

In addition to our financial services business, we process tax returns and payments. During 1995, we will process approximately 1.1 billion information documents and approximately 208 million returns, and our "gross receipts" will be over $1.2 trillion. To accomplish this monumental task, the IRS currently uses a factory assembly line-like process. Today processing takes place at ten Service Centers and two Computing Centers by round-the-clock, seven-day-a-week shifts during the height of the filing season. In the days just before and right after April 15th, mountains of mail arrive at our Service Centers by convoys of tractor trailers.

To reduce the burden on taxpayers and enhance voluntary compliance, the IRS must accurately and promptly accomplish this massive processing job. Between 1986 and 1994, the number of tax returns filed increased by almost 15 million, while the staff processing these returns decreased. As a result, the IRS recognized a real productivity improvement of 12.6 percent during that period. The result of this eight-year focus on productivity is that our ten Service Centers are currently operating at virtually their maximum levels of efficiency and quality. With the limitations of our current system, there is little or no further room for productivity increases at the Service Centers.

By the year 2002, the IRS will be receiving 27 million additional tax returns, more than the entire workload of one of our 10 Service Centers today. We are concerned that this increased volume could put at risk our ability to accurately and promptly process returns and payments, particularly since our current system cannot be modified quickly to adjust to tax law changes.

TSM has already begun to help us meet the increased demands on our overburdened infrastructure by providing alternative methods of filing and receiving tax returns and payments. A paper return must travel by mail to the Service Center, be processed through our mail room, transported to a data entry clerk and key punched into the system. This process is not only outdated and labor intensive, but also prone to errors by both taxpayers and the IRS. In contrast, nearly 16 million

electronically filed documents, including 14 million individual tax returns, bypassed these costly and inefficient steps last year. As a result, these electronically filed documents were processed with an accuracy rate of 99.5 percent -- significantly higher than the accuracy rate for paper returns. Errors, by both IRS and taxpayers, represent re-work at a significant cost and burden to the Service and possible cost and burden to taxpayers if we have to contact them to correct errors.

By changing the way we do our business through increased productivity and various alternative electronic filing methods, the IRS is already processing some tax returns and payments more efficiently. But without full implementation of TSM, we will be severely limited in our ability to achieve additional breakthroughs due to the age and capacity of our current systems. The current systems used for receiving and processing returns and payments are nearing or beyond their life expectancy. In contrast, the IRS's modernized system will use fewer resources and accurately capture up to 100 percent of return information that will be available immediately.

Although we are making significant progress modernizing the way we conduct our business, we need your continued support to completely transform our current 1960's assembly-line processing operation into an automated, efficient operation worthy of the 21st century. A fully implemented TSM program will enable us to fundamentally change the way we manage taxpayer accounts, and funding our FY 1996 Budget request will help to ensure that the TSM program is completed in a timely fashion.

TAXPAYER ASSISTANCE

Another way we are changing the way we do business is by finding new and better ways to interact with taxpayers. Recognizing that correspondence is labor- intensive, costly, and burdensome, the IRS has focused on making significant, meaningful improvements to its telephone operations. Taxpayers should be able to get through to IRS on the first call and have their issues resolved. We have already enhanced our systems through TSM, so today IRS representatives anywhere in the country can research and update taxpayers' accounts regardless of where taxpayers live. Future TSM enhancements will include expanded safeguards designed to protect access to taxpayers' accounts and a fuller access to available data.

To improve the way we interact with taxpayers, we have studied and are implementing the best practices of private industry. Our actions will result in better service and increased revenue collection. For example, we can now transfer telephone traffic among 27 sites nationwide to balance workload and maximize service availability to taxpayers.

Although we have made progress in the way we interact with taxpayers, we know that we can and must do more. Much of the progress to date can be credited to Tax Systems Modernization, and, to continue this progress, we must fully implement the modernization program by the year 2001.

Future TSM improvements planned specifically to help the IRS better interact with taxpayers include adding interactive capabilities to our telephone system which will provide taxpayers with secure, self-help account information capabilities, much like those available today with other financial institutions. For example, taxpayers will be able to use their telephone keypad 24 hours a day to access their accounts to determine any outstanding balances, receive refund status, or arrange for a tax payment plan.

ORGANIZATIONAL CHANGE

In making our tax administration system as effective and efficient as possible, we understand that it is not enough to modernize our information systems and business systems without updating the organization's 40-year old structure. A structural change is essential to capitalize on the modern technology and the way we want to do business. In 1993 and 1994, we restructured our Headquarters and Regional Office organizations, and redesigned our methods of supporting compliance and customer service operations. This reorganization has reduced layers of supervision, increased management spans of control, reduced overhead, consolidated support operations (personnel, automation support, training, facilities support), and focused line executives on improving compliance and service to taxpayers.

These efforts are part of our Business Vision -- consolidating functions that were previously dispersed and making the optimum use of technology. We are beginning to consolidate the returns processing operations now done in ten Service Centers into five Submission Processing Centers, and to consolidate the 44 geographic locations where we had 70 phone and correspondence operations into 23 Customer Service Centers. We will be operating with three computing centers responsible for centralized mainframe computing instead of twelve, and we are very close to finalizing recommendations about the number and primary functions of our district offices. The combination of organizational streamlining, business change and state-of-the-art technology will move us from a paper-based, labor intensive system to an electronic filing and payment system.

COMPLIANCE

In addition to our financial services and processing lines of business, the IRS is also charged with enforcing the law -- both civil and criminal -- and collecting taxes that are not voluntarily paid. Although it is only one part of our business, our compliance function is probably the best known part of what the IRS does.

Our research estimates that about 83 percent of taxes due are paid voluntarily. Another 3.5 percent (for a total of 86.5 percent) is collected annually through compliance and enforcement efforts. In FY 1994, total enforcement revenue collected by the IRS was $33.7 billion, of which $23.5 billion was a direct result of the IRS collection organization. Total revenue collected last year was more than four times as much as the entire IRS budget. And while compliance is not directly responsible for the generation of revenue which is voluntarily paid, examinations, collection actions and criminal investigations are, and always will be, essential to demonstrate to those who do comply with the tax law that those who do not comply will be caught.

As part of our efforts in FY 1994 we:

- Increased the number of examinations of foreign controlled corporations and proposed over $8 billion in adjustments, thus making sure that income is taxed in the proper jurisdictions;

- Initiated over 5,340 criminal investigations and recommended prosecution in over 3,740. These investigations covered motor fuel excise taxes, failure to file income tax returns, money laundering, bankruptcy, and other financial crimes;

- Examined 1.4 million income, employment and excise tax returns, proposed additional tax and penalties of $24.4 billion, and disallowed $3.3 billion in claims against the Treasury;

- Examined over 77,700 exempt organizations and 29,300 employee benefit plans; and

- Made determinations on over 62,000 exempt organizations and 53,400 employee benefits plans.

The IRS is continuing to improve its compliance efforts to maximize the revenue collected. Enhancing the IRS's research capabilities -- the linchpin of future compliance efforts -- will enable the IRS to measure voluntary compliance levels nationally and locally; identify broad market segments and industries that are noncompliant; and affect taxpayer behavior through a combination of information, education and enforcement.

As part of TSM, we have acquired the hardware and software needed for our National Office Research and Analysis site, as well as the 31 local District Office Research and Analysis sites. These sites have been staffed and training is underway. This research is helping our compliance employees select the most productive cases for examination and is increasing their effectiveness during those examinations. These improvements will not only produce additional revenue but will also reduce taxpayer burden caused by an inefficient audit process.

We also have other TSM projects underway to increase compliance and reduce taxpayer burden. The Integrated Collection System (ICS) and Totally Integrated Examination System (TIES) automate the examination and collection activities. These systems increase the productivity of field revenue agents, office tax auditors, service center tax examiners and field revenue officers. The TIES and Automated Underreporter (AUR) systems assist compliance personnel by automating previously manual tasks such as report writing, tax and penalty computations and a host of other required actions. These automated systems reduce the time period to complete an examination by as much as several months. ICS, which assists collection personnel with the field collection process, increased revenue officer productivity in the test site by 26 percent and reduced by 20 days the time it took a revenue officer to complete a case. The TSM systems are producing immediate benefits, while at the same time, building the foundations for the fully integrated system of the future.

Automation of Criminal Investigation (CI) is also underway. During FY 1995, we are piloting the initial phase of the new Automated Criminal Investigation (ACI) system that, when fully implemented, will permit CI employees to use information from sources throughout the law enforcement community. In addition, on a broader scale, Tax Systems Modernization will provide enhanced capabilities for detecting and stopping those who try to circumvent the tax system fraudulently.

We have set an ambitious goal to increase overall compliance to 90 percent by the end of 2001 -- a goal that will provide an additional $40 billion in tax revenues by 2001 and every year thereafter. With your continued support of the FY 1995 Compliance Initiative and TSM, we will be able to achieve this goal.

I would like to note that in addition to automation and compliance efforts, carefully crafted statutory changes relating to the administration of the tax law can dramatically affect the amount of revenue collected by the IRS. For example, in the 1993 Omnibus Budget Reconciliation Act, Congress changed the point of taxation for diesel fuel from the distributor to the terminal and authorized dyeing of tax- exempt diesel fuel. This change has reduced fraud and abuse and increased dramatically the amount of excise taxes collected.

Through the first three quarters of calendar year 1994, the tax dollars from taxable diesel fuel sales reported on excise tax returns increased by 34.6 percent over the same period in

calendar 1993, adjusted for the recent rate increase -- an additional $1.09 billion. Although some of the increase in sales reported may be attributable to improved economic conditions, we believe almost all the increase is due to greater compliance achieved by moving the collection point from the distributor to the terminal rack, dyeing of diesel fuel used for non-taxable purposes, and greater enforcement efforts.

The IRS could increase collection of excise taxes even more with the help of this Subcommittee. Diesel fuel fraud -- particularly when it involves organized crime -- must be addressed through undercover operations initiated by our Criminal Investigation activity. As I testified in a hearing before this Subcommittee last October, undercover fraud operations, particularly diesel fuel fraud investigations, are expensive and currently must be paid for with appropriated funds. The Department of the Treasury supports giving the IRS authority to use the proceeds of undercover operations to finance them. IRS had this so-called "churning" authority at one time but the statute lapsed and needs to be reinstated. We are currently the only federal law enforcement agency without this authority.

THE FY 1995 COMPLIANCE INITIATIVE

The IRS has an ambitious goal to raise the overall compliance rate to 90 percent by the year 2001. As I stated, accomplishing this goal will increase the revenue collected without any change in the tax rate. Last year, with the support of this Subcommittee, Congress funded a five-year compliance initiative that provided for an appropriation of $405 million and 6,238 FTEs for additional compliance programs. That initiative affords IRS the first opportunity since FY 1991 to undertake a multi-year effort to collect the revenue owed. Over the FY 1995 - FY 1999 period tax revenue from this initiative is estimated at $9-10 billion. The return on this investment builds each year as new employees become fully productive and additional cases are closed.

As part of the initiative, the IRS has already hired more than 3,300 permanent compliance employees. With further hiring underway, the IRS is poised to fully utilize all of the much needed resources provided in this initiative. This initiative is focused heavily toward the collection of delinquent accounts, with special emphasis on reaching taxpayers quickly by telephone if we have an indication of a delinquency.

Even with the additional staffing, in FY 1995 IRS is operating with about 3800 FTE fewer than we had in FY 1992. Because of improvements in management and the impact of our early TSM projects, we have placed more FTE in compliance and accounts maintenance work and proportionately fewer in processing returns and correcting errors. As part of TSM, we have a number of projects underway to increase compliance and reduce taxpayers' burden. These systems are producing immediate benefits, while at the same time, building the foundations for the fully integrated system of the future.

TAX SYSTEMS MODERNIZATION

A fully implemented Tax Systems Modernization program is an integral and necessary part of the IRS's future. For that reason, I understand, and all of us at the IRS understand, that it is essential that TSM be effectively managed. In addition to the progress that we have made toward modernizing the tax system, the IRS has also made significant improvements in our overall management of Tax Systems Modernization. Because of the very significant financial commitment we are asking for TSM, we understand the need to assure Congress and American taxpayers that the IRS can implement this program.

In our recent testimony before the House Appropriations Subcommittee on Treasury, Postal Service and General Government, the GAO expressed three basic concerns it had about the successful completion of TSM. The first concern focused on technical and management expertise and skills. Madame Chairman, we have worked hard to assure that we not only have the IRS personnel necessary to do the job, but that we are also including outside experts in the project.

About 75 percent of the proposed TSM budget would pay for contractor provided products and services. Two major support contractors, the Illinois Institute of Technology and the TRW Corporation, have worked with us for some time to develop and manage the TSM effort. We also are relying heavily on oversight and guidance from the National Research Council, as well as the GAO.

The second concern was that new technology would be introduced without making improvements in underlying business processes. We recognize that upgrading information systems alone is not the answer to meeting current and future challenges. Consequently, we have rethought the fundamental way we carry out our mission. We are not only redesigning business systems but are also reconfiguring our organization to take full advantage of modern technology. Taxpayers are already benefitting from the combination of new business approaches and applied technology, for example, with more filing and payment choices and improved customer service.

Maybe the most important step I have taken as Commissioner in connection with TSM has been the appointment of Larry Westfall as the Modernization Executive. On June 30, 1994, I issued a memorandum throughout the IRS detailing his role in managing TSM. He reports directly to me and my memorandum made it very clear that everyone in the IRS reports directly to him in all matters concerning TSM. In other words, he is the TSM program manager and has the responsibility for overseeing every aspect of modernization, including the use of outside contractors.

Under his leadership, we have also established management control processes for modernization that demonstrate our commitment to change and our understanding of what it takes to make change happen. We believe this addresses GAO's third concern -- that the IRS set system development priorities and establish performance measures.

As part of this new approach, we have conducted a number of critical project reviews to ensure the early identification and resolution of issues. These reviews will enable us to better identify and control risks involving modernization and ensure that we remain on track.

We now have schedules for implementing TSM, monitoring the program and measuring its success. Our Business Master Plan, Integrated Transition Plan and Schedule, and the Concepts of Operations were prepared this past year and these documents provide the program and project level priorities for TSM. They clearly identify the milestones and accountability for development of the operational capabilities that create the modernized IRS. They also form the baseline set of plans and schedules against which our performance can be monitored and the success of TSM may be determined.

The Modernization Executive is working with the Infrastructure Project that was established in the Chief Information Officer organization to complete delivery of the remaining architectural and integrated design components of TSM by summer 1995. Next month, as we committed to the Subcommittee on Treasury, Postal Service, and General Government, we will provide Congress a timetable for the systems architecture and integration requirements and comprehensive data standards.

The Chief Financial Officer has established a new Office of Economic Analysis to certify annual budget estimates for TSM, oversee an independent cost analysis for TSM, and develop a new economic analysis process for determining TSM costs and benefits.

THE FILING SEASON - MAKING COMPLIANCE EASIER

I would like to turn to this year's filing season. The filing season begins with taxpayers filling out their returns and sending them to the IRS. I have already described to you the things the IRS is doing to process these returns more efficiently. I would also like to describe some steps we have taken to make filling out forms and complying with the law less burdensome for taxpayers.

An easier filing season starts with simpler, more understandable forms and instructions. We have concentrated especially on making improvements in forms for small businesses. Examples of improvements to date include a new streamlined Schedule C-EZ for sole proprietors and a much simpler Form 940 (Federal Unemployment Tax Return) that can be used by two-thirds of all Form 940 filers. Last year, I created an Office of Small Business Affairs, run by Barbara Jenkins who is with me here today. This Office is working with small businesses to address paperwork and regulatory problems and looking for opportunities to apply technology and increase communication.

We are also working with the Social Security Administration and the states to simplify the tax and wage reporting system. This concept calls for all federal and state wage and employment taxes to be reported to a single point which will distribute information, eliminating the need for multiple reporting. Last year, the Social Security Administration extracted wage information from the W-2s submitted from 12 states and redistributed this information to IRS and the states eliminating the need for employers to send paper W-2s to those states. This filing season, 28 states have enrolled in this program.

Reducing a taxpayer's burden in meeting his or her tax obligations is one of our three business objectives -- along with improving compliance and enhancing productivity. We want to make it easier for taxpayers to get the information they need to file accurate returns; we want to make the returns themselves easy to understand and file; and after taxpayers file, we want to make it simple to resolve account problems.

Wherever we can, we are using technology to get information to taxpayers as quickly and easily as possible. For example, we now can provide the public with a CD-ROM version of tax forms, publications and instructions. This means that copies of forms, publications and instructions -- even seemingly hard to find ones -- can be printed on demand without leaving your office. We are also making forms and instructions as well as up-to-date information available on the Information Superhighway. Tax forms are now available electronically on FEDWORLD, an electronic bulletin board service operated by the National Technical Information Service, an agency of the Department of Commerce. This service gives the public direct dial-up access to files of official IRS tax forms, instructions and publications which they can download onto a computer for printout.

Taxpayers must be informed if they are going to file accurate and complete returns. This year, we expect to respond to 70 million taxpayers through our phone centers. Our telephone assistors will respond to 36 million taxpayer inquiries over the toll-free system, but this is still only 52 percent of the customers who will request the services of an assistor -- we would like to be able to serve the other 48 percent, too. The FY 1996 Budget will allow us to answer an additional 1.3 million callers -- still far short of demand.

This filing season we have expanded our hours of service. Our telephone lines are now open at least 10 hours a day each work day within the continental U.S., and all IRS telephone sites will provide telephone help during three Saturdays in April. TSM funds have allowed us to replace our equipment with a new state-of-the-art telephone system that has provided us the capability to transfer calls among our toll-free sites so that calls can be transferred from those sites that are at or over capacity. This new system is already improving productivity by 10 percent where implemented, allowing us to answer more taxpayer calls. In addition, we have after-hours routing to our automated Tele-Tax system that can address 140 tax topics as well as automated refund status information.

We also provide other types of assistance. We will respond to more than 22 million pieces of correspondence and this year we expect to help more than seven million taxpayers at IRS walk-in assistance sites. To further our goals to reduce the burdens on taxpayers, we have expanded the number of our assistance sites offering no cost electronic filing from 42 last year to 232 this year. Electronic filing at no cost is also available at over 1,000 Volunteer Income Tax Assistance (VITA) sites.

THE FILING SEASON - REVENUE PROTECTION

Our biggest challenge this filing season has been to put in place better methods to protect the tax revenue from those who want to commit fraud on the system. IRS has addressed tax refund fraud through its Questionable Refund Program for many years. Teams of trained personnel in each of the Service Centers have used both manual techniques and computerized criteria to determine which returns need review. However, technology has significantly improved the capabilities of both government agencies and financial institutions to deliver money faster. But shorter payment cycles and electronic payments require both public and private institutions to be more vigilant than ever in guarding against fraud.

Since 1990, the IRS has steadily increased its efforts to control refund fraud -- significantly more fraud has been identified and stopped by IRS and more new schemes have been identified. In May 1993, I appointed an IRS executive to coordinate our refund fraud prevention and detection efforts and established a coordinating group to assure all components of the IRS worked in concert to address problems contributing to refund fraud. Since the hearing before this Subcommittee last February, we have taken many steps as part of an agency-wide revenue protection strategy. We established new criteria for qualifying Electronic Return Originators. We used both IRS and outside expertise to analyze patterns indicative of erroneous or fraudulent refunds and programmed a series of filters and screens into our processing system. Also, we have made additional staff available to our processing, criminal investigation and examination activities to reinforce our Refund Protection Strategy. Last spring, in consultation with this Subcommittee, the Secretary of the Treasury established a special task force to further study the problem of refund fraud and propose additional preventive actions. In reporting to the Congress last October, the task force estimated that erroneous and fraudulent returns could be costing the Treasury between one and five billion dollars.

This filing season, we are carefully reviewing all returns -- paper and electronic -- to ensure that only those taxpayers who are entitled to refunds receive them. We have spent a lot of time both before and during this filing season urging taxpayers to be very careful to use accurate Social Security Numbers (SSNs) for themselves and for their dependents because we are verifying those numbers on all returns. Refunds are being delayed on returns with missing or incorrect SSNs and on some returns claiming refundable credits to allow us additional time to verify

claims prior to issuing the refunds. We are using the knowledge gained in recent years to identify indicators of questionable refunds. With the Los Alamos National Laboratory -- the premiere authority in computerized pattern detection -- we are building more sophisticated screening techniques. Obviously, we cannot discuss the specific screens without compromising the effectiveness of these new tools.

We regret that for some taxpayers, perfectly legitimate refunds will be delayed this year because the initial screening criteria flag their returns. But I want to emphasize that taxpayers who are entitled to refunds will receive them -- as soon as possible. For true hardships, the Problem Resolution Program is available for assistance. We estimate that up to eight percent of all refunds may be delayed this year.

When we have delayed a refund in whole or part, we are letting taxpayers know why. Our notice explains that the full refund or remaining refund amount will be sent within eight weeks unless we determine additional contact with the taxpayer is necessary to verify the claim.

At our hearing before this Subcommittee last February, we outlined our four- part refund fraud strategy:

- First, we are developing a better understanding of patterns of fraud -- our work with the Los Alamos National Laboratory is an example of this.

- Second, we want to prevent occurrences of error or fraud. Checking the accuracy of SSNs is an example of this. Assuring that we have policies and procedures for screening Electronic Return Originators before permitting them to access the IRS electronic filing system is another example of fraud prevention.

- Third, we want to detect fraud before refunds are paid.

- The fourth part of our strategy is that we will take vigorous enforcement action when we uncover fraud. Working with the Department of Justice and the U.S. Attorneys, we are actively pursuing criminal violations. In the federal system, approximately 98 percent of the indictments involving refund fraud result in conviction, and the average incarceration is 17 months.

As I stated, we have spent a lot of time this filing season urging taxpayers to be very careful to file accurate returns using the correct SSNs for themselves and their dependents. In addition to including this cautionary information in our tax packages and in all of our filing season publicity, we also worked extensively with the tax preparer community and with financial institutions before the 1994 filing season even ended, to let them know we would be taking additional steps this filing season to protect tax revenues against fraud and soliciting their assistance about how to better accomplish this goal in a way that would be the least burdensome to taxpayers.

ADVANCED EARNED INCOME CREDIT

I could not conclude without mentioning a subject that I, the Treasury Department and the Administration have worked hard to promote -- the Advanced Earned Income Tax Credit (AEITC). Workers who qualify for the AEITC can get up to $105 per month in their paychecks -- whether they get paid weekly or bi-weekly -- by filling out a very simple Form W-5, Earned Income Tax Credit Advance Payment Certificate and providing it to their employers. Sixty percent of the total credit available to workers with a qualifying child is distributed as an addition to their paychecks; the other 40 percent is paid in a lump sum when they file their returns. By claiming the earned income credit on an

advanced basis, taxpayers who are eligible for the Earned Income Tax Credit can avoid potential refund delays and use the funds during the year. They don't have to wait until they file their return to get the credit.

CONCLUSION

In conclusion, Madame Chairman, I stated at the outset that FY 1996 is a pivotal year for the IRS as we continue with our plans to acquire and implement major new systems. What happens to our FY 1996 Budget will impact the tax administration system of the future, shaping our ability to effectively administer the tax law and collect all the revenue that is due. I have highlighted for you today the progress the IRS has made in changing the way we do business. TSM will influence most every aspect of that business -- our processing capabilities and the filing season, the effectiveness of our customer service efforts and our compliance capabilities including fraud detection and prevention. It is essential now that we have the funding needed to capitalize on the progress that we have already made. Without adequate funding, TSM will not simply be delayed. Only modest, incremental improvements in business processes could be achieved, and the IRS would in any event have to begin replacement of obsolete equipment that would otherwise fail over the next few years. Investing in TSM makes good business sense and will enable us to effectively meet the challenges of tax administration in the next century.

In closing, I would like to reemphasize a point that I have made with Chairman Archer and many of you in our recent meetings. I realize that the 104th Congress is considering changes to the Internal Revenue Code. One of my concerns is that the Department be given an opportunity to advise you before legislation is finalized of any burden possible changes may have on taxpayers as well as the cost to the Service before legislation is finally adopted. Particularly when the legislative changes occur later in the year, the effect on the next filing season can be significant. Some of the burden that is placed upon taxpayers might be avoided if the Department is able to consult with you during the formulative stages of the legislation.

Madame Chairman, I know that the members of the Subcommittee have many questions to ask. If it fits your schedule, I would now like to ask Mr. Westfall, our Modernization Executive, to give you a brief overview of where we are going with TSM. We then would be delighted to answer any questions you might have for us. For your reference, I have included as an appendix a summary of the 1996 Budget request.

Internal Revenue Service

BUDGET OVERVIEW FY 1996

Prepared by:
Chief Financial Officer
Budget Division

The President's Budget for FY 1996

The 1996 President's Budget enables the IRS to continue its overall mission by funding basic ongoing operations and programs and providing additional resources for specific initiatives. The attached Appendix is a comparison of the FY 1994, FY 1995, and FY 1996 IRS budgets by budget activity.

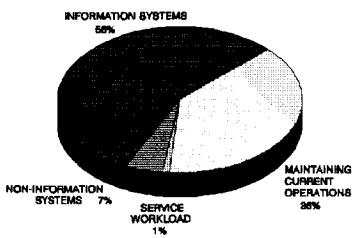
Overview

The FY 1996 resource requirements for the IRS are 114,885 FTEs and $8.228 billion.

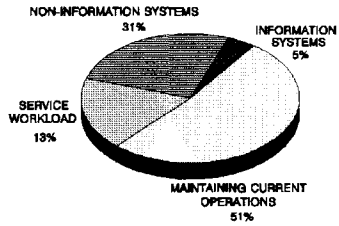
The Service's net increase in resources over FY 1995 is $739 million and 922 FTE. The total proposed increases for the Service are $844 million and 1,930 FTEs in the following:

-- Tax Systems Modernization (TSM)
-- Non TSM Systems: Storage Peripheral Replacement Unisys Computer Equipment (SPRUCE)
-- Revenue Protection/Tax Refund Fraud
-- Tax Account Telephone Resolution
-- Automated Criminal Investigation (ACI)
-- Service Center Workload Growth
-- Maintaining Current Operations

FY 1996 BUDGET INCREASES
($844 Million)



FY 1996 BUDGET INCREASES
(1,930 FTE)

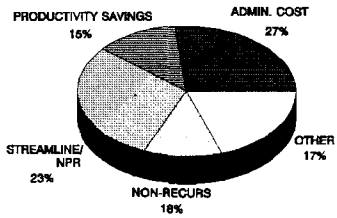


These increases are partially offset by proposed reductions of $105 million and 1,008 FTE.

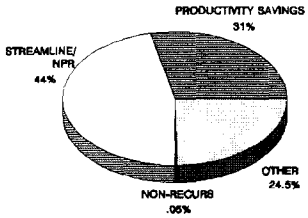
These reductions include:

-- Productivity Savings
-- Administrative Support Costs
-- Streamlining/NPR Staffing
-- One-Time (Non-Recurring) Costs

FY 1996 BUDGET DECREASES
($105 Million)



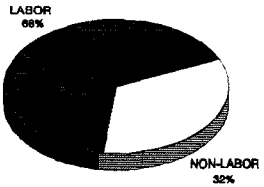
FY 1996 BUDGET DECREASES
(1,008 FTE)



Labor Costs

Labor costs are the single largest component of the IRS budget, representing almost 70 percent of the FY 1996 request. Adjustments to labor costs for FY 1996 total over $235 million.

LABOR VS. NON-LABOR COSTS



Annualization of FY 1995 Pay Raise

Because the FY 1995 pay raise took effect in January 1995, the base budget includes only enough resources to fund those pay raises for three quarters of the year. It will cost the IRS an additional $32 million to pay the FY 1995 pay raises for a full year in FY 1996.

FY 1996 Pay Raise/One More Day's Pay

The Administration estimates that there will be a 2.4 percent pay raise effective in January 1996. For three quarters of the year, this pay raise will cost the IRS $92 million. FY 1996 has 261 workdays, one more than FY 1995. The Service requires an additional $20 million, the average daily labor cost.

Benefits

The FY 1996 budget includes $11 million for projected changes for the government's share of health insurance, retirement, and workers compensation.

Non-Pay Raise Labor Costs

While the budget process regularly addresses the labor cost changes discussed above, the Service also experiences other cost growth resulting from promotions, step increases, and upgrades. These costs can be offset if there is a high turnover in the workforce. However, the low attrition rates of the last few years have given the Service a workforce with more seniority, requiring an additional $79 million for higher salaries and benefits.

Other Adjustments

The FY 1996 budget includes some non-labor cost adjustments which modify our ongoing operations rather than support new or expanded programs. These are a net reduction of $28 million and 67 FTE.

Administrative Cost Reduction

In 1993, the President issued Executive Order 12837, which required all agencies to reduce administrative costs by not less than 14 percent between 1994 and 1997. The mandated reduction for FY 1996 is three percent (as it was in FYs 1994 and 1995) which will reduce the Service by $34 million.

Streamlining/NPR Reductions

As part of IRS' implementation of the recommendations included in the Vice President's National Performance Review (NPR), IRS is reducing 442 FTE and $27 million to reduce the overall size of government. These FTE will be supervisors and oversight personnel.

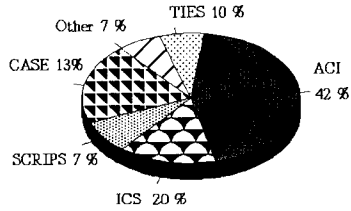
Non-Recurring Costs

When resources are no longer needed by the Service for the purposes for which they were originally provided, they are removed from our budget. For FY 1996, this includes $22 million and 9 FTE, including $11 million for expected telephone savings and $9 million for furnishing/equipment in our new office building.

Productivity Savings

As new automated systems are brought on-line, Service activities realize productivity savings which are removed from our budget. For FY 1996, productivity savings are associated primarily with Automated Criminal Investigation (ACI), Totally Integrated Examination Systems (TIES), Integrated Collection Systems (ICS), Service Center Recognition/Image Processing System (SCRIPS), and Counsel Automated Systems Environment (CASE).

FY 1996 PRODUCTIVITY SAVINGS
(Total Savings = $19.2M and 313 FTE)



Postage

A postal rate increase went into effect in January 1995. This budget includes an additional $5 million to fully fund postage costs in FY 1996.

Inflation

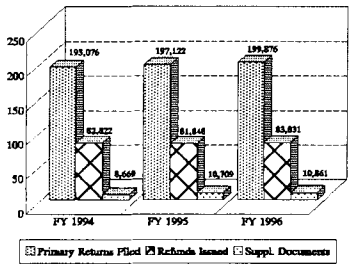
Each year, our budget request includes an increase based on expected cost growth (inflation) over the current year. The IRS budget includes $59 million for inflation for FY 1996.

Service Center Workload Growth

In FY 1996, the IRS will need to process an additional 2.8 million primary tax returns and issue 1.2 million more refunds than in FY 1995. We also expect that supplemental documents (amended returns, extensions to file, etc.) will increase by 0.2 million. This workload increase is directly related to the growth in the taxpayer population. In order to

process this additional workload without jeopardizing timeliness, quality, or customer service, our budget includes an increase of $12 million and 243 FTEs.

RETURNS PROCESSING WORKLOAD
(# in 000s)



Initiatives

In addition to labor and non-labor cost adjustments to ongoing operations, our FY 1996 budget also includes $533 million of real program growth.

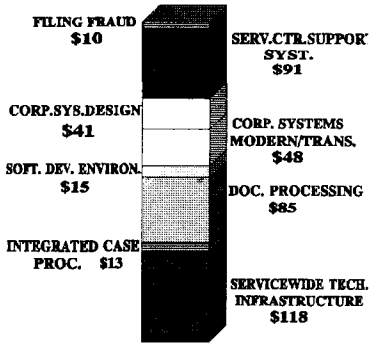
Tax System Modernization (TSM)

The FY 1996 budget includes an increase for TSM of $421 million and 95 FTE, bringing the total TSM request to over $1 billion. The increase will be used to:

-- provide automated tools for our front-line compliance and customer service staff. These tools allow us to close cases up to ten weeks sooner while improving revenue results ($118 million);

-- provide imaging and scanning equipment at our processing centers to process paper tax returns by making a digital image of the document. This will significantly reduce the staff needed to process tax returns while capturing 100 percent of the document data (versus 40 percent today) ($85 million);

FY 1996 TSM PROGRAM INCREASE BY PROJECT
($421 Million and 95 FTE)



-- acquire hardware and software applications to store and analyze data captured through electronic filing and imaging of paper documents. This will enable us to identify and resolve all relevant issues in a single contact with taxpayers ($138 million);

-- build the hardware and telecommunications infrastructure necessary to support TSM and to protect the systems against violations of taxpayers' privacy and fraudulent returns ($80 million).

Storage Peripheral Replacement Unisys Computer Equipment (SPRUCE)

Until TSM is fully operational, our current systems must continue to be maintained. The FY 1996 increase of $51 million is essential to replace the overage and undependable tape and disk environment which was placed into service between 1981 through 1987 and represents tape subsystem technology which is over 20 years old.

Tax Account Telephone Resolution

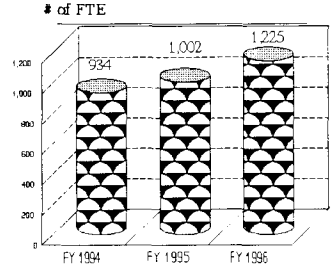
As the IRS increases its customer satisfaction focus, telephones have become a major contact between taxpayers and the IRS. Each year we answer more calls, but the total number of calls from taxpayers (answered and unanswered) grows even faster. Productivity improvements alone will not enable us to keep up with the demand. This initiative provides $17 million and 239 FTE to handle an additional 1.3 million telephone calls.

Revenue Protection/Refund Fraud

The IRS is requesting additional support for a cross-functional effort to combat tax refund fraud. This effort identifies and stops the payment of fraudulent refunds, detects schemes, and investigates fraud. Over the past few years, the dollar value of fraudulent refund claims detected has increased dramatically from $43 million in 1991 to $461 million in 1994 (through 12/31/94).

To help combat this increased fraud, IRS is requesting an additional $28 million and 323 FTE to detect and stop fraudulent refunds; identify and refer for audit those Earned Income Tax Credit (EITC) cases with audit potential; handle the rapidly increasing volume of calls associated with fraud; and investigate and prosecute at least the most flagrant cases.

LEVEL OF RESOURCES DEVOTED TO IDENTIFYING AND INVESTIGATING FRAUDULENT REFUND SCHEMES



Automated Criminal Investigation (ACI)

The Service is requesting an increase of $3.5 million for the purchase of investigative equipment, including laptop computers, desktop workstations, and necessary software.

Crime Bill

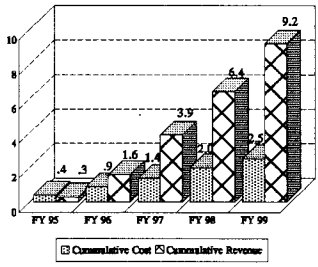
The Violent Crime Control and Law Enforcement Act of 1994 (commonly known as the Crime Bill) provided $7 million to the IRS in FY 1995 for combating public corruption and enhancing illegal tax enforcement activities. The Service requests additional funding in FY 1996 of $12 million for a total of $19 million.

The FY 1996 funds will be used to supplement current efforts for Revenue Protection/Refund Fraud and the Automated Criminal Investigation System.

Compliance Initiative

In FY 1995, IRS worked with Congress on a budget strategy that permitted funding of $405 million and 6,238 FTEs in additional compliance programs. Tax revenues from these initiatives are estimated at between $9 and $10 billion over the FY 1995-1999 period. The budget strategy was to devote $405 million in each of the next five years to these compliance initiatives. The FY 1996 budget again includes $405 million for the initiatives. In addition, one-time costs in FY 1995, which would normally be non-recurred, have instead been reinvested in an additional 546 FTE, bringing the total FY 1996 compliance initiative FTE to 6,784.

FY 1995-1999 COMPLIANCE INITIATIVES ($ in Billions)



The FY 1995 initiative is the first step in a long-term strategy to improve voluntary compliance by investing streamlining and modernization savings into front-line compliance and customer service activities.

The key areas are:

- Income Tax Underreporting: Increase the number of correspondence audits and contacts; improve compliance by Federal Government payers; correct wage reporting by the military; and reduce the number of unmatchable documents.

- Excise Tax Fraud/Pension Plans: Increase resources dedicated to detecting motor fuel excise tax evasion schemes, bankruptcy fraud in pension plans, and insurance fraud, and investigating refund fraud.

- Foreign Controlled Corporations: Expand coordination and litigation, concentrate resources on the development and implementation of Advance Pricing Agreements, and increase enforcement based on identified market segments by targeting foreign business activity in the U.S.

- Underpayment/Non-Filing: Increase the collection of delinquent accounts by improving case selection and prioritization, faster case assignment, and accelerated taxpayer contact, and by obtaining delinquent returns and collecting delinquent taxes.

User Fees

In the FY 1995 budget, the IRS proposed three user fees to raise $147 million to supplement appropriated resources. The Congress changed our approach, allowing us to charge and collect any user fees that we were otherwise authorized to initiate and to spend up to $119 million of the collected fees to supplement appropriations. For FY 1996, the IRS budget proposes no changes to Congress' direction.

Conclusion

FY 1996 is a critical year for tax administration, and the Service's budget request responds to this challenge. Continued modernization of our existing overaged tax systems, timely and effective enforcement of the tax laws, and strong support for customer service are the bases of this budget. As the IRS re-engineers itself for tax administration in the 21st Century, we are committed to fair, effective, efficient and constantly improving revenue collection.

FY 1996 CONGRESSIONAL SUBMISSION
SUMMARY
($ in millions)

	FY 94		FY 95		FY 96		+/- FY 95/96

Note: FY 1994 and FY 1995 adjusted to reflect new budget structure

Chairman JOHNSON. I certainly do want to hear from Mr. Westfall, but I think we might as well hear from him in the context of a first question. Because while you have quoted the GAO's concerns about the tax modernization system, I would like to quote from their testimony more specifically because I think it is very important that the subcommittee get a better understanding of what the problems are, what you are trying to do, and what you think you are accomplishing versus some of those who are looking to see what they think you are accomplishing or concluding.

The GAO does say that the IRS has realized only marginal improvements in its operations. They go on to say that the changes are not built to be an integrated part of the comprehensive TSM program and they have not delivered the large increases in capability and customer service that the IRS hopes to be able to deliver in the future. They then go on to say that the IRS has not defined a consistent focus for making TSM investment choices.

In other words, they draw a picture of your not having a clear road map of where you are going and of your expenditure of the first $2 billion of the $8 billion allocated for tax modernization, having spent those first $2 billion in ways that have resulted in only marginal improvements, but almost more seriously they have not been chosen in a way so that they then become building blocks and pieces of the ultimate system.

So, Mr. Westfall, we do invite your comments and appreciate your being here.

Ms. RICHARDSON. I would just like to say, before turning it over to Mr. Westfall, that we do disagree with the General Accounting Office in their assessment of where we are. I will say that we would like to be providing even better customer service, and I think that statement is one we do agree with, but we are at the beginning of the process of modernization, and as I think Mr. Westfall will be able to describe to you, we have made some significant improvements in the way we are able to serve taxpayers even today. I think that, as I say, we do not agree with their characterizations.

So, Larry, you may want to——

Chairman JOHNSON. Mr. Westfall, I have forgotten from Commissioner Richardson's testimony how long you have been on board.

Mr. WESTFALL. I have been assigned here in the Washington office on this tour for 4 years. I have been in the present position as program manager for TSM since last June.

Chairman JOHNSON. Thank you.

Mr. WESTFALL. I think that there is perhaps a fundamental issue associated with whether we are building a long-term unique new system or are we transitioning the Internal Revenue Service through a critical number of filing seasons that have to be successful and headed toward a totally new way of operating in the future, which we will reach at a point in time.

GAO has referred to a perceived marginal progress. We believe that we have made substantial progress in beginning to take actions that transition us toward the system that we have to operate in in the future. I will give you an example or two of that.

Essentially——

Chairman JOHNSON. Mr. Westfall, if you will yield for just a moment. It occurs to me that I think it would be useful to the sub-

committee if after you finish, we all question you on the issue of the tax systems modernization program. Then we can go on as a subcommittee to some of the other issues because there are some equally important issues, but this one is complicated. So after you have finished, we will proceed in that way.

Mr. WESTFALL. Madam Chairman, if you do not mind, I would like to stand and answer this first question from an overhead.

With the Commissioner's indulgence, I may put this smack in front of her for purposes of presentation—perhaps the easel will work better here.

Chairman JOHNSON. Actually, if you put it over there, it is all right or even back further where you have more room.

Mr. WESTFALL. You are saying work from back here?

Mr. LEVIN. We are using the same old systems here.

Ms. RICHARDSON. We are sympathetic to that.

Chairman JOHNSON. If we were state of the art, you would be able to press a button and it would have gone overhead and we would have screens on both sides of the room.

Mr. WESTFALL. That is exactly what this is, a state-of-the-art presentation.

I think people sometimes get confused about TSM. They think it is too long, too complicated, and not happening. We keep building something which people have difficulty understanding is taking place. What I want to do is just take a couple of minutes from a business standpoint to communicate to you what TSM is, first of all, as a backdrop against which to answer the question.

Through a series of projects over a number of years, what we seek to do is take a very large paper-based and old batch-oriented operation into the future. It is very simple. It simply involves a business terminology seeking to capture data, to store and analyze data, and to distribute and use data in this large information system in a state-of-the-art environment, instead of the environment that we are in today.

It goes to four or five fundamental business objectives. You have to understand that we seek to operate as much like a business as we can in the future. We are one of the largest, if not the largest, information organizations in the world and we cannot find our information many times.

You made the point, Madam Chairman, of the paper trailing the world, and that paper-based environment causes us to be ineffective and inefficient in serving our customer, the taxpaying public in this country. The objectives of the system go like this.

The first one, just as a large bank or other financial institution, a credit card company or a large insurance company, we seek to take our business, to the extent that we can in the future, electronic. They are going electronic. It is an electronic commerce that exists in the business environment of information today, and we need to become electronic as well.

So as the first major phase of change for the future, we seek to take returns electronic, to the extent possible; to take remittances electronic, to the extent possible. Electronic in this context goes beyond just electronic transmission in the form of computer to computer. It also addresses the issue of things like tax returns being filed by telephone. That is a major component, to take as much of

the paper activity in the future electronic, as we can, for the obvious business value that you get out of that.

Second, we recognize that in the year 2000 to 2001, we will still have large amounts of paper in the system. The preponderance of the system will still be paper in many respects. We seek to use image technology, character recognition technology in ways that allow us to reduce the labor-based environment that we now use to put information in the system. By using scanning, using character recognition, and using more sophisticated systems, we can get much more of the information from tax returns into the system than we can afford to manually key stroke in today. We are already proving that we have the ability to massively take the errors out of the system through this kind of technology. So the first thing we do is go electronic.

The second thing we do is become much more efficient and effective at processing the residual paper that exists. Through a combination of this, we pick up much more information both in the form of computer-based information and also images of documents and tax returns and get that into a computing environment which does not exist today. Our master files can be enhanced by considerably more information and also made available online by workstation accesses throughout the system. We can be more responsive to the public and the public can get access to the information that it needs in connection with its tax account records.

All this enables that corporate computing center database to drop information into, No. 1, our customer service operation. In our customer service operation for the future, there is a basic fundamental thing that we seek to do that we have never been able to do effectively as we feel we must. It involves doing business with the taxpaying public by telephone.

We simply have to use the telephones in the business of taxation much more extensively than we do or we have in the past. We have to be able to get access to information on a 24-hour-a-day basis, instead of a 9 to 5 basis. We have to be able to reduce the cost of a personal contact with a taxpayer or the necessity of burdensome notices and letters that cross in the mail by acting quickly on a tax account issue and doing it, wherever possible, with a telephone contact with the taxpayer that will much more quickly and much more effectively close the issue out.

Finally, we also need to put information in our field compliance activities so that our revenue officers, our revenue agents, our tax auditors can get faster access to more information with more computer assistance. This will enable us to better segment the taxpaying public, better segment compliance zones, focus our compliance resources on education and assistance in compliance actions designed to impact a particular industry that has a significant compliance issue, and impact that industry industrywide, instead of doing one audit at a time with a lot of manual work that we have to do in the system today.

From a business perspective, that is the environment that we seek to create in the future. I will make about 30 seconds' worth of points from this second overhead to complete the presentation.

In this overhead, which is also in your information packet, we seek to demonstrate progress made to date toward the ultimate

business objective that we are moving toward. The first point I make from this is that during the years 1992–95, with the systems that we have already put online, we have generated productivity savings in excess of 11,000 full-time equivalent positions that have been declared and given up from the IRS budget base. That is also a large amount of money.

To show progress made in one particular area, we seek to make 80 million tax returns and essentially all of the remittance activity in our system electronic. To date we have 16 million returns that are active electronically in the system, nearly 1 million of which this year will be filed by telephone for taxpayers capable of filing the simple 1040–EZ return utilizing telephone access.

This year, we also will have 2.2 million taxpayers in 29 States who will be capable of filing a single tax return electronically that will satisfy both the Federal and the State obligation simultaneously. This is a major burden reduction issue for the taxpaying public. It is something that we do not view as marginal, in terms of the progress being made and putting a choice in front of taxpayers to file electronically, to get access in some cases to telephone filing, and to be able to satisfy both a Federal and State obligation at one time.

The other thing that we will do this year is put about $160 billion electronically in the Federal tax deposit system. Essentially, that is a major step toward the $1.2 trillion total amount of revenue that we handle each year.

In closing, we believe that the progress made has been major, not marginal. Although it may not in some cases be the full future system in terms of the ultimate TSM integrated environment, we believe that the progress made thus far is essential. We cannot wait until TSM is fully implemented at a point in the future to be more responsive to the public, to satisfy the problems, and to improve the system incrementally over the years.

That is probably a substantial amount of the issue as it relates to the GAO observation—whether we are building the ultimate system and putting all of our resources there or transitioning the existing system by moving through a series of phased steps to get to where we will go with TSM at approximately the year 2000 to 2001.

Chairman JOHNSON. Thank you very much for your presentation, Mr. Westfall. It was very interesting.

In thinking about modernization and the presentation that you just made, I was interested in a letter that came to my attention recently from Commissioner Richardson's predecessor to my predecessor, Mr. Pickle. In it she comments that in 1990, they identified 128 fraud schemes affecting 411 returns. This is all in regard to electronic filing. Since that is clearly one of the directions you are going and must go and have begun to get people together to focus on how to eliminate fraud, I am curious that as early as—her letter is 1992—she comments that in 1990 there were 128 fraud schemes affecting 411 returns against a population of about 4 million returns filed electronically. In 1992, just 2 years later, they projected that they would identify 1,400 fraud schemes affecting 12,000 returns against a population of 11 million electronically filed returns.

You are now up to 16 million returns.

As you have developed your system, have you worked from that base of fraud schemes that the IRS identified early? How has that work gone? Why is it that, in spite of that work, we should be up to such extraordinarily high rates?

My understanding is that 43 percent of all fraud is committed via electronic returns and that 90 percent of the EITC returns are involved. I may not be remembering these figures accurately. I am not claiming they weren't given to me accurately. I may not be restating them accurately, but the implications are certainly there.

Ms. RICHARDSON. I think, Madam Chairman, as we developed TSM—and one of the reasons it is so important, I think, that we move ahead with modernizing our system—is that it will provide us the ability to prevent fraud and prevent fraudulent returns from entering into the system.

We can come back to that in just a moment.

I think it is fair to say that not finding fraud does not mean that it doesn't exist. As your ability to detect it becomes more sophisticated and better, you find more fraud and that is—so sometimes finding more can be a good sign because it at least means your detection capabilities are working.

Our goals, as we stated 1 year ago and will continue to be, were to understand enough about fraud and the patterns of fraud so we could build into our systems, as a stopgap from here to the end of this decade, filters for screening out potentially fraudulent returns, questionable returns, and also to take steps that we could build into our ultimate system the ability to prevent fraud.

Mr. Brown, who is with me today, is our refund fraud executive; and I know he would be happy to answer more specific questions. He has been a person who, for almost 2 years now, has overseen our capabilities, not just working with each filing season, but also working with our modernization people to assure that we have long-term solutions to fraud built into our TSM plans.

Chairman JOHNSON. We will get into fraud issues more specifically later on, but——

Ms. RICHARDSON. I think the important thing to remember is that it has really been the advent of electronic filing and electronic processing of information that has allowed us to detect patterns of fraud, and it is important that we continue being able to process even those paper returns electronically, as Mr. Westfall was demonstrating, so that we can detect patterns of fraud. We are much better able when we have access to full return information to detect and then ultimately prevent fraud.

Chairman JOHNSON. Later on, as we do get into a discussion more specifically of fraud and prevention, it would be useful to us to have more detailed information about what kinds of patterns you have detected in the past. I would ask you about the work you are doing now and tip off those who you might be after, but there are a number of issues in the fraud area that we want to go into in more depth. But, at this point, I am going to yield to my colleague, Mr. Matsui from California.

Ms. RICHARDSON. I think the real important thing to remember is with a more modern system and better capabilities built in through the electronic filing and processing systems, we will be in a better position to address fraud.

Mr. MATSUI. Thank you, Madam Chairwoman.

I have a question directed to the Commissioner from Representative McDermott who is not able to be here today. May I direct this to the Commissioner and perhaps the Service can answer it.

Chairman JOHNSON. Certainly.

Mr. MATSUI. I want to make two observations before I ask a question of Mr. Westfall, one is that I have not really kept up with the tax system modernization program. This is my first year on the Oversight Subcommittee and so my support of it is, basically, upon the representations of the Commissioner who I greatly respect in this area.

I would like to ask Mr. Westfall some questions, however, regarding it. You have indicated, in response to the question from the chairwoman, that you have been doing this now for approximately 4 years, this TSM system?

Mr. WESTFALL. I think what I indicated is that in this particular tour I have been back here in the Washington office for 4 years. I have served as program manager for TSM since last June when the Commissioner announced the major change in how the program would be managed for the future.

Mr. MATSUI. Now, it is my understanding—and I have only started really getting into this by reviewing the GAO document and also the testimony today and some documents from the staff—but I understand since approximately the mideighties this program has been kind of conceptualized by the IRS. Is this correct?

Mr. WESTFALL. That is correct.

Mr. MATSUI. You were not involved in it at that time?

Mr. WESTFALL. I was involved in it only as an executive in the field who was interested in modernization and had input into the original formulation.

Mr. MATSUI. But it wasn't until the early nineties that we really started getting into this program and actually coming up with a scheme, is that correct?

Mr. WESTFALL. That, essentially, is correct, yes.

Mr. MATSUI. OK. Now how many managers have been involved in this since then?

Mr. WESTFALL. The program for the most part——

Mr. MATSUI. You?

Mr. WESTFALL. I am the first program manager for TSM in the form that we have it today. The program was previously managed by the CIO (chief information officer) more as a technology agenda. It has become a business agenda in a very large sense, and so the CIO and that large information systems organization remains very, very active and dominant in a lot of this, but it has now come under the management of a business approach.

Mr. MATSUI. Because prior to your taking over, which is a few months ago, this was basically setting up the system conceptually and on paper, is that correct?

Mr. WESTFALL. A lot of the original investment was in that, yes, but there have also been systems delivered as early as 1992.

Mr. MATSUI. OK. One of the criticisms that the GAO has is that there is a lack of vision in what you are trying to do, and I am trying to understand this from your graphs. I can think of three reasons why you want to do this—and you probably can add more.

One is that everybody likes computers so why aren't you doing it? Two, the code has become much more complex over the last 15 years or so or 10 years or 5 years—whatever. It may be you need a computerized system in order to deal with it. Three, of course there is just an increase in the amount of work because there are just filings being done.

Now those three reasons—and it seems to me that what you have just described in terms of your system being put in place now it seems like you are talking about the easier returns. If somebody can do it over the telephone, it sounds like you can—that is a pretty easy one it seems to me.

Now, perhaps you can kind of explain when we are going to get to the more complex ones. Am I correct in my analysis so far?

Mr. WESTFALL. I guess the three rationales I would give for why we do this—stated a little bit differently. I think that we recognize that we have to be able to take actions within the tax system much faster than we take them today. The fact that it takes 6 weeks to get a tax refund, the fact that it takes us 1½ years to match information documents to verify that the information you claimed on your return was correct, these are actions that are terribly slow in the business environment of the country today. That is one.

The second is errors. Speed is one thing. Frequency of error is another. Because a paper return has to flow through a factory environment, be handled more than two dozen times between all of our handlings and those of the taxpayer before the return was sent to us, an error rate results of between 15 and 20 percent of the returns. To correct these errors is terribly costly and terribly unsatisfying both to us and to the public. We seek to reduce that error rate as much as possible, and in the electronic environment, it is less than 1 percent. Speed is one thing; error frequency is another.

The third is the fact that we don't have access to enough information to effectively administer the system. We seek to put much more information in our database and then electronically access that information in order that we can properly manage the account and be responsive to the public relative to the account.

Now, the 1040. I think I mentioned the form 1040 EZ as being a return that is currently capable of being filed over the telephone in some States now. That is a simple return. There is an enormous range of complexity across the whole return set, and we are moving incrementally with different approaches on different levels of complexity.

We are, for instance, taking 1040 returns, the more complex returns, through the electronic side of the system. But that particular return, it currently exceeds our complexity range for what we think we can effectively control and handle through a telephone approach. So there are different stage solutions in this for different ranges of complexity and types of documents over time.

Mr. MATSUI. OK. One last question. In terms of your management of putting the system in place and the oversight of it, are you using outside vendors as well or is this something that is all in-house? We are talking about $20 billion perhaps over the period of years.

Mr. WESTFALL. We are extensively using contract resources and consulting expertise outside of government, probably on a dimension that is pretty comparable to what the large defense agencies use in connection with some of their larger technology pursuits. The 1996 resource estimate that we make is that an excess of 75 percent of the budget in TSM would be expended for products and services that are contractor based.

This ranges from the fact that the Commissioner consults with the National Research Council on a personal basis to have them monitor and provide her consulting assistance relative to the program to the fact that the TRW Corporation acts as our integration support contractor on a long-range contract, the fact that the Illinois Institute of Technology serves us from a research and development consulting expertise, and then down to such things as a very large image and character recognition contract that will facilitate our paper processing for the future has been awarded to the Grumman Corp.

There are just a host of very, very large corporate entities that have various roles in the overall program. Yes, Loral Federal Systems is also involved in our document processing system development.

Mr. MATSUI. Thank you.

Chairman JOHNSON. Thank you.

Mr. Herger.

Mr. HERGER. Thank you very much, Madam Chair.

Commissioner, if you could tell us—now that the 1994 filing season year is 1 year old, could you tell us perhaps what the profile was for the refund fraud during 1994?

Ms. RICHARDSON. I guess one of the things that we are reluctant to do is to be too specific, because many of the filters and screens that we built into our system this year were based on what those profiles were.

About this time last year I think we testified to a number of different types of schemes in which people were engaging, but the specific profile I would be reluctant to talk about other than in a closed session because that really is how we determined what our filters would be for this year.

Mr. HERGER. Could you perhaps give us an idea of how much was involved with the paper returns and those filed electronically?

Ms. RICHARDSON. I am going to ask Mr. Brand if he might join us at the table. He is our chief compliance officer and I think has most of those numbers probably committed to his memory many times over.

The one thing I would like to say, though, a lot of the concerns did involve use of duplicate Social Security numbers, erroneous Social Security numbers, inaccurate Social Security numbers. So that has been a main focus of ours for this filing season, to encourage taxpayers—to urge taxpayers to use accurate Social Security numbers, not just for themselves and their spouses but also for their dependents.

Mr. BRAND. I might be able to size this a little bit for the subcommittee.

First off, last year during 1994 we believe what we identified were 77,000-plus fraudulent—actually fraudulent returns. I will

come back and talk about the difference a little bit between fraudulent and erroneous. About 33.6 thousand of these were ELF returns; 42.2 were, in fact, paper. So you see the spread between the types of—and, again, I am talking about outright fraudulent returns here. There was $160 million claimed in this amount.

Additionally, we disallowed another $450 million of questionable refunds. We haven't made a determination that they are fraudulent, but they are at least problematic because of some instance on the return or some result of correspondence. So we are talking someplace in the neighborhood last year of $567 million or $0.5 billion of this range that I talk about between fraudulent and erroneous that we, in fact, deleted last year.

There were 413 prosecutions last year for refund fraud that were actually prosecutions that occurred and, obviously, a number of starts of prosecution cases that will continue to occur as we come through the year. So that is sort of the way we sized what our part is. The problem is, about fraud, you only know what you detect, of course. You don't know what you don't detect.

Mr. HERGER. Well, knowing what you did detect, is there anything in hindsight that you feel we might have been able to have done differently?

Mr. BRAND. I think in hindsight what we tried to do, I guess, is take the hindsight and apply it to 1995.

One of the things we know to be very problematic, as the Commissioner mentioned, is this whole area of Social Security numbers—making sure that the Social Security numbers are present and they are correct, that they match up with the taxpayer, et cetera. So that is one of the areas that we have paid close attention to for this coming year.

Again, a number of the lessons that we have learned we would be glad to share with you, furnish you that in closed session because it does impact on the way that we detect fraud and also just abuse.

Mr. HERGER. OK. Maybe one other question.

Chairman JOHNSON. Certainly.

Mr. HERGER. A different issue, has to do—on page 9, Commissioner, in your testimony you stated that taxpayers should be able to get through to the IRS on the first call. I think it also mentions about how expensive it is through correspondence. Evidently, you are alluding to the fact that it is less expensive to be able to take care of these questions by phone rather than through correspondence.

Ms. RICHARDSON. Our goal is for people to be able to get through on the first call and, ultimately, to handle 95 percent of the account inquiries in that telephone call on the first call.

Right now, if you were to receive a letter from us that said we have a question about a deduction that was claimed or something may have been omitted, we would send you a letter. You could write back to us. Perhaps before you got back to us a second letter might have gone out. So, in the meantime, interest and penalties might be building up on an amount. The correspondence crosses in the mail; a check crosses in the mail because we don't have the capacity today to do online posting of accounts.

It isn't like your being able to call your credit card company or your bank and if there is a question about your account, you can resolve it typically right there on that telephone call. We can't do that today.

Mr. Westfall mentioned 15 to 20 percent of our paper processing or paper returns end up with errors. If you apply 15 to 20 percent against 100 million paper returns, that is a lot of errors, a lot of contact; and it is a very labor intensive process.

We feel like if we can handle that account question or handle that account matter over the telephone and resolve it right there, we have probably saved ourselves a lot of correspondence but also, ultimately, maybe some compliance issues down the road which are also expensive if you have to have a revenue agent or revenue officer involved.

Mr. HERGER. Now GAO says that the chances of a taxpayer getting through to the IRS on his phone call is only 13 percent—in other words, less than one in five times——

Ms. RICHARDSON. That was based on weeks earlier in this filing season. We don't have precise agreement, I think, with the GAO about how you measure access to our system but, in any event, it was based on a 1-week look early in the filing season.

Mr. HERGER. That 1 week was less than one out of five times they were able to get through to you. Is it——

Ms. RICHARDSON. I think it was based on a number of calls placed, not the number of taxpayers who got through. We actually use a system, the unique number report, with which you can identify where people have actually been able to get through on a system.

Mr. HERGER. So you are saying that that 13 percent is not characteristic of——

Ms. RICHARDSON. Correct, it is not characteristic of what we are experiencing at this point in the filing season.

Mr. HERGER. What would you say it is at this point? Thirteen percent, I am sure, we all have to agree, is certainly something we have to improve quite dramatically.

Ms. RICHARDSON. I am sorry. It is averaging around 50 percent, which our goal for this filing season was to try to answer 52 percent of the calls—of the taxpayers' calls. That is basically what we feel we are able to do based on what funding levels we had for our taxpayer service function. We are running about at that level now for the season.

Mr. HERGER. I was speaking with a CPA only in the last week who indicated that—and I don't know where his statistics came from—two-thirds of the answers that they did receive when they did contact the IRS were correct. One-third were not. One out of three were not correct, and yet that taxpayer was held responsible—accountable for that one-third that weren't correct. Would you like to comment on that?

Ms. RICHARDSON. I would. I think that our numbers show that our accuracy is a little bit higher than that. Our goal is to have it—I mean, obviously, you would like to have 100 percent, but I think we have been running right around 90 percent the last couple of years, and we expect to have that same standard for this year as well.

Chairman JOHNSON. Excuse me, Commissioner. Is that 90 percent accuracy?

Ms. RICHARDSON. Correct. There are some areas, quite frankly, that are gray.

Mr. HERGER. Is there a reason why—now 90 percent is certainly far better than 66 percent, but yet is there some reason why a taxpayer should not be able—is the system so complicated that we can't be answering correctly almost, say, 98, 99 percent?

Ms. RICHARDSON. Our goal—we would like to be able to answer every single question accurately.

Mr. HERGER. Is there some allowance that is given during this——

Ms. RICHARDSON. I was going to say we published this year in the tax package for the first time our customer service standards, and if a taxpayer can demonstrate that any penalties or interest are imposed because of an erroneous answer they have received from us, we will be in a position to not charge them with that.

I agree with the premise of your earlier question. People shouldn't be penalized if we have made a mistake.

Mr. DOLAN. Mr. Herger, if I might amplify slightly.

We have watched the quality of taxpayer service operation very intensively for the last 4 or 5 years. I think we report to this subcommittee and others quite regularly on a week-to-week monitoring process where we watch every site for their individual quality performance.

We break it down into three particular areas: the technical tax law answer, the quality of answers on procedural questions, and the quality of answers on account questions. We give immediate feedback to the sites who show any slippage. We have put in place a very standardized probe and response guide so when you call in to site 1 or site 13, you ought to be received the same way.

We go through, basically, the same algorithmic approach to getting the right answer to the taxpayer; and we have tried to make a passion out of offering a quality service.

As the Commissioner said, the last couple of years on the filing season basically it averaged 90 percent. Last week's results were 86 percent. We would like that to be higher, but we are also doing a tremendous amount of reconfiguration this filing season and putting our people to probably as much challenge as we have in the last 4 or 5 years to be onsite and be prepared to give a quality answer.

Mr. HERGER. Thank you.

Chairman JOHNSON. Mr. Hancock, we will have to try to move along because there are a number of other issues to cover with the Commissioner.

Mr. HANCOCK. Just a real brief question—I think it will be brief, anyway.

I noticed in the testimony that on the accounts receivable and uncollectibles, the percentage that you are collecting hasn't been going up very much. I also noticed in 1990 you had roughly 87 billion accounts receivable, now there are 156 billion, which is an 80-percent increase. As a small businessman and a business advisor, accounts receivable is one of the things that you look at real quickly.

Ms. RICHARDSON. Absolutely.

Mr. HANCOCK. I am wondering what your projections are. Are we going to continue to see these increases? I would think that you would have this broken down into ages and what have you, just like a business would. I wonder if we might be able to get that information, the numbers of accounts and the age on them like a business would?

Ms. RICHARDSON. Absolutely.

Probably the biggest single factor contributing to that dramatic growth was a change in the law that required us to keep accounts receivable on the books for 10 years instead of 6 years. So, unlike a business and ones that you probably are most familiar with where you write them off after a certain point when people are dead or bankrupt or whatever, we are not in a position to do that. But we do have that breakout and can get you that information.

Mr. HANCOCK. Pardon me. You mean if you find that this individual is no longer around and that the estate is settled, you still have to keep it on the books?

Ms. RICHARDSON. Yes, sir. We can break it out in great detail because it is not the way you would keep your accounts receivable in a business day in and day out—at least in a realistic way. But the largest single increase has been attributable to the fact that we had to account for them or keep them on the books for 10 years.

Now the 10th year is just ending this year, so next year you will see a different number. We are working to try to enhance collections and collect those amounts that are collectible. But there are some things that are carried in that figure that are not collectible and will never be collected, and we would be happy to give you a very detailed breakdown of that.

Mr. HANCOCK. Thank you.

Thank you, Madam Chairman.

[The following was subsequently received:]

Breakdown of ARDI Statistics

In 1990, Congress extended the time the IRS is required to keep accounts receivable on the books from 6 to 10 years. Thus, unlike businesses in the private sector, IRS accounts receivable cannot be written off even if they are not collectible. This change alone increased IRS accounts receivable by 20%. The Accounts Receivable Inventory carried by the IRS is not a reflection of an annual underpayment of taxes, but includes current receivables, plus a ten year carryover of unpaid taxes, along with accrued interest and penalties.

At the end of FY 94, IRS gross receivables equalled $156 billion, of which 30% or $46.8 billion reflected accrued interest and penalties. At the end of FY 90, gross receivables were $87 billion. The IRS gross receivables, like the receivables of a private business, are divided into two components: (1) currently not collectible; and (2) active accounts receivable. An analysis of these two categories as of the end of FY 94 reflects:

- Currently Not Collectible (CNC) - $76.5 billion is currently not collectible; 38.3% ($29.3 billion) of this amount is comprised of accrued penalties and interest. Over 86% ($65.79 billion) of the CNC inventory is not collectible due to defunct (no asset) corporations; bankruptcy (after adjudication by the bankruptcy court); hardships; or the taxpayer did not respond to contacts or could not be located.

- Active Accounts Receivable - $79.5 billion is potentially collectible. Of this amount:

  - 20.7% ($16.46 billion) is comprised of accrued penalties and interest;
  - 18% ($14.5 billion) are lower value cases that will be collected through systemic monitoring;
  - 18.4% ($14.63 billion) of the inventory is inactive, either awaiting adjudication by a court of acceptance of an offer in compromise;
  - 13.6% ($10.81 billion) are reported by notices;
  - 42% ($33.4 billion), the largest portion of the active account has been assigned for enforcement action.

In FY 94 alone, the IRS collected $1.2 trillion in net tax receipts. Also in FY 94, the active accounts receivable increased 7% ($5.1 billion), the smallest growth in active accounts receivable in 4 years.

Chairman JOHNSON. Just to pursue that, what about the more recent years? I mean, there is a way of factoring out—you have the 6- to 10-year problem. In the last 3 years have you increased the amount of uncollected taxes you have been able to collect?

Mr. BRAND. Let me give you a little bit of overview.

Chairman JOHNSON. This also goes to the figures that we have before us about erratic audit numbers.

Mr. BRAND. Let me give you a bit of overview, if I can, of the accounts receivable that Mr. Hancock referred to. About $79.5 billion of that is currently under active collection. The other portion of that has been determined as uncollectible. It has either been adjudicated as bankrupt, the taxpayer is deceased, we have contacted the taxpayer and determined there is some type of hardship or some type of reason not to make the collection—a whole variety of reasons there.

Over the past 3 years our collections, in fact, declined. However, we are really pleased about the fact that during 1994 and so far for the first 5 months in 1995, we had a substantial turnaround in terms of the portion of the accounts receivables that we are, in fact, collecting dollar amounts.

I think there is another thing to keep in mind when you look at accounts receivables and that is the fact that the percentage of accounts receivables to the total net revenues deposited to the Treasury of the United States has remained constant. We have been someplace in the area of 6 to 7 percent.

Accounts receivables in and of themselves are neither good nor bad. I think Mr. Hancock asked the magic question of what is the age of them and what is the collectibility of them, and those are the types of questions that we should provide for the record for you.

[The following was subsequently received:]

AGE AND COLLECTIBILITY OF ACCOUNTS RECEIVABLE

Our RACS (Revenue Accounting Control System) does not currently allow the IRS (Internal Revenue Service) to age the accounts receivable inventory. However, RACS is currently being redesigned to provide more accurate information about the nature of the accounts making up the receivables inventory. The IRS will begin implementing the redesigned system in fiscal year 1996.

At the end of fiscal year 1994, the active accounts receivable inventory was $79.5 billion. After taking into account an allowance for doubtful accounts, IRS estimates that $26.7 billion is potentailly realizable.

Ms. RICHARDSON. Madam Chairman, I think one of things that we can attribute the increased collections to is the fact that we applied additional staffing now to the issue. We have also taken some management steps which we can provide you for the record. As I mentioned in my testimony, from 1991 until the fiscal year we are in now, we actually have declined in staffing; and so some of that really has had its impact on the collections as well.

[The following was subsequently received:]

MANAGEMENT STEPS CONTRIBUTING TO INCREASED COLLECTIONS;
ARDI STAFFING STATISTICS

For the three years prior to FY 94, collection yield had declined between 4% and 6%. Although some of this decline was attributable to a decrease in front-line collection staffing, it was also the result of a decline in productivity. In FY 94, however, IRS' collection yield increased 3% with over a 9% decrease in front-line collection staffing. Through the first quarter of FY 95, collection yield has continued to increase by 3.8% over the first quarter of FY 94. When the hiring and training of the additional collection staff from the FY 95 Compliance Initiative is completed, the increase in yield should grow.

Management changes under way to improve collection include:

- Enhanced cooperation with state taxing authorities. The State Income Tax Levy Program involves agreements with states (Maryland, Virginia, North and South Carolina) whereby they accept IRS levies on state income tax refunds. This resulted in collections of $108 million from FY 92 to FY 94.
- Proper use of certain collection tools. In FY 92, the Offer in Compromise policy and procedures were streamlined resulting in additional collections of $281 million in FY 94 by enabling field personnel to finally resolve many accounts that previously would have remained uncollected. The use of seizures in appropriate situations. In FY 94, $125 million was collected from over 10,000 seizures, a 5.6% increase in seizure activity over FY 93. Effective use of levies resulted in $2 billion in revenue in FY 94. Expanding installment agreement authority to all contact employees increased the dollars secured through installment agreements from $2.28 billion in FY 92 to $4.75 billion in FY 94.
- Decreasing the number of notices, shortening the notice period and instituting earlier intervention by telephone. During FY 94, the IRS tested "early intervention" in two Automated Collection System (ACS) sites with positive results. In January 95, using 770 staffyears of the FY 95 Compliance Initiative in ACS sites, early intervention was implemented nationwide. We project, based on the experience during the pilot, that early intervention will results in additional revenues of $3 billion over 5 years.
- Increasing emphasis on and monitoring of payment of agreed tax assessments at the conclusion of the examination process. In FY 92, Examination secured payment of 8.1% of agreed tax assessments. In FY 94, as a result of the emphasis on payment at the conclusion of the examination process, Examination had secured payment of 31.7% of agreed tax assessments.

Chairman JOHNSON. Mr. Levin of Michigan.

Mr. LEVIN. Thank you.

Let me continue the Chair's discussion of TSM, and I very much agree with her that every hearing doesn't have to be entirely adversarial. We do have a stake in an IRS that collects. It is the basis of compliance. We want to be sure others pay. So let's focus for a few more minutes on the GAO report.

You have responded about marginal improvements, but they then go on to say that you seem to be focusing on automating old processes, and you need to focus better. They say they are concerned about potential management problems. You don't have the management skills to handle it.

By the time you do so, new systems will take over the present systems. All of us I think know about that. New processes occur faster than we can update our own. Again, you should direct your attention to a small number of projects that address critical gaps in mission performance.

Try to get to the nub of this. I am not sure—if you read your testimony and the GAO's report, it is really hard to understand what is the gist of all this. I mean, forget all the kind of fancy language. What are they saying and what are you saying in response?

Mr. WESTFALL. I believe that a significant amount of this issue goes to current systems improvements, as opposed to those that might be focused on the fully integrated solution. I will give you an example.

There is a system that is developed and basically, for the most part, is an automation of existing processes as opposed to being a major business reengineering endeavor. It is called the integrated collection system. That system is programmed, and it is prototyped and proven. We have spent money and would hope to continue to spend some amount of money in rolling that system out nationwide.

Now, in doing that, we don't do it recklessly. There is a nearly 10 percent productivity implication in that system going online based on the fact that having the access to a laptop and the information stored in laptop form when a revenue officer goes to the field significantly improves the efficiency of a revenue officer.

It has also been proven in prototype that a revenue officer, working in this automated environment and with access to the additional information as they work in the field, is producing more than 20 percent additional average revenue per case closed, per case worked. So not only are the cases being worked faster, but the revenue generation out of the cases is greater.

We have made a decision in that particular case that this short-term system is worthy of spending TSM funds, investing in the gains that are there today in that particular system as we move forward toward the ultimate system of the future.

That is an example I think of some of the contention—I believe GAO might assert. It might be an example of a system that they would view as not worthy of continuation; that they believe that our money would be better spent on the longer term TSM initiative. GAO can speak for themselves. I believe that is a fair translation of where they might come out on that particular system.

We disagree. We think we can't afford not to spend that money. We think that it is directly pertinent to where we want our collectibility to go for the future and is an appropriate transition step to take.

To get to the nub of the issue. I think it is a question of are you building the ultimate system or are you spending money transitioning your current system over time to where you want to go.

I believe GAO would have us go more to build a fully integrated system and dedicate and build resources. We agree we have to engage those resources and deliver that integrated solution. But, in doing it, we also believe that we have to improve operations today, especially with systems that are proven and already developed, and that we can make those systems consistent with the future.

For instance, these systems that we are putting online today, we are attempting to use hardware and, where possible, the standard approaches that will make that system as consistent with our ultimate vision as we can. We might have to throw the software away, but where we can, we want to at least be able to work the workstation in the longer term environment as we change.

Mr. LEVIN. I want to ask one other question, and I think we are now anxious to talk to the GAO. Unfortunately, we have these panels and you don't get people talking to each other who disagree. So let me just ask you, because we have such a stake in this, I think if any system needs to be automated it is the tax filing system, right? I mean, there has to be more paper going through there than even here.

Now, do you talk to experts? I mean, are you—this disagreement about short term, long term, are you doing this of your own notions or are you consulting wise people outside? How are we supposed to sit in here and have any idea of who is right? We haven't heard from GAO yet, but what are we supposed—there is a lot at stake here. So you talk to people before you do these things?

Ms. RICHARDSON. We most definitely do. I wanted to mention that Mr. Bowsher, the Comptroller General, and I will be meeting some time this week to really talk about what the facts are, what our differences are, if any, and where we can go about reaching common ground so we can move on with this together.

We very much appreciate the oversight role of the General Accounting Office, and I think it is important that we have oversight. I have engaged the National Research Council to help us. That is part of the National Academy of Science, National Academy of Engineering. We have a number of people from the private sector who sit gratis on a panel to help us with this. As Mr. Westfall testified, we are using a number of outside contractors as well.

I think it is important that we all do work together to accomplish this goal because good tax administration is vital to this country. It has nothing to do with political issues or anything else. It is terribly important that we work together.

So our staffs actually met last week primarily to talk about some of the issues. We are going to be talking about what we can do. I think it is only fair that we keep you apprised of where we are because, obviously, you all do not have the time to get into these matters as deeply as we do, and I don't have as much time as Mr.

Westfall does to get into these matters. We want it to work. We want it to work well. I think we will be working with the GAO to try to find out how we can make this system work.

Mr. LEVIN. Do you report back to the Chair after your discussion?

Ms. RICHARDSON. Most definitely.

Chairman JOHNSON. We may get ourselves all together to talk about that after they have discussed it.

Ms. RICHARDSON. The other thing I would like to say is that part of the disagreement may well be in whether or not you are here in the Dark Ages and have people using a pen and paper to do their work when you know that the ultimate system is going to look somewhat different in the year 2001. But there are tools such as these laptops that can make our people more productive, more effective, raise additional revenues. Should we sit here doing nothing for the next 5 years or for the last 10 years doing nothing until we have an ultimate system in place?

I guess we felt that any prudent businessperson would say no. We have got to keep enhancing our productivity and enhancing the collections as we move along.

What we have tried to do is assure that the decisions we make are not decisions that are irrevocable or would mean that we have to throw out something altogether and start over. We are transitioning, as Mr. Westfall said, to our new system. You just aren't going to turn the switch on one day and have a whole new tax system. It is something—it is a massive system, and we have to transition to it. I think that is where a lot of the disagreement lies.

The idea about focusing more effectively is one that we do agree with. We do know we have to focus, and that is one of the reasons I did appoint Mr. Westfall to be the project manager—not just for the technological side but for every single thing in our organization that has to do with modernization.

The operations people report to him on this issue. The technical people do. We did not want a system that when it was built nobody could use, it didn't meet the requirements of our business people. That happens very often I think in the private sector as well as the public sector, and we didn't want that to happen.

Chairman JOHNSON. Thank you, Commissioner.

Mr. Ramstad.

Mr. RAMSTAD. Thank you, Madam Chair.

Commissioner, I appreciate your coming to my office.

Chairman JOHNSON. I am sorry. I was leaning forward, and I thought our colleague from Texas had left.

Mr. RAMSTAD. I would be glad to yield to my good friend from Texas.

Mr. JOHNSON of Texas. Go ahead.

Mr. RAMSTAD. I am not going anywhere, and I am sorry I was late because of a flight.

Let me just ask you, Commissioner, I know we have spent zillions of dollars in upgrading the computer capability at the IRS. If some of our colleagues have their way—I know the distinguished Minority Leader, Mr. Gephardt, was here a couple of weeks ago ad-

vocating a flat tax. Our Majority Leader, Mr. Armey, advocates flat tax. It is gaining momentum here in the Congress.

If the flat tax becomes law, a simplified card like this is used to file our taxes, and everybody does it at 11:30 on the evening of April 15, what about the computer resources? I mean, isn't this expenditure going to go for naught?

Ms. RICHARDSON. I don't think so. The reason is, no matter what system we have, whether it is an income tax, a consumption-based tax, and whether the income tax is flattened out or whatever, someone in some organization has to administer it. What we are doing today to bring us really into the 20th century—maybe not even into the 21st—is going to be vital no matter what kind of tax system you enact.

One of the biggest concerns I have, quite frankly, is that our system cannot be responsive enough to try to make the quick changes that we may be called upon to do. I think that—as I have encouraged everyone, both on the subcommittee as well as your staff, to join us at one of our service centers, especially this time of the year, I think you would really be amazed at how well the system works, not that we do have a few errors. I think it is important that we continue with this project because, whatever happens in terms of the tax law, we will need that upgraded and updated equipment to administer it.

Mr. RAMSTAD. For some reason, I am not surprised you didn't say we are spending too much money on computers.

Ms. RICHARDSON. Those postcards will be coming in. We will have to process those, too.

Mr. RAMSTAD. Let me ask you about the work force person power there. Now there are over 113,000 employees, and 5,000 additional employees were funded last year as I recall—$405 million per year for 5 years to fund 5,000 new agents to improve compliance and collections.

In view of the resources that we put into the computer system, are we at some point going to see a dividend in terms of decreased employees? Isn't there some correlation? The more you automate, shouldn't we see the need for employee decrease?

Ms. RICHARDSON. Absolutely. One of those charts that Mr. Westfall was showing indicates that from fiscal year 1992 through 1995, we have productivity savings of 11,000 FTE that we have given up as a result of tax systems modernization.

Now we have been given backstaffing, and I might add that 5,000 was on top of a 109,000 base, I believe. So we are now, I think, around 114,000 FTE.

It wasn't 5,000 on top of the 113,000 or 114,000. But, in 1992, we had 117,000 full-time equivalents. We have been able to enhance our productivity, and we will continue to do that.

But our customer base is growing, we hope. As we are taking on additional workloads with more filings, the population increases, and we need to be working on some of those compliance issues we talked about. We need to address the accounts receivable issue. So some of the increase in staffing that we would be looking to—not increase in staffing but some of the productivity savings we would like to reinvest in compliance-related positions.

Mr. RAMSTAD. So, really, you are not willing at this point to correlate the increased expenditures, increased appropriations for computers to at some point seeing a reduced work force.

Ms. RICHARDSON. I am sorry. We can do that. We have done that. We will give you the precise numbers of exactly what we can save as a result of what we have done and what we will be doing.

[The following was subsequently received:]

The following table provides additional documentation on the 11,819 cumulative FTE savings from automation achieved through FY 1995:

FY 1996 PRESIDENT'S BUDGET, FEBRUARY 6, 1995
CUMULATIVE PRODUCTIVITY SAVINGS
FY 1992-1995 (FTE)

	FY 1992 FTE	FY 1993 FTE	FY 1994 FTE	FY 1995 FTE	FY 92-95 Total
CURRENT SYSTEMS:					
ICS-Connectivity		303	303	303	909

Inspection Systems Development				24	24
Corporate Systems Modernization/Transition (CSM/T)				19	19
Sub-total, TSM	*1,050*	*1,917*	*3,002*	*4,154*	10,123
Total, FTE Savings	**1,050**	**2,393**	**3,612**	**4,764**	**11,819**

For the FY 1996-FY 2000 period, an additional 22,703 FTE of Tax Systems Modernization savings are projected based on full funding of the FY 1996 President's budget. These savings, which accrue by year, are proposed to be reinvested in compliance and detection activities made possible by the capabilities that TSM will provide. Additional revenue in the amount of $2.546 billion can be generated from this reinvestment for the same time period.

Mr. WESTFALL. We estimate, approximately, an additional 12,000 FTE over the term of implementing TSM that will be capable of being given up as backroom jobs—a lot of clerical positions, paper handling positions, control positions that can be—for which we will have a choice. The choice that you will have is either to remove those positions from our funding base or to authorize us to reallocate those positions into compliance jobs at a 5-to-1 or greater revenue generating capability.

One of the things we get out of TSM is a lot of new compliance opportunities that are generated by the additional information ability to analyze the information and, in the end, potentially apply some resources to work that particular compliance agenda.

Mr. RAMSTAD. Well, I appreciate your responses, and I certainly hope that the thrust is to reduce the Federal work force. I understand you have a difficult job and certainly as many critics as we do in Congress. IRS isn't everyone's favorite agency—I know that—but, nonetheless, I think all of us have to be very diligent in trying to cut expenditures as we are downsizing government. We need to do what the private sector has done for a long time.

I think it is clear the American people want us to reduce the size and scope of the Federal Government. It seems to me that, at least based on our visit and what you are saying now, that you are getting that message like all of us, hopefully, are getting that message; and we will continue to work toward that end.

Ms. RICHARDSON. Not only are we getting it, I think we got it at least several years ago.

In my testimony, I mention the fact that we are actually reducing the number. We now have 10 service centers. We are moving to five submission processing centers. So there will only be five centers out there where people will be filing their returns. We will have 3 computing centers instead of 12—10 service centers and 2 computer sites.

We are moving about a thousand employees out of our headquarters operation. I think over 500 are out now. By the end of the year, another 500 will be out on the front lines. The same with our regional structure.

We are in the process of looking at our district office and regional office missions and operations, and we will be making some recommendations later this spring about how we want to have those structured.

So we are acutely aware of the importance of using our resources wisely. We understand the importance of streamlining.

But what modernization has allowed us to do is to really reengineer the way we do our business. To be able to reengineer our business without having the technology to go along with it would really not, I think, be the prudent thing to do in terms of the tax administration system. The two do go hand in hand.

Mr. RAMSTAD. Thank you, Madam Chair.

Chairman JOHNSON. Mr. Johnson of Texas.

Mr. JOHNSON of Texas. I didn't mind yielding to my friend from north Texas.

I would like to ask a couple of questions. First, it seems to me that maybe we are reinventing the wheel taking so long—to the year 2008—to get this job done.

I am pleased to know that you are consulting with TRW. That is a good company, and they have just made a conversion themselves. They moved their equipment—they changed their whole computer system and moved the equipment in overnight without hampering customer service one iota.

I know in the Air Force it takes us 10 years to develop an airplane and here you are taking 12 years or more just to get a new computer system going. Can you explain that to me?

Ms. RICHARDSON. Well, I am going to let Mr. Westfall handle the more technical details, but this might be a good time for a plug about the Federal procurement process, too.

Mr. JOHNSON of Texas. Well, then let me ask you another question. Can you privatize this conversion and get it out of the government control? That is what you just said you could do.

Ross Perot used to say—and I don't quote him very often—he said, "Why don't you just pull it over to the side of the road, lift the hood and fix it?"

Ms. RICHARDSON. Let me say if we could have done it, it probably would have been done long before my watch, too. It is a massive undertaking. The year—really, I hope, before the year 2001—and I will let Mr. Westfall address that.

But I do think that when you talk about technology acquisition you need to have a long, hard look at what the procurement rules do. They were very well suited to the time when we were buying jeeps and tanks and things that weren't changing very rapidly, and it is a very fair system. A lot of people can put in their bids. But technology is rapidly changing, and we need to be able to respond much more quickly.

That has been part of the problem with the delays. We have an extremely competent contracting staff. We have done a very good job in the procurement area withstanding protests, and I think we have done as well as we could and probably better than most other agencies in terms of procurement process working with what we have today, but it is still cumbersome.

Mr. WESTFALL. We have awarded——

Chairman JOHNSON. Let me just say we do have a number of other panels, so we will have to try to keep the answers focused.

Ms. RICHARDSON. One thing I might add also. We would be more than happy to meet with you or meet with some of the members of the subcommittee—with Mr. Westfall.

Mr. JOHNSON of Texas. That is fine. I would like to know why it has taken so long.

Let me bring one more question into focus here before we quit. I am going to quote a quick paragraph from the Dallas Morning News which said, "According to wire reports, the IRS plans to collect credit reports, news stories, tips from informants, information from real estate, motor vehicle, and child support records as well as conventional government financial data. Aside from civil liberties concerns, citizens also fear the IRS is acknowledging that some of the data may be inaccurate but that taxpayers will not be allowed to review it or correct it."

Now I know in the case of TRW they do allow their consumers to correct their records, and I would hope the government doesn't get into that position. Can you tell me with a straight face that our

taxpayers are not going to be allowed to keep their records straight?

Ms. RICHARDSON. I can also tell you that that article was erroneous. There is—it was filled with significant amounts of erroneous information. I would be happy——

Mr. JOHNSON of Texas. But somebody in the IRS gave the press those reports.

Ms. RICHARDSON. Well, I think there is even dispute about how that was handled, quite frankly, but we are not collecting individual taxpayer information as they suggested. I can give you the specifics of what we are doing.

I had long conversations with Senator Pryor, and I know he is satisfied that we do have concerns about taxpayer's rights of privacy and the information we collect. I would be delighted to provide you with precisely what we were doing. The article was inaccurate in many, many ways——

Mr. JOHNSON of Texas. OK.

Ms. RICHARDSON. Not the least of which is——

[The following was subsequently received:]

Extent and Types of Information IRS Collects on Individuals

On December 20, 1994, the IRS published notice of an amended Privacy Act system of records: "Compliance Programs and Projects File - Treasury, IRS 42.021." Based on comments received and media articles, the notice may not have adequately distinguished among the various users and uses of the compliance system, as well as the data it is to contain.

The system will not be used to support large scale data matching in order to identify specific individuals for contact by IRS personnel. The IRS has developed procedural safeguards to prevent data used in the compliance research programs and projects that engage in large scale data manipulation techniques to determine levels of compliance in particular market segments from being used for enforcement purposes as to specific taxpayers.

The compliance research system is being redesigned to identify causes and trends of noncompliance and to generate and test new approaches to increasing voluntary compliance. The enhancements will not include maintenance of records with individually identifying information. The personnel who use and access the research system will not be enforcement personnel. The system will not be used to select individuals for enforcement actions.

This system of records has always on a limited basis and with legal authority contained information from various third-party sources. The enhancements to this system will add more information from more sources. However, use of these enhancements for the purposes of compliance research will adhere to the operating principles of such research: it will be group-focused rather than individually focused and not directly used to select individuals for enforcement actions.

Mr. JOHNSON of Texas. You don't like the GAO, and you don't like the press. Do you like anybody in Federal Government?

Thank you. I appreciate the responses.

Thank you, Madam Chairman.

Chairman JOHNSON. Thank you.

Mr. Zimmer will inquire.

Mr. ZIMMER. Thank you.

Mr. Westfall and Commissioner Richardson, as I walked by the Congressional Federal Credit Union on my way over here I saw their newsletter, and the headline says, get your tax refund weeks faster, and in the fine print it says up to 5 weeks faster if you file electronically.

My question is, if you are eligible for earned income tax credit, is that an accurate promise this year?

Ms. RICHARDSON. Yes, it is, if you are eligible for the earned income tax credit. If you are not, it is not accurate. We have been very concerned, as has this subcommittee in prior years, about people claiming a credit who are not eligible. There has been some fraud, and we have stepped up our efforts this year to police the whole refund program.

The vast majority of the people are getting their refunds in a timely fashion or timely in the sense of the customer service standards that we published. Only if people have questionable—or we have reason to question a refund or a credit claim are we holding it up.

Mr. ZIMMER. So what percentage of those EITC returns are being held up more than they were last year?

Ms. RICHARDSON. Mr. Zimmer—as of this morning we didn't have that information. I will be able to provide it to you, I think, in about another week.

[The following was subsequently received:]

Because the tax filing season is coming to a close, IRS does not yet have a final report on the number of EITC refunds delayed, but we will be happy to provide that report as soon as it is available.

Mr. ZIMMER. Is it a larger percentage? Because we understand from our constituents that it has gone up considerably.

Ms. RICHARDSON. It has certainly gone up over last year. As I said in my opening statement, I regret that there are people who are legitimately entitled to refunds and to the credit who are being caught in the initial screens and filters. But we have been very concerned about promoting integrity in this system and wanting to make sure that people who are eligible do get the credit and people who aren't don't.

One of the things that we have also encouraged is the advanced earned income tax credit which people can get throughout the year in their paychecks and wouldn't have to wait until they file their return to get at least the majority of the credit.

Mr. ZIMMER. At the end of your testimony, you said that you would appreciate it if we in Congress gave you some advance notice as to when we were going to change the Tax Code because of the impact it has on administration by the IRS. I certainly understand that.

Ms. RICHARDSON. We would certainly like to work with you.

Mr. ZIMMER. Obviously. That is a very good idea. But, by the same token, do you not feel that it is your obligation to inform taxpayers of a change in the procedures so that they can put their financial affairs in order?

There are a large number of taxpayers who applied for loans in anticipation of their refund. There were banks and other financial institutions that lent them the money, and now they find that a portion of the refund is being sent directly to the taxpayer by check—by paper check rather than by electronic transmission to the lender. This is not only a problem for the lenders but for the taxpayers as well.

If I get a check from the IRS, I am going to cash it. Sometimes my wife asks me what it is for, but I usually—the first impulse is to cash that check. That is money that is owed to the financial institution they borrowed from in anticipation of the refund. These taxpayers, by definition people of modest means, are really imperiling their credit rating as a result of that portion of the loan not being repaid.

Now, could you tell me what steps were taken in 1994 by the IRS to inform the taxpaying public and the relevant financial institutions that this change was about to take place?

Ms. RICHARDSON. Maybe you aren't aware, we are currently in litigation over many of the issues you have just talked about, so I am not in a position to comment other than fairly generally.

But, beginning even before the end of the filing season last year, as the concerns about refund fraud were voiced by this subcommittee, by other committees, the Treasury Department set up a task force; and we announced and worked with a number of the practitioner groups, the public.

Any time I have ever spoken and had the opportunity, I have indicated that we were going to be changing our procedures and processes for this filing season, that we would be taking whatever steps we thought would be prudent and appropriate to assure the integrity of the refund system.

In the tax package this year we indicated the importance of filing accurate information, accurate Social Security numbers and that we might have to do some compliance reviews on certain returns. So I think we have worked—my filing season press conference, we had a significant amount of publicity about the fact that we were going to be changing our approaches this year and stepping up our efforts.

So, as I said earlier, I am sorry that there are some people who have legitimate claims who are going to have their refunds held up, but we really do think it is important to promote integrity in the system.

Mr. ZIMMER. When did the IRS inform the public that it would issue some of the refunds in two installments, one that could be electronically transferred to the lender and the second is a paper check? When was that information made public?

Ms. RICHARDSON. I believe that was in December, perhaps.

Mr. ZIMMER. How was it promulgated?

Ms. RICHARDSON. I will have to get you the specific information. Again, this is a subject of a court proceeding and—but I will——

[The following was subsequently received:]

WAYS AND MEANS OVERSIGHT HEARING ON FEBRUARY 27, 1995

IRS Budget Proposal for FY 1996 and 1995 Filing Season

Insert for the Record

QUESTION: When did IRS highlight the bifurcation of refund returns?

ANSWER: Attached is a chronology dating back to 1992 that details the actions taken relating to the Revenue Protection Strategy. Highlights include activities in December 1994 and January 1995 that directly relate to bifurcated refunds.

QUESTION: Did the October 1994 notification covering elimination of the DDI also include notification of the bifurcated return system of the refunds that were going to be electronically filed?

ANSWER: The bifurcation of refunds was not discussed when we made notification of the DDI changes.

REVENUE PROTECTION STRATEGY

1992

October Commissioner and Deputy Commissioner, Assistant Commissioners (RP) and (CI) and Chief Counsel met with representatives from H&R Block, Beneficial Corp., Jackson Hewitt, Mellon Bank, Greenwood Trust, NATP and others to discuss plans to remove the Direct Deposit Indicator (DDI) in the 1994 filing season. The Industry presented IRS with a briefing document entitled, "The Direct Deposit Acknowledgement Issue and Its Relationship to Electronic Filing Fraud."

1993

April Banks submitted a supplement to the October 1992 paper entitled "Electronic Filing: Industry Led Initiatives to Combat Fraud and Improve Electronic Filing."

Creation of the Council of Electronic Revenue and Commerce Advancement (CERCA) to review security of data and privacy issues, and increase the value of electronic filing commerce with all agencies to ensure consistent standards of software and data elements.

June Deputy Commissioner, Assistant Commissioner (RP), Deputy Assistant Commissioner (RP), Director, Office of Refund Fraud and members of their staff met with industry representatives regarding the DDI issue.

IRS announced the decision to retain the DDI for the 1994 filing season along with steps to strengthen fraud detection/deterrence and expectations of the industry. Explained to industry that we will review this decision each filing season based on ongoing trends.

1994

June Presentation to CERCA on changes to Suitability, RAL advertising and Form 8453 requirements.

Refund Fraud Strategy approved by Treasury.

1994 (cont'd)

General Accounting Office briefed on fraud initiatives by the Director, Office of Refund Fraud.

July **IRS Nationwide Tax Forum - Baltimore (attendance 1,600). Opening executive remarks emphasized refund delays related to inaccurate SSNs. Seminar on 1995 Changes to the Electronic Filing Program emphasized importance of TIN accuracy for both paper and ELF. Seminar on Earned Income Credit - Advanced Earned Income Credit emphasized educating the public, compliance initiatives and future plans. Handout on preventing fraudulent filing, prepared by Fraud Task Group, provided to attendees. IRS Nationwide Tax Forum - Sacramento (attendance 1,150), same structure as Baltimore forum.**

Issued News Release IR-94-73 announcing new fraud control measures and need to verify the accuracy of SSNs prior to release of refunds.

August IRS Nationwide Tax Forum - Albuquerque (attendance 770), same structure as Baltimore forum.

IRS Nationwide Tax Forum - Kansas City (attendance 1,200), same structure as Baltimore forum.

Presentations to NAEA, ABA and NATP by the Director of Practice, discussing filing fraud initiatives, emphasizing DDI, SSN accuracy and refund delays.

Presentation to FTA Technology Workshop, including description of the Revenue Protection Strategy, ERO requirements, SSN accuracy and refund delays.

Presentation to North Eastern Tax Officials Association, including a brief overview of the Revenue Protection Strategy.

September IRS Nationwide Tax Forum - Orlando (attendance 2,000), same structure as Baltimore forum.

IRS Nationwide Tax Forum - Salt Lake City (attendance 690), same structure as Baltimore forum.

1994 (cont'd)

Briefing of SSA by the Director, Office of Refund Fraud and staff outlining filing fraud initiatives and potential impact on SSA, stressing coordination efforts.

Advance notification of ERO changes to states with joint electronic filing and national practitioner associations.

National press contacted and News Release (IR-94-100) issued, addressing ERO changes, SSN accuracy and refund delays.

Tax Symposium - Ogden, Utah: brief overview of the Revenue Protection Strategy emphasized SSN accuracy and refund delay.

Meeting with Commissioner's Advisory Group (CAG) members discussed general issues on filing season strategies, including potential for two payments and potential refund delays due to additional filters.

October Under Secretary Noble testified before the Oversight Subcommittee - recommended IRS take the time necessary to review refunds before issuance.

CERCA meeting discussed Revenue Protection Strategy.

Meeting with representatives from the Fraud Service Bureau (FSB) to discuss Revenue Protection issues.

Press Conference conducted by Treasury Secretary Lloyd Bentsen, Under Secretary for Enforcement Ronald K. Noble, and IRS Commissioner Richardson regarding EITC and DDI.

Calls made to industry stakeholders explaining reasons for elimination of DDI.

Correspondence mailed to notify EROs of changes and application procedures.

FTA Board of Trustees meeting discussed ELF strategies, emphasis on DDI and Revenue Protection Strategy, emphasis on SSN validity and refund delay.

A news release on SSN accuracy and refund delays, developed jointly with SSA, was distributed to 1300 SSA field offices for local use.

1994 (cont'd)

November Commissioner Richardson met with AICPA, discussed Rev. Proc. 94-63 with emphasis on DDI.

Presentation to Texas Society of Certified Public Accountants (TSCPA)/IRS Liaison on changes to Rev. Proc. 94-63, and Revenue Protection Strategy with emphasis on SSN accuracy and refund delays.

Meetings with NATP, NAEA, NSPA - changes to Revenue Procedure 94-63 and filing fraud initiatives discussed SSN accuracy and refund delays emphasized.

Discussion with H&R Block, requested clarification on Responsible Official signature and suitability checks.

Discussion with Bank One on extension of Filing Form 8633.

Fraud Service Board met with Office of Refund Fraud representatives to discuss screening criteria for potentially problematic refunds.

SSA and IRS issued an article on SSN accuracy and refund delays in the "SSA Courier" which is distributed to 14,000 organizations.

Sixty second public service radio spot on SSN accuracy and refund delay provided to over 8,800 radio stations. Through February 20 this spot was aired 92,910 times, by 1,495 outlets, in 828 markets, and 51 states/possessions.

December Presentation to American Institute of Certified Public Accountants (AICPA) on changes to Rev. Proc. 94-63 and Revenue Protection Strategy, emphasis on SSN validity and refund delay.

Federation of Tax Administrators (FTA)/Commissioner's Liaison Meeting discussed Revenue Protection and Electronic Filing, emphasis on SSN accuracy and refund delays and new ERO rules.

Meetings with H&R Block and Bank One.

Instructions for tax packages revised to include SSN accuracy and refund delay messages.

Statistician from Office of Refund Fraud met with FSB to discuss statistical data in developing screening criteria.

1994 (cont'd)

IRS Executives briefed local Congressional Representatives on Revenue Protection Strategy.

Tax Counseling for the Elderly sponsoring organizations were provided a brief overview on revenue protection initiatives, emphasis on SSN validity and refund delays.

The Commissioner's filing season media and public service campaign kickoff; issuance of Fact Sheet 94-10, "Refund Protection Procedures" and News Release IR 94-119 stressing correct SSNs, refund delays, possibility of split refunds on returns claiming refundable credits. This information was made available on the ELF Bulletin Board and distributed to 43 representatives from general print media, technical tax press, electronic media, financial press and professional associations. Q&As, including information on the split refund and second payment by check, were made available on the ELF Bulletin Board (available to ELF practitioners) and the Public Affairs Bulletin Board (available to IRS offices nationwide). The press conference was attended by 41 media representatives, such as CNN, Cox Broadcasting, ABC, NBC, CNBC, Fox-TV, U.S. News and World Report, Tax Notes, Tax Analysts, New York Times, Washington Post, Associated Press, Dow Jones News Service, Knight-Ridder Financial News, Standard News Radio Network, McNeil/Lehrer and Scripps-Howard. The conference and video news release were sent via satellite and picked up in 47 major markets, with 67 stations within those markets. The Commissioner also held interviews via satellite with about 15 media markets nationwide.

A poster on SSN accuracy and refund delays was published in the SSA/IRS Joint Reporter and distributed to 7 million employers.

Notices issued to taxpayers with known invalid SSNs in the prior filing period.

1995

January Commissioner's interview with freelance reporters for "Good Housekeeping" and "Working Women" addressed SSN accuracy and refund delays. Publication scheduled for April.

1994 (cont'd)

Communication print products addressing overall accuracy, correct SSN and refund delay message include:

• Eighteen different Form 1040 series tax packages (forms and instructions) made available to 86 million taxpayers, also available through FEDWORLD on the INTERNET.

• 1995 Tax Supplement (English and Spanish). This supplement is carried by approximately 3,000 daily and weekly newspapers in its entirety and portions of it are carried by approximately 7,000 other newspapers throughout the filing season.

• 1995 Filing Season "Ask the IRS" question and answer columns (English and Spanish), used year-round by approximately 10,000 small newspapers as a regular column or filler.

• Public service filing season print drop-in ads are carried by approximately 10,000 newspapers and magazines and over 4300 billboard displays are available.

• 1995 International Clipsheet placed with international companies and overseas media.

• Publication 910, "Guide to Taxpayer Services," six million copies are made available to taxpayers.

CAG Meeting stressed SSN validity and refund delay and discussed emerging areas of fraud.

Presentation to the American Bar Association (ABA) of ELF changes to Rev. Proc. 94-63.

Presentation to IRS field employees responsible for the Congressional Affairs Program (local Congressional liaison) on Electronic Filing, Suitability, Monitoring, Education and Outreach.

Commissioner Richardson, Deputy Commissioner Dolan, Chief Taxpayer Service, and Electronic Filing Executive met with H&R Block.

AICPA meeting, IRS assisted in preparation of procedural guidelines and addressed the removal of the DDI and SSN validity.

1994 (cont'd)

Electronic Filer's Report, ELF Executive provided responses to questions posed by reporter Rob Hamel on RALs, EITC returns, DDI and split refunds with the second payment by paper check.

Industry telephone contacts with NELCO, Drake, Electronic Filing Coalition of America and Beneficial Corp.

Numerous telephone conversations with outside stakeholders re: Revenue Protection and general Electronic Filing. These external stakeholders were primarily practitioners from across the country calling in regards to the DDI decision.

IRS Executives briefed local Congressional Representatives on Revenue Protection Strategy.

February Commissioner's letter to Industry providing background on Revenue Protection Strategy and delay of refund.

Commissioner's letter to Members of Congress providing background on Revenue Protection Strategy.

Communication audiovisual products addressing overall accuracy, correct SSN and refund delay message include:

• PBS Tax Clinic aired February 5th on 176 PBS stations; 116 other PBS stations, numerous cable stations and Armed Forces Television are scheduled to air it later. The February 5th airing resulted in over 35,000 calls to the Taxpayer Service Toll Free area.

• Public Service Announcements have been distributed to over 8,800 radio stations and 2,400 television stations.

• Videoguide to Taxes - approximately 5,000 have been distributed to libraries, 2,500 copies to video outlets, such as Blockbuster, and 2,600 copies to IRS field Public Affairs Officers and Taxpayer Education Coordinators for local use. GEMSTAR Development Corp. also made it available to VCR Plus users in three regional markets and several smaller markets.

Chief Compliance Officer interviewed by Associated Press and Washington Post reporters about the Revenue Protection Strategy. News Release IR 95-16 issued, urging accuracy to avoid

1994 (cont'd)

delays and addressing the potential for split refund payments on returns claiming tax credits. The news release was distributed to 43 representatives from general print media, technical tax press, electronic media, financial press and professional associations. The news release and Q&As, which addressed the split refund and second payment by check, were also made available on the ELF Bulletin Board and the Public Affairs Bulletin Board.

Subcommittee on Oversight, Committee on Ways and Means Hearing, "The 1995 Filing Season and IRS's FY 1995 Budget Request."

Mr. ZIMMER. This is a fact.

Ms. RICHARDSON. It was in December we put out press releases. We met with the people in the industry.

Mr. ZIMMER. Can you tell me why you send the second check as a paper check?

Ms. RICHARDSON. I can say that the taxpayer is entitled to the refund, and we send the refund to the taxpayer.

Mr. ZIMMER. But the taxpayer has requested that the entire refund go to the lender. Can you explain why you are disregarding the taxpayer's request?

Ms. RICHARDSON. This is the subject of a lawsuit so I have been advised not to discuss it.

Mr. ZIMMER. So you can't—OK.

At what point did you inform the public that you would delay refunds on so-called questionable returns?

Ms. RICHARDSON. Again, before the end of last year's filing season we said we were going to take steps to do that. Throughout all of our meetings last summer I think with the industry groups, from the time we began focusing on this issue, we made it very clear that we would delay refunds, take any other steps necessary to make sure that only the people entitled got them.

Mr. ZIMMER. How do you define questionable as in questionable returns?

Ms. RICHARDSON. I beg your pardon?

Mr. ZIMMER. How do you define a questionable——

Ms. RICHARDSON. Where, on the face of it, it appears that someone may not be eligible for a refund.

Mr. ZIMMER. How long a delay can a taxpayer anticipate if there is something——

Ms. RICHARDSON. Where we have held up the refund funds, we have sent letters to taxpayers informing them that it could be up to as long as 8 weeks.

Mr. ZIMMER. Do you have enough——

Ms. RICHARDSON. If there is additional information that we need from them, it may even be longer, but we are trying to process things as quickly as possible and get the money out as quickly as possible to the people who are eligible.

Mr. ZIMMER. Do you have enough experience to know how long the average delay is at this point?

Ms. RICHARDSON. We don't.

Mr. ZIMMER. OK. Thank you very much, Madam Chair.

Ms. RICHARDSON. Thank you.

Chairman JOHNSON. Thank you.

Mr. Hancock.

Mr. HANCOCK. Yes. I had a question asked to me over the weekend that I just remembered, and I figured that maybe we can get it on the record right now. This particular question was the State of Missouri now is requiring a copy of the Federal income tax return to be submitted with their State income tax return if it is itemized. The question is, since the Federal return is supposed to be confidential, can a State legally require a copy of the Federal return?

Ms. RICHARDSON. We will get you an answer.

I can tell you that the best advice I would take is, if I don't know the answer to the question, I will ask my lawyer and we will get back to you.

I know that a number of States use a Federal—because they piggyback onto the Federal tax system, ask you to file your schedule A or schedule B or whatever with your State return. I think that happens here in the District of Columbia and in the State of the Virginia.

Mr. HANCOCK. Can they require the entire 1040 return be submitted as part of a State return?

Ms. RICHARDSON. I think I really would feel more comfortable finding out and letting you know for sure.

Mr. HANCOCK. Thank you.

Chairman JOHNSON. Thank you.

[The following was subsequently received:]

The Internal Revenue Code neither authorizes nor prohibits a State from having such a requirement. In general, the rules of section 6103 of the code governing the confidentiality and disclosure of Federal returns and return information apply only to information that is submitted to the Federal Government. Therefore, States are free to ask for Federal tax return information directly from their taxpayers.

Section 6103(p)(8) of the code, however, was designed to ensure that States requiring Federal tax information directly from their taxpayers take steps to protect the confidentiality of that information. This section requires these States to adopt confidentiality laws before they can receive any Federal tax information directly from the Federal Government. Because information exchange with the IRS is very important to State taxing authorities, this provision has been an effective incentive for the States to adopt confidentiality laws that are satisfactory to the Internal Revenue Service.

Chairman JOHNSON. There are a couple of precise questions that I think we need to get on the record, Commissioner. We have strayed from the tax systems modernization program into the other areas that are of concern to the subcommittee, and that is acceptable, but there are a few more things we need to follow up on.

First of all, what were the consequences of the $400 million cut in your 1995 budget request for your tax system's modernization—in terms of your timetable for implementing the tax modernization system specifically?

Mr. WESTFALL. We are continuing to do—let me start this way. What we did when we took the major cut in the request that we made for 1995 is we did a complete reevaluation of where we were putting the money and how fast the systems were rolling out. We, basically, for the most part, have done some reprioritization, but geared the program down. The exact impact of what we have done is still somewhat uncertain.

We believe that we are probably slowed by a full year in the implementation of the program. How much of a delay or perhaps even program reductions have to take place will be a product of whether our 1996 request is authorized or not.

Chairman JOHNSON. Are you aware that the GAO believes that you will not be able to spend this year's money?

Mr. WESTFALL. I have read that in the GAO testimony. I believe that my response very clearly would be we will effectively spend the money.

We basically went on a hold last year as a result of the fact that the increase was not authorized. We have several major acquisitions in the system that are about ready to go to closure that re-

quire funds. The document processing system needs to be funded for rollout. That project has already been contracted. It may not be capable of being rolled out if funding is not authorized.

The largest single hardware acquisition in the system, the service center support system that provides the corporate hardware platform for the new database environment, is scheduled to be let very soon and is dependent upon funds that would be authorized in the 1996 budget.

Chairman JOHNSON. Thank you.

As to the tax filing season questions specifically, could you clarify for the record exactly when you did inform the public and the tax return preparers of your activities and your plans to curb fraudulent returns? Particularly your decision to be very strict about requiring accurate Social Security numbers. Did you inform clearly about that early?

Ms. RICHARDSON. I believe we did, Madam Chairman, and I can get you the specific chronology of when the announcements were made and what we said. That was clearly part of the tax package that went out to all taxpayers.

Chairman JOHNSON. I want to see if it was highlighted, since it was a change and since it was so important to our efforts to reduce fraud.

[The following was subsequently received:]

REVENUE PROTECTION STRATEGY

1992

October Commissioner and Deputy Commissioner, Assistant Commissioners (RP) and (CI) and Chief Counsel met with representatives from H&R Block, Beneficial Corp., Jackson Hewitt, Mellon Bank, Greenwood Trust, NATP and others to discuss plans to remove the Direct Deposit Indicator (DDI) in the 1994 filing season. The Industry presented IRS with a briefing document entitled, "The Direct Deposit Acknowledgement Issue and It's Relationship to Electronic Filing Fraud."

1993

April Banks submitted a supplement to the October 1992 paper entitled "Electronic Filing: Industry Led Initiatives to Combat Fraud and Improve Electronic Filing."

Creation of the Council of Electronic Revenue and Commerce Advancement (CERCA) to review security of data and privacy issues, and increase the value of electronic filing commerce with all agencies to ensure consistent standards of software and data elements.

June Deputy Commissioner, Assistant Commissioner (RP), Deputy Assistant Commissioner (RP), Director, Office of Refund Fraud and members of their staff met with industry representatives regarding the DDI issue.

IRS announced the decision to retain the DDI for the 1994 filing season along with steps to strengthen fraud detection/deterrence and expectations of the industry. Explained to industry that we will review this decision each filing season based on ongoing trends.

1994

June Presentation to CERCA on changes to Suitability, RAL advertising and Form 8453 requirements.

Refund Fraud Strategy Approved by Treasury.

General Accounting Office briefed on fraud initiatives by the Director, Office of Refund Fraud.

1994 (Con't)

July — IRS Nationwide Tax Forum - Baltimore (attendance 1,600) Opening executive remarks emphasized refund delays related to inaccurate SSN. Seminar on 1995 Changes to the Electronic Filing Program emphasized importance of TIN accuracy for both paper and ELF. Seminar on Earned Income Credit-Advanced Earned Income Credit emphasized educating the public, compliance initiatives and future plans. Handout on preventing fraudulent filing, prepared by Fraud Task Group, provided to attendees. IRS Nationwide Tax Forum - Sacramento (attendance 1,150), same structure as Baltimore forum.

Issued News Release IR-94-73, announcing new fraud control measures and need to verify the accuracy of SSNs prior to release of refunds.

August — IRS Nationwide Tax Forum - Albuquerque (attendance 770), same structure as Baltimore forum.

IRS Nationwide Tax Forum - Kansas City (attendance 1,200), same structure as Baltimore forum.

Presentations to NAEA, ABA and NATP by the Director of Practice, discussed filing fraud initiatives, emphasizing DDI, SSN accuracy and refund delays.

Presentation to FTA Technology Workshop, including description of the Revenue Protection Strategy, ERO requirements, SSN accuracy and refund delays.

Presentation to North Eastern Tax Officials Association, including a brief overview of the Revenue Protection Strategy.

September — IRS Nationwide Tax Forum - Orlando (attendance 2,000), same structure as Baltimore forum.

IRS Nationwide Tax Forum - Salt Lake City (attendance 690), same structure as Baltimore forum.

Briefing of SSA by the Director, Office of Refund Fraud and staff outlining filing fraud initiatives and potential impact on SSA, stressing coordination efforts.

Advance notification of ERO changes to states with joint electronic filing and national practitioner associations.

1994 (Con't)

National press contacted and News Release (IR-94-100) issued, addressing ERO changes, SSN accuracy and refund delays.

Tax Symposium - Ogden, Utah, brief overview of the Revenue Protection Strategy, emphasized SSN accuracy and refund delay.

Meeting with Commissioner's Advisory Group (CAG) members discussed general issues on filing season strategies, including potential for two payments and potential refund delays due to additional filters.

October Under Secretary Noble, testified before the Oversight Subcommittee - recommended IRS take the time necessary to review refunds before issuance.

CERCA meeting discussed Revenue Protection Strategy.

Meeting with representatives from the Fraud Service Bureau (FSB) to discuss Revenue Protection issues.

Press Conference conducted by Treasury Secretary Lloyd Bentsen, Under Secretary for Enforcement, Ronald K. Noble, and IRS Commissioner Richardson regarding EITC and DDI.

Calls made to industry stakeholders explaining reasons for elimination of DDI.

Correspondence mailed to notify EROs of changes and application procedures.

FTA Board of Trustees Meeting, discussed ELF strategies, emphasis on DDI and Revenue Protection Strategy, emphasis on SSN validity and refund delay.

A news release on SSN accuracy and refund delays, developed jointly with SSA, was distributed to 1300 SSA field offices for local use.

November Commissioner Richardson met with AICPA, discussed Rev. Proc. 94-63 with emphasis on DDI.

Presentation to Texas Society of Certified Public Accountants (TSCPA)/IRS Liaison on changes to Rev. Proc. 94-63, and Revenue Protection Strategy with emphasis on SSN accuracy and refund delays.

1994 (Con't)

Meetings with NATP, NAEA, NSPA - changes to Revenue Procedure 94-63 and filing fraud initiatives discussed SSN accuracy and refund delays emphasized.

Discussion with H&R Block, requested clarification on Responsible Official signature and suitability checks.

Discussion with Bank One on extension of Filing Form 8633.

Fraud Service Board met with Office of Refund Fraud representatives to discuss screening criteria for potentially problematic refunds.

SSA and IRS issued an article on SSN accuracy and refund delays in the "SSA Courier" which is distributed to 14,000 organizations.

Sixty second public service radio spot on SSN accuracy and refund delay provided to over 8,800 radio stations. Through February 20 this spot was aired 92,910 times, by 1,495 outlets, in 828 markets, and 51 states/possessions.

December Presentation to American Institute of Certified Public Accountants (AICPA) on changes to Rev. Proc. 94-63, and Revenue Protection Strategy, emphasis on SSN validity and refund delay.

Federation of Tax Administrators (FTA) Commissioner's Liaison Meeting discussed Revenue Protection and Electronic Filing, emphasis on SSN accuracy and refund delays and new ERO rules.

Meetings with H&R Block and Bank One.

Instructions for tax packages revised to include SSN accuracy and refund delay messages.

Statistician from Office of Refund Fraud met with FSB to discuss statistical data in developing screening criteria.

IRS Executives briefed local Congressional Representatives on Revenue Protection Strategy.

Tax Counseling for the Elderly sponsoring organizations were provided a brief overview on revenue protection initiatives, emphasis on SSN validity and refund delays.

1994 (Con't)

The Commissioner's filing season media and public service campaign kickoff; issuance of Fact Sheet 94-10, "Refund Protection Procedures" and News Release IR 94-119 stressing correct SSNs, refund delays, possibility of split refunds on returns claiming refundable credits. This information was made available on the ELF Bulletin Board and distributed to 43 representatives from general print media, technical tax press, electronic media, financial press and professional associations. Q&As, including information on the split refund and second payment by check, were made available on the ELF Bulletin Board (available to ELF practitioners) and the Public Affairs Bulletin Board (available to IRS offices nationwide). The press conference was attended by 41 media representatives, such as CNN, Cox Broadcasting, ABC, NBC, CNBC, Fox-TV, U.S. News and World Report, Tax Notes, Tax Analysts, New York Times, Washington Post, Associated Press, Dow Jones News Service, Knight-Ridder Financial News, Standard News Radio Network, McNeil/Lehrer and Scripps-Howard. The conference and video news release were sent via satellite and picked up in 47 major markets, with 67 stations within those markets. The Commissioner also held interviews via satellite with about 15 media markets nationwide.

A poster on SSN accuracy and refund delays was published in the SSA/IRS Joint Reporter and distributed to 7 million employers.

Notices issued to taxpayers with known invalid SSNs in the prior filing period.

GEMSTAR Development Corp. also made it available to VCR Plus users in three regional markets and several smaller markets.

Chief Compliance Officer interviewed by Associated Press and Washington Post reporters about the Revenue Protection Strategy. News Release IR 95-16 issued, urging accuracy to avoid delays and addressing the potential for split refund payments on returns claiming tax credits. The news release was distributed to 43 representatives from general print media, technical tax press, electronic media, financial press and professional associations. The news release and Q&As, which addressed the split refund and second payment by check, were also made available on the ELF Bulletin Board and the Public Affairs Bulletin Board.

Subcommittee on Oversight, Committee on Ways and Means Hearing, "The 1995 Filing Season and IRS's FY 1995 Budget Request".

Chairman JOHNSON. In the same vein, when did you highlight the bifurcation of the return in the refundable area?

Ms. RICHARDSON. I will get you that specific information.

Again, that——

Chairman JOHNSON. When you notified people and the tax preparers and what kind of advanced notice they actually got.

Ms. RICHARDSON. That specific issue is the subject of a pending lawsuit right now.

[The following was subsequently received:]

Although the potential for two payments was discussed at a meeting with the Commissioner's advisory group in September 1994, information about split refunds was first discussed in a more public forum in the Commissioner's press conference to kickoff the filing season on December 28, 1994. Questions and Answers, including information about issuance of a paper check for the second portion of the refund, were placed on the Electronic Filing Bulletin Board in conjunction with the press conference. (See our previous submission for the chronology of activities.)

Chairman JOHNSON. On a more general plane, going back to your predecessor's letter, which I did not pursue because I thought we would focus first on tax modernization systems, but Commissioner Peterson's letter did go on to very specifically say that in 1994 they would eliminate the DDI (direct deposit indicator).

Now the DDI does seem to be a real culprit in encouraging fraudulent returns and payment of returns in a way and at a pace that makes it very hard for us to retrieve the dollars if they are mistakenly paid.

I understand that your bifurcated system is responding to this, but why did you not just implement the recommendation that had been developed in the IRS to eliminate the DDI, which probably would have solved the problems rather more directly and with less complexity than the bifurcated return?

Ms. RICHARDSON. We did, and last October Secretary Bentsen announced that we would no longer be issuing the direct deposit indicator, and we are not doing that for this filing season.

Chairman JOHNSON. But you did do it for the 1995 filing season. I must have not expressed myself clearly. The original recommendation was for the 1994 filing season. Why was it delayed a year?

Ms. RICHARDSON. I was actually—I did not make that——

Chairman JOHNSON. If it is a transition thing, you may want to yield to one of your——

Ms. RICHARDSON. I did not make that decision at the time, but what we really wanted to do was get an opportunity to look at, as we testified here last year, to take a very principled approach to looking at the fraud, to trying to define what it is before we made any decisions.

Chairman JOHNSON. I agree with that. I do think this is an important point. Because clearly the IRS had determined that there was a real explosion in fraud going on, and that eliminating the DDI would help. I am concerned why that decision was delayed a year and any light you can shed on that would be very useful for us. Because, of course, millions of dollars went out that we will never recoup because the decision was delayed a year.

Mr. DOLAN. Madam Chairman, one of the perspectives I might add is that I participated over a series of about 3 years in a number of discussions both—basically across the constituency base of

practitioners, financial industries, others who are involved in this issue. What we had said as an organization from the outset was that we would continue to reevaluate both from filing season to filing season and within filing seasons.

One of the things the industry did in response to a meeting in 1993 was to suggest that the upstepped measures they would take in an industry-financed fraud service bureau would in fact eliminate the issues that the IRS had problems with. We said we would evaluate that. We said we would on a continuing basis determine what effects that other kinds of external stimuli might have had on the fraud.

Probably the time we had the most comprehensive picture of the fact that many of these cures, albeit well-intentioned, had not had the desired outcome was when we were able to do the two statistically valid studies that ran concurrent with the early months of the last filing season. It was coming out of that experience that we were convinced some of the anecdotal evidence and some of the suggestions that systems that had been interposed were going to make a difference in fraud had really not, that we made the judgment that the DDI was as integrally connected to what we were finding as we did.

Chairman JOHNSON. So are you saying that the original decision by the IRS to eliminate the DDI for the 1994 tax season—because this letter to my predecessor, Mr. Pickle, is very specific. It says we plan to eliminate the DDI beginning in the 1994 filing season. Later on it says to provide the time necessary for the discussion with the stakeholders, with other people involved in the system, we will not make the change in the DDI until the 1994 filing season.

So, clearly, this is going on well in advance of that filing season because they are delaying the decision in order to have the discussion with other people involved. With all of that preparation it did not go forward.

Now, you appear to be telling me that information gained from that very filing season indicated that maybe the DDI was not exactly the problem and maybe there were other answers that would be more effective. But that does not explain why the decision was derailed in apparently late 1992–93.

Mr. DOLAN. I am not sure, Madam Chairman, I can speak to all the circumstances that might have been behind the assertion that Commissioner Peterson made in that letter. I do believe that what had been going on and has gone on up until very recently is an active dialog among all the players in this arena with, we believe, the common objective of reducing the amount of fraud.

At almost every juncture steps were taken both by the IRS and by the many, many people in the industry to attempt to minimize the fraud. But on the heels of all those efforts, and given the additional information that came in last year, we believed that the Secretary made the right decision when he concluded, based on our advice, that the correlation was so strong. I think that additional information that came about as a result of early last filing season was what I think carried it over the top, at least from my point of view.

Chairman JOHNSON. Perhaps you, then, could tell me exactly when the IRS did inform people of these changes? The Commissioner referred to the tax package that went out to all filers.

Ms. RICHARDSON. No, I am sorry, on the removal of the direct deposit indicator, or the decision not to provide it any longer, that was made in October. I believe it was toward the end of October of last year by Secretary Bentsen. We can get you the precise date. That was announced at a press conference and widely publicized and the public record is quite—there are people that had a direct interest in it that we actually called and told them that the announcement was being made, but it was also announced to the public by the Secretary at the end of October.

Chairman JOHNSON. At the end of October.

Ms. RICHARDSON. Yes, ma'am.

Chairman JOHNSON. Thank you very much.

Are there other questions from the subcommittee? Yes, sir, Mr. Johnson from Texas.

Mr. JOHNSON of Texas. Thank you, Madam Chairman. I would just like to bring up the issue of the overseas assistance and tours that your department does, which is to some of the more exotic places in the world.

You answered the question about the Service's estimate of additional tax revenues that have been or will be collected by the Federal Government directly attributable to the program, and you say there is no data available to estimate the additional tax revenue attributable to overseas taxpayer assistance.

It would seem to me if we do not know that we are making money, if we do not have a cost analysis, then we ought to stop the program.

Ms. RICHARDSON. I would like Mr. Brand to maybe address that because he has the international operation under his——

Mr. JOHNSON of Texas. Thank you.

Mr. BRAND. Mr. Johnson, I would say this; that we assisted 95,000-plus taxpayers at a cost of $265,000 for travel.

Mr. JOHNSON of Texas. What is the total number of taxpayers in this country?

Mr. BRAND. Two point two million taxpayers are overseas and about half of these are, in fact, military taxpayers that we in fact assist there.

Mr. JOHNSON of Texas. So you saw a very small portion of them, actually.

Mr. BRAND. One could look at that and say that, yes, 1 million out of 2.2 million assisted.

Mr. JOHNSON of Texas. You have volunteers in the military and State Department that help you, do you not?

Mr. BRAND. Part of the purpose for the overseas travel, is, in fact, to train those volunteers, yes, sir.

Mr. JOHNSON of Texas. It would appear to me in some of the instances that you were spending hours, 1 or 2 or 3 hours, with very few people, in some cases. Others you had more there, I would agree.

Mr. BRAND. That is one of the things that you do on an annual basis, is you do probe and look to where there is in fact demand

and where there is in fact need and you change your service on a yearly basis depending on where in fact the need exists.

Mr. JOHNSON of Texas. Well, there are a lot of small countries where there are not any Americans, and I would say we should look at that program. Do you respond just because some Ambassador asks you to come?

Mr. BRAND. No, sir. I think the context here is IRS has been offering overseas assistance at this minimal amount for some 20-plus years. We respond based on where the U.S. Ambassador pleads there is demand, where we see demand, where our own historic record demands exist, and based on where the number of U.S. service people are stationed or where there are other Americans for various——

Mr. JOHNSON of Texas. Well, it seems to me if this thing has been around for 20 years, maybe you should look at that. I notice you have a request from the Ambassador in Haiti to send people down there. Is that a necessity?

Mr. BRAND. I don't know about the request, Mr. Johnson. I would have to take a look and see about a request to Haiti. But, in fact, there is a sizable military presence in Haiti right now.

Mr. JOHNSON of Texas. But the military helps you with their own people. I have been in the military, and I know. I never talked to an IRS person. They never helped at all.

Mr. BRAND. I understand. I hope that is not the case, but, in fact, in our interaction with the military, we are not there to do the direct assistance. We are there to train the individuals who act as volunteers to do the assistance.

Mr. JOHNSON of Texas. Then most of them are in the finance area of the military or the State Department, for that matter. So they rotate back to the United States on occasion. It would seem you could grab them then.

Thank you for your response.

Chairman JOHNSON. Commissioner, in October, you notified the public about the elimination of the DDI. Did you also notify them about the bifurcated return system of the refunds that were going to be electronically filed?

Ms. RICHARDSON. Madam Chairman, I will have to get you that for the record. I am not sure of the precise dates of that.

Chairman JOHNSON. I want to be sure that the notification in October was to all three points.

Ms. RICHARDSON. I am sorry, no, it was to the direct deposit indicator. That was when it was withdrawn in October.

Chairman JOHNSON. But it did not go to the whole system of reforms that you were going to apply to this tax filing period, and to the bifurcation of the refund in the electronic area and also to the second check going directly to the taxpayer. Was that information out there publicly in October?

Ms. RICHARDSON. I don't know exactly when it was out there. I know it was out there by the end of the year. I will get you the precise dates. I have to apologize because we had met with the industry and talked to them about what we were doing.

Chairman JOHNSON. Thank you very much.

[The following was subsequently received:]

The bifurcation of refunds was not discussed when we made notification of the DDI changes. (See our previous submission for the chronology of activities.)

Chairman JOHNSON. Since the EITC was involved in 90 percent of the fraudulent claims in 1994 and because in 1995 the number of people eligible to claim EITC benefits will increase by 6 million, I congratulate you on doing something about the problems in this area. We will follow the effects of your policies very closely, and we will be interested to see if they have any implications for changes in tax law, both in regard to the EITC and in regard to refundability in general and in regard to your process as well.

Ms. RICHARDSON. Again, we would like to work with the subcommittee and the subcommittee staff on any of those proposals.

Chairman JOHNSON. Thank you. I am going to recognize now Mr. Herger for one last question for the record.

Mr. HERGER. Thank you, Madam Chair. I do have another question that with your permission I would like to submit and submit to the Commissioner.

Chairman JOHNSON. Thank you. You certainly are welcome to do so, Mr. Herger, and thank you, Commissioner, and your staff, for your time this morning.

[The following was subsequently received:]

RESPONSE TO OVERSIGHT SUBCOMMITTEE OF THE COMMITTEE ON WAYS AND MEANS REGARDING TAX TREATMENT OF ASSOCIATE MEMBER DUES INCOME RECEIVED BY TAX-EXEMPT FARM BUREAUS

INTRODUCTION

During the House Ways and Means Oversight Subcommittee hearing of February 27, 1995, on IRS Budget Proposal for FY 1996 and 1995 Tax Return Filing Season, Congressman Herger requested that the Commissioner submit additional comments for the record. Congressman Herger requested information relating to a Technical Advice Memorandum issued in 1994. Specifically, the Commissioner was asked whether any change in IRS position evidenced in the 1994 TAM should "come only after careful review at the highest levels." In addition, the Commissioner was asked to provide any other thoughts regarding this matter.

The Technical Advice Memorandum (LTR 9416002) (1994 TAM) involved a farm bureau and the treatment of income derived from the dues of associate members. The 1994 TAM concluded that dues income from associate members resulted from the marketing of access to an unrelated trade or business (i.e., auto insurance) and thus was taxable to the organization.

LEGAL BACKGROUND

Income received by labor, agricultural (including farm bureaus), or horticultural organizations is generally exempt from federal income tax under section 501(c)(5) of the Internal Revenue Code. Section 511(a), however, imposes a tax on unrelated business taxable income received by these otherwise exempt organizations.

Historically, the Internal Revenue Service position has been that the marketing of insurance by exempt organizations generally is an unrelated trade or business and, therefore, income derived from selling such insurance is taxable. This position was ultimately upheld by the Supreme Court in United States v. American Bar Endowment, 477 U.S. 105 (1986).

In 1982, two Technical Advice Memoranda (LTR 8302009 and 8302010) (1982 TAMs) were issued regarding farm bureaus that sold insurance. In the 1982 TAMs, regular membership was open only to those who owned or operated farms. Anyone else could join as an associate member. The organizations' activities included lobbying on agricultural issues, distributing of publications, and sponsoring lectures and seminars. The organizations also supported 4-H clubs and provided educational materials to public schools. Associate members paid the same dues as regular members and had similar access to programs and activities, but could not vote or hold office. The 1982 TAMs concluded that the insurance activities were unrelated trade or business, but that dues payments received from both regular and associate members were

not taxable because benefits provided to all members indicated that dues were not clearly attributable to participation in the insurance programs.

Shortly after issuing the 1982 TAMs, the IRS considered associate member dues paid to labor unions and concluded in LTR 8344001 that such associate member dues were taxable. In that situation, associate members were employees outside the collective bargaining unit. They received union bulletins and ancillary benefits from the union's lobbying on workplace matters, but could not vote in any union election or be represented by the union. The union argued that lobbying and other unspecified work-related activities were sufficient to create a nexus between the dues and the exempt functions of the organization. The IRS disagreed.

The IRS took a similar position in then-pending postal union cases. Two of these cases were resolved by United States Courts of Appeal. In American Postal Workers, AFL-CIO v. United States, 925 F.2d 480 (D.C. Cir. 1991), associate members received no benefit other than access to health insurance. In National Association of Postal Supervisors v. United States, 944 F.2d 859 (Fed. Cir. 1991), associate members could attend meetings and serve on committees in an advisory capacity. Educational programs on lobbying, writing and speaking skills were also available to the complete membership. In both cases (Postal Union Cases), dues income from associate members was held to be taxable because access to insurance was found to be the only benefit associate members received in exchange for dues.

As a result of American Bar Endowment and the Postal Union Cases, IRS agents in certain on-going examinations have taken the position that farm bureaus are required to include in unrelated business taxable income the dues received from associate members attributable to the right to purchase insurance.

THE 1994 TECHNICAL ADVICE MEMORANDUM

The National Office of the IRS was asked again to consider farm bureaus and associate member dues in 1994. This resulted in the issuance of the 1994 TAM. The facts of that case were similar to the 1982 TAMs, in that associate members could purchase insurance and had all the rights of regular membership except the right to vote and the right to serve as voting delegates or board members. The IRS viewed the facts as indicating that the farm bureau used the associate member category to boost sales of insurance. The dues income appeared to be a method by which the farm bureau could derive a benefit from its marketing of insurance. Consistent with the development of the case law subsequent to the 1982 TAMs, and in particular, the Postal Union Cases, the 1994 TAM considered (1) whether associate members were bona fide members (that is, whether they

were provided anything of substance other than the right to purchase goods or services from the exempt organization); and (2) whether associate members could or were likely to avail themselves of the exempt functions of the organizations. The 1994 TAM concluded that the associate member class was used for the purpose of marketing access to an unrelated trade or business (i.e., auto insurance) and, as a result, dues from that membership class were taxable to the organization. The organization described in the TAM did not provide evidence of significant exempt activities directed at non-farmers.

IMPACT OF 1994 TAM

A technical advice memorandum is requested by either the taxpayer or by an IRS field office and relates only to the facts of the specific case. As such, it is not precedential in nature. The impact of the 1994 TAM is to treat the associate member dues of the farm bureau in that case as unrelated business taxable income. Farm bureaus with similar facts may be similarly impacted, although the facts and circumstances of each case will have to be considered.

PUBLICATION OF REVENUE PROCEDURE 95-21

In response to questions raised about the 1994 TAM, the IRS, in conjunction with the Office of the Assistant Secretary for Tax Policy, published a revenue procedure. Rev. Proc. 95-21 (copy attached) indicates that the IRS will only treat dues paid by associate members as taxable if the associate member class was formed or otherwise availed of for the principal purpose of selling or providing access to goods or services unrelated to the exempt purposes of the organization.

The impact of the revenue procedure on a particular organization will depend upon the facts of that case. In this regard, the Service will look to the purposes and activities of the organization and not the intentions of its members.

This revenue procedure restates and clarifies the IRS position with respect to this issue and will be helpful in explaining that position to section 501(c)(5) organizations that have established associate member categories.

REVENUE PROCEDURE 95-21

SECTION 1. PURPOSE

The purpose of this revenue procedure is to establish when associate member dues payments received by an organization described in section 501(c)(5) will be treated by the Service as gross income from the conduct of an unrelated trade or business under section 512.

SECTION 2. BACKGROUND

An organization exempt from tax under section 501(a) as an organization described in section 501(c)(5) is subject to the unrelated business income tax imposed by section 511(a). Section 501(c)(5) organizations often receive dues payments not only from members that are accorded full privileges in voting for the directors of the organization but also from associate members that are accorded less than full or no voting privileges. Whether associate member dues payments are treated as gross income from the conduct of an unrelated trade or business under section 512 is determined in accordance with the following section.

SECTION 3. TREATMENT OF ASSOCIATE MEMBER DUES PAYMENTS

The Service will not treat dues payments from associate members as gross income from the conduct of an unrelated trade or business unless, for the relevant period, the associate member category has been formed or availed of for the principal purpose of producing unrelated business income. For purposes of this revenue procedure, unrelated business income is income from the sale of, or

the provision of access to, goods or services produced by an activity which constitutes a trade or business, regularly carried on, and not substantially related to the organization's exempt purposes other than through the production of income. Consequently, other than where the statute or regulations specifically provide a method of allocating a portion of dues payments to unrelated business taxable income, the Service will treat dues payments from associate members as not including gross income from an unrelated trade or business if the associate member category has been formed or availed of for the principal purpose of furthering the organization's exempt purposes.

In applying this revenue procedure, the Service will look to the purposes and activities of the organization rather than of its members.

EFFECTIVE DATE

This revenue procedure is effective for all open years.

DRAFTING INFORMATION

The principal author of this revenue procedure is Charles Barrett of the Exempt Organizations Division of the Office of the Assistant Commissioner (Employee Plans and Exempt Organizations). For further information regarding this revenue procedure contact Mr. Barrett at (202) 622-8152 (not a toll-free number).

Chairman JOHNSON. I am going to submit for the record Mr. Ramstad's opening statement.

[The prepared statement follows:]

Statement of Rep. Jim Ramstad
Oversight Subcommittee of the Ways and Means Committee
Hearing on FY 96 Internal Revenue Service Budget
February 27, 1995

Madam Chair, thank you for calling today's hearing to discuss the budget proposals for the Internal Revenue Service (IRS).

I have strong concerns about the dramatic increase in this year's IRS budget proposal. As Congress seeks ways to dramatically reduce the federal deficit -- with spending control that should affect every government agency -- the IRS has submitted a request for $7.5 billion, a 10 percent increase over last year.

The IRS, which has 113,963 "full time equivalent" employee positions, has remained isolated from the federal workforce reduction President Clinton hails. Even worse, the agency is requesting funding to add 922 full time equivalents.

Perhaps most disturbing, the IRS intends to spend a massive sum on an expensive computer system, which may not be necessary if this Congress succeeds in simplifying the tax code.

Madam Chair, Dr. James Payne, a leading scholar of our tax system, estimates that the "overhead" costs of operating our current system consume around $65 of every $100 in revenue raised. By continuing to build up a massive IRS, it will becoming increasingly difficult to fundamentally reform our existing tax system.

Thank you again, Madam Chair. I am anxious to exploring these critical issues with our witnesses today.

Chairman JOHNSON. Mr. Portman from Ohio.

Mr. PORTMAN. Just very briefly, Madam Chairman. I appreciate your acknowledging me. I had a good meeting with the Commissioner last week. Sorry I was unavoidably detained this morning. I looked over your testimony briefly. I know you addressed the diesel gas and excise tax issue in your testimony. I would ask on the record that we work on that issue with regard to the refunds.

Ms. RICHARDSON. Right.

Mr. PORTMAN. I told you I had some specific evidence the refunds were not being applied back in a timely fashion. I will get that specific information to you.

Second, just on the tax modernization system, I know you have already had an opportunity to talk about TSM. My only question would be whether it might make sense for us to see a list of the top complaints that the Service gets and that we get from our constituents constantly and then match those with the various TSM projects. This would be a project that I would be happy to work with you on. I could provide you with the complaints; you can provide me with the TSM projects that could address them.

Honestly, I think all of us on this panel do get complaints constantly regarding specific matters, and it might be interesting to see where the various TSM projects line up with the complaints and whether they are in fact addressing them, and I would be pleased to work with you on that.

Ms. RICHARDSON. We would like to work with you on that, too, and we will follow up with you.

Mr. PORTMAN. Thank you.

Chairman JOHNSON. Thank you, Mr. Portman.

Ms. RICHARDSON. Thank you, Madam Chair.

Chairman JOHNSON. Thank you, Commissioner.

As the first panel leaves the witness stand, let me call the second panel.

Jennie Stathis, the director of tax policy and administration issues of the GAO; Lynda Willis, associate director; Hazel Edwards, also of the GAO.

As the panel sits down, let me announce that we will have to begin abiding by the 5-minute rule, both panelists and members. We will begin using the lights.

Welcome, Ms. Stathis.

STATEMENT OF JENNIE S. STATHIS, DIRECTOR, TAX POLICY AND ADMINISTRATION ISSUES, U.S. GENERAL ACCOUNTING OFFICE; ACCOMPANIED BY LYNDA WILLIS, ASSOCIATE DIRECTOR, TAX POLICY AND ADMINISTRATION ISSUES; HAZEL E. EDWARDS, DIRECTOR, INFORMATION RESOURCES MANAGEMENT/GENERAL GOVERNMENT ISSUES

Ms. STATHIS. Thank you, Madam Chairman.

Chairman JOHNSON. Please proceed with your testimony and then we will move with questions, and I hope with a little more dispatch than we have to this point today.

Ms. STATHIS. Thank you.

We are pleased to be here this morning to participate in your hearing, and as you have introduced them, on my right is Lynda

Willis and on my left is Hazel Edwards. I will briefly summarize my statement, if I may, and submit it for the record.

First, I will talk a little bit about the tax systems modernization program.

We do believe that modernizing IRS' systems is absolutely critical. The tax processing system was designed in the early sixties. It is outdated. It is paper driven. It is labor intensive. It is hard to get information from it, and when you get it, it is often outdated. So this is absolutely a critical program. TSM is intended to change all of that. It is intended to eliminate the reliance on paper and make information available whenever and wherever it is needed.

IRS has been at this for about 8 years and about $2 billion has been invested, and we believe that marginal improvements have been made as a result of it. That is because the systems that have been brought online so far are ones that automate old processes or they make information available out of old systems. While they improve the current environment, they do not get us much closer to the environment of the future, the ultimate objectives that TSM is intended to provide.

Probably more important to us, Madam Chairman, however, is the next point in our testimony. IRS has devoted a great deal of its efforts to getting prepared to build these new systems, and we believe that over the past year they have made some encouraging progress in these areas, but we remain concerned that these future efforts are still at risk for a number of reasons that we list in the testimony: IRS still lacks sufficient technical skills to implement such a large, complex undertaking as TSM; the development of systems is proceeding at the same time as process improvements are being identified; and, third, there are not good priorities for which systems will give us the biggest bang for the buck, if you will. So, as a result, there are lots of things that are going on at the same time. There are also still not the fully established technical guidelines that are so critical to making sure that each piece of this fits together and works.

Now, the 1996 TSM budget request is for more than $1 billion and it is to fund about 41 projects. Given the lack of sufficient skills to really manage such a large effort, and because there are still problems with getting all of the technical guidelines in place, we are recommending that IRS focus its efforts on the critical few, try to identify the particular projects that will give the greatest benefit in terms of the objective where they want to go in the long run, and to try to focus the resources that they have on bringing those systems online in a short period of time. We think that IRS will get closer to the ultimate TSM objective that way and will get there faster.

The second area is refund fraud, which you have talked about a little bit this morning, and IRS has taken a number of steps this year to deal with refund fraud. Those come after our reports and hearings of this subcommittee. We believe that those actions, if they are implemented effectively, could help reduce the number of fraudulent claims and they could help improve the detection of fraudulent claims.

IRS has delayed at this point about 1.5 million returns of taxpayers. They will delay the refunds of many more before the filing

season is over. Those delays affect taxpayers who claim the earned income credit or who do not use valid Social Security numbers.

We believe that IRS could have done a better job of giving taxpayers adequate advance notice about the earned income credit refunds being delayed, and we think they still need to do a better job of telling people who have invalid Social Security numbers what they have to do to resolve that problem.

We also have some of our recommendations in here that deal with earned income credits, something you asked us to provide because so many of the refund fraud cases involve the earned income credit.

The third area of our testimony is with telephone assistance, which we believe is an important indicator of the service IRS provides during the tax filing season. This year we tested the access over a 2-week period. We made more than 1,000 phone calls, and we reached IRS 156 times.

With that, I will be pleased to answer your questions.

[The prepared statement and attachments follow:]

TESTIMONY OF JENNIE S. STATHIS, DIRECTOR
TAX POLICY AND ADMINISTRATION ISSUES
GENERAL ACCOUNTING OFFICE

Madam Chairman and Members of the Subcommittee:

We are pleased to be here today to participate in the Subcommittee's inquiry into the administration's fiscal year 1996 budget request for the Internal Revenue Service (IRS) and the status of the 1995 filing season.

Our statement addresses four main issues--the status of IRS' Tax Systems Modernization (TSM) program, IRS' efforts to control tax refund fraud, steps that might be taken to make the Earned Income Credit (EIC) easier to administer and less susceptible to fraud, and the ability of taxpayers to reach IRS by telephone. We also have some discussion of other issues related to IRS' budget request. Each issue is discussed in an appendix and summarized below.

BUDGET OVERVIEW

IRS' budget request is for about $8.2 billion and staff of 114,885 full-time equivalents (FTEs), an increase of about $739 million and 922 FTEs over IRS' expected fiscal year 1995 operating level. This overall increase is a net of various increases and decreases, including (1) increases to enable IRS to maintain current operations, (2) several reductions that represent IRS' share of the administration's initiatives to reduce the size and cost of government, and (3) increases to fund program changes.

Of the $521.3 million in requested program changes, $475.6 million is for automation projects, and the bulk of that ($420.7 million) is for projects that IRS considers part of TSM. The other $45.7 million is intended to help IRS deal with the two most predominant filing season issues so far this year and in the recent past--the need to better control refund fraud and the difficulties taxpayers experience in trying to reach IRS by telephone.

TSM

IRS is requesting $1.03 billion in fiscal year 1996 for TSM development, an increase of 66 percent over IRS' proposed operating level for fiscal year 1995. IRS is also requesting $61.2 million for the operation of completed TSM systems.

IRS initiated TSM in 1986 because its tax processing system, the same system still in use today, was outdated and in desperate need of repair. This processing system has remained virtually unchanged since it was automated in the early 1960s. For instance, most of the 200 million returns that IRS receives each year are still submitted in paper form, and only part of the information from these forms is keyed into computers. The processes that IRS employees use are paper-driven and labor-intensive, and employees must contend with taxpayer data that are sometimes difficult to access and that may be outdated and incomplete. Taxpayers, too, are frustrated by often futile attempts to get information when they contact IRS.

TSM is intended to change all this by creating a new tax processing system that virtually eliminates the reliance on paper and that makes taxpayer information available to IRS employees wherever and whenever it is needed. IRS top management has provided a vision of this new workplace and has redefined the organization to be more responsive to taxpayers' needs and mission demands. In addition, IRS is planning to improve key business processes with a goal of achieving dramatic gains in service and productivity. However, after 8 years and an investment of almost $2 billion in TSM systems, IRS has realized only marginal improvements in its operations.

Some initial systems have been completed with TSM funds, but most of these systems simply automate old processes without substantially improving service to taxpayers. We do not dispute

the value such systems could add to the current environment. But we believe that focusing on progress in such systems as part of TSM shifts agency and oversight attention away from the critical path of actions necessary to achieve the ultimate TSM objectives.

IRS made some encouraging progress in the last year in correcting deficiencies in its management and technical infrastructure for TSM. However, we remain concerned that future systems development efforts are still at risk because of a number of factors. These factors include (1) the lack of sufficient technical and management expertise and skills to implement TSM; (2) continued development of systems for TSM without taking into account changes that could occur because of process improvements; and (3) the lack of system development priorities or fully established technical guidelines. Without addressing these factors, IRS risks continuing business as usual, and the opportunity to realize greater service improvements and cost reductions could be lost.

To focus the TSM effort, we believe that IRS should first direct its attention to a small number of projects that address critical gaps in mission performance and are part of the TSM vision. The mission-critical projects include those that would help create a paper-free environment and make taxpayer data uniformly available agencywide. IRS should then devote the full range of its available TSM resources (managerial, technical, financial) to successfully completing these projects within a short period--perhaps 12 to 18 months. By limiting its attention to a few critical projects, IRS could gain control over many of the TSM risks and could begin to move incrementally toward the TSM vision. In light of the need to refocus TSM, IRS may not be in a position, in fiscal year 1996, to effectively use all of the funding it has requested.

These issues are discussed more fully in appendix I.

REFUND FRAUD

As discussed in appendix II, IRS has taken several steps this year in an attempt to better control refund fraud and is asking for additional resources to do more in 1996. This emphasis is in response to serious concerns raised in several GAO reports[1] and congressional hearings and in reports by an IRS consultant and a task force established by the Secretary of the Treasury. These actions, if implemented effectively, could help reduce the number of fraudulent claims being submitted and help improve IRS' chances of detecting fraudulent claims that are submitted.

Some of IRS' new controls are directed at giving IRS more time to ensure the validity of the taxpayer and the claimed refund. As a result, IRS has already delayed the refunds of at least 1.5 million taxpayers and will delay the refunds of many more before the filing season is over. Those delays affect taxpayers who claim the EIC or who do not use valid Social Security Numbers (SSN).

If accounts in the news media are an indication, these delays have caused much confusion and anger among taxpayers and tax return preparers. IRS might have mitigated some confusion and anger if, as discussed in appendix II, it had done a better job of (1) giving taxpayers adequate advance notice of the potential

---

[1]Tax Administration: IRS Can Improve Controls over Electronic Filing Fraud (GAO/GGD-93-27, Dec. 30, 1992); Tax Administration: Increased Fraud and Poor Taxpayer Access to IRS Cloud 1993 Filing Season (GAO/GGD-94-65, Dec. 22, 1993); Tax Administration: Electronic Filing Fraud (GAO/T-GGD-94-89, Feb. 10, 1994); and Tax Administration: Continuing Problems Affect Otherwise Successful 1994 Filing Season (GAO/GGD-95-5, Oct. 7, 1994).

delays to EIC-related refunds and (2) telling taxpayers whose refunds were being delayed because of an invalid SSN what they must do to correct the situation and get their refunds.

IRS is asking for an increase of $28.3 million and 323 FTEs in fiscal year 1996 to combat refund fraud. An IRS official told us that the additional resources would be targeted toward prevention rather than detection. We agree with such a focus, because it is less costly and more efficient, in our opinion, to stop a fraudulent return from being filed than to identify and deal with the fraud after the return is filed.

Because most of the refund fraud cases IRS identifies involve the EIC, you asked for our views on what could be done to make the EIC easier to administer and less subject to fraud. Refundable credits, like the EIC, pose a challenge for tax administrators. In addition to the concerns about fraud, there are equally important concerns that not all those eligible for the EIC are receiving it.

We have made several recommendations in the past that could help to make the EIC less of a problem for IRS and taxpayers. As discussed more fully in appendix III, those recommendations called for greater clarity in IRS' forms and instructions; eliminating differences between the definition of a qualifying child for EIC purposes and the definition of a dependent for purposes of claiming a dependency exemption; encouraging the advance payment option, whereby persons eligible for the EIC can choose to receive it in advance as part of their paycheck; and moving toward timely computer matching of employer wage information with tax return data.

TELEPHONE ASSISTANCE

An important indicator of filing season performance is how easily taxpayers who have questions or who want to order forms and publications are able to contact an IRS assistor on the telephone. In reports on past filing seasons, we discussed the inaccessibility of IRS' telephone service (i.e., the difficulty taxpayers had in reaching IRS by telephone).[2] To determine whether telephone service was again a problem during the early part of this filing season, we tested the accessibility of (1) the toll-free system that IRS tells taxpayers to call if they have questions about their account, the tax law, or IRS procedures and (2) the toll-free system IRS tells taxpayers to call if they want copies of tax forms and publications.

Results of both tests showed that accessibility is still a problem. Of the 1,166 calls we placed to the toll-free assistance number, we reached an IRS assistor 156 times--a 13 percent accessibility rate. We were more successful accessing IRS' forms ordering system, but even then we were able to reach an IRS assistor only 47 percent of the time. Our testing methodology and results are discussed in more detail in appendix IV.

IRS is asking for $17.4 million and 239 FTEs in fiscal year 1996 to help it answer 1.3 million more telephone calls. Although these additional resources might help improve accessibility, it will not make an appreciable difference in the large and growing gap between the number of calls coming into IRS and the number it answers. We believe that more taxpayers could get through to an assistor if IRS adopted some of the basic management practices used by other organizations that operate large telephone assistance programs. This is also discussed in more detail in appendix IV.

---

[2]See, for example, GAO/GGD-94-65 and GAO/GGD-95-5.

OTHER BUDGET ISSUES

In appendix V, we discuss three other issues related to IRS' fiscal year 1996 budget request:

-- IRS' operating plan for 1995 and its budget for 1996 both assume the receipt of at least $92 million from new installment agreement user fees in both years. To the extent the user fees do not generate the expected revenues, activities included in IRS' appropriation for processing returns and assisting taxpayers will be underfunded.

-- A proposed change in legislative language restricting the use of money appropriated for tax law enforcement could have an adverse impact on IRS' continued implementation of its fiscal year 1995 compliance initiatives.

-- If the federal employee pay raise for 1996, including locality pay, exceeds the budgeted 2.4 percent, IRS will have a funding shortfall in fiscal year 1996--just as it has in fiscal year 1995.

- - - - -

That concludes my summary statement. We welcome any questions that you may have.

TAX SYSTEMS MODERNIZATION

IRS first articulated its plans for modernization in the mid-1980s and laid out a more specific vision in the early 1990s. IRS' vision calls for a work environment that is paper-free and where taxpayer information is readily available to IRS employees wherever and whenever it is needed. The focus of any TSM systems investment, then, should be on delivering the capabilities of this vision, such as paperless processing, rapid update of taxpayer accounts, and instant access to taxpayer data when responding to taxpayer inquiries.

IRS is funding 41 projects in fiscal year 1996 under the auspices of TSM. Thus, TSM has grown to more than double the 18 projects funded in fiscal year 1993. It is reasonable to expect that any project funded under TSM would be focused on providing essential TSM capabilities. Instead, some projects funded under TSM have focused on the current systems environment.

The systems that IRS has delivered to date under TSM, including the Electronic Filing System, the Automated Underreporter System, the Integrated Collection System, and Corporate Files On-Line (CFOL), have marginally improved IRS' current tax processing and compliance operations. However, they were not built to be an integrated part of the comprehensive TSM program and they have not delivered the large increases in capability and customer service that IRS hopes to have in the future.

For example, CFOL, which provides on-line access to taxpayer account information in the existing IRS master files, brings some marginal benefits to IRS. It speeds return processing by permitting electronic verification of taxpayers' names and addresses, and it gives telephone assistors access to taxpayer account information to help answer questions. However, CFOL's information comes from master files only and does not reflect taxpayer data that may be in other systems, such as the collection and examination systems. Thus, a telephone assistor may not have all relevant and current information when answering a taxpayer's questions. A future TSM module is to provide on-line access to complete taxpayer information.

The fiscal year 1996 budget request for TSM includes other systems that will enhance the current environment but not be an integral part of the future TSM program. These systems include the Examination Automated System, which automates the field examination processes; the Integrated Collection System, which automates the field collection process; the Corporate Systems Modernization and Transition, which replaces and upgrades the Martinsburg and Detroit mainframe computer systems; and the Service Center Recognition/Image Processing System, which replaces the current optical character recognition of simple tax returns and documents. The examples cited account for $156 million, or about 15 percent of the 1996 request for TSM development.

We believe that these systems should not be funded as part of TSM. We do not dispute the value these systems could add to the current environment, but as part of TSM, they shift agency and oversight attention away from the critical path of actions necessary to achieve the ultimate TSM objectives. Specifically, progress in the stand-alone, current-environment systems is not a barometer of progress in activities essential to achieving the TSM objectives.

TSM COSTS ARE UNCERTAIN

IRS has been unable to provide us and the Congress with reliable estimates of what the overall cost of TSM will be. As of October 1992, IRS was estimating that TSM would require about $8.9 billion for systems development and a total of $23 billion

through 2008 for acquisition, operation, and maintenance. IRS' current estimate of TSM costs, as of February 1994, is $9.4 billion for acquisition and $22.3 billion in total. However, we had some concerns with the cost model that IRS used to develop the 1992 estimates and expressed these concerns to IRS in 1993. IRS' cost model has not been updated to address our concerns or changes in the TSM vision and scope. IRS intends to have a new cost model and revised estimates by September 1995. In the meantime, we continue to use IRS' estimates as an indication of the investment commitment that TSM entails. We would note, however, that all of these estimates include the variety of projects discussed above and many of them do not contribute to the central TSM vision.

TSM RISKS REMAIN HIGH

In the last year, IRS has made some progress in its management and planning of TSM. However, unmanaged risks continue to reduce IRS' chances for long-term success. These risks include

-- IRS' lack of sufficient technical and management expertise and skills to implement TSM;

-- the continued development of systems for TSM without taking into account changes that could occur because of process improvements; and

-- IRS' lack of system development priorities or fully established technical guidelines.

Because of these and other risks, we have placed TSM on our list of high-risk government programs.

In May 1994, we issued a report that identified a number of practices that leading private and public organizations used to manage their information resources more strategically in order to improve performance and better meet customer needs.[3] These practices included measuring the performance of key processes; focusing on process improvement; managing information systems projects as investments; and integrating the planning, budgeting, and evaluation processes. IRS has begun to study how it can use these practices to better manage its information resources and gain greater performance and service improvements.

However, IRS' current approach to TSM contrasts sharply with these practices. For instance, the successful organizations made sure that they had skilled and experienced technicians and managers to guide systems development efforts. According to the National Research Council (NRC), IRS needs to attract new skills to transform its software development staff from one of maintaining antiquated current systems to one that can design and build the modern, integrated systems that TSM requires.[4] The NRC also noted that IRS needs to manage its contractors more aggressively to ensure timely production of high-quality software. In this regard, the NRC advised IRS to hire people experienced in managing software development contractors.

Successful organizations also analyzed their business processes and determined how they could be improved before undertaking related automation projects. IRS has taken an important step in

[3]Executive Guide: Improving Mission Performance Through Strategic Information Management and Technology (GAO/AIMD-94-115, May 1994).

[4]Continued Review of the Tax Systems Modernization of the Internal Revenue Service (Interim Report), Computer Science and Telecommunications Board, National Research Council. National Academy Press, Washington, D.C., 1994.

this regard by initiating process improvement studies to streamline the tax return processing and customer service functions. However, IRS does not know how the results of these projects will be incorporated into the ongoing systems development efforts for these areas. As a result, IRS could end up with systems that do not meet the requirements of the streamlined or redesigned processes. In such a case, systems that have been developed may have to be retrofitted or scrapped.

Successful organizations prioritized their development projects using an explicit set of criteria that assess the mission benefits, risks, and costs of each project. IRS has not set priorities for any of its development projects, instead it considers all projects to be equally important. Priorities are essential for allocating scarce resources, as well as to establish program and project contingencies. The NRC noted in its report that IRS was unable to respond quickly and effectively to the reduction in TSM funding for fiscal year 1995 because it lacked contingency plans.

Finally, successful organizations ensured that they had a technical framework of standards and guidelines in areas such as data management, telecommunications, and security, that enable project teams to build systems that connect together, operate smoothly, and exchange information. Guidelines are also important because systems developed without guidelines may have to be changed or redesigned later, usually at a higher cost. In the last year, IRS has described its technical approach to integrating its information systems and revised guidance to its TSM system developers that further defines the technical and functional design of TSM. For successful integration of all of the TSM systems, IRS must now establish management controls to ensure that all projects use these guidelines.

One long-standing critical gap in IRS' technical guidelines is security. Technical guidelines for security are particularly important because the TSM environment of on-line access will make taxpayer data even more susceptible to unauthorized access and disclosure. Last year, IRS received a draft security architecture from its Integration Support Contractor, but decided not to accept it and began an effort to develop its own security guidelines. To date, IRS has issued a security policy and a draft of high-level security requirements. IRS has also engaged another contractor to perform a data sensitivity analysis and identify which data elements should be given specific levels of security. IRS expects to issue initial security guidance to TSM project teams by April 1995.

The challenges of completing a complex modernization involving large integrated systems are great, and it is easy to lose sight of the ultimate goal. Therefore, it is important that IRS focus management attention and resources on those opportunities that can best improve mission performance. By working on a wide variety of TSM projects simultaneously, IRS has not had such a focus. As a result, while IRS has invested significant funds in modernization, it is still far from its vision for TSM.

REFUND FRAUD

Over the past few years, more attention has been focused on refund fraud. Fraudulent refund schemes are generally based on false claims of federal income tax withheld or refundable credits, such as the Earned Income Credit (EIC) or the Fuel Tax Credit. Perpetrators of schemes include individuals who make false claims using their true names and Social Security Numbers (SSN) and individuals who make false claims using (1) the names and SSNs of unsuspecting, legitimate taxpayers or (2) fictitious names and SSNs.

Although fraud affects all types of returns, much of the attention has been on electronic filing because the speed with which those returns are processed has made it more difficult for IRS to detect the fraud before the refund is issued. Also, although only about 12 percent of all individual income tax returns were filed electronically in 1994, about 43 percent of the returns IRS identified as fraudulent that year were filed electronically.

Table II.1 shows the growth in identified fraudulent returns and refunds since 1990. From 1990 through 1994, as indicated by the information in the table, $102.6 million in identified fraudulent refunds were issued before IRS could stop them. Of that total, $78.7 million (77 percent) related to electronic returns.

Table II.1: Number of Detected Fraudulent Returns and Deleted[a] Fraudulent Refunds in Calendar Years 1990 Through 1994

Dollars in millions

	Paper			Electronic			Totals[c]		
Year	Returns	Refunds claimed	Refunds deleted	Returns	Refunds claimed	Refunds deleted	Returns	Refunds claimed	Refunds deleted
1990	5,302	$15.9	$14.8	411	$1.2	$0.5	5,713	$17.1	$15.3
1991	5,422	32.3	30.7	5,746	10.7	2.6	11,168	42.9	33.3
1992	12,244	33.2	30.9	12,725	33.6	22.5	24,969	66.8	53.4
1993	51,883	82.8	73.0	25,957	54.0	29.1	77,840	136.8	102.1
1994	44,137	90.7[b]	81.5	33,644	69.8	35.9	77,781	160.5	117.4

[a]A deleted fraudulent refund is one that IRS has detected and stopped before the refund is paid out.

[b]This figure excludes two returns claiming refunds totalling $347 million.

[c]Totals may not add due to rounding.

Source: IRS data.

Although the number of identified fraudulent returns is less than 1 percent of the total number of individual income tax returns filed in any year, we have been concerned about the growth in identified fraud and the uncertainty as to how much fraud is not being identified. Accordingly, we have made several recommendations directed at improving IRS' controls, some of which IRS has implemented, and have included filing fraud on our list of high risk government programs. Because the Subcommittee shared our concern, the Secretary of the Treasury established the Task Force on Tax Refund Fraud. On October 6, 1994, the Task Force testified before the Subcommittee and presented numerous recommendations of its own.

IRS HAS TAKEN STEPS IN 1995 TO DEAL WITH REFUND FRAUD

IRS has taken several steps in an attempt to reduce refund fraud in 1995. For example:

-- To better protect against unscrupulous tax return preparers or transmitters participating in the electronic filing program, IRS now requires new program applicants to provide fingerprints, that can be used to conduct criminal history checks, and to submit to a credit check.[5] It is our understanding that IRS plans to decide, after this filing season, whether to extend this requirement to preparers and transmitters who are already in the program. Implementation of this requirement is consistent with a recommendation we made in 1992 that IRS check the background of electronic filing applicants.

-- To better ensure the appropriateness of refund claims, IRS has said that substantial efforts would be directed toward identifying claims with missing SSNs, invalid SSNs (ones that do not match Social Security records), and/or SSNs that were already used by another taxpayer. IRS has added controls that prevent returns with one or more of those conditions from being filed electronically. If a return with one of these conditions is filed on paper, IRS has said that it will delay any refund until the matter is resolved.

-- According to IRS, most of the refund fraud cases it has detected in the past involved the EIC. With that in mind, IRS is delaying refunds on many returns claiming the EIC to allow time to better assure their validity. This action is being taken on returns determined to be most problematical based on an IRS study last year. Because the delay only applies to that part of the refund attributable to the EIC, some taxpayers may receive two refund checks--one for the nonEIC part of their refund and a second, several weeks later, for the rest, assuming IRS determines that the EIC claim is valid. The notice IRS is sending filers to advise them of the delay says that the refund "may be sent to you within eight weeks". IRS has estimated that about 7 million filers will receive such a notice in 1995.

-- Recognizing that the ability of electronic filers to obtain quick loans in the amount of their refunds (known as refund anticipation loans) might increase the incentive to submit fraudulent electronic returns, IRS took steps to disassociate itself from those loans by no longer providing the direct deposit indicator. The indicator, which signaled that IRS would not be reducing the taxpayer's refund to pay another federal debt of the taxpayer, was being used by financial institutions as a basis for making the loans.

These changes, if implemented effectively, could help reduce the number of fraudulent claims being submitted and help improve IRS' chances of detecting fraudulent claims that are submitted. Over the next several months, we will continue monitoring the implementation of these changes. We have two observations thus far about their potential effect on taxpayers.

First, IRS did not, in our opinion, provide taxpayers with adequate notice of the change involving EIC claims and the resulting delay in EIC refunds. We saw nothing in the Form 1040 tax package or in Publication 17 (Your Federal Income Tax) that explained that refunds involving the EIC could be delayed for

[5]The fingerprint requirement does not apply to Certified Public Accountants, attorneys, and enrolled agents.

several weeks. Both documents told potential electronic filers that "some refunds may be temporarily delayed as a result of compliance reviews" to ensure that the returns are accurate. Taxpayers who did not intend to file electronically--about 85 percent of the filers--were not even told that much. Also, by advising only potential electronic filers of possible "compliance checks", IRS may be giving the impression that electronically-filed returns are more subject to audit--not the kind of message that helps expand the use of electronic filing.

Second, some delayed refunds may not be resolved quickly and could cause additional taxpayer burden. When IRS identifies a return with an invalid primary SSN, it puts a hold on the refund and sends a notice (CP54B) to the taxpayer. That notice does not make it clear that the taxpayer's refund will not be released until the matter is resolved and, except in certain circumstances, does not require the taxpayer to send anything to IRS to help resolve the matter. This could result in additional correspondence with taxpayers and a further delay in issuing their refunds.

When we prepared this testimony, statistics were not available on the number of fraudulent refund returns identified this filing season. However, other indicators could be related to the new fraud control procedures.

-- IRS had received 24 percent fewer individual income tax returns electronically as of February 17, 1995 (6,720,000 compared to 8,872,000 during that same period in 1994).[6]

-- About 1.5 million taxpayers had been sent notices as of February 17, 1995, advising them that their refunds had been delayed as a result of IRS' fraud-related procedures.

-- At least 3 million reject notices sent out from the electronic filing system as of February 20, 1995, were for conditions that might indicate a questionable refund. Most of the notices related to some problem with the name and/or SSN of the taxpayer or a dependent. Because a return can be rejected for more than one reason, the number of reject notices may be greater than the number of returns rejected. We do not know how many returns were rejected nor how many of the rejected returns were corrected, resubmitted over the electronic filing system, and accepted.

Before the filing season began, many of IRS' 10 service centers expressed some concern about the impact of delayed refunds on their workloads. The only evidence of increased workloads we have seen to date is a 64 percent growth in the workload of the service centers' Error Resolution Units as of February 10, 1995, compared to last year. We do not know how much of the increase is due to IRS' new fraud procedures or whether that workload has become unmanageable. We will be following up on this issue during our continued monitoring of the filing season.

---

[6]Some of the decrease in electronic filings has been offset by an increase in returns filed on paper and an increase in returns filed over the telephone as part of IRS' TeleFile program. In total, however, the number of individual income tax returns filed as of February 17 has declined, from 29,203,000 in 1994 to 28,019,000 this year.

IRS' BUDGET REQUEST FOR 1996 INCLUDES ADDITIONAL RESOURCES TO FIGHT REFUND FRAUD

The administration's fiscal year 1996 budget request for IRS asks for 323 FTEs and about $28.3 million for a "cross-functional effort to combat tax refund fraud". IRS says that the additional resources will be used, among other things, to help it (1) detect and stop fraudulent refunds, (2) identify and refer for examination those EIC cases with audit potential, (3) handle the rapidly increasing inquiry calls associated with these cases, and (4) investigate and prosecute the most egregious cases.

IRS said in its budget estimates that, based on the results of past years' refund fraud efforts, the level of resources being requested should enable it to detect fraudulent refund claims amounting to $474.3 million in fiscal year 1996. That estimate is significantly overstated. Using the average results per staff year that IRS achieved in 1993 and 1994, the expected results in 1996 would be about $210.6 million.

However, an official in IRS' criminal investigations function told us that the ideal result would be for the amount of detected fraudulent refund claims to go down. He said that IRS hopes to achieve that goal by targeting additional resources on prevention rather than detection. We agree with that focus because it is less costly and more efficient, in our opinion, to stop a fraudulent return from being filed than it is to identify and deal with the fraud after the return is filed.

EIC CONTINUES TO CAUSE PROBLEMS FOR IRS AND TAXPAYERS

Even excluding the problems with fraud discussed in appendix II, the EIC continues to be a source of many taxpayer errors and additional IRS work.

In 1994, 14.8 million families received over $15 billion in EIC benefits--an increase over the 14.1 million who received $13 billion in 1993. IRS expects that about 6 million more persons will be eligible to receive the credit in 1995 due to provisions in the Omnibus Budget Reconciliation Act of 1993. Individuals without a qualifying child are now eligible for the credit if they (1) are at least 25 but less than 65 years old, (2) are not a dependent of another taxpayer, and (3) have earned income and adjusted gross income of $9,000 or less.

This expansion has created additional work for IRS. During the processing of returns, IRS' computer system identifies taxpayers without qualifying children who appear to be eligible for the EIC but did not claim it. IRS suspends processing of those returns until they can be reviewed by a tax examiner. If an examiner determines from information on the return and by researching Social Security data (to determine the taxpayer's age) that the taxpayer is eligible for the EIC, IRS will calculate the amount and correct the taxpayer's return.

IRS told us that about one-half of the taxpayers whose returns had been suspended in the first few weeks of this filing season were determined to be entitled to the EIC. According to IRS data as of February 10, 1995, failure to claim the EIC has been the most frequent error made by taxpayers and preparers on this year's returns. The second most frequent error involves mistakes in calculating the EIC when it is claimed.

WHAT COULD BE DONE TO MAKE THE EIC LESS OF A PROBLEM?

Refundable credits, like the EIC, pose a challenge for tax administrators. In addition to the concerns about fraud, there are equally important concerns that not all those eligible for the EIC are receiving it. We have made several recommendations in the past that could help to make the EIC less of a problem for IRS and taxpayers.

In September 1993, we recommended that IRS take certain steps that we thought would make the EIC easier to administer[7]. Specifically, we recommended that IRS (1) modify the Forms 1040 and 1040A to collect the data now required by Schedule EIC, thus eliminating the need for taxpayers to complete and IRS to process a separate schedule, and (2) clarify taxpayer instructions on the need to provide complete information for determining EIC eligibility. IRS continues to require the Schedule EIC but has simplified it by moving EIC computations to a worksheet. IRS' Schedule EIC instructions, in our opinion, are still not clear.

IRS objected to modifying the Forms 1040 and 1040A and eliminating the Schedule EIC. It believed that such a change would confuse taxpayers because of differences between the definition of a qualifying child for purposes of claiming the EIC and the definition of a dependent for purposes of claiming a dependency exemption. A key difference in the two definitions is the requirement, for purposes of claiming a dependency exemption, that the taxpayer provide over 50 percent of a dependent's support (referred to as the "support test"). There is no support test in the definition of a qualifying child for EIC purposes.

---

[7]Tax Policy: Earned Income Tax Credit: Design and Administration Could Be Improved (GAO/GGD-93-145, Sept. 24, 1993).

We addressed this problem in a March 1993 report, in which we analyzed four alternatives to simplify the laws on dependent exemptions, including two that would change the support test.[8] On the basis of our analysis, we recommended that Congress consider enacting legislation that would substitute a residency test similar to that used in the EIC program for the dependent support test when the dependent lives with the taxpayer.

Persons eligible to receive the EIC can choose to receive it in a lump sum payment after filing a tax return or in advance as part of their paycheck. In February 1992, we reported that less than 1 percent of EIC recipients in 1989 took advantage of that second option.[9] Although use of the advance payment option would help taxpayers benefit from the credit sooner, it could also create problems for IRS if persons receiving the advance payment later filed a tax return but did not report that they had received the credit in advance. Under IRS' returns processing procedures in place at the time we did our review, those persons could receive the credit again as a lump sum payment. We recommended that IRS take various steps to (1) better ensure that eligible taxpayers are aware of the advance payment option and (2) prevent those who take advantage of that option from receiving the credit a second time. When last we checked, IRS had taken steps to better publicize the availability of the advance payment option but had not revised its procedures to protect against duplicate payment of the EIC.

With respect to fraud on electronically filed returns, we recommended in December 1992 that IRS work toward electronically matching employer wage information with electronic return data[10]. That kind of match is currently beyond IRS' capabilities. Currently, employer wage information other than that provided by taxpayers is not available to IRS until after it has processed taxpayers' returns. This is because of the time it takes to verify the information and correct any errors.[11] IRS has begun to test the possibility of getting partial year's wage information from the states and using that to verify that the taxpayer is employed and to have some information on the taxpayer's amount of earned income.

---

[8]Tax Administration: Erroneous Dependent and Filing Status Claims (GAO/GGD-93-60, Mar. 19, 1993).

[9]Earned Income Tax Credit: Advance Payment Option Is Not Widely Known or Understood by the Public (GAO/GGD-92-26, Feb. 19, 1992).

[10]Tax Administration: IRS Can Improve Controls Over Electronic Filing Fraud (GAO/GGD-93-27, Dec. 30, 1992).

[11]Under the Electronic Management System--one of many planned components of TSM--IRS expects to electronically receive tax returns, tax information documents (like W-2s), and correspondence. Electronic transmission of W-2s would enable IRS to more quickly verify and correct the information, thus offering the possibility of having that information available to match with data being reported on electronic returns.

TELEPHONE ACCESSIBILITY

An important indicator of filing season performance is how easily taxpayers who have questions or who want to order forms and publications are able to contact an IRS assistor on the telephone. In reports on past filing seasons, we discussed the difficulty taxpayers had in reaching IRS by telephone (i.e., "accessibility").[12] Although IRS answers millions of calls each year, even more calls go unanswered. Many taxpayers receive busy signals, face long on-hold times, or simply give up.

To determine whether accessibility was a problem during the early part of this filing season, we conducted two tests. One test was to determine the accessibility of the toll-free assistance for taxpayers who have questions about their account, the tax law, or IRS procedures. The second test was to determine the accessibility of the toll-free system that IRS tells taxpayers to call if they want copies of tax forms and publications. Results of both tests indicated that again this year taxpayers are having problems reaching IRS by telephone. We plan to repeat both tests later in the filing season.

To conduct the tests, we placed calls at various times during each work day from January 30 through February 10, 1995. We made our calls from seven metropolitan areas--Atlanta; Chicago; Cincinnati; Kansas City; New York; San Francisco; and Washington, DC. If we received a busy signal, we hung up, waited 1 minute, and then redialed. If after four redials (five calls in total) we had not reached IRS, we considered the attempt unsuccessful. If we reached IRS but were put on hold for more than 7 minutes, we abandoned the call.

DIFFICULTIES ENCOUNTERED IN TRYING TO ACCESS TOLL-FREE TELEPHONE ASSISTANCE

In all, we made 344 attempts to contact IRS' toll-free telephone assistance this year. We succeeded in reaching IRS on the first try 79 times. In 20 cases, however, we abandoned the call after being on hold for more than 7 minutes. Thus, in only 59 (17 percent) of the 344 attempts were we successful in reaching an IRS assistor on the first try. In another 97 cases (28 percent), we successfully reached an assistor after one to four redials--an overall success rate of 45 percent. Our 344 attempts to reach an assistor required a total of 1,166 calls. Of those 1,166 calls, we reached an assistor 156 times--a 13-percent accessibility rate. IRS' own data show a nationwide accessibility rate of 12 percent during the same 2-week period.

In conducting our test, we did not ask questions of the assistors because it was not our intent to assess the accuracy of their assistance. IRS does its own test of accuracy, and we have assured ourselves in the past about the reliability of IRS' methodology. IRS' test data for 1995 showed an accuracy rate of about 86 percent as of February 11. That compares to a rate of about 89 percent for the same period in both 1994 and 1993.

LESS DIFFICULTY ENCOUNTERED IN TRYING TO ACCESS TOLL-FREE FORM ORDERING SYSTEM, BUT ACCESSIBILITY STILL LOW

One way taxpayers can obtain tax forms and publications is to place an order through IRS' telephone form ordering system. The order will then be filled by one of IRS' three forms distribution centers. As with the first test, our intent was to determine how easy it is to reach IRS over the telephone. We did not order any materials. We followed the same redialing and on-hold procedures as described in the toll-free telephone assistance test.

---

[12]See, for example, GAO/GGD-94-65 and GAO/GGD-95-5.

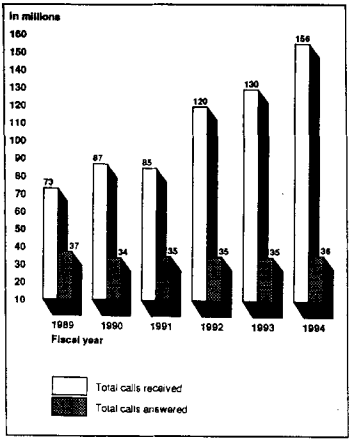
Of 240 attempts to contact the distribution centers, 137 (57 percent) were successful on the first try and 81 (34 percent) were successful after one to four redials--an overall success rate of 91 percent. Our 240 attempts to contact the distribution centers required a total of 465 calls. Of those 465 calls, we succeeded in reaching an IRS representative 218 times--a 47-percent accessibility rate.

We did not assess how well the distribution centers filled orders for tax forms and publications or whether IRS walk-in sites were adequately stocking these materials because (1) our checks in recent years showed that IRS was doing a good job in those areas, (2) IRS contracts for its own test of distribution center performance, and (3) our prior review of the contractor's methodology resulted in changes that have improved its reliability. The contractor's results as of January 27, 1995, showed that the distribution centers filled 96 percent of the test orders correctly.

IRS' REQUEST FOR ADDITIONAL RESOURCES TO IMPROVE TELEPHONE SERVICE WILL NOT APPRECIABLY INCREASE ACCESSIBILITY

The administration's fiscal year 1996 budget request includes an increase of 239 FTEs and $17.4 million to enable IRS to answer 1.3 million additional telephone calls for assistance. Although the increase, if approved, will help, it will not make an appreciable difference in the large and growing gap between the number of calls coming into IRS (which we refer to as "received") and the number it answers, as shown in figure IV.1.

Figure IV.1: Comparison of Total Calls Received and Total Calls Answered for Fiscal Years 1989 Through 1994



Source: IRS data.

We believe that more taxpayers could get through to an assistor if IRS adopted some of the management practices used by other organizations that operate large telephone assistance programs. To maximize the number of calls answered, the four private companies we contacted and the Social Security Administration commonly established (1) challenging program goals for answering as many calls as possible based on customers' needs; (2)

standards for the number of hours employees were expected to be on the telephones and the number of calls answered; (3) standard hours of operation, often extending beyond a 9-hour work day; (4) nationwide standards and uniform ways to measure operations and performance; and (5) nationwide call routing and easy access to customer information.

IRS has not used many of the management practices commonly used by the organizations we contacted. And, in cases where IRS did use a practice similar to those in the other organizations, it was not applied with the same emphasis on customers' needs. For example, IRS has had specific goals for answering more calls for the past 2 years, but these goals are based on the resources IRS has available, not on taxpayers' demand for service. IRS officials believe the gap in the number of calls they are able to answer compared to the number of calls made by taxpayers is so great that it would be unrealistic for them to establish goals based on taxpayer demand.

IRS has, for the first time, provided access to its telephone assistors for 10 hours per work day during the 1995 filing season. This may allow more taxpayers to reach IRS, although there has been no increase in the number of assistors available. IRS has also been working to improve customer service by overcoming the lack of nationwide access to taxpayers' account information. This has been a major barrier to routing calls among IRS call sites. Specifically, in February 1995, IRS provided its assistors the ability to access taxpayers' accounts no matter where the taxpayers filed their returns. Thus, IRS can now route calls to any call site and an assistor will be able to retrieve any taxpayer's account, which should increase taxpayers' chances of being served. These are all positive steps, but it is too early to assess their impact on answering more calls.

Despite the progress made, IRS lacks the capability to centrally monitor and route nationwide call traffic on a real-time basis to available assistors anywhere in the country. IRS also still lacks some basic management practices for its telephone assistance program, including standards for the number of hours assistors should be on the telephone and for measuring performance. We believe that implementing these practices would, over time, allow IRS to answer more taxpayer calls with its existing level of resources, but it is unlikely that IRS would be able to answer all of the calls it receives.

OTHER ISSUES RELATED TO IRS' FISCAL YEAR 1996 BUDGET REQUEST

Beyond those issues discussed already, the most significant questions surrounding the fiscal year 1996 budget request are (1) will IRS receive the expected amount of installment agreement user fees? (2) will IRS successfully implement the fiscal year 1995 compliance initiatives? and (3) is the budgeted increase for a federal employee pay raise sufficient?

WILL IRS RECEIVE THE EXPECTED AMOUNT OF INSTALLMENT AGREEMENT USER FEES?

IRS' operating plan for fiscal year 1995 and its budget for fiscal year 1996 both assume the receipt of $92 million from new installment agreement user fees. Installment agreements allow taxpayers to pay their tax liabilities on an agreed-upon schedule with IRS.

IRS' fiscal year 1995 budget request proposed two new user fees--one for providing a direct deposit indicator associated with the electronic filing program and another for setting up installment agreements. The proposed direct deposit indicator fee became moot when the Department of the Treasury announced in October 1994 that it would no longer provide that indicator. IRS expects to start charging for installment agreements in early to mid-March 1995. The fee is to be $43 for each new installment agreement and $24 for restructured agreements.

In our report on IRS' fiscal year 1995 budget request, we said that it is impossible to predict how taxpayers will react to a fee for installment agreements.[13] For example, some taxpayers may be encouraged to pay their entire tax liability to forego incurring the fee. Others may be discouraged from entering into these agreements because of their cost. According to IRS officials, the $92 million estimate is based on an assumption that IRS will receive about 2 million new installment agreements and 90,000 restructured agreements.

IRS' fiscal year 1995 appropriation act (P.L. 103-329) provided that the Secretary of the Treasury could spend user fee receipts to supplement appropriations made to IRS. Accordingly, IRS' fiscal year 1995 appropriation and fiscal year 1996 budget reflect lower amounts for tax return processing and taxpayer assistance than would have otherwise been the case if there were no user fee provision. If the demand for installment agreements falls short of what IRS expects in 1995 and/or 1996, activities that are included in IRS' appropriation for returns processing and taxpayer assistance would be underfunded.

WILL IRS SUCCESSFULLY IMPLEMENT THE FISCAL YEAR 1995 COMPLIANCE INITIATIVES?

In every year but 1 from 1990 through 1994, Congress has funded compliance initiatives to provide IRS with additional staff with the intent of increasing compliance and producing more revenue. Yet, IRS' compliance staffing declined in that period. For fiscal year 1995, Congress provided IRS with $405 million for more compliance initiatives and restricted IRS' ability to use the compliance funds for other purposes. The fiscal year 1995 appropriation act also said that no funds could be transferred from IRS' Tax Law Enforcement appropriation. These restrictions were imposed because IRS had not fully implemented past initiatives and had used initiative funds to cover budget shortfalls in base operations. In recent testimony before the House Appropriations Subcommittee on Treasury, Postal Service, and General Government, we said that these restrictions increased

---

[13]Tax Administration: Analysis of IRS' Budget Request for Fiscal Year 1995 (GAO/GGD-94-129, Apr. 20, 1994).

the prospects that IRS would implement the fiscal year 1995 compliance initiatives.

IRS' fiscal year 1996 budget does not include any funding for new initiatives or additional funding for the fiscal year 1995 initiatives. It does, however, show an annualization of the 1995 initiative for an additional 546 FTEs. According to IRS officials, funds that were used for support costs associated with hiring the new employees in fiscal year 1995, but not needed for that purpose in fiscal year 1996, will be used instead to "buy" additional FTEs for 1996.

The fiscal year 1996 budget also requests a change to the restriction that was imposed in the 1995 appropriation act on the use of compliance initiative funds. In lieu of the language that prohibits any transfer of funds from the Tax Law Enforcement appropriation, IRS is proposing language that would allow funds to be transferred if IRS obtains the advance approval of the House and Senate Appropriations Committees. We believe that the restriction imposed in the fiscal year 1995 appropriations act should be retained to better ensure that IRS uses the compliance initiative funds as Congress intended and to protect against erosion of IRS' enforcement base as occurred in prior years.

IS THE BUDGETED INCREASE FOR A FEDERAL EMPLOYEE PAY RAISE SUFFICIENT?

The President's fiscal year 1996 budget provides for a 2.4 percent federal employee pay raise. For IRS that percentage increase equates to $92 million. It is uncertain whether this amount will be sufficient to cover an across-the-board pay increase and locality pay. IRS' fiscal year 1995 budget provided for a 1.6 percent federal pay raise that was not adequate to cover locality pay. As a result, according to IRS budget officials, IRS needed to absorb an additional $50.7 million for locality pay. If Congress authorizes locality pay for fiscal year 1996 to the levels outlined in the Federal Employees Pay Comparability Act, IRS may need to absorb an additional 2.4 percent average pay increase--$92 million more than the amount provided for in the fiscal year 1996 budget.

Chairman JOHNSON. Thank you very much.

On the efforts that the IRS has made to reduce fraud, you do not appear to be in disagreement; that they are right to focus on the validity of the Social Security number.

Ms. STATHIS. That is a very well-placed effort on their part.

Chairman JOHNSON. Appears to be long overdue as well.

Ms. STATHIS. That is correct.

Chairman JOHNSON. If they had notified as part of the packet to taxpayers that this is a very important matter, frankly, what more is the government required to do? What is the complaint against the IRS in this regard?

I don't care how many times you tell your own children, sometimes they do not listen. Taxpayers are going to figure out that they have to get their Social Security number right when taxpayers do not get their refunds and do not get their filing accepted because they do not have the numbers right.

Ms. STATHIS. Mrs. Johnson, we believe that the IRS has done a very good job of informing people that they have to have a correct Social Security number. That is not an issue. But there are many, many people whose earned income credit is going to be held up who have a valid Social Security number. They are going to be held up because they are caught in one of the predictive profiles that comes out of IRS' study of last year. They appear to be problematic, so the refunds are going to be held.

Chairman JOHNSON. But, again, they are going to wait 2 months. Relative to the billions of dollars that people got last year that they should not have gotten, that were fraudulent, is 2 months a real hardship?

Ms. STATHIS. Well, we do not think so.

Chairman JOHNSON. Or are you saying that the predictive screens were too rigorous and, therefore, were imposing a hardship unnecessarily or irresponsibly?

Ms. STATHIS. No, we are not in disagreement with what IRS is doing.

Chairman JOHNSON. OK.

Ms. STATHIS. In terms of the refund fraud cases, in fact, I think they may have to go beyond where they are and we will see how these work this year. But we may have to go to a system, for example, where we encourage people to get the earned income credit on an advanced basis, to get the 60 percent they can get in their paychecks, and have 40 percent left. We may have to go to a process where they do not get that until May, perhaps. That would allow the entire filing season for IRS to examine all of the patterns that they have.

Chairman JOHNSON. I think we are going to have to take a look after this filing season at even the validity of a lump sum reimbursement when this is actually an income expansion and, logically, should be closely connected to the wage reporting. We do not have the computer capability to do that for several years. So in the interim we may want to really change the system.

But you do not think they are too tough in their screens?

Ms. STATHIS. No, we do not.

Chairman JOHNSON. You agree they absolutely have to screen in order do reduce fraud.

Ms. STATHIS. Yes.

Chairman JOHNSON. So the real issue is, is 2 months too long?

Ms. STATHIS. I think the issue is going to be whether even what they are doing is enough.

Chairman JOHNSON. That may be so, but in terms of the current criticism, would you say 2 months is too long?

Ms. STATHIS. No, I think it is probably not long enough.

Chairman JOHNSON. Now, to get back to the phone system briefly, because your evaluation of their accessibility through their phone system and their evaluation of their accessibility from their phone system are very different. On the other hand, in their testimony they point to a number of things that are fairly recent changes on how they manage phone calls.

Have you talked to them recently? How can you explain to me the discrepancy between your two positions?

Ms. STATHIS. What IRS is telling you is that they have an estimating methodology where they try to estimate the number of taxpayers who are calling in rather than the number of phone calls that are made. That estimating methodology has enough guesswork in it that we quit using it.

But I think our estimates on our 2-week phone call pretty much matched their estimates. So I am warming to their number. If you take the five attempts that we made, our number comes up to about a 45-percent success rate on the five calls. If the same taxpayer tries five times to call at least during the 2 weeks we were testing, they would get in maybe 45 percent of the time according to our test, and that is pretty close to the number that they are using.

But in terms of the absolute number of calls, we got through 156 times out of more than 1,000, which is a 13-percent number. We started using——

Chairman JOHNSON. So behind your 13 percent number is, for an individual taxpayer, a 45-percent shot?

Ms. STATHIS. The 45 percent is probably a good indication of what a single taxpayer would experience if they tried as much as 5 times to get in.

Chairman JOHNSON. Well, we certainly are discussing variations in still an unacceptable range.

Ms. STATHIS. The basic point is the same, which is that telephone access is pretty poor.

Chairman JOHNSON. Last, has GAO made any specific recommendations in terms of modernization of phone services that might address this problem?

Ms. STATHIS. I do not think so, not on modernization alone. Let me have Lynda Willis respond.

Ms. WILLIS. Madam Chairman, the recommendations that we have made to IRS focus on how using management practices we found in companies that we looked at that also have significant telephone operations, how those management practices could actually improve IRS' current level of service without the additional increments that would be brought about by modernization of their equipment, et cetera. These practices included such things as standard hours, more expanded hours of phone coverage, and

things that we found companies that depended on the telephone to do their business were routinely implementing right now.

Chairman JOHNSON. Were your calls made before IRS adopted some of these policies, because they reported today that now they have adopted some of these policies for this filing season?

Ms. WILLIS. The calls that we made were made during this filing season. The recommendations that we have made have not been implemented. IRS has expanded its hours this season to 10, as opposed to 24 at the companies that we looked at—on a per day basis. We would expect that based on the improvements IRS has made that accessibility should go up over the entire filing season, and should compare better than last year; but it is still not going to be enough to close the gap.

Chairman JOHNSON. The key thing is using the equipment that they have for more hours than they are currently using it.

Ms. WILLIS. Right, and possibly putting more people on the phone.

Chairman JOHNSON. Last, in terms of the modernization issue, it is difficult from the general description to determine, in a sense, the merit of what you are saying versus the merit of what the IRS is saying. They did give us some very interesting examples of old processes that they have modernized and in the course of modernizing it, not only gotten more taxpayers to pay up but also taxpayers to pay more accurately the amount they owe resulting also in increased collections.

Now, that does matter a lot. Why is that not worth doing?

Ms. EDWARDS. The issue, Madam Chairman, is not that that function is not worth doing; the issue is whether that function represents a part of TSM, which is the objective of providing information on a taxpayer within IRS such that it is the same information, such that it is consistent, such that it is available quickly, and getting rid of paper processes for the broad agency operations within IRS.

When you look at each of those systems, let us go to ICS, which is the integrated collection system, the specific system Mr. Westfall pointed to. The points that he makes are absolutely correct in terms of what that system does in today's environment, in the current environment. However, it is important to understand that that system is an automation of the final process in the collection chain, and the gains that have been identified apply to that very specific component where the revenue officers are engaged.

But the other more significant point about that system is that it is a stand-alone system and does not connect to anything else, which means the information in that system is not available to a tax assister who is answering a question from a taxpayer calling in about their account. The essence of TSM must be to provide uniform information to anyone within the IRS so that they can respond to taxpayers in a way that is reasonable, accurate, and consistent.

I think if there is one thing we have heard, and I am sure you have heard as well from your constituencies, is that there are instances when people call into IRS and they might call on several different occasions.

Mr. JOHNSON of Texas. Madam Chair.

Chairman JOHNSON. Yes, just one moment.

So, in essence, your choice, then, is, given limited resources, that we should dedicate the resources to the TSM goals even at the expense of improving the quality and effectiveness of some of the current systems that are going to be there for a considerable transition period.

Ms. EDWARDS. Actually, Madam Chairman, we are suggesting that for those improvements that need to be made to the current environment, to keep the operations moving along or to make some very essential changes now, that those decisions need to be made on a one-for-one basis; that is to say, if the ICS or integrated collection system is something that is really needed, it needs to stand on its own, not as part of the TSM arena. It should not be presented in that construct because it gives the impression that more is being done for the long term than is actually happening.

So we are suggesting that the IRS focus on those current initiatives that need improvement and for which business decisions would dictate that they make some short-term automation effort, but not justify it in terms of TSM because it is not a contributor to TSM.

In terms of phasing, as we talk about the integrated collection system, it is being perceived in a logical sense as a phasing toward the long term, but, again, that system technically does not fit into the long-term system. So in terms of a technical building block, it is not that.

Chairman JOHNSON. Let me yield to my colleague from Texas, Mr. Johnson.

Mr. JOHNSON of Texas. Thank you, Madam Chairman.

I was interested in the comment you made that this big system we are building is not going to be accessible except right here. Is that true?

Ms. EDWARDS. When I was sharing about the integrated collection system?

Mr. JOHNSON of Texas. Right.

Ms. EDWARDS. I was saying that that system is only available to people in a particular function, so that if it is a taxpayer assister that is at an 800 number, for example——

Mr. JOHNSON of Texas. Right.

Ms. EDWARDS. They would not have access to information which might be——

Mr. JOHNSON of Texas. So they could not help them, in effect.

Ms. EDWARDS. They would help the taxpayer, but if there were significant information in that collection system related to a recent contact, the tax assisters would not have access to that information.

Mr. JOHNSON of Texas. The other question, Madam Chairman, is are there segmented parts of this computer modernization that we are seeing? It is not an integrated system.

Ms. EDWARDS. That is the point we are making with regard to the systems that have been delivered to date.

Now, the objective, the goal as presented by Mr. Westfall earlier, is that ultimately the tax system modernization initiative would be an integrated system. But what we are saying is that based on the

systems that have been delivered to date, those systems, ICS as an example, do not integrate.

Mr. JOHNSON of Texas. Thank you very much. Thank you, Madam Chairman.

Chairman JOHNSON. Ms. Edwards, I am far from a computer expert. I am embarrassed at my ignorance in this area. But in preparation for this hearing I had some discussions with businesspeople and computer people, and we are soon going to be able to link far more cheaply and effectively.

So it seems to me if you improve the collection system down the road apiece, as you improve other parts, you link them all together, and the integrated system comes from linking access to the information. The linking capability that is part of the larger project does not in any way compromise the improvement of the collection system. I do not understand why IRS is not right in saying, look, we fix this and later on as we get down the road and we can link together, we have better stuff to link.

Ms. EDWARDS. The distinction, the disconnect, if you will, is that the system that they are building today, the one that they pointed out specifically, will not—that system, that physical system, will not be able to link, as you say. They will essentially be forced to rewrite the system. To take the idea, but to redevelop the system, will cost additional moneys.

The point that we are making is that while we are aware of that right now, let us collectively figure out how to identify the needs within the business and then to identify the systems that are going to be essential to support those needs——

Chairman JOHNSON. Ms. Edwards, are you saying when they modernize the collections program, presumably, they could have rewritten the program at that time so that it would be a part of the larger system?

Ms. EDWARDS. Yes.

Chairman JOHNSON. Now, did they not do this because they are not far enough along in the planning about the major system?

Ms. EDWARDS. I believe——

Chairman JOHNSON. Did they not do it because they did not have time, because it is a much bigger project than tweaking the system that they have? Why did they not do it?

Ms. EDWARDS. There probably are a host of reasons why the systems were not built that way. The ones that have been delivered, at any rate to date, were not built that way.

Some of those systems originated in the field in functions where users decided they needed to have a capability and they started to build a capability to satisfy a current need. Somewhere along the line those systems were adopted as part of the TSM umbrella. The specifics of how the systems were built or how they were going to link together were not modified. So the TSM became a collection of initiatives, if you will.

Chairman JOHNSON. Thank you. You have been very helpful. Mr. Levin.

Mr. LEVIN. I think this has been useful. One of the frustrating aspects of these hearings is we hear these things seriatim, so there is nobody here who testified before, right?

Chairman JOHNSON. No, there is not. But they are going to be talking together and we will have another round about this.

Mr. LEVIN. Because I am not sure that they would agree with this description. They gave the example of laptop computers. I do not quite see why those cannot be plugged into a new system.

Ms. EDWARDS. The hardware may very well be useful. The point that we are making is about the software, if you will, the engine that is going to help the hardware provide that service. It is the software that must integrate. So it is the software, the systems that have been developed and delivered already, that will have to be rewritten.

Mr. LEVIN. Are you saying it could have now been written so it could have plugged into an ultimate system?

Ms. EDWARDS. That is correct.

Mr. LEVIN. Well, it seems to me it is fairly easy to get some back and forth on that.

Chairman JOHNSON. If you will yield?

Mr. LEVIN. Please.

Chairman JOHNSON. But you yourself said that they have not set the technical standards, that there is a lot of this plan that they have not refined and finalized. So I don't know how they could have programmed to the larger plan when the larger plan is not thoroughly developed.

Ms. EDWARDS. That was the point, Madam Chairman, that we made last year, and we had made the year before as well with regard to the need for IRS to focus on more of the fundamentals, the fundamentals being those factors that would allow IRS to build systems that would tie together, and that a lot of attention needed to be placed there.

Over the past year IRS has made some significant strides in getting those technical standards in place, and they are saying now that April of this year they will be able to give those technical guidelines.

They are essentially rulings of the road; how do we build things, how do we write code, what are the norms, if you will, for building the system. Those guidelines will be available to the project teams in April of this year, in a couple of months.

Mr. LEVIN. So you and I are working on the staple points, and while it seems a bit detailed, it is a really a major issue now.

I do not think, then, you are criticizing their transitional efforts as much as you are saying they were not careful to make sure what they are doing transitionally would plug into the ultimate.

Ms. EDWARDS. That is exactly correct.

Mr. LEVIN. Well, why do you not all converse and let us know? I mean, really, give us—you are all part of the same government, eventually, and one would hope you could get your heads together and work this out. You are not so critical of what they have done transitionally, are you, in terms of the steps they needed to take?

Ms. STATHIS. Mr. Levin, let me say that people who reacted to this took our term "marginal improvement" as being a criticism. We are trying to describe to you the facts as we see them in terms of what has been produced to date. It is not necessarily a criticism, it is just describing to you what has been produced with the systems that have been delivered.

Mr. LEVIN. But the systems that have been produced may well deliver much more than they have so far?

Ms. STATHIS. No, I do not think so. I think——

Mr. LEVIN. So it is a criticism, then?

Ms. STATHIS. We are hoping that the modernized environment that IRS is planning will produce far more benefits than what has been delivered to date.

Mr. LEVIN. Everyone acknowledges that they do. But the question is, whether implicit, built into what they have been doing there, are the potentialities for much more. That is the issue.

Ms. EDWARDS. I think it is——

Mr. LEVIN. Strip away all the kind of fancy language. I mean, I do not know how critical—it is hard to read this, how critical you are and what you are criticizing. Sum up—my time is expiring—what you are criticizing in terms of the TSM. You are criticizing the transitional steps they took or that they failed to be sure that it phases in easily enough into the ultimate product or something else? Sum it up for the people—some people do watch this, and they may not all be like my children, born and raised with computers. What are you criticizing?

Ms. STATHIS. Let me focus it in terms of what we think needs to be done. The fiscal year 1996 budget asked for money to fund 41 projects. It is just a massive number of projects, some of which will give a lot of benefit, some of which may not give much benefit at all. We are saying prioritize those projects. Let us identify the ones that are going to give us the biggest bang for the buck and put our efforts on those.

I think that is our main issue, our main suggestion, for dealing with this modernization at this point. It will get us closer to where we want to be sooner.

Mr. LEVIN. All right. Well, I think that is a somewhat different issue than we have just been talking about. I do not see that those are——

Ms. STATHIS. It is——

Mr. LEVIN. Criticisms seem to run through your pages and it is hard to separate out.

Ms. STATHIS. It is related, Mr. Levin, in this way. If you only have so many people and so many resources to build a system, do you spend more of your time improving the really old system that you have, or do you devote more of your efforts to trying to produce the system of the future? If you continue spending all of your time and resources in improving this antiquated system that you have, you may not get to where you want to be.

Mr. LEVIN. Unless you plug in the transition to the ultimate product.

Ms. EDWARDS. That is true, but, Mr. Levin, I think the point we are making is that the transition to the ultimate product is not clearly defined; that there is discussion about it, but that what is happening and what we are seeing out of the current initiatives being completed is that there are systems being completed that essentially reinforce the current operation without giving those dramatic improvements that IRS speaks of and wants to get.

Mr. LEVIN. My time is up.

Chairman JOHNSON. Thank you.

Mr. Herger.

Mr. HERGER. Thank you very much. Ms. Stathis, I believe during your testimony you mentioned we have been 8 years spending about $2 billion marginal improvement. I believe that over the next 5 years we are projected to spend an additional $6.7 billion in taxpayer dollars, but Internal Revenue is indicating that they feel they will be receiving out of that $6.7 billion, $9.2 million in productivity savings. Could you validate these cost estimates and also validate the productivity savings?

Ms. STATHIS. I think we will have to get back to you on that. The $9 billion that you have, is that productivity savings or is that their estimate of the total benefits?

[The following was subsequently received:]

In January 1995, IRS issued a study in which it presented data on the expected costs and benefits of TSM during the 10-year period from fiscal years 1996 through 2005. That study showed (1) costs of $6.8 billion and benefits of $9.2 billion over the next 5 years and (2) costs of $12.6 billion and benefits of $32.3 billion over the full 10 years. Some of the reported benefits derive from investments that were made before 1996, while some of the costs incurred during the 10-year period will continue to yield benefits beyond 2005. For this reason, the report is not a typical cost-benefit analysis.

Of the $32.3 billion in benefits cited in IRS' report, almost all ($30.9 billion) are expected to come from the increased revenue generated by redeploying staff and enhancing compliance efforts. The rest is to come from interest savings ($1.3 billion) and labor savings (.1 billion). Increased revenues are not the same thing as "productivity savings" or savings of public resources. Tax revenues are simply a transfer of resources from taxpayers to the government. If IRS had wanted to show resource savings, it would have reported the dollar savings associated with the staff reductions made possible by TSM. Instead, IRS reports the additional revenue that can be obtained by reinvesting staff savings into expanded enforcement activities. The report, therefore, is essentially a budget-impact analysis rather than a social cost-benefit analysis.

We did not do the kind of work necessary to validate IRS' estimates. However, IRS has acknowledged that its study represented a preliminary, short-term analysis and that it has certain flaws, such as reliance on an outdated cost model. IRS expects to issue an economic analysis in September 1995 that it says will better reflect the costs and benefits that will be attributable to modernization. For one thing, that analysis is expected to cover the complete 18 year TSM life rather than the 10 years covered by the January 1995 study.

Mr. HERGER. Productivity savings.

Ms. STATHIS. If it is productivity savings only, I cannot speak to that number. As each of these systems has been tested in a particular location, IRS has tried to estimate from that what the productivity savings will be. Generally the IRS budget will reflect the savings that they hope to achieve when those systems are going to be implemented.

Mr. HERGER. I think the numbers that we have are total cost of $6.683 billion and total benefits of $9.166 billion.

Ms. STATHIS. I suspect that comes from a new cost-benefit study that was just made available to us on Thursday of last week. I believe that those benefits include more than productivity savings. I think they include efforts to redeploy resources into new compliance functions and all of the benefits that they think might accrue from that.

Mr. HERGER. In another area, GAO published a report in October 1994 titled, "Continuing Problems Affect Otherwise Successful 1994 Filing Season." On page 25 of that report you have a chart on fraudulent refund claims. A footnote to this chart states, "This figure includes two returns claiming refunds totaling about $300 million."

Would you please elaborate on this footnote and what type of refund claims could result in such significant amounts of $300 million.

Ms. STATHIS. I believe both of those were gas tax refund claims. Those refunds are probably more problematical than the earned income credit in that there is not a limit on them, so you can have really huge claims for refunds.

Mr. HERGER. Could you tell me were these identified by the IRS and were they stopped?

Ms. STATHIS. They were identified by the IRS and I believe they were both stopped.

Mr. HERGER. Do we have any indication of what happened to these individuals who submitted these fraudulent returns?

Ms. STATHIS. I do not have that information, but I can seek it.

Mr. HERGER. We would be very interested—were they brought to trial? Were they convicted?

Ms. STATHIS. I know there have been a number of prosecutions of fraudulent gas tax refund claims.

[The following was subsequently received:]

According to IRS, this is still an active investigation. They were reluctant to provide further details.

Mr. HERGER. Just maybe a quick followup to an earlier question that came up, and it had to do with the telephone calling—whether or not we are 13 percent successful or closer to 50 percent. Is this temporary? Are we correcting it?

Even at 50 percent—even if we move up from 13 percent to, I don't know what you had, 45 percent I believe, I don't believe that is acceptable to anyone who is making calls, paying accountants to make calls, or doing the public taxpayer themselves.

Are there any moves that are being made to move this up to a more acceptable level? Particularly in the testimony I understood from the IRS was that it is a savings to us to be able to conduct

our business over the phone rather than through the mail. Is there something being done on this?

Ms. STATHIS. There are a number of things being done, but I am not very hopeful that this is going to get better very soon. We have a graph in our statement that shows the past several years the number of phone calls coming in and the number that have been answered. The demand of the phone calls coming in continues to go up and the number of phone calls they are able to answer are pretty static. That is why we are recommending in a draft report that we have been talking with IRS about that they have to make some drastic management changes to try to get more out of the resources that they currently have.

The 1.3 million more calls that they say they will be able to answer with the additional funds they are asking for in 1996 I fear will do little. It may allow them to keep up—given that there will be more calls coming in. I just don't think that it will do a lot to improve the record.

Mr. HERGER. Would you concur that it does save us money to be able to handle these questions by phone rather than through the mail?

Ms. STATHIS. Conceptually, I think that that is probably a correct understanding. Assuming that you can resolve the question on the telephone, that should be more efficient than handling correspondence.

Mr. HERGER. I believe you mentioned earlier that they are going from 8 to 10 hours, and the public sector has perhaps 24 hours.

Ms. STATHIS. That is right. Most private companies that have telephone operations offer that service 24 hours a day.

Mr. HERGER. OK. So there is a great more that we could be doing.

Ms. STATHIS. Yes, there is a lot to be done.

Mr. HERGER. Thank you.

Chairman JOHNSON. Mr. Hancock.

Mr. HANCOCK. Thank you, Madam Chairman.

Following up on Mr. Herger's question about the $300 million on two returns, I noticed on a report here that you have the data through June 1994. I am assuming that the data for all of 1994 probably is available now, but just to make a statement, if you analyze that and take the $300 million out and then you add back in another 25 percent, it would appear that there has been very little increase between 1993 and 1994.

Ms. STATHIS. For——

Mr. HANCOCK. For fraudulent returns.

Ms. STATHIS. Of fraudulent returns. I think that is correct. In our statement we have the statistics for the entire year of 1994 and the number of fraudulent returns in 1994 is actually slightly below 1993.

Mr. HANCOCK. OK, fine. Well, I didn't see it. I made analysis of it and that is the way it would calculate.

The question we have here, you know you were talking about the fact that you can't integrate the two systems, but I mean we are putting data into a system that you say can't be integrated, but as long as we have the data in there, that data can be transferred into the system that can be integrated; can it not?

Ms. EDWARDS. I think it is fair to say that the information will be placed in the new system whenever that new system arrives. The data is transferable, but of course it means that it has to be transferred manually very likely.

Mr. HANCOCK. Transferred manually?

Ms. EDWARDS. Yes. I wanted to make the distinction when we say that a system is not integrable. It cannot be integrated. We mean that the information can't flow from one system to the other. I just wanted to clarify that point.

Mr. HANCOCK. Wait a minute. Wait a minute. I am a little confused. I don't know all that much about computers also, Madam Chairman, but the fact is that once the data is in a database it is usually available to pull out electronically and to enter into another form in some manner.

Ms. EDWARDS. You mean electronically.

Mr. HANCOCK. Electronically, yes.

Ms. EDWARDS. That is the notion that is behind integration. When we talk about integration that is what we mean. It means that you should be able to pull the data from the system electronically and electronically pass it to another system.

Mr. HANCOCK. OK.

Ms. EDWARDS. That is why the issue of integration is so crucial to this discussion and what we are saying about these systems that have been developed to date is that those systems do not allow the information to be pulled electronically from one system and passed to another system.

Mr. HANCOCK. Well, let me ask what—maybe it is not a simple question, but have you all talked to the credit card industry? I mean, my goodness, the hundreds of millions of entries that they make daily are probably much bigger than what the Federal Government does, because everybody has got a credit card. If they handle their affairs like we are handling ours, that thing never could have existed. Why can't we take a look at what they are doing, get some of their experts to come in and tell us what we need?

Ms. EDWARDS. Mr. Hancock, the point that you are making is the essence of our suggestion that IRS needs to have the sufficient number of managerial and technical experts, if you will, or people who are skilled in building these systems that link, that integrate, that pass data electronically so——

Mr. HANCOCK. But can they do that in-house? I mean do they have the personnel to do it or do they need to go to the credit card industry and get their people to do it on a contract basis? Give them a figure. Say, look, I wonder what would happen. We are going to spend $9 billion. I wonder what would happen if we would tell the industry we will give you an award of $5 billion if you will do this.

We are not going to give you anything unless you develop a program, but we are going to give you $5 billion if you do it. I bet there would be a lot of computer programmers start trying to figure out how to go about doing it. This guy that took the bank for $1 billion here just recently, I mean that guy could probably figure this thing out.

Thank you, Madam Chairman.

Chairman JOHNSON. I am stunned, Ms. Edwards, by your comment that you can't get the data off of the system electronically. I never heard of a computer system from which you could not take data.

Is that really true that they can't get this data off in order to feed it into another system if they wanted to do that?

Ms. EDWARDS. Let me answer that question by example and maybe this will help to clarify it. IRS tried to integrate some of these systems, the integrated collection system was one of them, and there are several others that I think are highlighted in the Commissioner's and in our testimony.

Their technicians discovered that it was tougher to try to integrate them—to try to make them link up to try to pass the information from one to the other—than to rewrite. So they chose to rewrite. That is the point that we are raising. These systems that have been delivered to date offer value in selected functions, be it collections at the revenue officer's site or be it the identification of underreported income in the AUR application. While they may offer value there or do offer value there, they are not part of a broader, more comprehensive, integrated or linked environment. You can't pass information among them.

Chairman JOHNSON. Are you suggesting that they are going to need to rethink what information they are collecting and what format it is going to be arrayed in this, the new system?

Ms. EDWARDS. That is absolutely part of what they are in the process of doing now and what we are saying they should place even more emphasis on.

Chairman JOHNSON. I can see that. I don't see how they could have improved the collections system in harmony with this larger system since the larger system's criteria are only now being developed.

Ms. EDWARDS. That is true.

Chairman JOHNSON. So it is just a question of you think they shouldn't have spent the money on that when they should have spent the money on some other things.

Ms. EDWARDS. That is correct.

Chairman JOHNSON. Two other things just to get the record clear. First of all, back to the issue of fraud, would you comment on the vulnerability of the tax system in general to fraudulent collection attempts associated with refundable tax credits? In other words, is refundability of tax credits a policy that we should steer clear of because it is hard to implement?

Ms. STATHIS. Refundable credits are a particular problem for a tax administrator. Normally, credits that are applied against a tax liability are deducted from money that is paid in and so you are just returning a portion or evening out, if you will. But a refundable credit entitles the person to money that they wouldn't otherwise be entitled to whether they paid taxes or not. The earned income credit puts IRS in the role of being more of a welfare-benefit agency than a tax administrator. Trying to decide eligibility for that particular benefit is essentially what we are trying to do through the tax system, and that creates a particular vulnerability that isn't there in other parts of the system.

Chairman JOHNSON. It is true that IRS does not at this time have the capability of cross-checking wages and returns?

Ms. STATHIS. There is an experiment this year in one service center in an attempt to use three-quarters of the wage data from one State to see if that, in fact, will work.

Chairman JOHNSON. But it will be several years before they would have the ability to cross-check wage data in a timely fashion to determine refund, correct?

Ms. STATHIS. The so-called up-front matching is one of those benefits that we are hoping to get out of the long-term tax system modernization design.

Chairman JOHNSON. So would it be reasonable to restructure the EITC so that the only benefit available under it was a wage-based refund benefit with no lump sum possibility? Would that eliminate fraud?

Ms. STATHIS. It probably wouldn't eliminate fraud, but it might help. One of the problems——

Chairman JOHNSON. Why would you say it only might help since it only would go back out through the employer and through the earnings system, and it is the earnings system that makes this person eligible for this refund.

Ms. STATHIS. We did a report on the advanced credit as well and it is not without its own concerns, without its own problems. Not the least of which is that a person could work for more than one employer, a person could have other sources of income, so that the eligibility for the credit needs to be determined at the end of the year taking into account all of the earnings and the situation of the employee.

I don't think there is a lot of verification up front that the children really are qualifying children in compliance with the credit provisions. So there are a lot of those eligibility provisions that still have to be taken into account at the end of the year.

At the time we looked at it, there were also no controls in the system that would prevent someone from getting the advanced credit and then after the completion of that year also applying for the full lump sum credit and getting it in addition. So there are some problems with the advanced credit as well.

Chairman JOHNSON. Certainly, it does suggest that we should not pass more refundable credits until we get the problem straightened out with those that we have on the books.

Any recommendations you have in regard to changing the tax law to make it more enforceable in the refundable credits area we would be very interested in, since we will be working in that area in the very near future. Second, we would be interested in any concrete recommendations you might have in terms of improving the phone system and solving the problems of taxpayer access, because I think it is fair to say that all members of the subcommittee believe significant progress needs to be made in that regard and in the near future.

[The following was subsequently received:]

Based on a recently completed review of the accessibility of IRS' toll-free telephone service, we concluded that IRS top management had not exercised its authority to establish and enforce policies necessary to build an effective nationwide telephone assistance program. While acknowledging that more funds would enable IRS to provide more service, we made several recommendations that focused on maximizing service with existing resources.

Specifically, we recommended that the Commissioner of Internal Revenue direct the Chief, Taxpayer Service, in coordination with other appropriate IRS officials, to lead an aggressive effort to (1) identify and define the appropriate telephone assistance program operating practices for IRS that would allow it to optimize the number of calls it can answer and (2) work with the leadership of the National Treasury Employees Union to reach agreement on implementing those practices on a nationwide basis. Those practices should include, although not be limited to, the following:

-- challenging program goals for increasing the number of calls answered that are based, at least in part, on taxpayers' needs;

-- standards for the amount of time assistors should be available to answer taxpayers' calls;

-- hours of operation that offer taxpayers greater opportunity to reach IRS assistors; and

-- uniform reporting definitions for the number of calls answered and other performance measures.

We also recommended that the Commissioner direct the Chief, Taxpayer Service, to take the steps necessary to (1) fully implement the features of IRS' existing call routing technology and (2) pursue opportunities for more effective call routing through IRS' telecommunications vendor.

Let me raise with you one last issue. You have said, or at least implied, that the IRS doesn't actually have the technical capability that they need, the level of experience that they need in planning and implementing this TSM system.

In their testimony, they mentioned that 75 percent of the money goes out for equipment or consultants. It seems to me not only unwise, but probably impossible under our personnel rules to attract the kind of people that you would need to put this kind of plan in transition. Once you get it in place, you can buy sufficient capability to keep it running and to upgrade. But, I am not sure that the criticism, that the Department doesn't have on board the people who could manage a project of these dimensions, is fair when the testimony was that we don't have them on board. We contract to get this expertise and that, indeed, makes more sense. Would you care to comment?

Ms. EDWARDS. Seventy-five percent of the resources being contracted out, I think, refers to 1996 and what they plan to do for 1996. One of the recommendations that had been put forth to IRS last year as part of the appropriations process was that they would focus very seriously on how they used contractor support in order to address this particular issue.

The point that you raise with regard to the likelihood of their being able to attract enough people with the right kind of technical skills, I think, is a very significant point. I would simply offer that even to manage this kind of effort, there is a core of expertise that is required within IRS to effectively manage the contractor support in order to make sure that government gets value for the dollars spent. IRS has hired some people, a few people with more technical expertise in building integrated systems. I emphasize that because IRS does have skill sets in building the stand-alone or stovepipe systems we were talking about earlier, the ones that don't pass information among them. But the integrated system requires a different skill level. Even to manage the development of an integrated system requires a different level of skills. So the point of their expertise is to the management as well as their support of the implementation.

I don't know if the chairman is aware or the subcommittee members are aware, but IRS has somewhere in the vicinity of 2,400 people dedicated to the TSM initiative and there is a range of skills captured by that number. So, yes, there are a lot of people involved with the modernization effort. We are emphasizing the importance of bringing that critical core, if you will, of expertise into place.

Chairman JOHNSON. In your high risk report focusing on accounts receivable of the IRS, you claim their accounts receivable have grown from $87 to $156 billion between 1990 and 1994. The Commissioner indicated that that difference is primarily accounts that will never be receivable, that are either bankrupt or for some other reason are incapable of paying. Would you agree with that?

Ms. STATHIS. IRS pointed to the change from a 6- to 10-year statutory time on collections. We used to adjust those charts to show the difference between the 6- and the 10-year growth to try to level it out, if you will, or to adjust the growth for that. The information is not there to do that very well. Any numbers that IRS has are ballpark estimates. There are some accounts and a fair amount of

the dollar growth attributable to the change in the statute. But I wouldn't say that it is the bulk of the growth.

Chairman JOHNSON. That is interesting. Your report did show that their collection of delinquent taxes has declined in dollar amounts.

Ms. STATHIS. It has slightly declined. It has been relatively flat over a period of years, but actually down a little bit since 1990.

Chairman JOHNSON. We have put new resources into this. We have really focused on it. Why hasn't it gone up?

Ms. STATHIS. Actually, the compliance resources between 1990 and the end of 1994 went down. Even though there have been some proposals to increase the staffing, it really did not increase and that is why the 1995 compliance initiative was important to improving the enforcement posture of the IRS.

Chairman JOHNSON. Thank you. If there are no other questions, thank you very much for your testimony, and we look forward to working with you in the months ahead and thank you for your attention.

We will next have Mr. Buckley, the president and CEO of H&R Block. I would like to call Mr. Martin also to the table and we will hear both witnesses.

Mr. Buckley, if you will start.

STATEMENT OF HARRY W. BUCKLEY, PRESIDENT AND CHIEF EXECUTIVE OFFICER, H&R BLOCK TAX SERVICES, INC.

Mr. BUCKLEY. Madam Chair and members of the subcommittee, my name is Harry Buckley and I am president and chief executive officer of H&R Block Tax Services, Inc. I appreciate the opportunity to appear before you today to present H&R Block's views on the 1995 tax filing season, IRS' efforts to combat refund fraud and reform of the earned income tax credit.

H&R Block is headquartered in Kansas City, Mo., and we are the Nation's largest income tax preparation firm. We serve approximately one out of every seven U.S. taxpayers. We have over 8,000 company-owned and franchised offices throughout the United States and employ over 89,000 people during the tax filing season.

Last year, we prepared 12 percent of all individual U.S. tax returns for a total of over 13 million returns. We also transmitted over half the returns filed electronically last year with the Internal Revenue Service.

I would like to begin my testimony by stating that H&R Block would recommend the subcommittee support IRS' fiscal year 1996 budget request for both tax systems modernization and funding to combat fraud. After the subcommittee's hearing last year on tax refund fraud, we were pleased to see that the IRS' budget request included additional funding for staffing of refund fraud detection.

We encourage Congress to strongly consider making the investment IRS has requested for the purchase of computer software and hardware. Both refund fraud elimination and tax systems modernization efforts are extremely important investments in future IRS operations and their service to the American taxpayer.

In the 40 years we have been serving America's taxpayers, this is without a doubt the most difficult tax season in terms of our internal preparations and customer dissatisfaction. At H&R Block we

believe the reason we were the world's largest tax preparation firm assisting over 18 million taxpayers last year is because of our commitment to providing outstanding service to our clients.

This tax season we have received a substantial number of customer complaints due to the IRS inability to effectively communicate the procedural changes made this tax season. While the purpose of these changes was to eliminate tax refund fraud, millions of innocent taxpayers have been penalized and inconvenienced. It appears that the IRS is out to catch fraud rather than prevent the filing of fraudulent returns.

We are very concerned about tax refund fraud and support the administration's efforts to combat fraud by implementing procedures such as cross-checking of Social Security numbers. Historically, we have worked closely with the Internal Revenue Service criminal investigation officials in preventing and identifying potential fraud before the returns are filed.

Our quality control associates are trained to subject each W–2 brought in by our clients to a stringent review process. Our computer systems are programmed to check reasonableness between wages and withholdings on tax returns.

As I mentioned, millions of taxpayers are finding their tax refunds are being delayed because of changes in IRS policy that have not been effectively communicated. Let me give you some examples of individuals who are unaware of the recent changes in IRS procedure and were negatively impacted by these as a result.

One of our clients in Akron, Ohio, is an earned income tax credit recipient who needed her refund to bury her grandson, but has found out her full refund will be delayed. A taxpayer here in Washington, D.C., who has received EITC every year and uses it to pay his bills and daughter's college tuition received only a $100 refund and is waiting for the EITC portion of $2,000. Meanwhile, his bills are going unpaid and his interest costs are escalating.

Another taxpayer, a single parent, divorced with three children, this individual has moved several times in the last few years, misplaced birth certificates and has to use post office boxes to receive the EITC portion of her refund because her mail has been stolen from her. She is likely to be required to complete a two-page questionnaire and submit pages of documentation including obtaining and making a copy of her divorce decree, obtaining a copy of her post office box application, obtaining and making copies of birth certificates, obtaining and making copies of report cards or other school records for her two school-aged children, obtain a notarized statement from her day care provider, obtain her ex-spouse's Social Security number and address, and then mail all these documents in a package to the IRS within 30 days.

Normally, the filing season is very hectic for H&R Block, but in the past we have had the benefit of knowledge of the IRS rules and procedures well in advance. I want to cite some examples of new procedures we have had to implement this year.

For the first time, we have had to put into service a voice response unit to handle over 5 million phone calls that we haven't had in the past. For the first time, we have to keep copies of all W–2s. I personally had to sign 4,000 form 8633s twice for a total

of 8,000 signatures for our company-owned locations to receive their EFIN numbers so we could file electronically.

This year the IRS has decided to cross-check all Social Security numbers and names with the information on record and if a name and Social Security number don't match, then that certainly does create a problem.

In addition to that, the most people that have been severely hampered this year have really been the people who are receiving the earned income tax credit. Our numbers would indicate that approximately 30 percent of the electronically transmitted returns are having the EITC portion of their refund held for an additional period of time.

I also have some other recommendations enclosed in my testimony, Madam Chairman, that will talk about some of the recommendations we have to prevent fraud as well as the administration.

Chairman JOHNSON. We will have time to come back to those, Mr. Buckley.

[The prepared statement and attachment follow:]

Statement of Harry W. Buckley

President and Chief Executive Officer

of H&R Block Tax Services, Inc.

on Internal Revenue Service Budget for Fiscal Year 1996

and 1995 Tax Return Filing Season

Prepared for a Hearing before the House Ways and Means

Subcommittee on Oversight

Madam Chair and members of the Subcommittee, my name is Harry W. Buckley, President and Chief Executive Officer of H&R Block Tax Services, Inc. I appreciate the opportunity to appear before you today to present H&R Block's views on the 1995 tax filing season, IRS' efforts to combat refund fraud, and reform of the earned income tax credit program.

H&R Block is headquartered in Kansas City, Missouri and is the nation's largest income tax preparation firm. We serve approximately 1 out of 7 U.S. taxpayers. H&R Block has over 8,000 company-owned and franchised offices in the United States employing over 89,000 people during the tax filing season. Last year, we prepared 12% of all individual U.S. tax returns for a total of over 13 million returns. We also transmitted over 1/2 of the returns filed electronically last year with the Internal Revenue Service.

We have been serving America's taxpayers since 1955 when Henry Bloch, and his brother, Richard, founded the company. We have more experience working with and listening to middle and low income taxpayers than any other firm. As a result, we are in a unique position to learn of the particular problems and concerns faced by America's taxpayers.

I would like to begin my testimony by stating that H&R Block would recommend the Subcommittee support IRS' FY '96 Budget requests for both Tax Systems Modernization and funding to combat fraud. After the Subcommittee's hearing last year on tax refund fraud, we were pleased to see that IRS's budget request included additional funding for staffing of refund fraud detection. We encourage Congress to strongly consider making the investment IRS has requested for the purchase of computer software and hardware. Both refund fraud elimination and tax systems modernization efforts are extremely important investments in future IRS operations and their service to the American taxpayer.

In the forty years we have been serving America's taxpayers this is without a doubt the most difficult tax season in terms of our internal preparations and customer dissatisfaction. At H&R Block, we believe the reason we are the world's largest tax preparation firm, assisting over 18 million taxpayers last year, is because of our commitment to providing outstanding service to our clients. This tax season we have received a substantial number of customer complaints due to IRS' inability to effectively communicate the procedural changes made this tax season. While the purpose of these changes was to eliminate tax refund fraud, millions of innocent taxpayers have been penalized and inconvenienced. It appears that the IRS is out to catch fraud rather than preventing the filing of fraudulent returns.

H & R Block is very concerned about tax refund fraud and supports the Administrations' efforts to combat fraud by implementing procedures such as cross-checking social security numbers. Historically, we have worked closely with IRS' Criminal Investigation officials in preventing and identifying potential

fraud before the returns are filed. Our quality control associates are trained to subject each W-2 brought in by our clients to a stringent review process. Our computer systems are programmed to check the reasonableness between wages and withholdings on tax returns we prepare.

THE 1995 TAX FILING SEASON

As I mentioned, millions of taxpayers are finding that their tax refunds are being delayed because of changes in IRS policy that have not been effectively communicated. Let me give you some examples of individuals who were unaware of the recent changes in IRS procedure and were negatively impacted by these as a result.

One taxpayer served by our Akron, Ohio office is an EITC recipient who needed her refund to bury her grandson, but has found out that her full refund will be delayed.

A taxpayer here in Washington, DC who has received EIC every year and uses it to pay his bills and daughter's college tuition, received only a $100 refund and is waiting for the EIC portion of $2,000. Meanwhile his bills are going unpaid and his interest costs are escalating.

Another taxpayer is a single parent, divorced, with three children (including one pre-schooler in day care). This individual has moved several times in the last few years, has misplaced birth certificates, and has to use post office boxes because her mail has been stolen. For her to receive the EIC portion of her refund, she is likely to be required to complete a two page questionnaire and submit pages of documentation.

This will require her to do the following:

- Obtain and make a copy of her divorce decree.
- Obtain a copy of her post office box application.
- Obtain and make copies of her childrens' birth certificates.
- Obtain and make copies of report cards or other school records for her two school-aged children.
- Obtain a notarized statement from her day care provider.
- Obtain ex-spouse's social security number and address.
- Mail all these documents in a package to IRS within 30 days.

I want to call your attention to the fact that the 9598 form indicates that if IRS does not receive the information they have requested from the taxpayer within 30 days of date of the letter, the credit will be disallowed. The 30-day time frame seems unreasonable considering the paperwork that must be gathered to complete this form and the fact that the clock starts running with of the date on the letter, not upon taxpayer's receipt. We have been unable to find out if IRS is considering EIC validation for documentation received after the 30-day period for taxpayers with extenuating circumstances that prevented them from meeting the deadline.

Normally, the filing season is very hectic for H&R Block, but in the past we have had the benefit of the knowledge of the IRS rules and procedures well in advance. I want to cite some examples of new procedures we have had to implement this tax season.

- For the first time, Block has put into service a Voice Response Unit to handle over 5 million phone calls from clients checking on whether they qualify for a Refund Anticipation Loan (commonly referred to as a RAL).

- For the first time, I personally had to sign 4,000 (Form 8633's twice for a total of 8,000 signatures) for each of our

company owned locations to receive an EFIN number, so we could transmit returns automatically. We did not receive numerous EFIN numbers within the 45-day turnaround period as IRS promised, causing a delay in transmitting returns in January.

- For the first time, we must keep copies of all W-2's and supply a copy of the return when the clients signs the 8453 form, despite the fact that the taxpayer receives a copy two days later. This is reducing the productivity level of our tax preparers.

- H&R Block, as well as the rest of the tax preparation industry, is experiencing an increase in the cost of doing business which is attributable solely to changes in IRS procedures. Along with the duties involved preparing our clients returns, our tax preparers must spend additional time: 1) handling clients with problematic EIC returns for at least 6-8 weeks while they are waiting for their refund, 2) explaining new IRS procedures to clients, 3) dealing with clients' additional requests for information from IRS, and 4) helping clients resolve name and social security number problems on returns which have been rejected.

This year IRS has decided to cross-check all Social Security numbers and names with the information on record with the Social Security Administration. If a name and number on a tax return do not match the name and number in the Social Security Administration's records, the tax return is rejected by the IRS. While this may be an excellent procedure to implement to demonstrate IRS' commitment to combatting refund fraud, the message of this change did not get effectively communicated to the American public. As a result, taxpayers with legal changes in name (such as maiden name to married name), who have successfully filed for years, are having their tax returns rejected by the IRS due to a name and number mismatch. Therefore, the refunds are being delayed even though the taxpayers are using the same social security numbers they have used in the past. This is effecting millions of tax returns.

We have noticed two specific problems connected with the new social security number verification procedures:

- The Social Security Administration is not prepared to handle the volume of requests from taxpayers with Social Security number problems. In some cases in which taxpayers have lost their social security card, the wait for information was up to 2 weeks.

- There have been numerous instances of wrong information such as date of birth and spelling errors on last name of the social security records. In many cases, taxpayers are being penalized because of inaccurate data in the Social Security Administration's systems.

We recommend that for those taxpayers who have not yet filed their tax returns, electronic filing may offer a speedier solution as the IRS alerts the tax filer to any social security problems right away, eliminating a significant delay in processing the refund. Unfortunately, there is only one solution for a taxpayer who has already filed and has subsequently been notified by the IRS of a social security number problem. That taxpayer must revise the name with the Social Security Administration. An electronic return must then be retransmitted, when the name change has been verified, or in the case of a paper return, the taxpayer must respond to IRS correspondence about the accuracy of the name and or social security number.

H&R Block's customers with the greatest problem this tax filing season are those taxpayers filing for the Earned Income Tax Credit. Approximately 30% of the electronically transmitted

returns are having the EITC portion of their refund held for an additional period of time. This affects millions of taxpayers who qualify for, and depend on, this credit. Only after the IRS examines and verifies the Earned Income Tax Credit claim will they forward the refund to each taxpayer in one of four ways. The IRS will: 1) issue a refund, less the Earned Income Tax Credit amount, right away; 2) delay a refund for up to 8 weeks while they review it; 3) send a questionnaire to be filled out and returned by the taxpayer before issuing a refund; or 4) issue a refund without delay.

As a result of Treasury's decision to eliminate the direct deposit indicator, banks have been forced to increase their Refund Anticipation Loan prices, as well as their credit criteria which has angered many more taxpayers. As with other procedural changes made by IRS this tax year, while the intent of reducing fraud is commendable, the late announcement of such a significant change has caused significant financial hardship for taxpayers who are least able to afford it. This year the fees for RALs depend on the refund size, and on average the amount has doubled and range from a minimum of $29 to a maximum of $89. When the bank denies a RAL request, Block will waive its electronic filing fee of $25 for a Block-prepared return and $35 for a non-Block prepared return. In its place a service fee of $5 and $10, respectively will be charged.

EFFORTS TO FIGHT ELECTRONIC FILING FRAUD

Prior to tax season 1993, H&R Block established our own fraud prevention plan targeted at electronically filed returns. During the 1995 season, Block continues to be diligent in its efforts to maintain the following action plan to prevent the filing of fraudulent tax returns.

- Because so many fraudulent returns include first time Earned Income Credit (EIC) claims, Block does not allow banks making Refund Anticipation Loans (RALs) to Block clients to do so for any taxpayer who is eligible for EIC but did not file a tax return the previous year.

- Block subjects all W-2s to a stringent review process. All electronically filed returns containing a non-standard (substitute, handwritten, typewritten, or altered) W-2s are carefully reviewed before the returns is transmitted to the IRS. The FICA and Medicare withholding amounts are verified for accuracy. When it is suspected that a W-2 is fraudulent, Block verifies the taxpayer's employment with the employer listed on the suspect W-2. If employment cannot be verified, Block notifies the taxpayer that Block will not electronically file the return.

- Block does not allow banks making RALs to do so for any taxpayer whose only income is from Schedule C.

- Block compares the amount of income tax withholding on each Form W-2 with gross wages to determine whether the withholding amount is "reasonable" for the amount of wages.

- If Block detects or suspects fraud on any return, it sends a letter to the taxpayer explaining that the return contains discrepancies that must be cleared up before the return can be electronically filed. If the taxpayer does not respond satisfactory to the request for additional information, Block brings the situation in question to the attention of the Criminal Investigation Division of IRS.

RECOMMENDATIONS FOR REFUND FRAUD PREVENTION

After reviewing the results of this Subcommittee's February

10, 1994 hearing on tax return fraud, Block updated our fraud prevention plan. Because H&R Block shares the IRS' concerns, we have shared our detailed plan with them and are pleased to see some of our suggestions have been implemented. Our recommendations focus on four major points of implementation:

- impose higher standards on Electronic Return Originators;
- produce a cooperative public relations campaign between the IRS, CID, and Electronic Return Originators;
- require additional process controls by Electronic Return Originators; and
- enhance IRS system checking.

SUGGESTIONS FOR EASIER ADMINISTRATION OF EIC AND FRAUD REDUCTION

As you requested in your letter Representative Johnson, I would make some specific recommendations to simplify the administration of Earned Income Tax Credit and to reduce fraud within that program.

- Accounts (SSNs) for taxpayers whose EIC is delayed but ultimately paid, either through back end verification by IRS or acceptance of Form 9598, should be flagged in the IRS system as "good accounts." Based on this "flag," in future years the IRS would accept Schedule EIC as filed, thus eliminating EIC stripping and the requirements to complete Form 9598 and/or refund delays for these taxpayers.
- Advance EIC -- guarantee no delays in processing EIC portion of refund for taxpayers who receive advance payments of EIC from their employers.
- To avoid refund delays while preventing false claims, the IRS could require all taxpayers who are claiming EIC, head of household status, and dependents for the first time to file applicable documentation with their returns. This could include (as applicable) a dependency support worksheet, head of household worksheet, and EIC Questionnaire, as well as copies of proof documents. The confirming data could then be entered in the IRS computers. Once a taxpayers gets a "clean bill of health," he or she should be required only to reaffirm the personal data (and any changes) on a simple, one-page declaration form that would be filed with the return each year.
- Require submission (electronically or in paper format) of Earned Income Credit Worksheet or revise the EIC Form to include that information (similar to a form H&R Block designed and proposed to IRS).

CONCLUSION

I would like to close my remarks by offering H&R Block's technical expertise in tax return preparation to the members of the Subcommittee and Administration. As I have stated, H&R Block is committed to eliminating tax refund fraud, and is available to assist you in these efforts. Thank you.

Schedule EIC — Earned Income Credit — 1994

Name(s) shown on return | Your social security number

You cannot take this credit if:
- your return is for less than 12-month period (unless the short period is due to the taxpayer's death); or
- your filing status is married filing a separate return; or
- you are excluding any foreign earned income by filing Form 2555 or 2555-EZ with your return.

You may be eligible to take an earned income credit if:
- your adjusted gross income (line 16, Form 1040A or line 31, Form 1040) and
- your earned income (line 7, Form 1040A or lines 7, 12, and 15, Form 1040, *plus any nontaxable earned income from your employer*) are *both* less than:
  - $23,753 if you have one qualifying child; or
  - $25,293 if you have two or more qualifying children; or
  - $ 9,000 if you have no qualifying children.

To determine whether or not you can take an earned income credit:
- Complete Part I if you believe you may have a qualifying child; or
- Complete Part II if you know you don't have a qualifying child.

Part I: Earned Income Credit For Taxpayers With a Qualifying Child

1a Did a child live with you in the United States for more than half of 1994 (all of 1994 if the child is a foster child), or for the part of the year he or she was alive if the child was born or died during the year? . . . . . Yes ☐ No ☐

b Is the child your son, daughter, adopted child, grandchild, stepchild, or foster child? (Married child must be your dependent or would be except you gave the exemption to the other parent.) . . . . . Yes ☐ No ☐

c At the end of 1994 was the child under age 19, or under age 24 and a full-time student, or any age and permanently and totally disabled? . . . . . Yes ☐ No ☐

If you answered *yes* to all parts of question 1, go to line 2. If you answered *no* to any part of question 1, you do not have a qualifying child but, if your income is less than $9,000, go to Part II.

2 Are you a qualifying child of another taxpayer? . . . . . Yes ☐ No ☐

If *yes*, do not complete the rest of the form. You cannot claim an EIC. If *no*, go to line 3.

3 Did you and another taxpayer (other than your spouse with whom you are filing a joint return) live in the same home for over one-half of 1994 and have the same qualifying child(ren)? . . . . . Yes ☐ No ☐

If *yes*, enter the amount of the other taxpayer's adjusted gross income _____ and go to line 4. If *no*, go to line 5.

4 Is your adjusted gross income more than the amount on line 3? . . . . . Yes ☐ No ☐

If *no*, do not complete the rest of the form. You cannot claim an EIC. If *yes*, go to line 5.

5 Enter the requested information for the eligible child (or for two of the children if you have two or more eligible children). Then, go to Part III to figure your credit.

(a) Child's name (first, initial, and last name)	(b) Child's year of birth	For a child born before 1976, check if child was: (c) a student under age 24 at end of 1994	(d) disabled	(e) If child was born before 1994, enter the child's social security number	(f) Child's relationship to you (for example, son, grandchild, etc.)	(g) Number of months child lived with you in the U.S. in 1994
	19					
	19					

Part II: Earned Income Credit For Taxpayers With No Qualifying Child

6 Are you (or your spouse) a qualifying child of another taxpayer? . . . . . Yes ☐ No ☐

7 Were you a dependent eligible to be claimed on another taxpayer's 1994 return? . . . . . Yes ☐ No ☐

8 Was your main home located outside of the United States for 6 months or more during 1994? . . . . . Yes ☐ No ☐

9 Were you (and your spouse if married) under age 25 or older than age 64 at the end of 1994? . . . . . Yes ☐ No ☐

If you answered *yes* to any of the above questions, you do not qualify for the credit. Do not complete the rest of the form. If you answered *no* to all of the above questions, go to Part III to figure your credit.

Chairman JOHNSON. Mr. Martin.

STATEMENT OF MICHAEL MARTIN, ENROLLED AGENT, NATIONAL ASSOCIATION OF ENROLLED AGENTS

Mr. MARTIN. Thank you, Madam Chairman. My name is Michael Martin. I am an EA (enrolled agent) practicing in the Washington, D.C., area. I am representing the National Association of Enrolled Agents of about 9,000 members, all of whom are licensed by the Treasury Department to represent taxpayers before the IRS. If I can digress in this written comment a little bit, I think we can save some time.

I don't think anyone here was on this subcommittee in 1978. I happened to testify before this subcommittee in 1978 when the tax preparer penalties came into being, and they came into being for exactly the reason we are talking about now, and that is refund fraud. What was happening then is financial institutions were offering loans based on a potential refund to taxpayers and it was found out through audit that the tax preparers were inflating the number of exemptions, inflating itemized deductions, claiming dogs, parakeets, and everything else on tax returns in order to get a bigger refund and write a bigger loan. That whole process was stopped in 1978 with the passage of the Internal Revenue Code, section 6694 through 6696 and 6701.

In the nineties, the IRS was desperate to find some way to encourage people to use the electronic filing, and I think that is something you have to realize. There is no benefit to the taxpayer to file their return electronically, per se. It costs them more money. They are charged a fee to file their return electronically.

If they get their refund back faster, that is great. That is the benefit. The industry came to the IRS and proposed the idea of the refund anticipation loan with the direct deposit indicator. So we see that the IRS has come full circle, I think, in stopping what was in 1978 the refund anticipation loan, to in the nineties early nineties encouraging it.

It has gone, so far as it came to my attention last year, that one district office of the IRS sent out a letter to all real estate agents in that district encouraging them to become electronic filing centers. They said the only thing you have to have is a computer and a 2400 baud modem. You don't need to know anything about taxes or have any licensings or anything. Just send us your application and you can file tax returns electronically.

We think there are two solutions to this problem long term. One is the tax system modernization. But I have to tell you, I am appalled to hear that the IRS is looking at a system that doesn't talk to each other. I have to deal with this system every day, a system that doesn't talk to each other.

There is a system called the IDRS, the Information Document Retrieval System, and the ACS system, Automated Collection Service, which is the accounts receivable system. They don't talk to each other. They are not even on the same computer, not on the same terminal. If I am talking to a revenue officer on the telephone and they are in front of the ACS computer, if they can't find my

power of attorney, if they can't find my correspondence, they have to go to the IDRS system, which is at the other end of the room. They have one terminal—I am only talking about the Baltimore district now—to access that other computer.

To hear that the collection division is going to have another new system that doesn't talk to the main system, it doesn't help us at all in trying to solve taxpayers' problems with their accounts receivable.

But we also have to bring tax system modernization down to the local level. I am constantly frustrated, as are many of our members, with the fact that many IRS district offices do not have a fax machine readily available so we can fax information to them.

In this day and age, it is unheard of for an office, a business office not to be able to receive a fax. Many of us in my industry, if we have to fax a canceled check to the IRS we can't do so.

The other thing that we think is very important in the long-term solution is the universal licensing of tax return preparers and we have included documents from the Commissioner's advisory group recommending this. Their subgroup, as well as the GAO study based on the 1988 taxpayer compliance measurement program, showed that the amount of tax fraud and tax errors among those people who are licensed EAs, CPAs, and attorneys was much lower than the incidence of fraud among unlicensed commercial preparers.

Short-term solutions—we think that the IRS can do more short term by better screening of the tax returns. If people have a history of filing earned income credit claims, those returns probably should not be scrutinized as carefully as other ones claiming the earned income credit for the first time.

I would be happy to take any questions that you have.

[The prepared statement and attachment follow:]

STATEMENT OF MICHAEL MARTIN, ENROLLED AGENT
NATIONAL ASSOCIATION OF ENROLLED AGENTS

Madam Chair, Members of the Subcommittee, thank you for your invitation to testify on behalf of the National Association of Enrolled Agents, regarding the topic of income tax refund fraud, and specifically the delay some taxpayers are experiencing in receiving their refund checks due to the IRS's "Questionable Refund Program".

This testimony is being presented on behalf of approximately 9,000 members of the National Association of Enrolled Agents (NAEA). Members of NAEA are professional individuals whose primary expertise is in the field of taxation. They have established this expertise by either passing the Internal Revenue Service's comprehensive two-day examination on federal taxation or by serving as an IRS employee in an appropriate job classification for at least five years. NAEA members maintain this level of expertise by completing at least 30 hours of continuing professional education each year. As you may know, our members are the only classification of tax professional who are licensed by the Treasury Department. Our members represent more than four million (4,000,000) individual and small business taxpayers annually. It is in our role as the voice for the general taxpaying public that NAEA provides this testimony.

HISTORICAL PERSPECTIVE

In the late 1970's the tax preparation industry was rocked by a scandal in some ways similar to the one disclosed last year. It seems that many financial organizations offered tax preparation services to clients. As an incentive to potential as well as existing clients these institutions offered to loan the amount of the refund to the taxpayer as soon as the return was completed. The taxpayer would then endorse the refund check in favor of the lender in order to satisfy the debt.

It was found that because the tax preparers were paid more for placing loans than preparing the tax returns, they were inflating deductions and exemptions thus producing refunds larger than actually due.

As a reaction to this abuse, Congress enacted the Tax Preparer Penalties sections of the Internal Revenue Code (IRC Sections 6694-96 & 6701) which punishes preparers for filing false returns, negligent preparation or endorsing a refund check.

In the 1990's the IRS was seeking ways to encourage taxpayers and tax preparers to participate in the electronic filing program. The IRS has maintained that the ELF program reduces its expenditures for processing returns and also increases the accuracy of those returns.

Electronic filing gave rise to a new industry composed of many more than the traditional tax return preparers. Rushing to seize this new business opportunity were third party transmitters of returns, collection sites for preparing and transmitting the returns, and what became knows as "refund mills". In fact, as recently as 1993, one District Office of the IRS sent letters to all of the real estate agents in the District encouraging them to offer electronic filing services to their clients. The letter stated that all they needed was a 2400 baud modem on their computer. No tax knowledge was required, nor was any licensing, registration or regulation.

When the concept of the Refund Anticipation Loan (RAL) was conceived by the newly emerging electronic filing transmitter industry, it was not quashed by the IRS. The IRS indeed adopted and supported the program. The IRS agreed to further facilitate the RAL program by issuing Direct Deposit Indicators (DDI) to verify to the lenders that no offsets would reduce the amount of the claimed refund and thus essentially guarantee the loan.

Thus in their zeal to expand the use of electronically filed returns, the IRS promoted the growth of a new industry that was not subject to many of the preparer penalty rules adopted in the late 1970's to preclude the problems we see today. The IRS either did not or could not set up the systems needed to monitor not only the returns being filed but the electronic transmitters of those returns.

PROBLEM

In fifteen years, we have come full circle from the IRS discouraging the use of refund anticipation loans because of the potential for abuse to the IRS creating the environment where refund fraud could exist by encouraging and fostering the use of RALs. The fact that approximately 70% of electronically filed returns request RALs shows the popularity of that program. In fact, because of that popularity, the very future of the Electronic Filing Program may be in jeopardy unless a way is found to bring the program back to its performance of the last two years. The question now is how to curtail the filing of fraudulent tax returns while at the same time meeting the demand that has come into existence for rapid refunds.

LONG TERM SOLUTION

NAEA suggests that there are two solutions to this problem which will work in tandem. The first is enhancing the IRS's ability to perform the necessary checks by computer. The second would be to institute a regulation requirement for all tax preparers.

We realize that this subcommittee is not specifically charged with the IRS budget. However, we wish to take this opportunity to recommend to each member of the subcommittee the real long-term solution to this problem. That is the IRS's Systems Modernization Program. The funding of this program will give the IRS the computer capability to perform SSN matching and verification in a short enough period of time to issue the refunds promptly while simultaneously safeguarding the tax system from the type of refund fraud experienced during the last two years.

We believe the second part of the solution would be the universal regulation of tax return preparers. We cite the report of the Sub Group of the Commissioner's Advisory Group dated January 18, 1995. (A copy of that report is attached.) In that report, the sub group cited the statistics that 96.5% of all accuracy related tax preparer penalties were assessed against commercial tax return preparers who were neither EAs, CPAs nor attorneys. The sub group's report also cited a GAO study based on the 1988 Taxpayer Compliance Measurement Program data which showed compliance by commercial, unlicensed tax return preparers significantly lower than other groups. Finally, the sub group cited the experience of Oregon and California which have tax return preparer licensing programs and have found reduced incidence of fraud.

We, therefore, urge this subcommittee to support the CAG's recommendation to begin a program of registering and regulating commercial tax return preparers.

SHORT TERM SOLUTIONS

The IRS has already taken steps to curtail the opportunities for fraud in the electronic filing program. New this year are procedures requiring those preparers who are not currently regulated and held to the standards of Circular 230, and who participate as electronic filers, to submit fingerprints and pass a credit check.

The IRS has also instituted a program of surprise inspections of offices and files of Electronic Return Originators (ERO) who are electronic filers. These inspections are random and are not predicated on any evidence or suspicion of wrong doing on the part of the ERO. These inspections are very time consuming for the ERO and can completely disrupt a whole day of appointments. We question the IRS's right to "browse" through the records of any taxpayer whose return was prepared by the office being inspected. If these investigations could be focused on practitioners where there was a greater likelihood of uncovering erroneous filing practices, rather than simply at random, they might be more effective. After all, the IRS's examination program focuses on returns where there is a larger possibility of error. Why not apply the same standards to the review of electronic filers?

The IRS has instituted the Questionable Return Program where they are performing more verification on the types of returns which in the past accounted for the preponderance of the refund fraud. This program is causing a great hardship among the legitimate filers of refund

returns and those claiming a refund based on the Earned Income Credit. These individuals have come to count on the Rapid Refunds promised to them over the last five years. The IRS created a demand for the product, and has now cut off the availability of that product.

One possible intermediate solution would be to process in an expeditious manner those returns where the taxpayer's are using the same name, address and social security number as on previous returns, where the taxpayer has a history of claiming the Earned Income Credit, has the same employer and has a history of receiving refunds. Thus, only those returns that showed a variation from the normal and customary pattern of filing or were claiming the Earned Income Tax Credit or other refunds for the first time would be selected for greater scrutiny. This would allow the IRS to process refunds to many taxpayers quickly, fulfilling the promise of the Electronic Filing Program while maintaining safeguards against questionable claims.

Another suggestion would be that since several reports show a significantly lower incidence of fraud and negligence among licensed tax professionals, electronic filing originator status should be limited to those practitioners already licensed and supervised by the IRS.

Another alternative would be to require that Electronic Filing Originators, not covered by Circular 230, post a bond as well as be licensed by the IRS.

The effect of this slow down in processing returns has had a dramatic effect on the tax filing system. A recent report states that electronically filed return usage is down 25%-30%. A recent article in the Wall Street Journal reports that rejected return frequency is up 25%. This is occurring even though many of the returns contain information similar to last year and were filed electronically in previous years and accepted.

We do not believe that there is one easy solution to the problem of refund fraud, especially with the age of electronic filing. However, a combination of the above suggestions should serve to stem the hemorrhage of fraudulent refunds that have been issued during the last several years as well as speed the processing and issuance of refunds to those taxpayers most in need.

NAEA supports all efforts to identify and eliminate fraud in the tax filing system. We believe that the tax professional community is the first line of defense in return preparation fraud detection. We are ready to offer our members' support in this effort. Again, the members of NAEA thank you for this opportunity to testify on this important issue. We offer our assistance to provide any additional information raised by these comments or other areas of concern.

REGULATION AND REGISTRATION OF COMMERCIAL TAX RETURN PREPARERS

JANUARY 18, 1995 COMMISSIONER'S ADVISORY GROUP MEETING

In 1989, the Commissioner's Advisory Group studied the matter of regulating and registering commercial tax return preparers. At the time, the reasons for considering this matter included the following:

1. Any person, regardless of training or experience, may prepare income tax returns for a fee.

2. Commercial tax return preparers generally are not required to subscribe to any rules of professional conduct or professional responsibility.

3. The complexities of the tax laws are such that doubts are raised relative to the overall competence of commercial tax return preparers.

All of these concerns are still valid. In addition, the February 1994 hearings on the IRS Refund Fraud Strategy, held by the Subcommittee on Oversight of the House Ways and Means Committee, indicate a strong need to address the competence and integrity of the commercial tax return preparer community. In fact, close examination of the testimony provided at these hearings reveals support for the regulation and registration concept.

In response to questions posed to them during the hearing, two witnesses who were convicted of preparing false Federal income tax returns made the following comments:

"I am a tax preparer, but I didn't need to apply for any tax preparer (sic)..."

"I filled out 1040s and signed as the preparer of the returns. That is all that is necessary in the system."

"The idea would be for tax preparers, if they (IRS) could oversee them better. I am not an enrolled tax preparer (sic) with the IRS. I can go ahead and sign someone's return. Anyone in this room could sign another person's tax return as information supplied to them to the best of their knowledge and sign a return as a preparer."

The Subgroup also examined preparer penalty data and found the number of return preparer penalties assessed for fiscal year 1993 numbered 2,392. Interestingly, only 80 of these were assessed against Enrolled Agents, attorneys and CPAs (practitioners regulated under Circular 230). Thus, it can be inferred that 96.65% (2,312) of all return preparer penalties assessed for fiscal year 1993 were assessed against commercial tax return preparers. The 1989 CAG looked at similar data from fiscal year 1988 which indicated that 90.30% of all return preparer penalties assessed were assessed against commercial tax return preparers.

The Subgroup likewise took into consideration the recently released General Accounting Office (GAO) report which analyzed the compliance rates of sole proprietors. This report included a break-down of voluntary compliance, reported as a percentage, by type of preparer and was extracted from the 1988 Taxpayer Compliance Measurement Program (TCMP) data. The voluntary compliance percentage for the "other paid preparers" and "National Tax Service" categories, which include commercial tax return preparers, was among the lowest.

Finally, the states of Oregon and California currently have licensing programs in place for tax return preparers. The Ethics in Business Practices Subgroup has solicited input from the administrators of each of these programs to determine their success or failure. The Oregon State Board of Tax Service Examiners responded to several questions we posed to them. These questions and answers are attached to this report as Appendix A. In light of the current concern regarding refund fraud, the statement included in answer #2 "Since licensees can be easily found, fraud is generally low." is particularly interesting.

Having concluded that the regulation and registration of commercial tax return preparers is highly desirable, the Ethics in Business Practices Subgroup presents the following model program to regulate and register commercial tax return preparers.

DESCRIPTION:

Circular 230 would be amended to prescribe rules for the registration of "Commercial Tax Return Preparers".

1. "Commercial Tax Return Preparer" (CTRP) defined:

   The current definition of income tax return preparer found in Internal Revenue Code section 7701(a)(36)(A) would apply. Practitioners currently covered under Circular 230 (Enrolled Agents, attorneys and CPAs) would be exempt.

2. Registration and phase-in period:

After the approval and implementation of this proposal, anyone meeting the definition of CTRP would have one year to register with the Internal Revenue Service without providing proof of continuing professional education (CPE). This one year period would constitute the phase-in period. The group of CTRPs, who would be grandfathered into the program, would be obligated to meet all the requirements of registration renewal as set forth below.

3. Post phase-in period:

Persons desiring to register for the first time after the first year of the program would be required to meet the criteria listed below and submit proof of satisfying a minimum of 24 hours of CPE during the 18 months immediately preceding the receipt of the application for registration. Such proof, the completed registration form and required fee would be submitted to the Internal Revenue Service for acceptance.

4. Criteria for CTRPs:

A. Be not less than eighteen (18) years of age;

B. Continuing professional education requirements must be adhered to as follows:

1. A minimum of 48 hours of approved CPE over a three year period with a minimum of 8 hours of CPE in any one year.

2. Qualifying CPE will be that which meets the definition of "Continuing Professional Education" as found in Treasury Department Circular 230, section 10.6(f).;

3. Evidence of continuing professional education and a renewal application would have to be submitted every three years commencing with the third anniversary of the initial registration.

C. The information submitted on each application for the registration would be subject to IRS verification and investigated in a manner consistent with that of applications for enrollment to practice before the IRS;

D. CTRPs would be subject to the standards set forth in Circular 230;

E. Violations of ethical standards would result in the assessment of monetary penalties as authorized and/or prohibition from further tax return preparation;

F. Limited fees would be paid for registration to make the program self-funding. A study is requested to ascertain the minimum fee requirement;

G. Opportunities for non-English speaking preparers will be made available to accommodate registration and continuing professional education.

H. The program would be administered by the IRS Office of Director of Practice with strong support and referrals from the District Directors' offices.

SUMMARY:

This proposal has evolved after numerous meetings and extensive discussion and study. We recognize that the individuals covered by this proposal provide a vital service to the public. As a result, this program is not intended to limit or reduce the number of available tax return preparers. We have eliminated the second level of CTRP which appeared in our proposal presented at an earlier CAG meeting. It became obvious that the second tier of Advanced CTRP posed many problems including setting limits and/or assigning different responsibilities to each level. We reached a unanimous conclusion that eliminating the Advanced CTRP would enable the program to achieve its goals, simplify its administration and minimize the disturbance to the present system.

Chairman JOHNSON. Thank you both for your very useful testimony.

Mr. Buckley, if you want to just briefly run through your recommendations, I would be interested in hearing those.

Mr. BUCKLEY. OK. Basically we have a four-step program that we suggest. One is to impose higher standards on electronic return originators which is much similar to what Mr. Martin just mentioned. Also, to produce a cooperative public relations campaign between the IRS, the Criminal Investigation Division, and the electronic return originators; require additional process controls by chronic return originators; and to enhance the IRS system checking.

Chairman JOHNSON. As to the current filing season, are there any changes that could be made midstream that might help straighten out some of the problems without reducing the chances of eliminating fraudulent claims?

Mr. BUCKLEY. I would think at this point in time that the IRS would have sufficient returns there that there would be some that they could start processing a lot quicker than what they anticipate, so that many of these taxpayers who are not used to waiting the 8 weeks to get their refunds or maybe 12 weeks if they get this additional form could possibly be served better.

Chairman JOHNSON. I do think that the wait of 2 months while you do point to some real cases of hardship, in general the wait of 2 months is not nearly as great a hardship as the fraud associated with this program and the cost to the taxpayers. So I think this was a necessary step to go through. Why is it that your industry wasn't better prepared for what was going to happen this season? It does appear that notice was given.

Mr. BUCKLEY. I don't feel that we were given proper notice as to the scope of the problem. We knew that they were going to be looking at earned income credit returns. The magnitude of the number of refunds that they have stopped is obviously a lot larger than what we anticipated. I agree with your former statement, Madam Chairman, that we need to do something to stop fraud and 2 months' wait is not that bad. The problem is I think taxpayers and tax preparers should have been able to warn those people much sooner than having to come into our office and then startling them that there may be a problem.

Chairman JOHNSON. Did the tax preparers underestimate the number of people whose Social Security number was inaccurate? I mean you certainly must have known this from past experience, or did you underestimate the number of people that were involved in the EITC?

Mr. BUCKLEY. I think——

Chairman JOHNSON. Both of which facets, seems to me, you would have known from your past experience.

Mr. BUCKLEY. Well, in the past when a return was submitted to the IRS, the primary Social Security number was checked and verified. This year, not only are they checking the primary, but they are also checking the spouse and the children and everyone else that is on the return. Our experience would show that many, many taxpayers out there are filing returns with the identical Social Security numbers that they have used for years. All of a sudden, they

know they have a problem either when the return is rejected when you file electronically or they will receive a notice back from the Internal Revenue Service. So it is very difficult to explain to somebody that you really need to go and check your Social Security cards.

Particularly what we find today are that many spouses who when they got married did not change their name with Social Security records and as a result they have been filing as Mrs. Johnson or Mrs. Buckley all these years, and yet this year they file with that same Social Security number that they have been using and then the return is rejected. So it is not until after the fact that these people understand that they really have a problem.

In regard to your question with the earned income credit, we certainly did underestimate, and I think justifiably from the IRS' point of view, that they would not be stopping as many returns. It just seems incredible that there are so many—such a broad brush has been used to stop the number of fraudulent returns which are currently out there.

Chairman JOHNSON. Well, could you be more specific about this broad-brush issue. Certainly claiming more children, more deductions than you are entitled to, is one cause of a lot of fraud.

Mr. BUCKLEY. Well, Madam Chairman, we have been using the term, "fraud" rather loosely here, as has been indicated from the subcommittee from last year's testimony when I believe it was identified then as problematic refunds rather than fraud, and that problematic does obviously contain some amount of fraud. I think the issues that we have recommended to the IRS—I think some of the things they have done this year as far as having us all get fingerprinted and get an EFIN for each location. I think these are commendable. I think checking Social Security numbers is commendable. But I don't think there is a need out there to stop these millions of returns when you didn't tell the people up front this is what you were going to do.

Chairman JOHNSON. Now, I thought they did tell the people up front this is what they are going to do. The people don't necessarily understand the dimensions of this, maybe they didn't know the dimensions of this, but can you honestly say that people weren't informed?

Mr. BUCKLEY. I can say that in the tax booklet which I think would be the major publication and our major communication that a taxpayer would have a hard time in reading that. There is one small line in there that says that some returns that are filed electronically will be held up to make sure they are accurate. I think that small little blurb in there, as well as in the Commissioner's letter to the taxpayers, which says you must use the proper Social Security numbers, is being taken lightly by taxpayers, as I mentioned, because they have been using these same Social Security numbers for a number of years.

It would seem to me that if they did use these same Social Security numbers this year as they have in the past, that there should have been some way that the IRS could have notified these people last year saying that this Social Security number doesn't belong to you and you are going to have to get this fixed before next filing season.

Chairman JOHNSON. I have seen their letter and it could have been stronger. It could have been stronger in the sense of saying there is a problem with your Social Security number. You are going to have a hard time this filing season. Please check this and this is what you are supposed to do to check it. But many of the people you deal with have never read those directions. They count on you to read those directions. Did you work with your clients to be much more serious about Social Security numbers and about earned income tax credit documentation?

Mr. BUCKLEY. We have worked with our taxpayers on a daily basis in many cases. The problem with the Social Security number issue, as I mentioned, is that until we file electronically and it is rejected, that is when we can tell them they have a problem. It is a very difficult mission to try to tell somebody that there is a possibility that these Social Security numbers are not correct.

Chairman JOHNSON. So it wasn't really a problem for everyone to pick up until the system spit out that yours was not a correct Social Security number.

Mr. BUCKLEY. Right.

Chairman JOHNSON. Nonetheless, it is an important error to correct and will enable us to give a far better quality system. Next season it shouldn't be as much of a problem.

Mr. BUCKLEY. I would hope not.

Chairman JOHNSON. Thank you. Mr. Martin do you have anything you would care to add?

Mr. MARTIN. Well, we—the press release that I saw from the IRS announcing the dual refund system was dated, I believe, December 28. By December 28 most practitioners have already made plans, got our client letters out. Hopefully, our clients read our letters a little bit more than they read the letter from the Commissioner where we alert our clients to things like this. On December 28 our letters are by and large already out. Taxpayers have their information.

Chairman JOHNSON. But you were notified December 28.

Mr. MARTIN. The press release from the IRS that I saw was dated December 28. Yes, ma'am.

Chairman JOHNSON. The IRS was not specific about that earlier, so I was interested.

Mr. MARTIN. I know. The other thing that is possibly unfortunate for one reason or another is that the tax press did not pick up on that press release until around the first of February.

Chairman JOHNSON. That is interesting.

Mr. MARTIN. So most of us read some kind of a weekly journal of tax happenings and when we pick that up, OK, we know there could be a problem here. But, again, by early February we are already seeing clients and clients have been promised—there have been promises. The service has been promising for 5 years what I said in the written statement.

If you file your return electronically, you will have a very short turnaround for your refund. Now all of a sudden, just to turn off that spigot, I think, does create a serious hardship, and it is a hardship that the practitioner community has had to bear, because the taxpayer doesn't go to the IRS and yell and scream at the revenue officer and they don't have a chance to—they won't scream at

the Commissioner. They come to my office and they come to the H&R Block office and they yell and scream at their preparer saying, why haven't I gotten my refund check?

Chairman JOHNSON. I think your comments in your testimony about the history of this issue were very, very instructive.

Mr. MARTIN. I think the IRS should take some of its TSM and buy a historian so they don't keep making the same mistake.

Chairman JOHNSON. I assume you think the elimination of DDI is a good thing so that banks do that checking themselves.

Mr. MARTIN. I think so, yes. It complies with the law, though. The code, as it currently says, a practitioner, a preparer cannot endorse a taxpayer's refund check. That is, in fact, a $500 fine. If I would prepare your tax return, receive your refund check and deposit it right in my account, I would be fined $500.

The way the rapid refund or the refund anticipation loan works, that check comes into the taxpayer's bank account and then is electronically debited. It is only one step removed from the practitioner actually endorsing the check. It is a system fraught with danger.

Chairman JOHNSON. Thank you.

Mr. MARTIN. The other thing that we suggested which I think is a short-term solution is bonding. I mean this is—if we are talking about running the government as a business, if I am dealing with a contractor that is handling that amount of money, we have to realize that most of the refund fraud has emanated not from the taxpayer because they don't have access to the system. It is emanating from preparers who have access to the computer and the modem and the EFIN number, so to these people it is only good business.

Chairman JOHNSON. Mr. Hancock.

Mr. HANCOCK. Thank you, Madam Chairman.

What percentage of your clients file their returns electronically?

Mr. MARTIN. Of mine?

Mr. HANCOCK. Well, both of you probably have about the same percentage.

Mr. MARTIN. No. I don't participate in electronic filing programs at all, personally I do not. Many of our members, probably 50 percent, a survey we did recently about 50 percent or more of our members do participate in electronic filing programs and of them—of those people, I am trying to remember the statistics, about 40 percent of the returns were filed electronically.

Mr. HANCOCK. Do your clients ask you to participate in it?

Mr. MARTIN. No, sir.

Mr. HANCOCK. Do you have a particular client base of some type?

Mr. MARTIN. My client base is mostly professional upper income. They are not getting refunds, and if they are getting refunds, they are not worried about getting them in 2 weeks, 6 weeks, or 8 weeks. I personally have always had problems with the viability of the system and I elected never to participate in it.

Mr. HANCOCK. OK. Mr. Buckley.

Mr. BUCKLEY. We transmitted last year over 7½ million returns electronically. We transmit about 40 percent of the returns that we actually prepare, and we also transmit several million returns for people who have their returns prepared elsewhere or do it themselves.

Mr. HANCOCK. OK. Now, what do you mean you transmit. They complete their own return and bring it in to you and you transmit it electronically, is that correct?

Mr. BUCKLEY. That is correct.

Mr. HANCOCK. Do you have any idea how many of these clients apply for the refund anticipation loan, what percentage of your clients?

Mr. BUCKLEY. I would say certainly a majority of them, maybe 75 percent.

Mr. HANCOCK. Wait a minute. Are you talking about the one that is filed electronically? Seventy-five percent of them ask for these loans.

Mr. BUCKLEY. Approximately.

Mr. HANCOCK. What percentage of your profitability is determined by your fees that you charge on these loan applications?

Mr. BUCKLEY. We don't—we receive a very small fee off the actual loan. We charge a transmission fee whether you get the loan or you don't get the loan. In other words, for the clients who want to come in and just file electronically, they would pay the same price transmission fee as a client who comes in and wants the loan as well.

Mr. HANCOCK. What is that transmission fee?

Mr. BUCKLEY. We charge $25 transmission fee if the return is prepared by H&R Block and $35 if the return is prepared by themselves or someone else.

Mr. HANCOCK. Do you have any idea about the default rate on these anticipation loans, do you have any information at all on those?

Mr. BUCKLEY. No, sir, that is strictly done by the bank. The banks provide those loans.

Mr. HANCOCK. In December 1994 when they announced that there was going to be a slow down because they were going to be checking into fraud, did your organization take any major steps to start telling people that they might be subject to the slow down on the earned income tax credits?

Mr. BUCKLEY. Starting when we opened our offices in January, at that time even we did not know who or had no idea as far as the filters and screens that were going to be in place this year to be able to tell anybody that their returns could be delayed. In fact, when the first IRS money came back, it appeared to us that none of the clients had been—that none of the EITC had been stripped.

The second week when refunds started to hit, at that time we were notified by the bank who handles our refund anticipation loans that they were seeing refunds—the refunds not containing the earned income credit.

At that time, we immediately provided every customer who has earned income credit a letter which told them of the four possibilities that could exist if they were filing a return containing earned income credit, and we continue to do that today.

Mr. HANCOCK. Well, let me just ask the question. How exactly are you all associated with the Beneficial National Bank?

Mr. BUCKLEY. Beneficial National Bank provides the refund anticipation loans for our offices. For clients requesting refund anticipation loans, those loans go through Beneficial Bank.

Mr. HANCOCK. Do you have any joint ownership or joint board of directors?

Mr. BUCKLEY. No.

Mr. HANCOCK. Thank you, Mrs. Chairman.

Chairman JOHNSON. Thank you and thank both of you for being with us today. I appreciate your comments and your insights, and we hope by the next season that some of these problems will be straightened out and some of your comments will be included. Thank you.

Mr. MARTIN. Thank you for inviting us.

Chairman JOHNSON. The hearing is officially adjourned.

[Whereupon, at 1:49 p.m., the hearing was adjourned.]

[Submissions for the record follow:]

Bank One, Columbus, NA
Columbus Ohio 43271 1021

BANK ONE.

March 3, 1995

The Honorable Nancy L. Johnson, Chair
Subcommittee on Oversight
Committee on Ways and Means
1102 Long Worth House Office Bldg.
Washington, DC 20515

5217

Dear Ms. Johnson:

Bank One, Columbus, is an affiliate of BANC ONE CORPORATION, located in Columbus, Ohio. BANC ONE CORPORATION has assets of $88.9 billion and common equity of $7.3 billion as of December 31, 1994. BANC ONE now operates 65 banks with 1408 offices in Arizona, Colorado, Illinois, Indiana, Kentucky, Ohio, Oklahoma, Texas, Utah, West Virginia, and Wisconsin. BANC ONE also operates several additional corporations that engage in data processing, venture capital, investment and merchant banking, trust, brokerage, investment management, equipment leasing, mortgage banking, consumer finance and insurance.

Bank One, Columbus, is a major stakeholder in the affairs of the Internal Revenue Service (IRS). As such, we appreciate the opportunity to comment on IRS budget issues, 1995 filing season, and thank the Chairman and the committee members for this opportunity to express our views. Bank One is a member of the Council for Electronic Revenue Communications Advancement (CERCA) who has expressed its views to you but we would like to add comments we have as an individual entity. Bank One uses its 1,400 nationwide Banking Centers as collection points for self prepared tax returns to be filed electronically. In 1994, we processed over 25,000 electronic filings. In addition we offer Refund Anticipation Loans (RAL) through some 6,500 independent tax preparers. Over 8 million individual taxpayers have availed themselves of these loans since we began processing in 1989. The total RAL market approaches 20 million taxpayers. Many of these taxpayers come back for our service year after year.

Bank One supports the efforts of the IRS to upgrade the United States tax system through its Tax System Modernization (TSM) program. We are aware of major efforts going back to the 1960's to modernize and integrate the tax system to take full advantage of state-of-the-art technology. Previous IRS efforts that were frustrated have led to the current problems involving fraud, delayed processing, and the set back in the number of electronic filings in 1995. Bank One feels it is imperative that the TSM plan be funded and implemented.

The present filing season is a testament to the problems caused by the IRS's inability to keep pace with technology. The delayed refunds, the abandoned phone calls, and the mountains of paper still to be processed speak volumes as to the changes that are necessary.

The announcement concerning the Direct Deposit Indicator (DDI) on October 26, 1994 was a major blow to electronic filing and TSM. It was ill-timed and unnecessary. Attempting to blame fraud on a legitimate 20 million person RAL market is a sham. Rather than trying to place blame for past errors, we need to go forward together to achieve a safe, secure, and responsive tax system. Proper funding for TSM and for current IRS operations is a vital necessity.

In addition to obtaining TSM technology, the IRS needs to update their stand-alone philosophy. In this age of cyberspace, no entity can stand alone as the IRS is attempting to do. They need to embrace the help that has been offered through organizations such as CERCA and individual stakeholders such as Bank One. We stand ready with commitment and resources to help maintain the most efficient and fair tax system the world has ever known. Please urge the IRS to let its stakeholders help.

Sincerely,

John R. Galvin
Vice President
Bank One, Columbus, NA

cc: Margaret Milner Richardson

STATEMENT OF ROBERT E. BARR, PRESIDENT
COUNCIL FOR ELECTRONIC REVENUE COMMUNICATION ADVANCEMENT

On behalf of the Council for Electronic Revenue Communication Advancement (CERCA), I would like to thank the Chair and the members of this committee for the opportunity to express the Council's views on the IRS budget request and on issues that have arisen to date in the current filing season. CERCA is made up of software producers, telecommunications experts, financial institutions, tax practitioner organizations and others committed to responsibly advancing the use of electronic communications with government revenue agencies. In short, this group has come together to work with the federal government and the individual states on the construction and maintenance of the "tax lane on the information superhighway."

As you can see from the above description, CERCA represents a vertical market segment of the tax industry, from the people who prepare the returns through the companies that empower the preparers with software and the financial institutions that participate in the refund process, to the state and federal agencies to which returns are sent. This unique combination of viewpoints allows CERCA to speak from experience on a great variety of topics in the tax filing process. CERCA would like to take this opportunity to express its support for full funding of the Internal Revenue Service's Tax Systems Modernization (TSM) budget request and to note some concerns regarding the early stages of the current filing season.

Internal Revenue Service Budget Request for Fiscal Year 1996

Of all the items in the Internal Revenue Service budget request, the most critical to the American taxpayer and to the return preparation and filing industries is the Tax Systems Modernization (TSM) program. Last year, this program was budgeted for substantially less than the original IRS request and frankly, this cannot be allowed to continue. The IRS needs these funds to more effectively serve the honest taxpayer and to more efficiently track down the fraudulent tax filer.

TSM will improve service to honest taxpayers by enabling the Internal Revenue Service to answer inquiries in one phone call. The new system will more efficiently handle the volume of incoming calls that flood the IRS on a daily basis. Once their calls have been answered, taxpayers will find that the IRS employees answering the phone are better able to serve them with instant on-line access to information that today takes weeks to gather and forward to Service personnel in the field. This new capability will serve to greatly reduce the number of busy signals that taxpayers receive when calling the IRS, a complaint that seems to arise every year under the current system. Through better routing and access features, the technology will allow the Service to answer more incoming phone calls. By reducing the number of second calls needed, the technology will also serve to reduce the overall volume of incoming calls.

The fraudulent tax filer or tax evader, however, will find this new system substantially tougher to get around. TSM will provide IRS collection employees with the data needed to more effectively search for those failing to comply with the tax laws. The new technology will allow the Service to better target their resources to noncompliant taxpayers, through faster and more accurate matching and a greater access to information about the taxpayer. In addition, the technology will free up considerable numbers of full time employees who currently work on inputting paper returns, allowing these individuals to instead review some of the incoming returns for indicia of fraud . All of this together leads to an increase in the effectiveness of collections, which in turn will increase the amount of taxes collected from those taxpayers who do not voluntarily comply with the Internal Revenue Code. The IRS estimates that for each percentage point increase in voluntary compliance, the Treasury collects an additional seven billion dollars. Assuming that the figure is accurate, the Service could more than pay for this program within a year of its full implementation.

As a final note on tax systems modernization, CERCA would like to address some concerns that have been expressed regarding the Service's progress on TSM relative to the money spent to date. The Council's membership includes many software and systems developers who agree that the costliest period for any system is the planning stage, if it is done correctly. Unfortunately, this stage of the process also produces the least short-term tangible benefits. Systems that are not carefully planned or are rushed into implementation invariably fail to perform the tasks for which they are designed. Cautious progress is an indicator of quality systems design, and reducing the funding for the program as a result would amount to punishing the Service for doing the right thing the right way. While it is difficult now to continue funding of this program when few

tangible results can be shown, it will be far more expensive to spend years fixing a system that was rushed into use.

For these reasons, the Council for Electronic Revenue Communications Advancement respectfully asks the members of this committee to take whatever steps are necessary to ensure the full funding of Tax Systems Modernization as the budget request makes its way through the approval process in the House of Representatives. While this program may seem expensive now, the cost of inaction or inadequate action could be far higher.

Filing Season Concerns

Because CERCA represents such a broad spectrum of what the IRS considers its "stakeholder community," its members have seen several different types of problems with this filing season and the months that led up to it. Beginning with indecision on the direct deposit indicator (DDI) in the fall and moving forward to the current confusion on earned income credit refunds and taxpayer identification issues, the Service has made a great many changes to the filing system that have inconvenienced many taxpayers this season. While CERCA wholeheartedly agrees that the system must be protected from the fraudulent filer, the Council would like to make this subcommittee aware of some of the consequences, intended or otherwise, that have arisen as a result of actions taken to curb fraud. In addition, the Council would like to make several recommendations for legislative or administrative actions which could remedy the current situations.

Direct Deposit Indicator

Since the inception of electronic filing, the Internal Revenue Service has provided an electronic filer with two valuable pieces of information when it receives a return electronically. First, the Service acknowledges acceptance of the return, which tells the taxpayer and the electronic return originator (ERO) that the taxpayer's obligation to file a return has been met. Second, prior to this filing season, the Service provided a direct deposit indicator on claims for refunds filed electronically. The DDI told the ERO that the taxpayer could expect to receive a full refund because no federal obligations existed that would reduce it. This indicator enabled the ERO's who provided refund anticipation loans (RAL's) to show the lending bank that the loan could be made based on the full refund.

For the last two years, rumors have run rampant that the IRS would no longer be providing the DDI. In 1993, the Service announced that it would no longer provide the indicator shortly after April 15. Within a matter of months, the Service had responded to stakeholder concerns and agreed to issue the DDI for the '94 filing season. These rumors arose again in 1994 out of concern that the IRS had associated the DDI with the filing of fraudulent returns.

On October 6, 1994, Under Secretary of the Treasury Ronald Noble stated before this very subcommittee that in fact the DDI should remain in place for the '95 filing season. While expressing some concern that the speed with which refunds were provided to electronic filers might limit the Service's ability to properly review the claims, the task force which the Under Secretary headed could not find a direct link between provision of a RAL and the filing of fraudulent returns. In fact, the task force reported that, "[T]he DDI may offer some potential for increased fraud control and for increased ELF filing by genuine taxpayers." Mr. Noble went on to state before this committee that the DDI should be studied during the 1995 filing season in order to weigh its benefits against its potential for facilitating fraudulent refund claims.

This position led to the formulation of plans for the '95 filing season based on the availability of the DDI. Advertising campaigns were planned, financial institutions prepared for the influx of the loan applications, approximately 25,000 practitioners readied themselves to provide the RAL service to clients and millions of taxpayers prepared to receive RAL's

Within three weeks, then-Secretary of the Treasury Lloyd Bentsen announced that the DDI would not be available for the 1995 filing season, stating that "a very high number of EITC fraud schemes involve refund anticipation loans, and those loans are based on the direct deposit indicator." As a result, two of the four financial institutions that previously made refund anticipation loans refused to provide the Service this year. The top price of a RAL rose from $34

in 1994 to $89 in 1995. This means that the taxpayers who need their refund most of all will now be receiving less of the money they are due.

The circumstances surrounding the DDI and the 1995 filing season have led CERCA to respectfully make the following two recommendations to this committee. First, set a published date after which no significant changes could be made to the rules affecting the upcoming tax filing season. Such a date would give stakeholders the ability to make definite plans after that date. For instance, had this restriction been November 1, 1994, the Treasury Department could still have changed its position after testifying before this committee and those affected this year would have been on notice that nothing was final until November 1. Such a notice might have saved many stakeholders considerable inconvenience and expense this year. CERCA would prefer a much earlier date, however.

Second, until someone proves the allegations of fraud associated with the RAL, CERCA asks that the direct deposit indicator be reinstated in order to limit the cost of the refund anticipation loan to the taxpayer. Under Secretary Noble never stated that the Treasury's Task Force on Refund Fraud found conclusive evidence to determine whether the loans were a cause of fraud. He recommended further study before taking action on the issue. Under the current circumstances, the IRS is taking halting regulatory steps which are slowly strangling the RAL providers out of the business.

CERCA asks that the study recommended by Under Secretary Noble be conducted during the 1996 filing season. If the RAL is causing fraud, we ask that the industry be given at least one filing season to work with the Internal Revenue Service to correct the problem. If further study shows that the steps taken to correct the problem have failed, we would support action by this subcommittee to eliminate the program completely.

Earned Income Credit Split Payments

Another step taken by the IRS to stem the tide of fraudulent refunds in the 1995 filing season has been the bifurcation of earned income credit refund payments. Many taxpayers qualifying for the credit, particularly those filing as either head of household or single, have found that the Service will provide that portion of their payment which represents the refund of withheld taxes within the normal time period and in the form requested. However, the earned income credit portion of the refund is being held back for eight to ten weeks on as many as seven million returns. This action is necessary to allow the Service to more closely examine the taxpayer's claim. The difficulty arises with the fact that, once authorized, the earned income credit is mailed directly to the taxpayer in the form of a check. This has caused three problems for affected taxpayers.

First, it holds the money that Congress has designated for low income taxpayers out of the hands of those taxpayers for an inordinate amount of time. No one argues with the need for the Service to secure the system, but we are talking about money upon which America's neediest taxpayers have come to rely. Currently, the delay is eight to ten weeks. As the filing season progresses and the Service becomes increasingly busy, who is to say how long it will take to turn the earned income credit refunds around? Something must be done to speed up the process. In the future, full funding of tax systems modernization will make this process much faster and much more responsive to taxpayer needs. For this year, however, faster response on questionable earned income credits will probably require an increased manpower commitment from the IRS.

Second, the current system partially eliminates the direct deposit option for affected taxpayers. We are not talking about the direct deposit indicator now, but simply the option to have your refund deposited directly into your account. Keep in mind that this affects America's poorest taxpayers, individuals for whom the direct deposit represents a secure way to receive a refund, as opposed to simply a convenience. Many taxpayers who receive the earned income credit live in neighborhoods where theft of government checks from mailboxes is a common occurrence and where getting a check to the bank can be a risky venture. These individuals count on direct deposit to avoid the necessity of carrying a substantial check to the bank and making a deposit in person.

Third, it creates an often unforeseen financial obligation on taxpayers who receive refund

anticipation loans. These individuals receive their RAL based on the full amount of the refund which the bank believes will be deposited into the taxpayer's account. When the check for the earned income credit goes to the taxpayer, it creates an obligation on the part of the taxpayer to return the money to the RAL lenders. Those who receive the checks often believe that, since it comes from the government, it must be free of encumbrance. Many never bother to contact the ERO who filed the return to find out exactly what has happened. When this obligation goes unpaid, it eventually winds up on a credit report and comes back to haunt the taxpayer at a future time.

In response to these concerns, CERCA respectfully recommends that action be taken to ensure that once a taxpayer qualifies for and requests a direct deposit, the entire refund is deposited directly to the taxpayer's account. If the Service needs extra time to examine claims for the earned income credit, a bifurcated payment system should certainly be allowed. However, the taxpayer's request for a direct deposit should be honored for both segments of the payment.

Social Security Number Scrutiny

The last concern that has arisen out of this tax season is the closer scrutiny of social security numbers by the Internal Revenue Service. Clearly, this increased emphasis on accuracy is a vital part of the efforts to stop the flow of fraudulent refunds out of the Treasury. Nevertheless, some concerns have arisen with the coordination between the Internal Revenue Service and the Social Security database used to verify taxpayer numbers. CERCA would like to request that the communications process between these two agencies should be reviewed in order to determine what measures can be taken to more effectively and efficiently match taxpayer names and social security numbers.

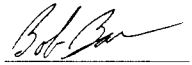
Constructive Congressional Relationship Needed

Finally, CERCA would like to respectfully recommend that this committee take a proactive stance toward the Internal Revenue Service, working to head off difficulties before they grow into nationwide problems. In addition, we would like to offer the Council for Electronic Revenue Communication Advancement as a resource for you in your work with the IRS to make sure that the tax system runs at maximum efficiency and effectiveness. CERCA was created at the behest of the Internal Revenue Service to provide a sounding board that represented every facet of the tax preparation and filing industries. Due to the breadth of its membership, CERCA can provide detailed information on almost any function in the process of filing a return.

Conclusion

In closing, we would like to thank this honorable committee for the opportunity to submit this written statement and we hope that you will consider the Council for Electronic Revenue Communication Advancement as a valuable source of information in your work to improve the administration of the tax system.

Respectfully submitted



Robert E. Barr
President
Council for Electronic Revenue
Communication Advancement

STATEMENT OF WILLIAM STEVENSON, CHAIRMAN OF FEDERAL TAXATION NATIONAL SOCIETY OF PUBLIC ACCOUNTANTS

On behalf of the 20,000 members of the National Society of Public Accountants (NSPA) and the 5 million small businesses and individuals they serve, I would like to thank the Chair and the members of this Subcommittee for the opportunity to express the Society's views on the IRS budget request and on issues that have arisen to date in the current filing season. NSPA's members, individuals providing a variety of accounting and tax services to small businesses and individuals throughout the nation, would like to express their support for the Service's Tax Systems Modernization (TSM) program. The Society would also like to take this opportunity to inform this Subcommittee of several concerns that have arisen as a result of fraud initiatives taken by the Internal Revenue Service this filing season.

Tax Systems Modernization

Of all the items in the IRS budget, TSM is the one program that has the potential to pay exponential dividends for the federal government. While the remainder of the Service's budget request focuses on increasing productivity by increasing staff and resources spent on production in the current system, TSM requests funding for computer systems that will empower Service employees to produce at levels far beyond their current output. The new system, once in place, will greatly improve the Service's ability to administer the tax system, to apprehend fraudulent taxpayers and to serve honest taxpayers.

The Internal Revenue Service needs Tax Systems Modernization because, once implemented, it will greatly reduce the cost of administering the tax system. Processing of returns will be more efficient with the addition of new technologies in optical scanning of paper returns as well as the transmission of electronically filed returns. Examinations will be more effective when the examiners have ready access to prior year returns at the push of a button on their portable computers. Returns and refunds will be more carefully and quickly scrutinized by improved document matching systems, allowing the Service to process legitimate refunds in less time and to identify questionable refunds before fraudulent filers have a chance to take the government's money and run. Finally, TSM will allow the IRS to effectively add much more than the 888 employees they have requested this year, as those employees who currently spend their days processing paper and inputting data can be retrained to spend their time scrutinizing returns for key signs of fraud.

Fraudulent filers would be the first to notice the Service's improved capabilities, as the increasingly effective computer analysis and the increased level of human analysis will weed out more and more of the fraudulent returns that rob the Treasury of an estimated $5 billion annually. Today, the Service is charged with using a vintage 1960's computer system to track down sophisticated tax avoidance schemes born of 1990's technology. With modern technology, the Service could better process and analyze all of the information returns that it receives, a key element in finding fraudulent filers. For every one percentage point increase in voluntary compliance levels, the Department of Treasury estimates that an additional $7 billion dollars in revenue is collected. Given that estimate, this system could pay for its 1996 budget estimate more than five times over by simply raising the compliance level by one point. Given that it has the potential to increase voluntary compliance by far more than one percentage point, TSM represents a great investment in stopping the fraudulent filer and collecting the proper amount of taxes owed to the Treasury.

Aside from the benefit that honest taxpayers receive when fraudulent filers and tax avoiders are brought into compliance, the honest taxpayer will also find a much more responsive Internal Revenue Service once TSM has been fully implemented. The IRS is the only government agency that, by law, all American taxpayers must contact every year. As such, the method in which the IRS provides service to the taxpayer will often form a taxpayer's opinion of the federal government as a whole. Under the current system, Congress hears annually from the General Accounting Office (GAO) about how the Service is unable to effectively answer its telephones and that those taxpayers lucky enough to get through once often find that it takes several calls to resolve their problems.

TSM offers an effective remedy to this currently unacceptable state of affairs first by empowering the Service to answer more telephones and second by enabling Service employees answering those phones to resolve taxpayer issues in only one call. Effective routing of calls

to the proper desk within the Service will provide taxpayers with better information on the first call. Making taxpayer information available via computer to the person answering the telephone will provide Service employees with the ability to resolve the question during the course of the first call, rather than having to request paper copies of returns from central filing locations and waiting weeks to receive them.

Because TSM will mean a more efficient Internal Revenue Service, better able to catch the fraudulent filer and the tax evader and better able to serve the honest taxpayer, NSPA respectfully requests that this Subcommittee take whatever steps possible to support the Service's request as the budget process continues over the next few months.

Current Filing Season Concerns

The Internal Revenue Service has gone to great lengths this year to curb refund fraud and the tireless efforts of the individuals charged with developing new safeguards are to be commended. However, NSPA would like to bring to light several concerns that have arisen with these safeguards and with unintended consequences that may affect honest taxpayers and practitioners as well as those that the safeguards were designed to apprehend. These concerns center first around procedures that the Service has implemented which place additional burdens on practitioners during busy season and second around steps that the Service could take to more effectively communicate some of the nonconfidential aspects of the revisions made to the return filing system this year.

Practitioner Concerns

NSPA recognizes that some of the fraud problems that have come to light in recent years have been caused by unscrupulous practitioners exploiting weaknesses in the tax system that they may have discovered in the course of their practices. Nevertheless, the Society's members have expressed a growing concern that the Service's efforts to stop fraudulent practitioners are increasingly hampering the ability of honest practitioners to conduct their practices during busy season. The clearest example of this problem is a procedure known as an "electronic filing compliance check," under which a practitioner who has been accepted to transmit returns electronically to the Service is examined for compliance with the rules governing electronic filing detailed in Revenue Procedure 94-63.

Ideally in an electronic filing (ELF) compliance check, Service personnel will come into a practitioners office, review the signature documents and W-2 forms which the practitioner is required to keep on file, briefly review security measures regarding the use of the electronic filing identification number (EFIN) and leave the practitioner's office in a relatively short period of time. This year the Service has taken several steps toward improving this practice, most notably scheduling appointments with practitioners where no suspicion of criminal activity exists, as opposed to last year's practice of performing all of these visits unannounced.

Two remaining steps are needed in order to make this program fair to the practitioners who are forced to undergo these checks. The Internal Revenue Service needs to publish a clear list of the documents that an agent is allowed to request in these checks and establish a time limit after which Service personnel should have to show reasonable cause for continuing the check. It is only fair that a practitioner undergoing an exam of this nature should be told what he or she is expected to produce and the amount of time allowed for the exam under normal circumstances. If the exam shows signs of fraud that require deeper investigation, a practitioner should be informed of the problem before the exam extends past the designated time.

NSPA does not dispute the Service's right to perform these checks and the Society acknowledges the need to perform them unannounced in certain circumstances. What we need the Service to understand is that practitioners are already swamped at this time of year and the intrusion must be kept to a minimum. If the IRS agents performing these exams have a specific checklist of what to look for and the practitioners know what to produce, these procedures don't need to take more than a few moments. Instead, different Service personnel ask for different documents and some practitioners lose substantial amounts of time to these exams at a time of year when they can least afford it. We ask for this Subcommittee's

assistance in working with the Internal Revenue Service to develop a reasonable regulation that will solve this problem.

Communications Issues

The problems that have arisen this year as a result of poor communications regarding the new steps that the IRS has taken to stop refund fraud are best explained by looking first at an example of how well the Service can communicate on these issues when it has the time and the resources. This year, as part of its efforts to control refund fraud, the IRS placed new restrictions on electronic return originators (ERO's), the practitioners who register to transmit returns electronically to the Service. New applicants would have to go through a substantial review process and even those renewing prior year's applications could find themselves submitting substantially more information. The new rules would affect many practitioners and getting the information out to them was of critical importance both to the IRS and to organizations like NSPA.

The day before the IRS made its formal announcement of the new rules, a meeting was held with practitioner organizations in Washington, DC. The Service released to the organizations advance copies of the Revenue Procedure describing the application process and the background check requirements. Several top level IRS staffers familiar with the program made themselves available to answer any questions that arose either at the meeting or later. This outreach effort was successful because it enabled the associations to carry accurate information to our members almost before they heard it anywhere else and it empowered the groups to accurately answer the question of those members who had heard bits and pieces of information elsewhere. It recognized the fact that on many key issues, the IRS and the practitioner community are in fact partners in the administration of the tax system.

Unfortunately, this level of communication on the new fraud control programs this year did not continue. Since the introduction of the new ERO rules, three examples of inadequate communication between the Service and the practitioner community have arisen that clearly demonstrate the importance of this partnership.

One new tool implemented this year was the 1040-V voucher form, designed to help the Service better track payments for balance-due returns filed electronically and for other specialized types of individual returns. The Service has also run several experimental programs in different districts aimed at more efficiently processing payments, including providing different addresses to which taxpayers can mail their return depending on whether they are getting a refund or paying a balance due. The Service did not adequately publicize these programs before filing season began, though, and groups like NSPA have fielded a considerable number of questions from confused practitioners who, after many years in the business, find themselves in the embarrassing position of not knowing where to send their clients' returns.

As a result, the IRS released on February 7 a "Practitioner Alert" attempting to clear up the confusion caused by the new procedures. While the release did answer the questions of most practitioners, the timing makes the release less than fully effective. Many practitioners, even at the beginning of February, are so immersed in tax preparation that few outside sources of information reach them effectively. In order to effectively support these IRS tests, the practitioner community must be brought into the loop much earlier in the development of the new procedures.

Another new procedure that the IRS put into use this year to control fraudulent claims for the earned income tax credit (EITC) is a split payment of refunds that include a questionable claim for the credit. This extra time allows the Service to perform more detailed checks on these questionable claims while still refunding withheld taxes to the taxpayer as quickly as possible. While these new checks will undoubtedly save the Treasury from paying out fraudulent claims, inadequate communication regarding the process has led to considerable confusion among the taxpaying public and the practitioner community.

The Society would like to make perfectly clear that we do not question the right of the Service

to perform these additional checks. In fact, we wholeheartedly support the IRS in these critical efforts. We ask only that the Service recognize the role that the tax practitioner plays as a liaison between the taxpayer and the tax system. By informing practitioners early about these new procedures, practitioners can in turn inform their clients and improve their understanding of the filing process. When practitioners are left to find out over the course of filing season what changes are affecting their clients, taxpayers are left feeling victimized by a system that they cannot understand.

Finally, the National Society would like to address the very sensitive issue of matching social security numbers. In this case, it really seemed as though the system was working. As early as last June, Commissioner Richardson made clear to everyone involved with the system that social security numbers should be double-checked by practitioners. NSPA reminded its members no fewer than four times throughout last summer and this fall through newsletter articles.

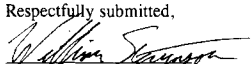
Nevertheless, the severity of the checks has surprised the preparer community this year. Electronically filed returns that were accepted without question last year are being rejected this year because, among other reasons, middle initials are missing and because married individuals who have filed jointly for years are finding that the Service has no record of a name change after their wedding. These screens are currently causing problems primarily for electronically filed returns, since those returns are typically filed early in the season and the taxpayer finds out more quickly that the return has been rejected. Once the paper filing season picks up, it appears likely that these new procedures will substantially slow the processing of those returns as well. Practitioners are now being forced away from using the mailing label which the IRS provides the taxpayer, an important tool for IRS processing. Under the current system, the information on that label could fail to match the social security numbers on file for the individual, due to missing middle initials, married names and other similar circumstances. In order to protect clients from these potential pitfalls, practitioners are mailing the returns with taxpayer names and identification numbers printed by computer onto the form.

In closing, NSPA would like to note that the Internal Revenue Service has gone to great lengths this year to comply with the mandate from this Subcommittee that the flow of fraudulent refund money out of the Treasury be stopped. Nothing in this statement is intended to imply that the steps taken by the Service are improper or unwarranted, although in the case of social security matching, the Society would submit that the system could have been more taxpayer friendly. The members of NSPA would like to point out, however, that these critical steps could have been more effective for the IRS and less burdensome to taxpayers and tax practitioners around the country if the Service had been more forthcoming with details.

Throughout the fall, NSPA was told by key Service personnel that, "If we tell you everything we are doing to protect the tax system, we cannot effectively protect the tax system." While that statement is true to some extent, the Society respectfully submits that if the IRS does not tell tax practitioners what it is doing to administer the tax system, the Service will hinder its ability to effectively administer the tax system. We ask this Subcommittee to take an active role in making sure that this critical information reaches practitioners and taxpayers in a more timely manner in the future.

On behalf of the National Society of Public Accountants, I would like to thank Madam Chair for providing us with the opportunity to submit comments on these topics which are so critical to our members. NSPA wishes you success in your efforts toward overseeing the tax system, and we hope that you will consider the Society as a valuable resource in support of those efforts.

Respectfully submitted,



Dr. William Stevenson
Chairman of Federal Taxation
National Society of Public Accountants

STATEMENT OF STEVE J. SAFIGAN, PRESIDENT UNIVERSAL TAX SYSTEMS, INC.

Address: 6 Mathis Drive, NW
Rome, Georgia 30161

Telephone no.: (706) 232-7757

The attached statement responds to certain comments made by IRS Deputy Commissioner Michael Dolan during The House Ways and Means Oversight Committee hearing on Monday, February 27, 1995 convened to address Tax Systems Modernization and the 1995 tax filing season. More particularly, Mr. Dolan's comment that there is "statistically valid" data showing the DDI to be material in causing fraud contradicts the findings of the Task Force appointed by the Treasury Department that addressed the DDI under the direction of Under Secretary of the Treasury Ron Noble.

During Mr. Noble's testimony to this Subcommittee on October 6, 1994 as to whether the IRS should abolish the DDI, he stated that The Department of the Treasury was not concerned that the DDI would cause fraud losses to the IRS. Rather, he testified that the DDI could play a role in improving fraud detection and that banks offering refund anticipation loans, rather than the IRS, would be at risk of loss. Mr. Noble also stated that now was not the time to remove the DDI, but rather the impact of the DDI should be continued to be examined during the 1995 filing season.

Despite the above findings, on October 26, 1994 Secretary of the Treasury Lloyd Bentsen announced the elimination of the DDI.

The actions taken during the current filing season regarding the DDI have simply not accomplished the same nor acceptable goals as communicated by the IRS. Nor does the current preemptive EITC withholding program attempt to prevent innocent and honest taxpayers from being unnecessarily and negatively affected.

I would like to thank the Chairman and the members of this Subcommittee for the opportunity to express our views. We are Universal Tax Systems, Inc., a developer of tax preparation software and a third-party transmitter of electronic returns. Last year our software was used to transmit well over one million tax returns electronically to the IRS and 30 state revenue departments. Our software was also used at hundreds of IRS VITA sites, district offices, service centers, and military installations here and abroad. We also file electronically for home users of tax software packages designed for individuals who do not use a preparer. We are in our second year of involvement in the IRS File-from-Home initiative. Our president, Steve Safigan, serves as the Vice-President, Infrastructure for the Council for Electronic Revenue Communication Advancement (CERCA) and is an active member of the Electronic Filing Committee of the National Association of Computerized Tax Processors (NACTP).

We wish to express alarm at some of the statements made by Deputy Commissioner Michael Dolan when questioned by Chairman Johnson about the Direct Deposit Indicator (DDI). If you recall, Mr. Dolan attempted to defend the IRS' decision to retain the DDI during the 1994 processing season, but removed it for the 1995 processing season.

Mr. Dolan claimed that there was "statistically valid" data showing that the DDI indeed caused fraud, and that the data was collected during the 1994 processing season. This was the reason, he claimed, for the decision to remove the DDI. His testimony contradicts the Treasury Department's own findings. As you know, this very Subcommittee directed then-Secretary of the Treasury Lloyd Bentsen to commission a task force to examine refund fraud and to make recommendations. The task force was convened under the direction of Under Secretary Ron Noble. Mr. Noble reported his findings in thoughtful and well-informed testimony to this Subcommittee on October 6, 1994.

Mr. Noble devoted 3 pages of his testimony to the question, "Should the IRS abolish the DDI?" His testimony can be summarized as follows.

> The Task Force found two grounds for concern about the DDI: cost and speed... if the IRS is to continue the DDI, the RAL banks that benefit from it should pay the administrative costs of the DDI check. Were they to do so, the cost concern would not be a major one. With regard to the second issue the speed with which electronic refunds can be delivered, our concern is <u>not</u> that the DDI will cause the IRS to suffer fraud losses. If the IRS pays no refunds until it receives all of the paperwork that must accompany an ELF return and until all of the detection procedures currently planned for the 1995 and subsequent filing seasons have been undertaken, the issuance of a DDI should neither increase nor decrease the likelihood that the IRS will be the victim of ELF fraud. As long as the IRS will run necessary checks on all electronic returns, all will be screened equally without regard to whether a DDI has been issued...the irony is that the speed of the DDI and RAL loans may lead in a relatively short time to improved fraud detection. This irony is attributable to the fact that, if the IRS detects problematic returns and stops refunds, the banks rather than the IRS will be at risk of loss... Thus, the Task Force believes that the DDI may offer some potential for <u>increased</u> fraud control and for increased ELF filing by genuine taxpayers... Accordingly, the Task Force concludes that this is not the time for a firm recommendation either to continue the DDI indefinitely or to kill it immediately. In lieu of either of these extremes, the Task Force believes that Treasury and the IRS should continue to examine the impact of the DDI on electronic filing in the next filing season and to determine what effects it has on fraud control and on incentives for ELF filing.

Twenty days later, on October 26, 1994, then-Secretary of the Treasury Bentsen announced the elimination of the DDI. Mr. Noble and Commissioner Richardson were in attendance. In light of subsequent actions, Mr. Noble might well regret the candor he displayed in his testimony before this Subcommittee.

Unbiased examination of the record would indicate that one of the following must be true: a) no "statistically valid" research exists showing such compelling evidence as Mr. Dolan testified; b) this research was withheld from Mr. Noble's task force; or c) the Task Force reviewed the research and considered it not worth mentioning.

Our conclusion is that the IRS is attempting to strangle the RAL banks out of business by exposing them to unacceptable risk. This strategy encourages tax cheats, deadbeat parents, and other federal debtors to defraud the banks using the U.S. Tax System. The removal of the DDI was only partially successful at eliminating refund loans. The IRS then instituted its EITC withholding program, which delayed payment to millions of eligible EITC recipients. Our examination of this program indicates that the IRS' initial screening criteria consisted primarily of two filters: a) the taxpayer claimed EITC, and b) the amount of the EITC was above a certain dollar threshold. This is hardly a program designed to assure that the honest claimant receives the EITC he/she deserves. More importantly to the financial institutions, the delayed payment was not directed into the taxpayer's account at the RAL bank, as the taxpayer requested.

Private industry knows well what's at stake if the fraud issue is not dealt with decisively. The sad fact, to quote Mr. Noble, is that "EROs and ERTs have the potential to serve as eyes and ears in the problematic refund prevention and detection effort." Instead, the IRS has chosen to demonize the financial institutions and more than 25,000 EROs who offer RALs to clients who appreciate the service. Our experience would indicate that the IRS' Social Security Number verification program is the only fraud prevention measure which was worth its expense and impact. The SSN verification program was tremendously effective in driving most fraud from the system. We certainly believe the IRS has the right to delay any suspicious refunds, so long as the IRS has legitimate reason to suspect that each return is problematic, the public is informed of any severe or widespread impact, and the taxpayer's original instructions are followed concerning where the refund is directed.

JOHNSON ANNOUNCES HEARING TO EXPLORE THE DEVELOPMENT OF TAXPAYER BILL OF RIGHTS II LEGISLATION

Congresswoman Nancy L. Johnson (R-CT), Chairman of the Subcommittee on Oversight of the Committee on Ways and Means, today announced that the Subcommittee will conduct a hearing to explore the development of Taxpayer Bill of Rights II legislation during the 104th Congress. **The hearing will be held on Friday, March 24, 1995, in the main Committee hearing room, 1100 Longworth House Office Building, beginning at 9:00 a.m.**

This hearing will feature invited witnesses only. In view of the limited time available to hear witnesses, the Subcommittee will not be able to accommodate requests to testify other than from those who are invited. Those persons and organizations not scheduled for an oral appearance are welcome to submit written statements for the record of the hearing.

BACKGROUND:

The term "Taxpayer Bill of Rights" refers to legislation that combines numerous individual provisions to strengthen the rights of taxpayers in their dealings with the Internal Revenue Service (IRS). The original Taxpayer Bill of Rights (TBR) became law in 1988. It sought to create a more level playing field between taxpayers and the IRS by creating over one dozen procedural safeguards for taxpayers. For example, it gave taxpayers a legal right to sue the IRS for up to $100,000 in damages in order to redress reckless actions taken by IRS agents in collecting taxes. It gave taxpayers in financial difficulty the statutory right to pursue installment payments plans with the IRS. It also prohibited the IRS from evaluating collection agents based on their collection results and from imposing collection quotas on its agents. Finally, it gave taxpayers who prevail over the IRS in litigation the right to have the IRS reimburse part of their attorney fees in some circumstances.

The 1988 legislation was a step in the right direction, but the general consensus was that much more could be done to help taxpayers. The Oversight Subcommittee held two days of hearings in 1991 to explore legislation to build on the 1988 TBR and further improve taxpayer safeguards and rights in dealing with the IRS. This hearing activity led the Subcommittee to conclude that it would be desirable to pursue a Taxpayer Bill of Rights II (TBR2). The Subcommittee Members developed H.R 3838 as legislation to create the taxpayer safeguards that they had identified as being helpful to taxpayers. H.R 3838 was introduced in November, 1991. A modified version of H.R. 3838 was included in H.R. 11, the Revenue Act of 1992, which passed Congress in October 1992, but was vetoed by President Bush for reasons unrelated to the TBR2 provisions.

The TBR2 provisions in H.R. 11 contained over two dozen provisions to help taxpayers. For example, one provision would have expanded the power of the Taxpayer Ombudsman in the IRS to issue protective orders to help taxpayers who were being treated unfairly by the application of normal IRS procedures. It would have imposed on the IRS an obligation to take reasonable steps to corroborate information returns whose accuracy is

disputed by the taxpayer. It would have given the IRS the authority to waive the interest on late tax payments in cases where the taxpayer had a good reason for the late payment. (Under current law, the IRS has broad authority to waive penalties but not the interest on late tax payments.) It also would have required the IRS to give that taxpayer 30 days advance notice before it revoked an installment payment agreement that it previously had entered into with a taxpayer.

The need for a Taxpayer Bill of Rights II has not diminished since 1992. Taxpayers would benefit if their rights were strengthened in dealing with the IRS. A good starting point in exploring expansions of the Taxpayer Bill of Rights in the 104th Congress would be the provisions that passed Congress in 1992 as part of H.R. 11. In addition, other legislation has been introduced in the 104th Congress, which builds on the earlier TBR.

In announcing the hearing, Chairman Johnson said: "When the average taxpayer goes up against the IRS, it's like a contest between David and Goliath. We should investigate ways to safeguard the rights of taxpayers in these contests. Taxpayers have a duty to pay their lawful tax liability, but they should not be put at a disadvantage by procedural rules and IRS policies that make the David and Goliath contest any more one-sided than it often is."

DETAILS FOR SUBMISSION OF WRITTEN COMMENTS:

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement by the close of business, Monday, April 3, 1995 to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filing written statements wish to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Subcommittee on Oversight office, room 1136 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

Each statement presented for printing to the Committee by a witness, any written statement or exhibit submitted for the printed record or any written comments in response to a request for written comments must conform to the guidelines listed below. Any statement or exhibit not in compliance with these guidelines will not be printed, but will be maintained in the Committee files for review and use by the Committee.

1. All statements and any accompanying exhibits for printing must be typed in single space on legal-size paper and may not exceed a total of 10 pages including attachments.

2. Copies of whole documents submitted as exhibit material will not be accepted for printing. Instead, exhibit material should be referenced and quoted or paraphrased. All exhibit material not meeting these specifications will be maintained in the Committee files for review and use by the Committee.

3. A witness appearing at a public hearing, or submitting a statement for the record of a public hearing, or submitting written comments in response to a published request for comments by the Committee, must include on his statement or submission a list of all clients, persons, or organizations on whose behalf the witness appears.

4. A supplemental sheet must accompany each statement listing the name, full address, a telephone number where the witness or the designated representative may be reached and a topical outline or summary of the comments and recommendations in the full statement. This supplemental sheet will not be included in the printed record.

The above restrictions and limitations apply only to material being submitted for printing. Statements and exhibits or supplementary material submitted solely for distribution to the Members, the press and the public during the course of a public hearing may be submitted in other forms.

Note: All Committee advisories and news releases are now available over the Internet at GOPHER.HOUSE.GOV, under 'HOUSE COMMITTEE INFORMATION'.

*****

Chairman JOHNSON. Good morning, ladies and gentlemen. I welcome you to our hearing to explore the development of a Taxpayer Bill of Rights II in the 104th Congress.

The primary mission of the IRS is enforcing our Nation's tax laws and collecting taxes that are legally owed. They collect $1 trillion in taxes a year. They struggle with $150 billion that people don't voluntarily offer with an outmoded computer system and 114,000 employees. On the whole, they do an outstanding job, but as with any big organization that has to do something that not everybody thinks is fun, they have some hard times and can be heavy-handed.

In the past, we have written Taxpayer Bill of Rights legislation. In 1988, we adopted a dozen procedural safeguards for taxpayers. We allowed taxpayers to make installment payments under certain circumstances and also gave taxpayers who prevail over the IRS the right to have the IRS reimburse their attorneys' fees in certain circumstances.

In the early 1990's, we gave a lot of time and attention to trying to assure that the playing field between the Government and its people on tax issues was relatively level. Unfortunately, that legislation, while it was broadly supported by the committee and was included in H.R. 11, was in the end vetoed by President Bush for unrelated reasons.

We now return to the issue of a Taxpayer Bill of Rights, and it is my intention and that of my committee to consider the provisions that we looked at in the early 1990's and to listen to our colleagues and listen to the people out there to see what measures are appropriate at this time to assure that in this period when, frankly, the IRS is faced with enforcing a far more complex code than a few years ago and a higher level of willingness on the part of people to deceive and dissemble in regard to their tax obligations and, therefore, has required the Government to have a far more aggressive antifraud program, that in this setting we also deal with the problems that intrusion and the disparity between the resources of the Government and particularly small individual taxpayers is properly balanced and that citizens in America don't feel unnecessarily powerless and defenseless in the face of the Government. Yet the Government must have the tools and position it needs to assure compliance with our Tax Code and with the obligations each citizen assumes to support the services of Government.

I yield now to my colleague, Mr. Matsui, the ranking member of the Oversight Subcommittee.

Mr. MATSUI. Thank you very much, Chairwoman Johnson. I first of all want to thank you for holding these very, very valuable hearings. I think, obviously, the fact that you have taken such a strong leadership role in this will mean that we will undoubtedly this year have legislation prepared, and I really appreciate the fact that you are moving in that direction. So I want to thank you very personally.

Second, very briefly, I think you gave an important and strong statement about what these hearings and future legislation are all about. But I might just add that, as you stated, we want balance in the collection of revenues to the Federal Government. Certainly, the Internal Revenue Service, which has a great deal of power and

influence over American society, must understand that taxpayers do have some rights and remedies. And so the issue of balance is very critical.

At the same time, I would hope that the Service and its valuable employees understands that this is not meant to cast aspersions upon the Internal Revenue Service itself. There are many tools, for example, that the Service does not have that I am sure it would like to have. It cannot waive penalties when the Service, for whatever reason, is not able to process a taxpayer's claim. Oftentimes, liens are misfiled. The Service does not have the ability to lift those liens. And so there are many valuable tools that we need to give the Service in order to have the Service do its proper work.

So I would not want the Service to view this as a threat, but to view this as a process in which all of us are working together to provide the best service possible to the American taxpayer.

So, again, I want to thank you very much for holding these hearings, and I look forward to the witnesses and certainly the markup of the legislation when it becomes available.

Chairman JOHNSON. Would any other member of the committee care to make a comment?

[No response.]

Chairman JOHNSON. We are pleased to welcome the Honorable Senator Grassley of Iowa as our first witness.

Senator Grassley, you have done a lot of work in this area yourself. We are pleased to have you here this morning, and we look forward to working with you on legislation that we hope not only will be considered by the House and the Senate, but let me make this point at this time since I rarely have a chance to say this directly to an esteemed Member of the other body.

I would hope that as we move this legislation forward that it could go to the floor separately and independently and not part of a whole great big bill. I think it is important in this era of public discouragement, in a sense, with the Congress that we move bills succinctly and independently so people can see exactly what we are doing. In this case, it is so important that people see that we are trying to balance their rights against their Government's at the same time we preserve the power of their Government to do what is in the public interest. For them to be able to see that legislation and hear that debate I think is important, and I hope to move this as an independent bill forward. And I would hope that it would be able to have that same treatment in the Senate.

STATEMENT OF HON. CHARLES E. GRASSLEY, A U.S. SENATOR FROM THE STATE OF IOWA

Senator GRASSLEY. Let me suggest to you that that rarely happens. It is a very legitimate request and one that I would not shy away from. The process in the Senate doesn't lend itself very often to that happening, and I am sure to the chagrin of Members of this very important body, who have the constitutional responsibility of initiating such legislation as tax legislation.

Well, I, too, thank you very much for your interest in this very important issue and an opportunity to be with you. Thank you very much for holding this hearing.

As many taxpayers are struggling in the midst of the current tax-filing season, then obviously the issue of taxpayers' rights takes on kind of a very special importance. Although most IRS employees provide very valuable and very responsible service, taxpayer abuse by the Government is, of course, an ongoing problem. So with this in mind, I am very happy to have joined Senator Pryor and others in reintroducing the Taxpayer Bill of Rights II in the Senate as S. 258. This is a very necessary legislation, and it happens to build upon the original Taxpayer Bill of Rights that we passed into law in 1988.

Now, for me, the long process of trying to ensure taxpayer protections began in the early 1980's. At that time I was a member and then chairman of the Finance Subcommittee on IRS oversight. We made some progress, but it was only the beginning. Senator Pryor helped continue the cause when he succeeded me as chairman in 1987. At that time, we took the initiative and he asked me to work with him in pushing for a Taxpayer Bill of Rights by expanding legislation I and others had introduced. It took nearly 2 years, but we ultimately succeeded in achieving this goal and the passage of the Taxpayer Bill of Rights.

We now have a 6-year record of implementing the legislation, and specifically as it regards the Taxpayer Bill of Rights. Great strides toward taxpayer protection were achieved through this important piece of legislation. Now, however, the Taxpayer Bill of Rights of 1988 was never then, nor now, expected to be the final chapter in the book of taxpayer protection. It was a very major step in the continuing process of stamping out taxpayer abuse, and that process still continues to this very day as we look into new and different ways to improve the current law.

In reviewing the record, it is clear that much more needs to be done. There is no question that breakdowns in implementing the law have occurred, and there are gaps in the law that need to be filled.

For instance, we believe that the current ombudsman position is too limited and too beholden to IRS insiders. Our legislation will turn the ombudsman into a more independent office of taxpayer advocacy. And the purpose of that office is to expand powers for that office to help taxpayers and for the office director to have direct control in the hiring and firing of problem resolution officers. Currently, these officers are too beholden to their respective district directors and tax collection officers.

Other important provisions include the abatement of interest with respect to unreasonable errors or delays by the IRS. We also create a cause of action against the IRS for wrongful liens. In addition, taxpayers would have a right to an installment agreement for liabilities of less than $10,000.

We were successful in passing a similar proposal through the Congress in 1992. However, the underlying legislation at that time, because it was attached to a proposal, was vetoed by former President Bush. So, of course, we are back again in this new Congress to attempt to do as well or even better than we did in 1992.

Since 1987, Senator Pryor and I have worked in a cooperative, bipartisan effort to further taxpayers' rights. As our roles change somewhat in this new Republican-controlled Congress, we hope to

continue our successful teamwork, and we hope to work closely with the House and the members of especially this subcommittee in our efforts to improve taxpayers' rights.

Beyond the introduction of this bill, Senator Pryor and I will be working on further improvements and even more pro-taxpayer proposals that will be offered at a later date. This is a truly bipartisan effort. Even President Clinton mentioned to me personally a few weeks ago that he supported our efforts. And we have had quite a few meetings with IRS and Treasury officials who understand that the problem exists and are making an effort to work out agreements.

So I urge my House colleagues to join us, along with Chairwoman Johnson, in the cause to help make the IRS more responsible and more accountable to the taxpayers of this country.

I thank you for this opportunity, Madam Chair, and I look forward to working with you and other members of this subcommittee as we continue this bipartisan effort.

Chairman JOHNSON. Thank you very much, Senator. The kinds of things that you suggest from your legislation are certainly the kinds of things we are interested in, and we look forward to working with you. It may be that if we work effectively not only in a bipartisan way in both Houses but in a bicameral way that we can also give greater visibility to this legislation on the floor.

One of the issues that we are struggling with is the issue of burden of proof, and I wondered whether you would be receptive to expanding the rights of victorious taxpayers to have their attorneys' fees reimbursed by the IRS by requiring the IRS to show that it was substantially justified in maintaining its position in order to deny a taxpayer's claim for attorneys' fees.

Senator GRASSLEY. Yes. The answer is yes, we are willing to consider that. We had it in the 1988 bill. We had to take it out before final passage, but it is something that we have considered before and we would be glad to look at it again.

Chairman JOHNSON. There are some other suggestions in legislation before the House to put the burden of proof in civil tax cases on the IRS. This would reverse current practice, which places the burden of proof on the taxpayer.

Are you looking at changes of that nature?

Senator GRASSLEY. Well, obviously, that is the ultimate of taxpayers' rights, and from that standpoint, that is always a consideration. But it is probably the most difficult one for us to deal with because, of course, the IRS will argue that that takes away the ultimate tool that they have to bring people to prove the amount of tax that is owed.

You will find—I am sure you know this when you ask the question—how very central that is to taxpayers' rights, and yet the strongest arguments from the IRS will come on that particular question.

Chairman JOHNSON. We will certainly be pursuing that with them and with others who testify. It is a difficult issue, but there are some other aspects of that same issue that could be addressed in ways that you suggested from your legislation as well as some of the ideas that have come before us.

I yield to my colleague, Mr. Matsui.

Mr. MATSUI. Thank you, Madam Chairwoman.

Senator Grassley, I like the notion of not only a bipartisan agreement but also a bicameral agreement, as the chairwoman has just mentioned. Do you happen to have an idea of when the Finance Committee might be moving its legislation on this area?

Senator GRASSLEY. Yes.

Mr. MATSUI. Because coordination might be something we might have to work on.

Senator GRASSLEY. Well, obviously, we seldom move any tax legislation without it first coming from the House. We might do some things simultaneously with you. Sometimes we move things out of committee to the floor.

We will not be considering—well, first of all, I don't know whether—I have not heard the chairman say when he was going to consider tax legislation generally, but my guess is that we are going to be, through the first couple weeks of May, working on welfare reform. So it will be after that date.

After that date, this would not have the primary position in the committee. It would be the tax bill that comes from the House of Representatives.

We still have not considered in our own minds whether or not we do some of this legislation through reconciliation—by legislation, I mean tax legislation—or separately. We have to make those decisions.

The final judgment as it relates to this bill, I think at that point, contrary to what Chairwoman Johnson requested, it probably would be considered a part of the tax bill at that point.

Mr. MATSUI. Thank you. I look forward to working with you.

Senator GRASSLEY. You bet.

Chairman JOHNSON. The gentleman from Missouri.

Mr. HANCOCK. I just wanted to thank you, Senator Grassley, for the work you have done over the years in this area. I think that maybe we are approaching a time that we are going to get something accomplished.

Thank you very much.

Senator GRASSLEY. Thank you.

Chairman JOHNSON. Mr. Cardin.

Mr. CARDIN. Thank you, Madam Chairman.

Senator, I think you will find that there is bipartisan support for moving on a Taxpayer Bill of Rights. We obviously want to make sure that where a taxpayer has been wronged there are remedies available.

It seems to me there is a different view as to what impact, financial impact on the agency, some of these proposals might have and whether IRS has sufficient budgetary support in order to carry out many of the requirements that we currently have in the code. I am wondering whether you have done any study in this area, or whether there is any information of which you know, that is available that would either support or not support the notion that some of these problems may be related to the support or lack of resources of the IRS.

Senator GRASSLEY. Well, we are looking into it, but I have to be very candid. It would be difficult to get a firm figure. We have a responsibility in passing this legislation to make sure that it

doesn't detract from the usual efforts and ongoing efforts of IRS. But, additionally, there were tremendous resources in the last budget season given to the IRS, so I think that we need to think in terms of those increases, plus other increases that are being asked in the current budget process, as some flexibility for us to not be concerned, at least that not to be the utmost concern that you present, with these additional resources that have come to the IRS.

Mr. CARDIN. And I agree. It would be useful if we had some independent analysis as to what impact these new requirements may have on IRS, and basically whether these are financial problems within the agency or something else.

Senator GRASSLEY. Well, we know this: that we will have a judgment given to us by the Commissioner and others in the Treasury Department on the costs, and they will have to be a consideration for us to have. But I still think we have to consider the resources that have already been given and are presently asked.

Thank you, Madam Chairwoman.

Chairman JOHNSON. Thank you. Mr. Portman.

Mr. PORTMAN. Thank you.

Senator, thanks for being here and for your good explanation of the bill. I have two quick questions. One is with regard to the taxpayer advocate. I don't have the actual language of your bill in front of me, and I was wondering: Does your legislation contemplate that the President would nominate and the Senate confirm as compared to the IRS Commissioner appointing the ombudsman?

Senator GRASSLEY. Not currently are we considering that much of a change, but the selection not being as important as the independence once it is set up; and, most importantly, the authority of the ombudsman over other people in the taxpayer resolution area, because there is a process set up that isn't so intimidating to taxpayers, a process to get questions answered very quickly, a process that gets around the usual bureaucracy, a process that works fairly well but would work much better if they were within the purview of the ombudsman, or as we call it, the taxpayer's advocate.

Mr. PORTMAN. Tax advocate. And you think that kind of independence would be practical without having a selection process that would be independent of the Commissioner?

Senator GRASSLEY. Yes. I don't believe—although we are giving consideration to other methods as you suggest, although I would say myself I haven't given attention to the question of the President making the choice. After considering those, still the most important view would be the independence of whoever is appointed.

Mr. PORTMAN. One other quick question, and this is a followup to Mrs. Johnson's question to you regarding shifting the burden of proof. Having been chairman of the subcommittee and followed this for years, I just wondered if we could probe a little further into your thinking on this issue. It is a very delicate issue, as you know, and one we will hear more about later, I think, in our further panels. But have you thought about any interim steps where perhaps the taxpayer would have the burden to come forward with some threshold amount of information, data, and so on that the taxpayer

would have and the IRS would not? And then at that point the burden might shift to the IRS to make its case?

Have you thought about those kinds of——

Senator GRASSLEY. We have not thought very deeply about it. We have thought that the chances of making any change whatsoever as opposed to the chance of getting other important pieces of the legislation through, we have thought that the latter has been more important. So we haven't gone into the alternatives. And part of our thought as well was that if we would get an adequate bill of taxpayers' rights, then that diminishes somewhat the changing of the burden of proof.

The burden of proof is something that can be justified a little easier, the extent to which there is less intimidation from the IRS.

Mr. PORTMAN. Thank you very much, Senator. Thanks for coming over.

Chairman JOHNSON. Thank you very much, Senator. It was a pleasure to have you, and we look forward to working with you. Thank you for joining us.

The Honorable Mr. Jacobs of Indiana, please proceed.

STATEMENT OF HON. ANDREW JACOBS, JR., A REPRESENTATIVE IN CONGRESS FROM THE STATE OF INDIANA

Mr. JACOBS. Thank you, Ms. Chairwoman and members of the subcommittee.

About 15 years ago, Representative Crane offered an amendment in committee that provided for attorneys' fees to be paid by the U.S. Treasury to citizens who were brought to court unreasonably by the IRS or without sufficient reason to bring those citizens before the court. At that time I was a member of the committee, and I offered an amendment to Mr. Crane's amendment that would provide that if an agent or an employee of the IRS should cause a citizen to be brought into court and put to expense in an arbitrary or capricious manner—something more than negligence or bad judgment—that the court could order that employee, the one who did it, to pay all or some of the costs to the citizen who was brought into court.

My argument then was what my argument is now. What did the taxpayers do wrong? Why should the taxpayers pay for damage done by an individual at IRS in an arbitrary or capricious, not merely negligent, but arbitrary and capricious manner? For some reason or another, that provision was not adopted.

However, my mother always quoted that if at first you don't succeed, try, try again. In 1986, I offered it to the big so-called tax reform bill that was before the committee. I was told by the chairman that it was not in order until the miscellaneous section at the end of the bill, which happened to come after 3 weeks at about 3 a.m. in this room, as they say in Indiana, of a Sunday. And a lady from the Washington Post—I think her name was Swardson—called me up in Indiana and said, "Isn't it true that this provision passed at 3 o'clock in the morning on a voice vote?" And I said, "That is true, but hardly all of the truth." I said that I had been working on it for however many years then; I guess it has been 15 or 16 now. And while it was passed on a voice vote, it was also passed on a rollcall vote.

Representatives from the IRS were in the room and gave their opinion about the amendment. One of them said, well, it is not a problem because we have internal disciplinary arrangements, and I replied to that by saying so do the doctors and so do the lawyers, and that is precisely why most people have no faith in public institutions anymore, people judging themselves and their peers. Whereupon, it passed by a show of hands 10 to 3. It went on to pass the House.

By the way, this reporter also asked me, wouldn't this have a chilling effect—there is a concept in law that you didn't learn in law school, but have a chilling effect on the performance of duties? And I said I believe it would have a chilling effect on arbitrary and capricious action by any IRS employee.

So how did it come out on the front page of the Washington Post the next morning? Just as you would imagine. Jacobs admitted that it was passed at 3 o'clock in the morning on a voice vote and it would have a chilling effect on the performance of duties by people at the IRS.

Now, I want just to add at least this: I hear it said that this is an insult to the employees at the IRS. Nothing could be further from the truth. We pass murder laws. That is not an insult to the citizens of this country, because very few people commit murder. And I am here to testify that very few IRS agents act in an arbitrary and capricious manner. But I am equally here to say that no service is perfect, and obviously sometimes someplace—I know a couple of cases—such a thing does happen.

Now, when it passed in the most recent tax bill—it has passed the House, I suppose, three times now, and when it passed most recently, the committee wanted to add the words "or maliciously." And I acceded to that. That is fine, exactly what I had in mind, someone who doesn't like your necktie or how you look or something like that.

So it has passed the House, I believe, at least three times, only to die in the cave of the bones, sometimes called the other body, after the IRS went to work on them.

Now, as a former police officer, I know that any time something like this is done with respect to any department of Government, there are many honest apprehensions about the misapplication of it. However, the provision that passed most recently provided as follows: You could not bring an independent action against an IRS agent. It would have to be—it was in the provision—an ancillary proceeding to the actual case itself, which is to say that once the evidence was in and was found wanting, the court could then conduct an ancillary proceeding on motion of the respondent to determine whether there was arbitrary and capricious action. So it didn't cost very much more; it was right there; the judge had already heard the facts and so on. And the judge was not required necessarily to assess the entire cost of the defendant, but the entire cost or any part thereof in the best judgment of the court.

That is about it, except that I hope you give us another chance to try it again, run it up the hill again.

Chairman JOHNSON. Thank you, Mr. Jacobs. That history was very interesting.

It is true that now a taxpayer who has been the subject of arbitrary and capricious action by the IRS can collect attorneys' fees. Is that not true?

Mr. JACOBS. Yes, but they collect them from innocent people, the taxpayers of the United States, even including the respondent, theoretically.

Chairman JOHNSON. I appreciate that. This would for the first time, though, in any Federal agency make the individual Federal employee liable. There is no other parallel in any other agency that we reach to the individual employee.

Mr. JACOBS. Yes. You have to start somewhere, I guess would be my answer to that. I mean, take the exclusionary rule, which we have dealt with recently in the House. The 75-year-old exclusionary rule, evidence obtained unconstitutionally excluded from a case even if it would convict the right person for a heinous murder. It is an outrage to the American public.

I say I am a former police officer. I gather evidence. I present it in court or at least I testify in court. Yes, I would like the person to be convicted. I am a good citizen. I think he is guilty. I think he or she ought to be convicted and punished.

But if you take the boat out of my driveway, it is going to have a lot more effect on my conduct than whether the evidence I gathered in a case makes a conviction. I have always thought that we should not have the exclusionary rule. The discipline should be directly against the officer who is a rogue who gets out of line.

So if this is the place to start, I am happy to be the George Washington of it.

Chairman JOHNSON. Have you had any experience with the internal disciplinary process at the Department?

Mr. JACOBS. I am sorry?

Chairman JOHNSON. You mentioned that you have always been told that the Department had an internal process to deal with individual employees who abrogated this standard. Do you have any comment on their process or do you have any idea whether it works?

Mr. JACOBS. Inherently, it is unacceptable to a civilized people that people judge themselves. I mean, it is what you call inherently incredible that you could have faith in a system where people and peers judge themselves. It is always thought better—we have all heard of the independent counsel. That is exactly what I am talking about.

Chairman JOHNSON. I hear what you are saying when you say it is inherently without credibility but, nonetheless, I think we need to know how it works and whether it has worked, and we will try to get that information on the record.

Mr. JACOBS. There was a case out in the Northwest United States a number of years ago where it was so obvious that the IRS agents were being personal about the respondent. They didn't like the people; they thought they were too snotty or whatever. That culminated in the man's committing suicide, so that the woman would have the insurance money to pay the tax bill.

Don't misunderstand me. I am not anti-IRS. I am not anti-police. Will Rogers said, "It is a great country, but you can't live in it for nothing," when he talked about taxes. Some people are just knee-

jerk. That is wrong. I want the highways, I want the police protection, I want the national defense, but I don't want to pay a nickel in taxes because that is un-American. Well, that is also nuts.

So I don't take that position at all. But I just say in those tiny little instances where that happens, the person who did it should pay, not the innocent taxpayers. That is my reaction. And, apparently, that argument went over. It has passed the House three times.

Chairman JOHNSON. Thank you.

Mr. Matsui.

Mr. MATSUI. Thank you.

Andy, I will tell you, I understand what you are saying, but don't you believe that the administrative process—I mean, if an agent is found to have committed a malicious act, what about the administrative process? They could be fired. They could be disciplined. There is a whole wide variety of actions that can be taken against them.

If we emphasize that, do you think that would have the same kind of deterrent effect as the issue of liability? It would seem to me that the whole notion of creating individual responsibility really changes the whole concept of what we are trying to do here, because I do believe it could have some chilling effect on others. You know, then you are at kind of the burden of a court system, and we know how jury trials are. Sometimes they work, sometimes they don't. Sometimes it depends upon how slick a lawyer is. Perhaps you can——

Mr. JACOBS. I just don't think murder laws have a chilling effect on most of us who don't tend to commit murder, and I don't think that a rule against arbitrary, capricious, and malicious action is going to have much effect, chilling effect—that is the term—on the IRS agents.

At first, I think they made some useful suggestions, by the way, when they said, What if somebody, a disgruntled taxpayer, just filed a suit against us? This has gone through a metamorphosis through the years. We changed that to make it an ancillary proceeding to the actual case itself, and nobody has standing to bring action against those individual agents. We trimmed this thing down quite a bit over the years, but I think it is down to the point now where it accomplishes the forensic purpose that I have described.

You asked me do I have faith in internal tribunals for misconduct of one's peers and people. No, I don't, and I don't think most Americans do. Most Americans understand the concept of conflict of interest.

Mr. MATSUI. Thank you.

Chairman JOHNSON. Thank you.

Mr. Hancock.

Mr. HANCOCK. I have absolute, complete sympathy with where we are heading here. There is no question about it. But I do have a little bit of a problem. This is a major change in the principle of agency, where the agent of an employer is on their actions, you can always go against the employer, which is true in the private sector. As a small businessman, if I have got a serviceman out here and

he does certain things, if he is at my direction, then I am responsible.

Mr. JACOBS. That is the whole point, sir. It is not at the direction. It is ultra vires. It is something beyond. Only under the color authority—you didn't do anything wrong if one of your people goes out and rapes a woman.

Mr. HANCOCK. I will agree, as long as it is a criminal action.

Mr. JACOBS. But he couldn't have gotten in the house if he hadn't been your serviceman.

Mr. HANCOCK. Well, that is true, but what about if I send somebody out to collect a bill and they get carried away? I mean, no criminal charges of any kind, but they get carried away on how they collect the bill and violate the laws on how to collect a bill. I have to answer for that. In fact, if my employee is out there doing the job and that individual brings a suit against me, then I am going to have to defend that suit and defend the employee, and probably they would get a judgment against me, similar to what we have——

Mr. JACOBS. They probably won't win the suit if you didn't direct him to do the crime.

Mr. HANCOCK. Well, my point is, are we talking about the agent or are we talking about the steps through his supervision?

Mr. JACOBS. We are talking about whoever took sets on somebody because he didn't like him. It is a fact situation.

Mr. HANCOCK. Sure, OK.

Mr. JACOBS. Someone who just took sets on someone, didn't like his race, didn't like his necktie, didn't like the fact they both wanted to go out with the same woman, whatever. That is the kind of case we are talking about. I am not talking about just some casual, let's go after one guy because we hate the service. I am talking about a fact situation, where it is arbitrary, well defined in the law already, capricious, and malicious. Now, that is a pretty heavy load to prove, and I don't think there is a danger.

As far as the major change is concerned, the last time I heard, the majority in this Congress favored some major changes.

Mr. HANCOCK. Do you know about any specific cases where the Internal Revenue Service may have initiated something on this order as an effort to make an example of the taxpayer where it could be talked about to make other people nervous?

Mr. JACOBS. You say an example?

Mr. HANCOCK. Yes.

Mr. JACOBS. Well, I just cited one, the one out in the Northwest a few years ago. And there are others. There are others.

We had a guy out in Indianapolis, an agent, a few years ago, called up one of the largest builders in the United States. Nobody knew how he got the direct line, but he did, and he got hold of the president of the company. And he got a little snotty with him and went on and on and on and on and on. And this guy said, you are nuts, I file my income tax by the boxful, and talk to my accountant, this is the first I heard of it.

This young agent called back, I think six times over a period of time. The fellow should have had his phone changed, I guess. But he called back six times, and somewhere along the line, surely he

would know that this was an honorable person. I don't know whom he was after.

Now, you might say, well, that is negligence. But after six times, you might have taken the trouble to look up what you are doing and find out. That was sort of borderline. I don't say it did any great harm. I guess this fellow had better things to do than be yelled at over the phone by an IRS agent.

Mr. HANCOCK. Thank you.

Chairman JOHNSON. Mr. Cardin.

Mr. CARDIN. Well, Andy, I think all of us agree that in the type of cases you are referring to, the taxpayer should have full rights and that there should be action taken against the Federal employee who has treated a person in that manner.

I get lots of complaints in my office about all Federal agencies, including the IRS, and the overwhelming number, perhaps all, would not fall into the category that you are referring to, those extreme cases.

Shouldn't we be looking for some balance in trying to deal with the problems that taxpayers have with the IRS by supporting additional efforts to modernize the way that the IRS handles the tax compliance issue by providing the resources which they need to modernize their facilities?

Mr. JACOBS. Absolutely. Absolutely. But you can't modernize a bad heart, and that is all this is about.

Mr. CARDIN. Yes, I understand.

Mr. JACOBS. That occasional rogue who, under color of authority, does damage to American citizen, and the whole issue here is whether other Americans citizens who didn't do that at all should be forced to pay taxes to pay for that person's—pay the damage, or should the person, the rogue, pay the damage? It passed the House three times. You voted for it.

Mr. CARDIN. I agree with you. We are in agreement. But I just believe that, unfortunately, we are trying to put so many things into the one category, so many types of constituent problems with the IRS into the one category, and trying to deal with a bill to deal with that category, where a large amount of the frustration that my constituents have with IRS is due to that Congress has not made available the resources for the IRS to modernize.

Mr. JACOBS. I acknowledge right readily that this is not a panacea. This is not the complete link. This is to deal with one specific problem, which is nothing less than an outrage. What is it Solon said? That civilization is impossible until the unconcerned are as outraged as the victim. I am outraged if you are wronged in that arbitrary and malicious fashion. It doesn't have anything to do with mistakes of the IRS. God knows we all make those. This is where intentional, heinous behavior occurs. That is all I mean. It is just an element.

Chairman JOHNSON. Mr. Portman.

Mr. PORTMAN. Thank you, Mrs. Johnson.

Andy, a few questions, but first just a comment on what Mr. Cardin said. I agree that modernization would help. I think more important would be simplification of the Tax Code rather than modernization, because I think if people understood clearly what

their rights were on both sides, the taxpayer side and the IRS side, there would be fewer instances of the kind that you mention.

But let me probe this a little further, and I do consider you the George Washington of this effort, as you know, the father of personal responsibility here. Arbitrary and capricious is a standard you use, which is the Administrative Procedures Act standard for rulemaking, and it is a pretty well established standard. There are a lot of court cases on it which would provide some sort of a safe harbor.

You also mentioned malicious behavior was added; you indicated at one point that it was arbitrary and capricious and malicious.

Mr. JACOBS. I beg your pardon.

Mr. PORTMAN. Is it and or or?

Mr. JACOBS. It is a disjunctive. It is or.

Mr. PORTMAN. Otherwise, it would be quite narrow, I would think.

Mr. JACOBS. It would be self-contradictory, I agree, but it is a disjunctive.

Mr. PORTMAN. I think that an important point to make is that there is, with the conjunctive, even, a lot of case law out there and that the standard—certainly if arbitrary and capricious is well established, I think that is important to have a safe harbor so that people understand on the IRS side what behavior would go over the line.

The second question is, you talked about the ancillary proceedings. You indicated that that would affect standing. It would limit people's ability to bring suits. Would it also, Andy, help with the situation with a lot of these tax litigation matters that go on and on for months, even years, and I would think there would be a cloud hanging over the head of the IRS agent during that time period. Having ancillary proceedings, does that affect that situation at all?

Mr. JACOBS. Rob, it is hard for me to believe that during the case in chief much of the evidence of what I am talking about, if it existed at all, would not have been heard by the trier of the facts, the judge. So I think that my perception is that the ancillary proceeding could be conducted in fairly rapid order.

Mr. PORTMAN. Another question I have relates to the cost of the taxpayer's legal fees. It is my understanding that you are asking that there be a personal liability on the part of the agent to pay those costs.

Mr. JACOBS. All or some part, yes.

Mr. PORTMAN. All or some part? And that is within the discretion of the trier of fact, of the judge.

Have you thought about putting some sort of a cap on that, Andy, to limit that liability at some——

Mr. JACOBS. Well, it wouldn't bother me. Yes, I think that would be reasonable. In other words, if a respondent gets his brother-in-law and figures he is going to get his fee paid, and he said, well, we will just make a $1 million fee, absolutely, I think that would be very—I am glad you mention it. I think that would be very helpful.

Mr. PORTMAN. Well, I thank you very much for bringing this issue before us. I am new on the committee, as you know, and

haven't had a chance to explore it yet. I look forward to seeing the statutory language, and I appreciate your continuing to push the effort.

Mr. JACOBS. Thank you very much.

Mr. PORTMAN. Thank you, Madam Chairwoman.

Chairman JOHNSON. Mr. Zimmer, would you like to inquire?

Mr. ZIMMER. I have no questions. Thank you.

Mr. JACOBS. Thank you.

Chairman JOHNSON. Andy, thank you very much for your good testimony and for your long work in this area, your perseverance over many years.

Mr. JACOBS. Thank you, Mrs. Chairwoman.

Chairman JOHNSON. We have appreciated it.

Our last witness on the panel is not here. When he arrives, we will visit with him. We will insert his statement into the record.

I would like to call the first panel: Hon. Peggy Richardson, the Commissioner of the Internal Revenue Service; and with her, Lee Monks, the Taxpayer Ombudsman from the IRS; and Cynthia Beerbower, Deputy Assistant Secretary of the Department of Treasury.

Deputy Assistant Secretary Beerbower, we are pleased to have you. I think this is your first appearance before our committee, and we are pleased to have you represent the Department of Treasury for tax policy.

STATEMENT OF CYNTHIA G. BEERBOWER, DEPUTY ASSISTANT SECRETARY FOR TAX POLICY, U.S. DEPARTMENT OF TREASURY

Ms. BEERBOWER. Thank you very much, Madam Chair and members of the subcommittee.

Chairman JOHNSON. Nice to have you, Ms. Beerbower. Why don't you go ahead?

Ms. BEERBOWER. In response to the subcommittee's request, I am pleased to present the views of the Treasury Department on many of the important issues of taxpayer rights. The administration supports many of the ideas in the legislation that we will be discussing today. Treasury has worked with the Internal Revenue Service to develop a package of administrative changes, including certain regulatory simplification to help taxpayers reduce the burdens of compliance. We have also been meeting with congressional staff, and we have been working on legislative initiatives that build upon the original Taxpayer Bill of Rights.

Commissioner Richardson in her testimony will discuss some of the new ideas that have emerged from our dialog with staffs. I want you to know we remain strongly committed to reducing taxpayer burden and safeguarding taxpayer rights in dealing with the IRS.

Last year, the Treasury Department supported the passage of tax simplification and technical corrections. It contained numerous provisions from the Taxpayer Bill of Rights II that were originally contained in H.R. 11. Although H.R. 3419 passed in the House, the legislation was never taken up in the Senate.

In its fiscal year budget for 1996, the administration has stated that it continues to support revenue-neutral initiatives designed to

promote sensible, equitable administration of the Internal Revenue laws. We support simplification and technical corrections. In addition, the budget describes the administration's support of compliance and enforcement measures. We have stated we support the reinstatement of authority to share information on cash transaction reports, and to fund undercover operations. We are working on intermediate sanctions, modernizing and streamlining IRS operations, and compliance with diesel dyeing.

The administration has also actively supported and pursued administrative measures to ease taxpayer burdens. In fact, the day before yesterday, the IRS issued a notice that relieves taxpayers who made charitable contributions of $250 or more from the statutory requirement that they obtain written acknowledgment from the charities for their 1994 returns. The IRS provided this relief because we have been hearing from a number of people of the difficulties that they have had in securing this written acknowledgment.

I detailed in my written testimony many of these initiatives that we have taken in order to simplify and in order to respond to problems individual taxpayers have had with the compliance burden.

Today, you have asked for our views on three pieces of taxpayer rights legislation that have been introduced in the 104th Congress: H.R. 390, which was introduced by Representative Traficant; S. 258, which was introduced by Senators Pryor and Grassley; and H.R. 661, which was introduced by Representative Thornton. You have also asked that we respond to title V of H.R. 11, which was passed by both Houses of Congress in 1992, but vetoed by President Bush.

In preparing our testimony today, we have reviewed the prior testimony in this area by Treasury officials. It is interesting to note that over a long period of time and regardless of the political affiliation of the administration, the testimonies of Treasury officials have been essentially consistent. Treasury has always cautioned Congress that compliance with our tax laws depends upon the public's perception that the tax laws are fairly administered and that the IRS has the ability to catch and to prosecute violators.

Our tax system has as its foundation voluntary self-assessment and compliance. The IRS only audits 1 percent of all returns. It is because of the dependency of the entire tax system on this voluntary compliance that Treasury approaches the subject today with caution.

There are three prerequisites to a successful voluntary tax system. First, the system must be fair and must be perceived as being fair. Second, taxpayers must be treated with respect and dignity. The enforcement mechanism should not be more intrusive or burdensome than is necessary for sound tax administration. Third, the system must operate efficiently and at a reasonable cost. If we increase the governmental cost of tax collection without commensurately increasing the benefit to taxpayers, we have wasted the taxpayers' dollars.

With these criteria in mind, we believe that certain important provisions in the proposed legislation will be very useful and valuable. However, we have serious reservations about other proposals. Although these proposals are well intentioned, we believe that they

could significantly undermine fairness, respect, and efficiency, and ultimately erode voluntary compliance with our laws.

I would like to focus initially on H.R. 390. This bill contains three sections. Our comments on the second and third sections are included in the written testimony. I would like to highlight the first section of H.R. 390, because that section concerns us very much.

Those of you who are lawyers know that the general rule is that the burden of proof in a civil proceeding is on the party who is in control of the facts. By contrast, in a criminal proceeding, such as a proceeding for criminal—or civil—fraud, the burden shifts to the Government.

There is much case law and it is in our written testimony that details the development of this legal doctrine. It is probably best summed up in a 1975 ninth circuit case called *Rockwell* v. *Commissioner* that reaffirmed the Tax Court rules, imposing the burden of proof on the taxpayer. The ninth circuit said even if it were to decide the burden of proof issue in the first instance, the court would impose the burden on the taxpayer. The taxpayer knows the facts, and he can testify as to what his intent or his purpose was. The Commissioner, on the other hand, must rely on circumstantial evidence, and most of it has to come from taxpayer records. So it is not unfair, said the ninth circuit, to impose the burden on the taxpayer to pursue the facts.

Section 1 of H.R. 390 would change this longstanding and well-established legal doctrine. What it would do is place the burden of proof on the Government in all tax cases for all issues.

While this provision may be relatively simple and innocuous on its face, we believe that it will have enormous and far-reaching adverse effects on the tax system. We believe, in particular, that it will result in a significant reduction in the willingness of taxpayers to comply voluntarily with their tax obligations, and it would greatly encourage tax protesters.

It is difficult to grasp a change of this magnitude. However, in fiscal year 1994, the IRS examined—through regular examinations and information return program contacts—4 million taxpayers. A vast preponderance of these audits were conducted by correspondence. Under the new provision, a taxpayer receiving a letter can simply refuse to provide the requested information.

The IRS would then be forced to do a face-to-face audit of the taxpayer. But even then, the taxpayer can refuse to cooperate. If so, the IRS is forced to disprove the items on the taxpayer's return. This would often be impossible. It would require extensive investigation by the IRS, lengthy face-to-face interviews of persons other than the taxpayer, and often the need to summon information from third parties.

As a result, the simplest audit would become a costly nightmare if taxpayers refused to cooperate. Taxpayers can wait for the Service to come up with the proof, and if the IRS gives up or abandons the effort, the taxpayer would automatically win.

Consider a few real-world examples of tax compliance, facts that the IRS would have to prove: one, if a taxpayer claimed a child as a dependent and the IRS suspects that the child does not exist, the IRS would be forced to interview neighbors; two, if the taxpayer claimed that he or she supplied more than half of the support of

a dependent, the IRS would be forced to prove that someone else provided more than half of the support of that dependent; three, if a taxpayer claimed that a certain piece of art that it has given to charity was worth $1 million, the taxpayer could just wait, and the IRS would have to prove that that particular piece of art was worth less; four, if a taxpayer claimed a $200,000 mortgage interest deduction, the IRS would be forced to summon the bank and prove that the interest had been paid and that the principal amount of the mortgage exceeded the $1 million limit; five, if a taxpayer claimed to be over 65 or if he claimed to be blind, the IRS would have to summon records to prove to the contrary; six, if a taxpayer claims lavish entertainment expenses, the IRS would have to disprove the expenses or the business purpose of the event by summoning waiters and credit card receipts; and seven, if a taxpayer claimed that his gambling winnings were offset by gambling losses, the IRS would have to prove that that taxpayer did not have the gambling losses.

The results in the business arena would be equally bizarre. If a foreign-owned U.S. company reported no profits and the IRS claimed there should be intercompany pricing adjustments that would result in profits, the IRS would have the burden of proving that the U.S. company had overpaid its foreign affiliate. This contradicts with the rule today, under which the company has to prove that it did not overpay. If a taxpayer claimed exemption from the passive loss rules for real estate by claiming that he or she worked more than 500 hours in the activity during the year, the taxpayer would need to show nothing, and the IRS would have to somehow disprove that claim.

The change in the burden of proof would have significant implications in the tax shelter area. Many tax shelter cases turn on whether the taxpayer can establish that the transaction or the investment was entered into with the intention of making a profit or was solely entered into to manufacture tax deductions. We believe it is reasonable for the taxpayer to have the burden of proving his own business motive. To do otherwise would open the door to shelters ranging from complicated corporate financial transactions to wealthy taxpayers who buy ranches as vacation homes and deduct the cost of what in reality is their vacation.

The bill would be an obvious boon to tax protestors, who would claim all sorts of deductions to zero out their incomes. The IRS would spend endless hours having to disprove each item on the protestor's return. Protestors would no doubt become extremely creative in claiming deductions that would cause the maximum difficulty for the IRS to disprove.

In fact, when we were preparing our testimony, we thought that section 1 of H.R. 390 could be named the Tax Protestors Relief Act.

There also would be a significant impact on the IRS appeals process, which has to take into account the hazards of litigation in settling cases. With the burden of proof on the Government, the IRS would be placed in a no-win position. It would either have to try to settle more cases for reduced amounts or proceed to court. Most taxpayers would not want to settle. They would hold out for court proceedings where they can simply sit back and relax. This choice would have little to do with the merits of the case, and it

would have everything to do with the IRS' ability to find the necessary records to prove the taxpayer's deductions.

H.R. 390 would also compromise taxpayer privacy. It would cause audits to be much more time-consuming and burdensome. The Service would be forced to conduct more extensive and intrusive investigations of the taxpayer. And if the taxpayer did not cooperate, third parties, such as banks and credit card companies, would be required to furnish lots and lots of information to the IRS. These documents would be viewed by third parties as very burdensome.

The system would also operate less efficiently, and it would be less able to deliver quality services at a reasonable cost. The choice really is: Will increased funding be provided for the IRS in order to enable them to carry some of this burden? Or will the funding remain the same and there simply be a reduction in the audit activity?

Just consider the task of disproving the existence of a child. If I claim that I have a baby, how are you going to prove that I don't? The fact that my neighbors never saw one or the grandparents don't know about one does not prove that the child does not exist.

Chairman JOHNSON. Ms. Beerbower, I really appreciate the specificity of your testimony. It is very helpful to the committee. But if you could summarize parts of it and continue with other parts, I would appreciate it.

Ms. BEERBOWER. I will.

There are many more arguments against H.R. 390 detailed in our written testimony. We have commented, as I said, on the other two sections of H.R. 390, but the length of my discussion on the matter is really designed to reflect the importance we place on the burden of proof and the magnitude of the change that is embodied in H.R. 390.

In evaluating H.R. 390, we ask you to consider whether it is in the long-term best interest of taxpayers to force the IRS to administer and enforce the tax laws with this handicap.

Although Treasury has not formally estimated the cost of this proposal, its cost is very large, and the trust of law-abiding citizens who do comply with the tax laws would be eroded.

I would like to conclude with a few comments on the other pieces of legislation, the Taxpayer Bill of Rights legislation that you have asked us to comment on.

As I said, Treasury and the IRS worked closely with Members of Congress and their staffs in developing the 1988 Taxpayer Bill of Rights. We are continuing to meet with congressional staffs to develop new ideas. Commissioner Richardson will go into these new ideas, and I need not at this point.

The two versions of the Taxpayer Bill of Rights that are the focus of this hearing are similar in most respects. I want you to know that we support many of the provisions in their current form and have suggested minor modifications. We have been discussing these modifications with congressional staff.

At the current time we understand that there are roughly 40 sections in each bill, and we have major disagreements with only a small number of them. We are supportive of the great bulk of the

bill, and the detail of our support is outlined in the written testimony.

I think with the balance of my time I would like to focus on just a few areas where our disagreement is very strong.

The taxpayer advocate provisions that are contained in the Taxpayer Bill of Rights II will be dealt with in detail, not only by the ombudsman but by the Commissioner.

Under current law, as you know, the administration's tax initiatives are not presented to Congress until they are cleared by the executive branch, the Office of Tax Policy, and the Office of Management and Budget. This coordinated clearance process is an important part of the function that we serve. In the Taxpayer Bill of Rights provisions in H.R. 661 and H.R. 11, the ombudsman would not only be required to submit annual reports to Congress, but he would be asked to give legislative ideas to Congress without being reviewed by the Office of Tax Policy, the IRS, or OMB.

Now, we like to believe that the ombudsman is independent. We support his independence. We are pleased that there is no mandate that the President select him and that his selection be confirmed by the Senate. And we applaud the deletion of this provision. But we believe that the administration should speak with one voice on tax proposals.

The administration needs to take into account its own priorities, the views of the Secretary of the Treasury, the concerns of many agencies, and in the Office of Tax Policy, we do believe that we provide significant technical revenue estimating and policy input.

We also need the administrative input of the IRS. In short, we believe that to change the reporting responsibilities on tax legislation of the ombudsman would essentially deny the executive branch the right to present Congress with a balanced economic agenda and would certainly undercut the role of the Secretary of the Treasury as the spokesman on the administration's fiscal matters.

We work with the IRS. We want you to know that Treasury has taken quite an interest in the administration of tax returns. Both Mr. Samuels and I have asked to visit Service centers in the next few weeks to see what type of burden they deal with. Last year, I went out to California to meet with the agents, and I was very interested in a lot of the comments they made about the difficulties they face.

We work with the IRS on legislative ideas, but we have been somewhat frustrated by the lack of opportunity to present good-government, legislative solutions. In 1993, tax provisions were viewed as nongermane to budget reconciliation. In 1994, there were no tax provisions in the budget. And in this current budget, while we have set them forth, we think that this committee needs to make a special effort—and it has done and we applaud what it has done in technical corrections—to place what is probably less glamorous tax legislation on the agenda and fight for its enactment.

I would also like to comment on the provisions providing for installment agreements as a matter of right and for the suspension of penalties that are in the Taxpayer Bill of Rights. You need to remember that most law-abiding and fiscally responsible taxpayers pay their tax liabilities on time. These provisions would encourage them not to. We have several examples in the written testimony,

but one thing to consider is the difference in the rate of interest on payments to the Federal Government and the rate of interest on a credit card balance.

If this legislation goes through the way it is, I would certainly expect people in the private sector to give advice to anyone that has an outstanding credit card balance, that it is far more tax efficient to pay the credit card balance before you pay your taxes. This is because in many instances I think the rate right now on credit cards is about 15 percent, whereas the rate on payments to the Government is 8 percent. It is clearly in your interest to pay down your credit card balance before you pay your taxes.

If the rate of interest on amounts owed the Government is less than the return that you get on your investments, you also would have an incentive to make these investments instead of paying the Government. And making these installment agreements a matter of right we think would seriously undermine efforts to pay your tax on time.

My final comments really deal with retroactivity. In H.R. 661, section 903 generally would prohibit us from issuing retroactive regulations. There are a number of exceptions that are detailed. There was a very useful provision in H.R. 11 that was dropped in the current legislation. It would have allowed regulations issued within 12 months of enactment of a statute to relate back to the date of enactment. But the authority to issue regulations retroactive is a great concern for us. There have been a lot of studies done of situations when the Treasury has acted retroactively, and I am not aware of any study that has ever concluded that we have engaged in a pattern of misuse or irresponsibility with respect to our authority to act retroactively.

If we were prohibited from acting retroactively, we would establish a window in the period of time between when changes in statutes occur and when the regulations that detail the manner in which one complies with those statutes are issued. Taxpayers would basically race against the Treasury in order to get their transactions in that window. We see constantly the arbitrage opportunities that are created in the financial markets that rely on the slowness of the Government to act, and we need the power to continue to at least threaten to act in many instances retroactively to prevent this type of arbitrage from occurring.

Despite these concerns, and in conclusion, we remain committed to the Taxpayer Bill of Rights. We believe we can work with this committee and can make the provisions better. And we look forward to that.

This concludes my prepared remarks, although I will stay for questions until after the Commissioner and the ombudsman have divided. Thank you.

[The prepared statement follows:]

STATEMENT OF
CYNTHIA G. BEERBOWER
DEPUTY ASSISTANT SECRETARY (TAX POLICY)
DEPARTMENT OF THE TREASURY
BEFORE THE
SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
UNITED STATES HOUSE OF REPRESENTATIVES

Madam Chair and Members of the Subcommittee:

In response to the Subcommittee's request, I am pleased to present the views of the Department of the Treasury on the important issue of taxpayer rights. This Administration supports many of the ideas in the legislation we will be discussing today. Treasury has been working with the Internal Revenue Service (IRS) to develop a package of administrative changes, including certain regulatory simplification to help taxpayers reduce the burden of tax compliance. We also have been meeting with Congressional staff to develop legislative initiatives that build on the original Taxpayer Bill of Rights.

Commissioner Richardson, in her testimony, will discuss some suggestions that have emerged from these dialogues. We remain strongly committed to reducing taxpayer burden and safeguarding taxpayer rights in dealing with the IRS.

Last year, the Treasury Department supported the passage of The Tax Simplification and Technical Corrections Act of 1993, H.R. 3419, which contained numerous provisions of the Taxpayer Bill of Rights 2, as originally contained in H.R. 11. Although H.R. 3419 passed the House on May 17, 1994, the legislation was never taken up in the Senate. In its Fiscal Year 1996 Budget, the Administration stated that it continues to support revenue-neutral initiatives designed to promote sensible and equitable administration of the internal revenue laws, including simplification and technical corrections. In addition, the Budget describes the Administration's support of such compliance and enforcement measures as reinstatement of authority to share information on cash transaction reports within the law enforcement community and to fund undercover operations. In the Budget, we also state that we support and want to work with Congress on proposals involving intermediate sanctions, the modernization and streamlining of IRS operations, and compliance with diesel dyeing requirements.

The Administration also has actively pursued administrative measures to ease taxpayer burdens. For instance, just this week, the IRS issued a notice relieving taxpayers who made charitable contributions of $250 or more from the statutory requirement that they obtain adequate written acknowledgements from the charities before they file their 1994 returns. The IRS provided this relief because of difficulties taxpayers are experiencing in obtaining these acknowledgements. As another example, in 1993 the IRS issued a notice providing relief for individuals who want an automatic four-month extension to file their tax returns, but who are unable to pay by the original due date the amount of tax estimated to be due. Although such taxpayers would still be liable for interest and late-payment penalties, they are relieved of the late-filing penalty that otherwise would apply.

In addition, the Administration has taken numerous administrative measures to make it easier for small businesses to deal with the tax system. The Administration routinely issues regulations designed to minimize or eliminate burdensome recordkeeping requirements on small businesses. For example, the Administration recently issued regulations reducing the reporting requirements necessary to claim an ordinary loss deduction on the sale of small business stock, simplifying return preparation for taxpayers subject to the alternative minimum tax, and simplifying the calculations for determining the amount of depreciation deductions for small businesses. The Administration has also issued guidance designed to assist small businesses in complying with complicated tax provisions -- for example, by issuing a revenue procedure that will greatly assist the rapidly growing number of small businesses that elect to operate as limited liability companies.

Today, you have asked for our views on three pieces of taxpayer rights legislation that have been introduced in the 104th Congress: (1) H.R. 390, which was introduced by Representative Traficant and others on January 4, 1995; (2) S. 258, which was introduced by Senator Pryor, Senator Grassley and others on January 23, 1995; and (3) H.R. 661, which was introduced by Representative Thornton on January 24, 1995. Because S. 258 and H.R. 661 are the same, I will refer to H.R. 661. You have also asked that we review Title V of H.R. 11, which was passed by both Houses of Congress in the Revenue Act of 1992, but vetoed by President Bush.

In preparing our testimony, we have reviewed the prior testimony in this area by Treasury officials. It is interesting to note that over a long period of time and regardless of the political affiliation of the Administration at the time, the testimonies of Treasury officials have been consistent. Treasury always has cautioned Congress that compliance with our tax laws depends upon the public's perception that the tax laws are fairly administered and that the IRS has the ability to catch and prosecute violators. Our tax system has as its foundation voluntary self-assessment and compliance. The IRS currently audits only approximately 1 percent of all returns. Since we depend upon voluntary compliance, Treasury approaches this subject today with caution.

There are three prerequisites to a successful voluntary tax system. First, the system must be perceived as being fair. Fairness requires that similarly situated taxpayers be treated similarly. The success of our system, therefore, hinges on each of us believing that if we pay our share of taxes, others will do the same.

Second, taxpayers must be treated with respect and dignity. The enforcement mechanism should not be more intrusive or burdensome than is necessary for sound tax administration.

Third, the tax system must operate efficiently in a manner that provides quality services to taxpayers at a reasonable cost. If we increase the governmental costs of tax collection, without commensurately increasing the benefits to taxpayers, the taxpayers' dollars will be wasted.

With these criteria in mind, we believe that certain important provisions of the proposed legislation will be useful and valuable. However, we have serious reservations about some of the other proposals in the proposed legislation. Although these proposals are well-intentioned, we believe that they could significantly undermine fairness, respect and efficiency, and ultimately erode voluntary compliance with our laws.

I. H.R. 390

I would like to focus initially on H.R. 390. This bill contains three sections. The first section, about which we have major concerns, would place the burden of proof on all issues in all tax cases in court on the government.

S 1. Burden of Proof

Current law. The general rule in civil proceedings is that the burden of proof is on the party that has control of the facts. By contrast, in criminal and certain penalty proceedings (such as civil fraud), the burden shifts to the government.

In the tax context, the general civil rule is articulated well by the Ninth Circuit case of Rockwell v. Commissioner, 512 F.2d 882 (9th Cir. 1975). In this case, the U.S. Court of Appeals for the Ninth Circuit held clearly that the burden of proof rests with the taxpayer both to produce evidence that rebuts the Commissioner's determination and to persuade the court of the correctness of the taxpayer's position. This, the court said, is proper and does not deny the taxpayer his right to due process of law. The court said if it were to decide the issue in the first instance, it would establish and uphold this rule:

> "The taxpayer knows the facts . . . . He can . . . testify as to what his intent or purpose was. The Commissioner, on the other hand, must rely on circumstantial evidence, most of it coming from the taxpayer and the taxpayer's records . . . . It is not at all unfair, in such a case, to place on the taxpayer the burden of persuading the trier of fact. . . " Id. at p. 887.

Proposal. Section 1 of H.R. 390 would change this long-standing and well-established legal doctrine in the tax context. It would place the burden of proof on the government for all issues in all tax cases in court. Section 1 provides: "Notwithstanding any other provision of this title, in the case of any court proceeding, the burden of proof with respect to all issues shall be upon the Secretary."

Discussion. While this provision may appear to be relatively simple and innocuous on its face, we believe it will have enormous and far-reaching adverse effects on the tax system. In particular, we believe it will result in a significant reduction in the willingness of taxpayers to comply voluntarily with their tax obligations and would greatly encourage tax protestors.

It is difficult to grasp a change of this magnitude. However, in Fiscal Year 1994, the IRS examined (through regular examinations and information return program contacts) four million taxpayers. Most of these audits are conducted by correspondence. Under the new provision, a taxpayer receiving a letter could simply refuse to provide the requested information.

The IRS would then be forced to do a full face-to-face audit of the taxpayer. But even then, if the taxpayer refused to cooperate, the IRS would be forced to disprove the items shown on the return. This would often be impossible. It would require extensive investigation by the IRS, lengthy face-to-face interviews of persons other than the taxpayer, and often the need to summon information from third parties. As a result, the simplest audit would become a costly nightmare if the taxpayer refuses to cooperate. The taxpayer could wait for the IRS to come up with proof and, if the IRS abandons the effort, the taxpayer automatically "wins."

For example, (1) if a taxpayer claims a child as a dependent and the IRS suspects the child does not exist, the IRS would be forced to interview neighbors; (2) if a taxpayer claimed that he or she supplied more than half the support of a dependent, the IRS would be forced to prove that someone else provided more than half; (3) if a taxpayer claimed that art given to charity was worth $1,000,000; the taxpayer could just wait, and the IRS would have the burden of proving it was worth less; (4) if a taxpayer claimed a $200,000 mortgage interest deduction, the IRS would be forced to summon the bank to prove that the interest had been paid and that the principal amount of the mortgage exceeded the $1,000,000 limit; (5) if a taxpayer claimed to be over age 65 and/or blind, the IRS would have to summon records to prove the contrary; (6) if a taxpayer claimed lavish entertainment expenses, the IRS would have to attempt to disprove the expenses (or the business purpose of the event) by summoning waiters and credit card receipts; and (7) if a taxpayer claimed that his gambling winnings were offset by gambling losses, the IRS would somehow have to prove that he did not have the losses.

The results in the business arena would be equally bizarre. If a foreign-owned U.S. company reported no profits, and the IRS claimed there should be intercompany pricing adjustments that would result in profits, the IRS would have the burden of proving that the U.S. company had overpaid its foreign affiliate, rather than (as today) the U.S. company having to prove that it did not overpay. If a taxpayer claimed exemption from the "passive loss" rules for real estate because he or she worked more than 500 hours in the activity during the year, the taxpayer need show nothing, and the IRS would have to somenow disprove that claim.

The change in the burden of proof also would have significant implications in the tax shelter context. Many tax shelter cases turn on whether the taxpayer can establish that the transaction or investment was entered into with the intent to make a profit or instead was solely to manufacture tax deductions. We believe it is reasonable for the taxpayer to have the burden of proving its own business motives. To do otherwise would open the door to shelters ranging from complicated corporate financial transactions to wealthy taxpayers who buy ranches as vacation homes and then deduct the cost of what in reality is the cost of their vacation.

The bill would also be an obvious boon to tax protestors, who would claim all sorts of deductions to zero out their income. The IRS would spend endless hours having to disprove each item on the return. Protestors would no doubt become extremely creative in claiming deductions that would cause maximum difficulty on the part of the IRS to disprove.

There also would be a significant impact on the IRS Appeals Office, which is required to take into account the hazards of litigation in settling cases. With the burden of proof on the government, the IRS would be placed in the "no win" position of either having to settle more cases for reduced amounts or to proceed to court. This choice may have little to do with the merits of the case and everything to do with the IRS's ability to obtain the necessary records.

Section 1 of H.R. 390 also would compromise taxpayer privacy and cause audits to become much more time-consuming and burdensome. The Service would be forced to conduct more intensive and intrusive investigations of the taxpayer and, if the taxpayer did not cooperate, third parties such as banks and credit card companies would be required to provide information to the IRS. These document requests would be viewed as imposing new burdens on these third parties.

The system also would operate less efficiently and would be less able to deliver quality services at a reasonable cost. The provision either would require increased funding for the IRS or a reduction in audit activity. Consider the task of disproving the existence of a child. If I claim that I have a baby, how are you going to disprove that? The fact that my neighbors never saw one or the grandparents never heard about one does not prove that the child does not exist. Even the lack of a birth certificate does not prove it.

The IRS would have to spend more time developing and litigating cases, even though it would have less chance of winning them. Audit resources would be spread even more thinly, and the audit rate would decline further. More summonses would be issued and more efforts would have to be exerted attempting to obtain district court enforcement of them. Because the statute of limitation on assessments would remain unchanged, this dilution in audit resources would effectively immunize more and more deficiencies from assessments. The ultimate result would be that IRS audits would only be cost-effective if very large amounts of money were at stake, inviting taxpayers to disregard the rules and fostering disrespect for the system.

In evaluating section 1 of H.R. 390, we ask you to consider whether it really is in the long-term interest of the average taxpayer to force the Internal Revenue Service to administer and enforce the tax laws with this impediment? Because of the negative impact on fairness, privacy and efficiency, the answer to this question is clearly no.

Although Treasury has not formally estimated the cost of this proposal, it is almost certain to be very large. The trust of law-abiding citizens who do comply with the tax laws would be eroded.

Moreover, this provision is likely to result in significant increases in reporting and recordkeeping burdens on the public because the IRS will be forced to obtain more information concerning taxpayers from third parties to carry the burden of proof. Not only will this be extremely costly, but it directly conflicts with our goal of reducing reporting and recordkeeping burdens wherever possible.

In sum, this proposal could severely weaken, if not destroy, our voluntary compliance system as we know it today.

* * *

I would also like to comment briefly on the remaining two provisions in H.R. 390.

§ 2. Secretary of the Treasury Required to Specify, on Request, Regulations Implementing Specific Taxes

Current law. Under current law, the IRS provides taxpayers with an explanation of the bases for its proposed adjustments in its statutory notices and provides detailed citations to authorities in support of its position in field audits.

Proposal. Section 2 of H.R. 390 would obligate the Secretary to provide each person who was made liable for a tax, upon written request, with a written identification of the type of tax and regulations relating to the adjustment. This written identification would have to be provided within 14 days of the request.

Discussion. We agree taxpayers should be made aware of the basis for an adjustment. In fact, this information is routinely provided by the IRS and already is available on request of the taxpayer. However, we question whether forcing a response in all cases within 14 days, regardless of the posture of the case, that could consume significant resources, would result in a commensurate benefit to taxpayers.

§ 3. Increase in Limit on Recovery of Civil Damages for Unauthorized Collection Actions; Exclusion of Such Damages From Income

Current law. Under current law, if an officer or employee of the IRS recklessly or intentionally disregards a provision of the Internal Revenue Code or Treasury regulations, the affected taxpayer may sue the United States for the lesser of (i) $100,000 and (ii) direct economic damages plus costs.

Proposal. The bill would increase the damage cap to $1 million and exclude the damages from the taxpayer's income.

Discussion. We believe that the current statutory provision strikes a reasonable balance between safeguarding the interests of taxpayers and the IRS. We are concerned that increasing the damage cap to $1 million could significantly encourage lawsuits by tax protestors. Excluding damages from income also results in mismeasurement of a taxpayer's economic income and is an indirect way of raising the cap.

II. TAXPAYER BILL OF RIGHTS 2

The Treasury and the IRS worked closely with Members of Congress and their staffs in developing the 1988 Taxpayer Bill of Rights legislation, and we are continuing to meet with Congressional staffs to develop new ideas that will build upon the advances that already have been made. Commissioner Richardson, who will testify after me, will set forth some of the ideas that the IRS and Treasury are developing.

As a general policy matter, the Administration has and will support legislative and regulatory proposals for procedural changes that are well-defined and that improve the tax system, subject of course to budget neutrality requirements that must be satisfied.

We also caution against attempting to codify existing IRS practices and procedures. This may hamper the ability of the IRS to revise those rules to respond to changed circumstances and encourage a small segment of the taxpayer community to engage in unproductive litigation that consumes scarce IRS resources. The costs of the delays and litigation expenses generally must be borne ultimately by all taxpayers.

The remainder of my testimony comments on specific provisions of the "Taxpayer Bill of Rights Two" (TBOR 2) bills.

The two versions of TBOR 2 that are the focus of this hearing (H.R. 661 and H.R. 11) are very similar in most respects. We support many of the provisions in their current form or with minor modifications that we have been discussing with Congressional staffs. At the current time, we understand that there are roughly 40 sections in each of the current bills and we have major disagreements with only a small number of these provisions. We are supportive, for example, of proposals in each of these bills to (1) extend the interest-free period for payment of tax after notice and demand; (2) disclose collection activities against spouses who filed a joint return; (3) permit joint returns after separate returns without immediate full payment of tax; (4) include phone numbers on payee statements; (5) apply the failure-to-pay penalty evenly to regular and substitute returns; and (6) make reasonable efforts to notify taxpayers that have made payments the IRS cannot associate with any tax liability.

Commissioner Richardson will testify in more detail on some new ideas that have been suggested. I would like to focus the balance of my testimony on our points of disagreement with the bills.

Taxpayer Advocate

§ 101 of H.R. 661 and S. 258 (same in pertinent part as § 5001 of H.R. 11). Establishment of Position of Taxpayer Advocate within the IRS

Both H.R. 661 and H.R. 11 contain two sections that affect the office of the Taxpayer Ombudsman. I generally will defer on these provisions to Lee Monks, the current Ombudsman. However, there are two issues on which I would like to comment.

Current law. Under current law, the Administration's tax legislative initiatives are not presented to Congress until they are cleared by all pertinent executive offices and agencies, including the Office of Tax Policy, the Internal Revenue Service, and the Office of Management and Budget. The Ombudsman is appointed by the Commissioner.

Proposal. Section 101 of H.R. 661 and section 5001 of H.R. 11 require the Ombudsman (who would be renamed the Taxpayer Advocate) to submit an annual report to the tax-writing committees on the activities of his office. Each such report would have to contain recommendations for legislative solutions to problems encountered by taxpayers. These reports would not be permitted to be reviewed by officials of Treasury, IRS, or the Office of Management and Budget, including the Commissioner and the Assistant Secretary for Tax Policy, prior to being submitted to Congress.

Section 5001 of H.R. 11, unlike section 101 of H.R. 661, requires the Taxpayer Advocate to be appointed by the President and confirmed by the Senate.

Discussion. We believe that the Ombudsman (or Taxpayer Advocate) should be independent and free to discuss his views, and we are pleased that the current bill does not contain a mandate that he be chosen by the President and confirmed by the Senate. But we draw the line at submitting legislative proposals in the absence of review by other offices. We believe that the Administration should speak with one voice on tax legislative proposals, taking into account the priorities of the Administration, the views of the Secretary of the Treasury, the concerns of many agencies and the technical, revenue estimating and policy input of the Office of Tax Policy and administrative input of the IRS. In short, we believe this provision undercuts the right of the Executive branch to present to Congress a balanced fiscal and economic agenda and the role of the Secretary of the Treasury as the spokesman of the Administration's fiscal matters.

Installment Agreements

§ 202 of H.R. 661 and S. 258 (not in H.R. 11). Running of Failure-to-Pay Penalty Suspended during Period Installment Agreement is in Effect

Current law. Under current law, taxpayers generally must pay interest and a failure-to-pay penalty on taxes that are not paid on time. The failure-to-pay penalty applies during the period of time an installment agreement is in effect.

Proposal. The proposal would suspend the failure-to-pay penalty during the period of time an installment agreement is in effect, as long as the agreement was requested before the due date of the return.

Discussion. This proposal would have a serious negative impact on revenues and collections. Taxpayers who otherwise could pay taxes on time would be encouraged to pay in installments. Consider the interest arbitrage between the rate of interest on payments to the Federal government and the rate of interest for credit card borrowings. The government rate is only about half the credit card rate. Obviously, anyone with credit card balances should pay that first before paying tax. Also, if the rate of interest owed the government is less than the return taxpayers could earn by investing the delayed payments, taxpayers would have an incentive to borrow from the government by not paying tax on time. The consequences of the proposal would be exacerbated when combined with the proposal (section 201 of H.R. 661 and S. 258) permitting installment agreements as a matter of right.

Interest

§ 301 of H.R. 661 and S. 258 (modification of § 5201 of H.R. 11). Expansion of Authority to Abate Interest

Current law. Under current law, the IRS has the authority to abate interest assessed with respect to a tax deficiency or payment that is attributable to the error by, or delay of, an IRS employee performing a "ministerial" act.

Proposal. In the case of taxpayers with net worth and size exceeding certain thresholds (generally, $2 million for individuals and $7 million or 500 employees for businesses), the IRS would be authorized to refund or abate interest attributable to "unreasonable" IRS errors or delays, regardless of whether the error was attributable to a "ministerial" act. In the case of taxpayers with a net worth and size below the thresholds, the IRS would be obligated to abate the interest until the demand for payment was made. The counterpart to this proposal in H.R. 11 omits the net worth distinction and does not mandate abatement for any taxpayers.

Discussion. This broadening of the authority to abate interest in both H.R. 661 and H.R. 11 would encourage taxpayers to seek relief from interest assessments as a matter of course, imposing significant administrative and controversy-related costs on the IRS. These costs ultimately would be borne by all taxpayers. In addition the vagueness of the standard for abatement would lead to uneven application of the law.

Moreover, even during delays in the resolution of an issue, taxpayers have the use of government money. Since interest (unlike a penalty) is compensation for the use of money, the provision would represent an economic windfall to taxpayers in many cases.

The net worth distinction in H.R. 661 lacks a solid policy foundation as it is unrelated to the purpose of an interest charge, which is to account for the time value of money. When coupled with the mandatory abatement for "small" taxpayers, the proposal also would have a negative impact on tax revenues. We also believe that the net worth distinction would add significant administrative complexity.

Information Returns

§ 603 of H.R. 661 and S. 258 (modification of § 5503 of H.R. 11). Requirement to Conduct Reasonable Investigations of Information Returns

Current law. Deficiencies determined by the IRS generally are afforded a presumption of correctness.

Proposal. Section 603 of H.R. 661 would place the burden of proof on the IRS in all reasonable disputes concerning the accuracy of income reported on an information return filed by a third party, unless the IRS had conducted a reasonable investigation of the accuracy of the return. The proposal is more expansive than its counterpart in H.R. 11. Section 5503 of H.R. 11 is limited to disputes over information returns in court proceedings, does not apply unless the taxpayers cooperate, and requires the IRS to present "reasonable and probative information" concerning the deficiency, rather than to shoulder the burden of proof.

Discussion. We believe the H.R. 11 proposal strikes an acceptable balance between taxpayer and government burdens. The IRS already has updated its procedures to incorporate the substance of that proposal.

For many of the reasons discussed in our comments on section 1 of H.R. 390, we have very serious misgivings about the version of this proposal in H.R. 661. By shifting the burden of proof on income reported on information returns to the IRS, the H.R. 661 proposal could eviscerate the IRS's matching program by eliminating the presumption of correctness if the IRS failed to physically examine the return or otherwise conduct a "reasonable investigation" of the return's accuracy. Taxpayers, without presenting any supporting evidence, could force the IRS to investigate the accuracy of information returns before issuing notices of deficiency.

Any statutory change that prevents the IRS from asserting deficiencies on the basis of information returns could have devastating effects on the tax compliance system and profoundly increase the resource needs of the IRS. Computerized matching of information returns has had a significant positive impact on taxpayer compliance. This change would represent a significant step backwards.

Administrative Costs

§ 804 of H.R. 661 and S. 258 (not in H.R. 11). Authority for Court to Award Reasonable Administrative Costs

Current law. Under current law, a "prevailing party" in an administrative or judicial proceeding is entitled to reasonable litigation and administrative costs, including attorneys' fees. Positions of the IRS taken prior to issuance of an IRS Appeals decision or notice of deficiency are not taken into account.

Proposal. Although the drafting of the proposal is not entirely clear, its intent appears to be to permit taxpayers to recover costs in connection with IRS positions asserted prior to an IRS Appeals decision or notice of deficiency.

Discussion. Cost recoveries should be allowed only after the United States has adopted a litigating position. The position of the United States during the early stages of an investigation cannot be judged against the "substantial justification" standard used to determine if one is a prevailing party, because examining agents pursue fact-finding investigations that do not consider the hazards of litigation.

Relief from Retroactive Regulations

§ 903 of H.R. 661 and S. 258 (modification of § 5803 of H.R. 11). Relief from Retroactive Application of Treasury Regulations

Current law. A taxpayer may rely on Treasury regulations and revenue rulings that accord with the taxpayer's particular facts. In addition, penalties are abated for taxpayers who rely on other written guidance of the IRS. The Secretary may exercise its discretion to issue tax regulations prospectively or retroactively.

Proposal. With a few exceptions, section 903 of H.R. 661 and the corollary provision in H.R. 11, would prohibit final regulations from applying to a taxable period ending before the earlier of (1) the date related proposed regulations were filed with the Federal Register; or (2) a Notice was issued substantially describing the expected content of the regulations. Under both sections, regulations could apply to an earlier period (1) to prevent abuse of a statute, (2) to cure procedural defects in previously issued regulations, or (3) pursuant to an election by the taxpayer. The H.R. 11 version provides an additional very important exception. Under H.R. 11, regulations issued within 12 months of the date of enactment of a statute may relate back to that date. Both H.R. 661 and H.R. 11 would apply retroactively to invalidate regulations that already have been issued.

Discussion. Section 7805(b) of the Internal Revenue Code, in existence basically since 1921, confers broad authority on Treasury to authorize prospective effective dates for rulings, regulations and other types of guidance. It presumes that regulations can always be applied retroactively. However, in practice, Treasury rarely has applied guidance retroactively unless the taxpayers have wanted retroactive treatment. Most reviews, some of them rather extensive, by academics, bar associations and practitioners, have concluded that Treasury has acted responsibly and reasonably. We are not aware of comments suggesting a pattern of misuse or other emergency justifying the type of fundamental change contemplated by the proposal.

The ban would encourage aggressive return positions for transactions that occur in the "window" between the date of change in the statute and the date of issuance of regulations interpreting that change. Taxpayers would routinely litigate the new nonproductive question of whether a retroactive regulation was justified, because their transaction "abused" the statute. In addition, the exception for retroactive regulations to curb abuse of a statute would not cover regulations addressing judicial decisions or substantive defects in prior regulations. The absence of an exception in H.R. 661 for regulations issued within twelve months of the related statutory provision would inhibit the ability of Treasury to implement the operation of new legislation according to Congressional intent. Taxpayers would constantly "race" the Treasury to complete their questionable transactions before regulations could be issued.

Finally, the retroactive effective date of the proposal is, at best, counterproductive. By applying to regulations filed on or after January 5, 1993, the proposal in H.R. 661 would undercut legitimate taxpayer reliance on regulations issued on or after that date and before H.R. 661 was enacted.

* * *

This concludes my prepared remarks. I will remain to answer any questions that you have after the Commissioner's and the Ombudsman's statements. Thank you.

Chairman JOHNSON. Thank you, Ms. Beerbower. .
Ms. Richardson, welcome.

STATEMENT OF MARGARET MILNER RICHARDSON, COMMISSIONER, INTERNAL REVENUE SERVICE

Ms. RICHARDSON. Thank you, Madam Chairman and other distinguished members of this committee. I have a longer written statement which I would like to submit for the record and then summarize it, if I might.

I appreciate the opportunity to be able to testify today before this subcommittee on the possible development of a Taxpayer Bill of Rights II. The issue that we are discussing today, ensuring that the rights of American taxpayers are protected, is of the greatest importance to me, to the Internal Revenue Service, and to American taxpayers.

With me today is Lee Monks, the Taxpayer Ombudsman, who will speak to you from his perspective as a taxpayer advocate.

I want to begin today by assuring you that the Internal Revenue Service is committed to respecting the rights of all taxpayers. Although I believe that we have the best tax administration system in the world, that does not mean that we should not continue to improve it. Our tax system, with the rights afforded taxpayers under it, is the model to which other nations look both in planning their systems and in measuring their successes.

Since becoming Commissioner almost 2 years ago, I have had the opportunity to visit with many of our almost 115,000 employees. What has particularly impressed me has been their dedication to and concern for protecting taxpayers' rights and their commitment to reaching balanced, sensible solutions to the varied and often unique taxpayer situations with which they are confronted. The vast majority of our employees care very deeply about providing good customer service and about protecting taxpayers' rights.

I think we have long recognized that there is an interrelationship between taxpayer service and taxpayer rights. We understand that when we make it easier for taxpayers to meet their filing responsibilities, when we are helpful in assisting them with their questions, and when we more quickly respond to an account inquiry or problem, the more likely it is that they will feel respected and, in reality, have their rights respected.

Our commitment to providing good quality service to every taxpayer does run deep in our organization, and we are working very hard to break down the functional areas so that every employee, not just those who are officially assigned to the Taxpayer Service area, appreciates the importance we attach to taxpayer service and taxpayer rights.

But despite our progress, I believe that by working together we—Congress, the Treasury Department, and the IRS—really can still do more to enhance taxpayers' rights. There are, as Ms. Beerbower mentioned, significant areas of agreement about what provisions would further enhance taxpayers' rights, and I won't go into those. But we have detailed them in an appendix to my written testimony.

I would like to share with you today several new proposals that we believe will further enhance the rights of taxpayers. The first

proposal would assist the IRS in safeguarding each taxpayer's right to privacy. Protecting taxpayers' rights of privacy is a top priority for the Internal Revenue Service. I have repeatedly stated that we will not tolerate any violation by employees of taxpayers' rights of privacy. Taxpayers' confidence that their privacy rights will be honored and that their tax return information will be kept confidential is one of the foundations of our voluntary compliance system.

A basic tenet of our confidentiality and privacy policy is a prohibition against employee access to or use of tax return information, except when it is essential for that employee to perform his or her assigned function. Our proposal, which we hope you will support, provides specific criminal sanctions that would apply to employees who violate this policy.

Under another proposal we have made, the IRS would be required to abate a penalty assessed for the first time a taxpayer failed to make the required deposits of payroll taxes if: that failure occurred during the first quarter that wages were paid; the return was filed on time and appropriate payments were made; and the taxpayer completes an IRS-approved education program that addresses the filing and payment requirements. This relief is aimed typically at new small business employers.

Finally, we propose a requirement that we issue annual reminders to taxpayers with outstanding delinquent accounts that are not in an active collection status, which remind taxpayers about the status of their accounts, the continued accrual of interest and penalties, and the continued possibility of having their refunds offset to pay those outstanding amounts.

Madam Chairman, we would like to assist your subcommittee in making these proposals a reality. We would also like to work closely with the Treasury Department and the subcommittee as you all consider various proposals so that we can inform you about the provisions we believe would propose significant administrability issues. Some of the provisions raise issues that should be considered and balanced against the additional burden and appearance of inequity that they would cause.

One example is a provision to require income tax return instructions to contain information on installment agreements, extensions of time to pay, and offers in compromise. We believe that by promoting the availability of offers in compromise before returns are filed and taxes are due through references in the income tax instructions, there is a risk of undermining the confidence of the overwhelming majority of taxpayers who timely and fully pay their liabilities. It is issues of this nature, balancing the rights of taxpayers who do pay fully and on time against the rights of those who may make an offer to settle their liabilities for an amount significantly lower than the amount they owe, that are ones we hope the subcommittee will explore with us further as it considers the legislation.

We also hope to work with you to give you an appreciation of some of the resource issues presented by the proposals, as well as some of the technological constraints that make some of the proposals infeasible with our current systems.

In the interest of time, I only want to discuss a few of the administrative concerns we have with the proposals considered today,

but, again, outlined in my index are a number of concerns that we have about some of the proposals.

Although the taxpayer ombudsman is going to address the organization and responsibilities of his function and a proposal to expand its authority to issue taxpayer assistance orders, I wanted to share with you how the ombudsman and his organization have had a positive impact on the promotion of taxpayer rights within the IRS.

Not only does the ombudsman and his organization assist taxpayers individually through the Problem Resolution Program, he also provides recommendations to improve the quality of IRS programs and systems that benefit all taxpayers. Through these recommendations for systemic changes, the ombudsman has a much wider impact than if his only contribution were to address taxpayers' problems individually.

Currently, problem resolution officers in the Service centers and district offices report to the heads of these offices. This organizational structure provides a strong incentive for these field offices to deliver quality services to taxpayers and promptly resolve taxpayer problems. It also allows problems that occur at the local level to be resolved at the local level.

The current structure, by all accounts, is working well. There is a proposal in some of the legislation to remove problem resolution officers from the current management reporting lines and have them report to the ombudsman in Washington, D.C. Madam Chairman, I encourage the subcommittee and your staff to explore with the ombudsman and his staff the effect that such a change would have on their ability to help taxpayers. Any change should be carefully considered and not just done for the sake of change.

We are also concerned with provisions that generally give noncorporate taxpayers the automatic right to installment agreements once every 3 years and eliminate failure-to-pay penalties for taxpayers who request installment agreements by the due dates for payment of their taxes. Rather than enhancing taxpayers' rights, these automatic installment agreements, with no failure-to-pay penalties, would be unfair to the vast majority of taxpayers who do pay their taxes on time.

Another proposal would expand the IRS' authority to abate interest assessments by replacing the "error or delay in performing a ministerial act" standard for abatement with an "unreasonable error or delay" standard. It would also require the IRS to abate interest assessments against small businesses and most individuals in cases of "unreasonable error or delay," but only until the date that the demand for payment is made. The apparent justification for this proposal——

Chairman JOHNSON. Excuse me, Commissioner. Could you come a little closer to the microphone?

Ms. RICHARDSON. I am sorry.

Chairman JOHNSON. Gradually, I think we are all having more trouble hearing.

Ms. RICHARDSON. The apparent justification for this proposal—that a taxpayer who has an unpaid tax liability and is charged interest on that unpaid liability is somehow economically disadvan-

taged relative to a taxpayer who timely paid his or her liability without interest—is one with which we do not agree.

This broadening of the interest abatement standard would encourage taxpayers, particularly those with large liabilities, to seek routine relief from interest assessments, thereby imposing significant administrative costs, as well as controversy-related costs, on the IRS and the judicial system. These costs ultimately would be borne by all taxpayers.

Another proposal would require the IRS, prior to commencing an examination, to notify a taxpayer in writing of a planned examination and the examination procedures, with exceptions which apply for criminal investigations, collection jeopardy situations, national security needs, and confidential law enforcement. In many respects——

Chairman JOHNSON. Excuse me, Commissioner. You do have to practically have the microphone right in your face. Thank you.

Ms. RICHARDSON. In many respects, this provision is consistent with our current procedures. For example, we generally provide written notice and a copy of Publication 1, "Your Rights as a Taxpayer," prior to commencing an examination. This provision requiring advance notice, however, would undermine some compliance efforts, including roadside inspections of highway vehicles to ensure they are not evading Federal motor fuel excise taxes, compliance checks for currency transaction reporting, and unannounced visits to electronic return originators to determine whether they are complying with our procedures.

Our current document matching program is an efficient, cost-effective way to stop underreporting of income. We experience an overall compliance rate of over 95 percent in the areas for which we have information reporting. Under the document matching, we match information documents, such as forms 1099 received from third parties, against filed income tax returns. Underreported amounts become subject to correspondence audits.

I am greatly concerned about the provision in H.R. 661 and S. 258 that would shift the burden of proof to the IRS for income reported on information returns. Taxpayers, without presenting any supporting evidence, could force the IRS to investigate the accuracy of information returns before issuing notices of deficiency. We believe this proposal would render the IRS' matching program inoperable. Without this program, the IRS would need substantial additional resources to reach the same level of compliance with the tax laws that we have today.

An H.R. 11 proposal to reform the Service's information reporting procedures provided the same standards as those currently in the Internal Revenue Manual. The H.R. 11 proposal reflected the joint effort of the Service and Treasury, working with Congress, to respond to the concern underlying both that proposal and the H.R. 661 and S. 258 proposal. We believe that that proposal in H.R. 11 strikes a reasonable and appropriate balance between the rights and obligations of both taxpayers and the Government.

I would like now to turn to H.R. 390. H.R. 390 contains a provision that would shift the burden of proof to the IRS during any court proceedings. Madam Chairman, not only would that provision undermine the Federal income tax system, but also State tax sys-

tems that depend on Federal deficiency assessments, assessments which would simply evaporate if this provision were enacted.

The current burden of proof rules have been in place for well over a century and are closely woven into the fabric of our system of voluntary compliance. While proposals to shift the burden of proof to the Government have been advanced during this period, in each instance the proposals have been rejected. The reasons for rejection were well stated during a 1925 debate on a proposal that, like H.R. 390, would have placed the burden of proof on the Government. The quote went as follows:

> You might as well repeal the income tax law and pass the hat, because you will be practically saying to the taxpayer, How much do you want to contribute toward the support of the government? And in that case they would have to decide for themselves.

The Internal Revenue Code and the administrative policies of the IRS contain many procedures designed to foster the administrative settlement of civil tax disputes and result in the successful resolution of the vast majority of the civil disputes that arise under the tax laws. Not all disputes can be resolved administratively, however, and the code permits taxpayers dissatisfied with the outcome of these administrative proceedings to seek relief in court.

Throughout the history of tax litigation in this country, the taxpayer has been required to bear the burden of proof in tax disputes. This allocation of the burden of proof is in keeping with the common law traditions, is sensible and fair, and reflects some of the fundamental principles that underlie our system of taxation.

Generally, in civil tax litigation, the burden of proof is on the taxpayer. In those situations where liability is imposed for civil fraud or where there is alleged criminal liability, the burden of proof is on the Government—a situation that, for good reason, should continue.

But there are good reasons not to change the burden of proof in civil tax litigation. First, as I said, the current rules are consistent with the voluntary self-assessment system, which presumes that taxpayers, and not the Government, are best able to maintain and produce records to substantiate items on their tax returns.

Second, placing the litigation burden of proof on taxpayers promotes administrative resolution of tax cases. Knowledge of this ultimate burden provides an incentive for them to voluntarily produce information during an audit and subsequent administrative proceedings.

Third, taxpayers, like other claimants, should bear the burden of proving their claims in court. Under the common law, parties challenging administratively proper decisions of Government agencies are typically required to shoulder the burden of proof. The Internal Revenue Code and current administrative practices of the Internal Revenue Service ensure that taxpayers have many opportunities to seek resolution of tax disputes short of litigation.

Finally, considerations of fairness and efficiency require that taxpayers bear the burden of proof. The common law generally places the burden of proof on the party with the most ready access to the evidence necessary to adjudicate claims. This common law tradition is not only consistent with principles of fairness, it substantially

lessens the need for court-supervised and intrusive discovery during both administrative and court proceedings.

Also, it is unrealistic to expect that the Government has either the resources or the ability to prove that all taxpayer claims, no matter how outlandish, are false. I think that Ms. Beerbower touched on a number of the issues and concerns. I won't go into that here.

Chairman JOHNSON. She did. And I think if you could skip over those parts of your testimony——

Ms. RICHARDSON. Except to say that we believe that H.R. 390 would not serve in the best interests of sound tax administration and the American taxpayer. Taxpayers would be encouraged to keep or produce nothing about their tax affairs and require the Government to disprove every item on their return. Recordless taxpayers, including those who earn income from illegal sources, would be rewarded.

Passage of H.R. 390 would also necessitate additional information gathering by and reporting to the Government. Audits performed with the burden of proof on the Service would involve a much broader and more detailed inspection of the financial affairs of the taxpayer and third parties. Rather than simply choosing certain items on a taxpayer's return to review according to specific enforcement criteria, which we do today, the Service would, of necessity, need to challenge a greater number of items. The audits would be much more costly to the——

Chairman JOHNSON. Commissioner, if I may interrupt you for a minute. Since the Treasury did go into this in detail, I think if we could skip forward, since there is so much to cover this morning, I would appreciate it.

Ms. RICHARDSON. OK. Finally, I guess the final point we want to make is that court proceedings would also be burdened by the rule change because the only response the Government could make to shifting the burden would be to increase the amount of discovery in litigation.

We think that you will hear from a number of other sources also, Madam Chairman, who are interested in sound tax administration, that passage of H.R. 390 would in effect destroy our voluntary compliance system.

You also asked for our views as to how to best enhance taxpayer rights. In today's dynamic service-oriented business environment, taxpayers have come to expect prompt access to information and assistance with account inquiries and problems, the type of access and assistance they receive in the private sector. Unfortunately, however, as you know all too well, we simply cannot deliver this level of service with our 30-year-old technology. Only through modernization of our information systems will we be able to successfully meet the demands of taxpayers and provide taxpayer rights. Therefore, I am asking that this committee assist us in obtaining the tools we need to properly serve our customers by ensuring full and stable funding for our Tax Systems Modernization Program.

I would like to close with a simple yet, I think, very poignant illustration of the types of things that tax systems modernization would enable us to do for the cause of taxpayer rights. Earlier, we discussed concerns about a proposal to expand our authority to

abate interest assessments and to require us to abate interest assessments in certain cases. But what if we eliminate the need for these interest assessments in the first place without exposing the tax system to the problems presented by the interest abatement proposal?

Tax systems modernization holds the key to providing drastic reductions in the amount of interest assessed to taxpayers. When TSM is fully implemented with its online capabilities, our goal is to match information documents at the time a return is filed, not almost 2 years later, as is done today. That means that almost 2 years' worth of interest assessments could be eliminated for every taxpayer with an unpaid tax balance that is detected through our information document matching programs. TSM will also reduce errors, reduce the time it takes to begin and conduct examinations, speed up account problem resolution for taxpayers, and accelerate collection activities, thus providing further opportunities for reductions in the amount of interest assessments.

With TSM fully implemented, systemic improvements will be possible that would improve the efficiency of the Government, benefit all taxpayers, and result in significant interest assessment reductions.

We are already beginning to reap many of the benefits of TSM today, but we need your assistance to bring it to full and successful completion. Madam Chairman, I am committed to an IRS that expects no less than that all of its employees are advocates for taxpayers, while at the same time ensuring that taxpayers who are compliant with the tax laws are not disillusioned by those who use procedural loopholes to game the system.

I would like to thank you and your colleagues for the opportunity to provide our views in this important area, and we look forward to working with you on the proposals. I will be happy to answer questions after Mr. Monks testifies.

[The prepared statement and attachment follow:]

STATEMENT OF

MARGARET MILNER RICHARDSON
COMMISSIONER OF INTERNAL REVENUE

BEFORE THE

SUBCOMMITTEE ON OVERSIGHT
HOUSE COMMITTEE ON WAYS & MEANS

MARCH 24, 1995

Madame Chairman and Distinguished Members of the Subcommittee:

I appreciate the opportunity to testify today before this Subcommittee on the possible development of a Taxpayer Bill of Rights 2 (TBOR2) and on specific proposals in H.R. 11 from the 102nd Congress ("H.R. 11") and H.R. 390, H.R. 661, and S. 258 as introduced in this Congress. The issue we will be discussing today -- ensuring that the rights of American taxpayers are protected -- is of the greatest importance to me, the Internal Revenue Service, and American taxpayers. One of my most important responsibilities as Commissioner of Internal Revenue is to ensure that, in dealings with the IRS, taxpayers are treated fairly, courteously, and with respect and dignity.

With me today is Lee Monks, the Taxpayer Ombudsman. The position of Ombudsman was created by the Internal Revenue Service in 1979. Since that time, the Ombudsman has served taxpayers well and has made countless improvements in the ways that the IRS interacts with taxpayers. The Ombudsman has also successfully carried out the purposes of the Taxpayer Bill of Rights since its enactment in 1988. Mr. Monks will speak to you today from his perspective as an advocate for taxpayers.

I want to begin today by assuring you that the Internal Revenue Service is committed to respecting the rights of all taxpayers. I believe that we have the best tax administration system in the world, although that does not mean that we should not continue to improve it. Our tax system, with the rights afforded taxpayers under it, is the model to which other nations look both in planning their systems and in measuring their successes.

Since becoming Commissioner almost two years ago, I have had the opportunity to visit with many of our almost 115,000 employees. What has particularly impressed me has been their dedication to and concern for protecting taxpayers' rights and their commitment to reaching balanced, sensible solutions to the varied and often unique taxpayer situations with which they are confronted. Contrary to what is often, in my experience, a very distorted stereotype, the vast majority of our employees care very deeply about providing good customer service and protecting taxpayers' rights.

I realize that there will always be isolated instances in which individual IRS employees have made mistakes. I also realize that given the size of our organization, the volume of our business, and the number of contacts we have with taxpayers each year, the "giant" metaphors like the one in the Subcommittee's press release are simply irresistible. My hope, however, is that the overwhelming number of taxpayers who come in contact with us will come to know us as a genteel, Gulliver-like giant, rather than the Goliath referred to in the Subcommittee's press release.

TAXPAYER SERVICE AND TAXPAYER RIGHTS

In recent years, the Service has made great strides in focusing on customer service. We have long recognized the interrelationship of taxpayer service and taxpayer rights. The better we serve taxpayers -- the easier we make it for them to

meet their filing responsibilities, the more helpful we are in assisting them with their questions, and the more quickly we can respond to an account inquiry or problem -- the more likely it is that they will feel their rights have been respected. Our commitment to providing quality service to every taxpayer runs deep in our organization. By breaking down functional barriers of the past, we are trying to ensure that every employee -- not just those under the direction of the Assistant Commissioner (Taxpayer Services) -- appreciates the importance we attach to both taxpayer service and taxpayer rights.

Our strong commitment to customer service and taxpayer rights is also evidenced by our Compliance 2000 program. Our Compliance 2000 philosophy recognizes that taxpayers cannot comply with the tax laws unless they understand their rights and obligations under those laws. This recognition of our need to serve taxpayers on the front end through education and outreach is intended to ensure that they have every opportunity to comply. Through this approach, enforcement efforts are reserved for only those cases where education and outreach are not successful. As with our other taxpayer service endeavors, to the extent we are successful in reaching out to taxpayers under our Compliance 2000 program, the more likely they will appreciate our commitment to the cause of taxpayer rights.

COMMON GROUND AND NEW IDEAS

Despite the progress we have made in providing better customer service and enhancing taxpayers' rights, I believe that, by working together, we -- Congress, the Treasury Department, and the IRS -- can do still more to enhance taxpayers' rights. There are significant areas of agreement between the IRS and the H.R. 11, H.R. 661, and S. 258 sponsors about what provisions would further enhance taxpayers' rights. Proposals to extend the interest-free period for payment of tax after notice and demand from 10 to 21 days, permit disclosure of collection activities among spouses or former spouses who filed a joint return, permit joint return filings without full payment of tax after an initial filing of separate returns, and require information returns to include the telephone number of the payor's information contact, for example, all represent sound ideas that would help to make the tax system fairer and more administrable. (I have provided a more detailed discussion of these provisions and others in H.R. 661 and S. 258, in the attached Appendix.)

The Treasury Department and the IRS worked closely with Congress both toward the enactment of Taxpayer Bill of Rights legislation in 1988 and the development of the taxpayer protection provisions which were included in H.R. 11. In fact, many of the provisions in H.R. 11, H.R. 661, and S. 258 were suggested to Congress by the IRS. But I would like to share with you today several new proposals that we believe will further enhance the rights of taxpayers. The first proposal is one that addresses a concern that I have heard about in almost every meeting I have had with tax practitioners over the past two years. Under current law, taxpayers cannot have their representatives resolve issues presented in IRS notices without providing the IRS with written authorizations to disclose the taxpayers' return information to the representatives -- often a time consuming process that delays the resolution of the taxpayers' issues.

Our proposal would eliminate such delays. It represents a careful balance between the security of taxpayer data and the need to be responsive to taxpayers' desires for quick resolution of their cases. Our proposal would provide taxpayers with an alternative to the written consent requirement. Instead, we

propose that a unique identifying number be included on each IRS notice. A taxpayer could give that notice's unique identification number to its authorized representative, which would permit the representative to deal directly with the IRS without delay.

The second proposal would assist the IRS in safeguarding each taxpayer's right to privacy. I have made protecting taxpayers' rights of privacy a top priority for the IRS. I have repeatedly stated that the IRS will not tolerate any violation by employees of taxpayers' rights of privacy. Taxpayers' confidence that their privacy rights will be honored and that their tax return information will be kept confidential is one of the foundations of our voluntary compliance system. I have adopted more severe administrative sanctions, up to and including dismissal, for employees who violate our policy concerning confidentiality and privacy. A basic tenet of that policy is a prohibition against employee access to (or use of) tax return information, except to the extent essential for the employee to perform his or her assigned functions. Our second proposal, which I request you support, provides specific criminal sanctions that would apply to employees who violate this policy.

Under our third proposal, the IRS would be required to abate a penalty assessed for the first time a taxpayer failed to make required deposits of payroll taxes if: (1) the failure occured during the first quarter wages were paid; (2) the return was filed on time and appropriate payments were made; and (3) the taxpayer completes an IRS-approved education program that addresses filing and payment requirements. This relief is consistent with the Compliance 2000 philosophy that I outlined earlier and is aimed at new (typically small business) employers.

Finally, and consistent with our efforts to assist taxpayers in meeting their obligations, we propose a requirement that we issue annual reminders to taxpayers with outstanding delinquent accounts that are not in an active collection status (i.e., accounts for which we are no longer issuing collection notices and that we consider currently not collectible). These notices would remind taxpayers about the status of their accounts, the continued accrual of interest and penalties, and the continued possibility of having their refunds offset to pay the outstanding amounts.

Madame Chairman, I hope that these proposals for enhancing taxpayers' rights will be seriously considered by the Subcommittee. The IRS and the Treasury Department would like to assist the Subcommittee in making them a reality and in identifying appropriate offsets, as necessary, to ensure they are implemented in a deficit neutral manner.

AREAS OF CONCERN FOR TAX ADMINISTRATION

The IRS and the Treasury Department also would like to work closely with the Subcommittee as it considers H.R. 11, H.R. 661, S. 258, and H.R. 390 so that we can inform you about those provisions we believe would pose significant administrability issues. Some of the provisions raise issues that should be considered and balanced against the additional burden and appearance of inequity they could cause before the Subcommittee recommends legislation. One example is in section 5901 of H.R. 11 and section 1001 of H.R. 661 and S. 258. Those sections would require the income tax return instructions to contain information on installment agreements, extensions of time to pay, and offers in compromise.

Offers in compromise, for example, represent a delicate balance between the need to ensure that taxpayers are treated consistently and fairly and the need to ensure that the government will be able to collect at least a portion of an

insolvent (or close to insolvent) taxpayer's debt. By promoting the availability of offers in compromise before returns are filed and taxes are due through references in the income tax return instructions, there is a risk of undermining the confidence of the overwhelming majority of taxpayers who timely and fully pay their determined liabilities. Issues of this nature -- balancing the rights of taxpayers who pay fully and on time against the rights of those who may make an offer to settle their liabilities for an amount significantly lower than the amount that they owe -- are ones we hope the Subcommittee will explore with us further as it considers the legislation. We also hope to work with you to give you an appreciation of some of the resource issues presented by the proposals, as well as some of the technological constraints that make some of the proposals infeasible under our current systems.

In the interest of time, I will only discuss a few of our administrative concerns with the H.R. 11, H.R. 661, S. 258, and H.R. 390 proposals today. The Appendix to my testimony, however, outlines each of the provisions about which we have concerns. I would like to focus on the following proposals: (1) changing the Taxpayer Ombudsman's organization and responsibilities; (2) granting installment agreements as a matter of right to non-corporate taxpayers and eliminating failure-to-pay penalties for taxpayers that request an installment agreement by the due date for payment of their taxes; (3) expanding the IRS' authority to abate interest assessments and requiring the IRS to abate interest to certain taxpayers; (4) requiring the IRS to give advance notification of an examination; (5) shifting the burden of proof to the government in certain information report matching cases; and (6) shifting the burden of proof to the government in all tax matters. I will defer to the testimony of Cynthia Beerbower, Deputy Assistant Secretary (Tax Policy), on the importance of ensuring that the Treasury Department and the IRS retain the ability to issue retroactive regulations where appropriate in the interest of sound tax administration.

Taxpayer Ombudsman and Taxpayer Assistance Orders

While Lee Monks, the Taxpayer Ombudsman, will address the organization and responsibilities of the Taxpayer Ombudsman function and a proposal to expand its authority to issue Taxpayer Assistance Orders, I wanted to share with you how the Ombudsman and his organization have had a positive impact on the promotion of taxpayer rights within the IRS. Not only does the Ombudsman and his organization assist taxpayers individually through the problem resolution program, but the Ombudsman also provides recommendations to improve the quality of the IRS programs and systems that benefit all taxpayers. Through these recommendations for systemic changes, the Ombudsman has a much wider impact than if his only contribution were to address taxpayers' problems individually.

Currently, Problem Resolution Officers (PROs) in the Service Centers and District offices report to the heads of these offices. This organizational structure provides a strong incentive to these field offices to deliver quality services to taxpayers and promptly resolve taxpayer problems. It also allows problems that occur at the local level to be resolved at the local level. The current structure, by all accounts, is working well. Section 101 of H.R. 661 and S. 258, however, would remove PROs from the current management reporting lines and have them report to the Ombudsman in Washington, D.C. Madame Chairman, I encourage the Subcommittee to explore with the Ombudsman and his staff the effect that such a change would have on their ability to help taxpayers. Any change should be carefully considered and not be done just for the sake of change.

Installment Agreements and the Failure-to-Pay Penalty

H.R. 661 and S. 258 contain provisions that generally give non-corporate taxpayers the automatic right to installment agreements once every three years and eliminate failure-to-pay penalties for taxpayers who request installment agreements by the due dates for payment of their taxes. Rather than enhancing taxpayers' rights, this "automatic" installment agreement with no failure-to-pay penalties would be unfair to the vast majority of taxpayers who pay their taxes on time. Under the combined effects of these proposals: (1) all taxpayers would have every incentive not to timely pay and to borrow from the government at least once every three years at interest rates generally lower than prevailing market rates for unsecured debt; (2) the IRS would see a significant growth in its accounts receivable inventory (a topic of great concern to the IRS, Congress, and the GAO); (3) the IRS would have to shift substantial additional resources to intrusive, post-filing collection efforts; and (4) the revenue loss to the government would be substantial.

Abatement of Interest

Section 301 of H.R. 661 and S. 258 would expand the IRS' authority to abate interest assessments by replacing the "error or delay in performing a ministerial act" standard for abatement with an "unreasonable error or delay" standard. It would also require the IRS to abate interest assessments against small businesses and most individuals in cases of "unreasonable error or delay," but only until the date demand for payment is made. The apparent justification for this proposal -- that a taxpayer who has an unpaid tax liability and is charged interest on that unpaid liability is somehow economically disadvantaged relative to a taxpayer who timely paid its liability without interest -- is one with which we do not agree.

This broadening of the interest abatement standard would encourage taxpayers, particularly those with large liabilities, to seek routine relief from interest assessments, thereby imposing significant administrative costs, as well as controversy-related costs, on the IRS and the judicial system. These costs ultimately would be borne by all taxpayers. Additionally, the unreasonable error or delay standard is vague and, as such, would present significant challenges in ensuring consistent application of the law. Finally, "means testing" the requirement to abate interest by imposing a net worth requirement as the bill does is incompatible with the purpose of an interest charge and presents administrative complexity and additional burden on taxpayers if they are required to provide net worth data which would have to be verified.

Notification of Examination

Another section of H.R. 661 and S. 258 would require the IRS, prior to commencing an examination, to notify a taxpayer in writing of a planned examination and the examination procedures. Exceptions would apply for criminal investigations, collection jeopardy situations, national security needs, and confidential law enforcement or foreign counterintelligence activities. In many respects this provision is consistent with IRS' current procedures; for example, we generally provide written notice and a copy of Publication 1, "Your Rights as a Taxpayer," prior to commencing an examination. The provision requiring advance notice, however, would undermine some compliance efforts, including roadside inspections of highway vehicles to ensure they are not evading federal motor fuels excise taxes, compliance checks for currency transaction reporting, and unannounced visits to Electronic Return Originators to determine whether they are complying with IRS procedures.

Burden of Proof in Information Reporting Cases

Our current document matching program is an efficient, cost effective way to stop underreporting of income. We experience a overall compliance rate of over 95% in the areas for which we have information reporting. Under the document matching, we match information documents, such as Forms 1099 received from third parties, against filed income tax returns. Underreported amounts become subject to correspondence audits.

I am greatly concerned about the provision in H.R. 661 and S. 258 that would shift the burden of proof to the IRS for income reported on information returns. Taxpayers, without presenting any supporting evidence, could force the IRS to investigate the accuracy of information returns before issuing notices of deficiency. We believe this proposal would render the IRS' matching program inoperable. Without this program, the IRS would need substantial additional resources to reach the same level of compliance with the tax laws that we have today.

I believe that a proper balance is achieved under existing IRS standards, which were revised in 1993 to respond to the concern underlying this H.R. 661 and S. 258 provision. Under the revised standards found in the Internal Revenue Manual, if, in a court proceeding, a taxpayer asserts a reasonable dispute with respect to any item of income reported on an information return and the taxpayer has fully cooperated with the IRS, the government must present "reasonable and probative information" concerning this income in addition to presenting the information return. A fully cooperative taxpayer is one who provides, within a reasonable period of time, access to and inspection of all witnesses, information, and documents within its control to the extent reasonably requested by the IRS.

An H.R. 11 proposal to reform the Service's information reporting procedures provided the same standards as those currently in the Internal Revenue Manual. The H.R. 11 proposal reflected the joint effort of the Service and Treasury working with Congress to respond to the concern underlying both that proposal and the H.R. 661 and S. 258 proposal. The H.R. 11 proposal is responsive to this concern. We believe that it strikes a reasonable and appropriate balance between the rights and obligations of both taxpayers and the government.

Burden of Proof

I would like to turn now to H.R. 390. H.R. 390 contains a provision that would shift the burden of proof to the IRS during any court proceeding. The bill provides:

> Notwithstanding any other provision of this title, in the case of any court proceeding, the burden of proof with respect to all issues shall be on the Secretary.

Madame Chairman, that provision alone would undermine the Federal income tax system. Not only would it undermine the Federal tax system, but also the state tax systems that depend on Federal deficiency assessments -- assessments which would simply evaporate if this provision were enacted.

The current burden of proof rules have been in place for well over a century and are closely woven into the fabric of our system of voluntary compliance. While proposals to shift the burden of proof to the government have been advanced during this period, in each instance, these proposals have been rejected. The reasons for rejection were briefly stated by a member of the Board of Tax Appeals (predecessor to the current U.S. Tax Court) during a 1925 debate on a proposal that, like H.R. 390, would have placed the burden of proof on the government:

> [Y]ou might as well repeal the income tax law and pass the hat, because you will be practically saying to the taxpayer, How much do you want to contribute toward the support of the government? [A]nd in that case they would have to decide for themselves.

The Internal Revenue Code and the administrative policies of the IRS contain many procedures designed to foster the administrative settlement of civil tax disputes. Indeed, these procedures result in the successful resolution of the vast majority of the civil disputes that arise under the tax laws. Not all disputes can be resolved administratively, however, and the Code permits taxpayers dissatisfied with the outcome of these administrative proceedings to seek relief in court.

Throughout the history of tax litigation in this country, the taxpayer has been required to bear the burden of proof in tax disputes. This allocation of the burden of proof is in keeping with common law traditions, is sensible and fair, and reflects some of the fundamental principles that underlie our system of taxation.

How the Current Rules Work

Generally, in civil tax litigation, the burden of proof is on the taxpayer. Thus, in cases in which the government questions the reporting of income or deductions or credits of a taxpayer and has made an administrative determination that additional tax is due under the law, and the taxpayer has exhausted his or her rights in the examination and administrative appeals processes, the taxpayer may go to court and ask the court to redetermine his or her liability. The burden is on the taxpayer to persuade the court that the determination made by the Commissioner of Internal Revenue is wrong and should be adjusted. Likewise, in those cases where the taxpayer contends that he or she has paid too much tax and wants the government to refund part or all of those payments, the burden is on the taxpayer. (In those situations where liability is imposed for civil fraud (the government seeks to impose the civil fraud penalty) or where there is alleged criminal liability (the government seeks to fine or incarcerate a person for violation of a criminal statute), the burden of proof is on the government -- a situation that for good reason should continue.)

Reasons to Leave the Current Rules in Place

There are good reasons not to change current law. First, the current rules are consistent with the voluntary self-assessment system, which presumes that taxpayers, and not the government, are best able to maintain and produce records that substantiate items on tax returns.

Second, placing the litigation burden of proof on taxpayers promotes administrative resolution of tax cases. Under the current system, taxpayers cannot prevail in court without marshalling and producing evidence in their favor. Knowledge of this ultimate burden provides an incentive for them voluntarily to produce information during audit and subsequent administrative proceedings. If this were not the case -- as it surely would not be if the government had the burden of producing all records necessary to challenge taxpayer assertions that they owe little or no tax -- taxpayers could "stonewall" auditors and examiners, playing a game of "catch me if you can."

Third, taxpayers, like other claimants, should bear the burden of proving their claims in court. Under the common law, parties challenging administratively proper determinations of government agencies are typically required to shoulder the burden of proof. The Code and current administrative practices of the

Internal Revenue Service ensure that taxpayers have many opportunities to seek resolution of tax disputes short of litigation. Disputes that end up in court do so only after a thorough consideration of the issues by the government (or taxpayer neglect of the administrative process).

Finally, considerations of fairness and efficiency require that taxpayers bear the burden of proof. Common law generally places the burden of proof on the party with most ready access to the evidence necessary to adjudicate claims. This common law tradition is not only consistent with principles of fairness, it substantially lessens the need for court-supervised and intrusive discovery during both administrative and court proceedings.

It is, moreover, unrealistic to expect that the government has either the resources or the ability to prove that all taxpayer claims -- no matter how outlandish -- are false. For example, a taxpayer claiming $50,000 for business supplies, could readily show that the deductions were proper simply by producing records of what was purchased, for what amount, and for what business purpose. It would be nearly impossible, however, for the Service to show that a claimed deduction was improper.

Many Internal Revenue Code sections contain provisions with very specific requirements for favorable tax treatment. If the government were required to prove that taxpayers do not meet the requirements for favorable tax treatment, aggressive taxpayers would be encouraged to take unsupported positions. In the end, the changes produced by H.R. 390 would reward aggressive taxpayers at the expense of compliant ones.

Passage of H.R. 390 Is Not in the Best Interest of Tax Administration or Taxpayers

I believe H.R. 390, if enacted, would not serve the best interests of sound tax administration and the American taxpayer. Shifting the burden of proof would undermine the record-keeping requirements of the Code. There would be little incentive for taxpayers to maintain records of their business and income producing activities. Rather, taxpayers would be encouraged to keep or produce nothing about their tax affairs and require the government to disprove every item on their return. Indeed, the absence of records would preclude a government challenge to virtually any taxpayer claim. "Recordless" taxpayers, including those who earn income from illegal sources, would be rewarded.

Passage of H.R. 390 also would necessitate additional information gathering by and reporting to the government. Audits performed with the burden of proof on the Service would involve a much broader and more detailed inspection of the financial affairs of the taxpayer and third parties. Rather than simply choosing certain items of the taxpayer's return to review according to specific enforcement criteria, the Service would of necessity need to challenge a greater number of items. The audits would be much more costly to taxpayers and the IRS because they would take longer and involve many more requests for information. They would also be more burdensome on third parties with whom the taxpayer has done business. Taxpayers would have no incentive to correct inadequacies in their records. Rather, the government would have to fill in the gaps by obtaining information from financial institutions, employers, employees, suppliers, contractors, etc., in order to "prove" that the taxpayer owed more taxes than reported. In summary, the Service's enforcement and collection activities would be infinitely more intrusive than they are today.

Additionally, not only would the government have to make extensive investigations of taxpayers, it would also be required to maintain extensive records about taxpayers. In order to carry its burden of proving that potential taxpayer claims were without

merit, the government would have to obtain and retain substantially more information about all taxpayers than is currently the case. All of this activity would entail invasion of personal privacy of the taxpayer on a level not found in the current system.

Finally, court proceedings would be burdened by the rule change. The only response the government could make to a shifting of the burden is to increase the amount of discovery it conducts in litigation. Taxpayers would have no incentive to turn over tax information voluntarily in such proceedings. Extensive, intrusive, and expensive, discovery battles would become more common, and court dockets would swell because of the discovery logjam.

A few examples will illustrate how the passage of H.R. 390 would substantially increase the costs of administering the tax system and burden the courts. In a routine dispute over depreciation deductions, the government would have to prove the cost of assets, the dates of acquisition, and previous allowances for depreciation in order to obtain a court ruling on the question. If the government could not obtain the taxpayer's records or the records it could obtain were inadequate to prove any of these items, the taxpayer, no matter how meritless the claim, would be entitled to prevail.

Also, if H.R. 390 were enacted, in every case in which a tax protestor claimed on its return that wages are not income, the government would have to come to court with the records to prove that the taxpayer had, in fact, been paid wages. In most cases, the government would have to obtain the records from the taxpayer's employer and require that one of the employer's bookkeepers or supervisors appear in court to authenticate records detailing wage payments and the fact of the protestor's employment.

In practical effect, passage of H.R. 390 would virtually immunize from challenge many of the itemized deductions claimed on Schedule A, would require the government to examine substantially more records to fend off claims, and would compel the government to engage in costly searches for corroboration of facts that unfortunately not all taxpayers would willingly acknowledge. In the end, passage of H.R. 390 would substantially increase the costs of administering the revenue system, substantially reduce the revenues the government should properly collect under the laws the Congress has enacted, and disadvantage honest taxpayers who keep proper records. Madame Chairman, I believe, as I think you will hear from a number of sources who are interested in sound tax administration, that passage of H.R. 390 would destroy our voluntary compliance system.

TAX SYSTEMS MODERNIZATION

You have asked for my views as to how best to enhance taxpayer rights. In today's dynamic, service-oriented, business environment, taxpayers have come to expect prompt access to information and assistance with account inquiries and problems -- the type of access and assistance they receive in the private sector. Unfortunately, however, the IRS simply cannot deliver this level of service with our 30 year old technology. Only through modernization of our technologies will we be able to successfully meet the demands of taxpayers and provide taxpayer rights. Therefore, I am asking that you assist us in obtaining the tools we need to properly serve our customers by ensuring full and stable funding of our Tax Systems Modernization (TSM) program.

I would like to close with a simple yet poignant illustration of the types of things that TSM will enable us to do for the cause of taxpayer rights. Earlier in my testimony, I

discussed several problems associated with section 301 of H.R. 661 and S. 258 -- a proposal to expand the IRS' authority to abate interest assessments and to require the IRS to abate interest assessments in certain cases. But what if we eliminate the need for these interest assessments in the first place without exposing the tax system to the problems presented by the interest abatement proposal?

TSM holds the key to providing drastic reductions in the amounts of interest assessed to taxpayers. When TSM is fully implemented with its on-line capabilities, our goal is to match information documents at the time a return is filed, not almost two years later as they are today. This means that almost 2 years worth of interest assessments could be eliminated for every taxpayer with an unpaid tax balance that is detected through our information document matching programs.

TSM will also reduce errors, reduce the time it takes to begin and conduct examinations, speed up account problem resolution for taxpayers, and accelerate collection activities, thus providing further opportunities for reductions in the amount of interest assessments.

With TSM fully implemented, systemic improvements would be possible that would improve the efficiency of the government, benefit all taxpayers, and result in significant interest assessment reductions. The IRS and taxpayers are already reaping many of the benefits of TSM today. It is a reality -- and we need your assistance to bring it to full and successful completion.

CONCLUSION

Madame Chairman, I am committed to an IRS that expects no less than that all its employees be taxpayer advocates while at the same time ensuring that taxpayers who are compliant with the tax laws are not disillusioned by those who use procedural loopholes to game the system. I would like to thank you and your colleagues for the opportunity to provide our views and comments in this important area and look forward to working with you to develop proposals that truly protect the rights of taxpayers and reduce their compliance burdens.

I would be happy to remain until after Lee Monks has finished his prepared statement to answer any questions you or the other Subcommittee members may have.

APPENDIX DISCUSSION OF H.R. 661 and S. 258 THE "TAXPAYER BILL OF RIGHTS 2"

This appendix provides a general discussion about the provisions of H.R. 661 and S. 258 (both cited as "Taxpayer Bill of Rights 2") and their effects on tax administration. This discussion is offered by the Internal Revenue Service to assist the Subcommittee as it explores the development of legislation that would provide additional safeguards for taxpayers' rights.

The discussion provided in this appendix is based on an important assumption that where the provisions of H.R. 661 and S. 258 overlap with provisions contained in H.R. 11 of the 102d Congress, the legislative history reflected in H. Rep. No. 1034, 102d Cong., 2d Sess. (1992) would be adopted as the legislative history to both H.R. 661 and S. 258.

The Subcommittee should note that the discussion of provisions contained in this appendix represents only the views of the Commissioner of Internal Revenue. Also, the staff of the Internal Revenue Service is continuing its analysis of the provisions and may have further technical comments to share with the Subcommittee staff in the future.

Nothing in the discussion of the provisions should be interpreted as constituting an official position of the Administration. The Administration would be pleased, however, to assist the Subcommittee with official positions, revenue estimates, and, where necessary, appropriate offsets to ensure deficit neutral implementation of any provisions of the bills that the Subcommittee decides to advance.

The following provisions would help to make the tax system fairer and more administrable:

§ 302. Extension of interest-free period for payment of tax after notice and demand. The current law's 10-day interest-free period upon notice and demand would be extended to 21 days for tax liabilities (including interest and penalties) of less than $100,000. The shorter 10-day period would continue to apply to amounts of $100,000 or more. Conforming changes would also be made to the failure-to-pay penalty.

§ 401. Disclosure of joint return collection activities. If the IRS has assessed a deficiency for a joint return, the IRS would have the discretionary authority, upon the written request of one of the spouses (or former spouses), to disclose whether the IRS had attempted to collect the assessed deficiency from the other spouse (or former spouse), the general nature of any such collection activities, and the amount of the deficiency collected from the other spouse (or former spouse). Although it is believed that such disclosure already is authorized under current law, this proposal would make explicit the IRS' disclosure authority in cases relating to separated or divorced spouses.

§ 402. Joint return may be made after separate returns without full payment of tax. Under current law, married taxpayers who file separate returns for a taxable year in which they are entitled to file a joint return may elect to file a joint return after the time for filing the original return has expired. The election to refile on a joint basis may be made only if the entire amount of tax shown as due on the joint return is paid in full by the time the joint return is filed. The bills would repeal this requirement.

§ 601. Phone number of person providing payee statements required to be shown on such statement. The bills would require that information returns include the telephone number of the payer's information contact, in addition to the currently required payer name and address.

§ 902. Treatment of substitute returns under section 6651. Under current law, if no return is filed by the taxpayer, the IRS may file a substitute return for the taxpayer. If the IRS files a substitute return for the taxpayer, the failure-to-pay penalty runs from ten days after the IRS sends the taxpayer a notice and demand for payment of the tax.

The bills would provide that the failure-to-pay penalty for substitute returns would apply in the same manner as for other returns. Thus, the penalty in each case would run from the due date of the return until the tax is paid.

If modified, the following provisions also would generally improve tax administration:

§ 203. Notification of reasons for termination or denial of installment agreement. Currently, the IRS is required to give a taxpayer 30-days notice before terminating an installment agreement due to a change in the taxpayer's financial condition. The bills would extend the 30-day installment agreement notification and explanation requirement to all cases in which the IRS may deny, alter, modify, or terminate an installment agreement (other than cases in which the IRS believes the collection of the tax to which the installment agreement relates is in jeopardy).

Through recently issued final regulations, the IRS already has adopted and implemented procedures requiring it to notify taxpayers 30 days prior to altering, modifying or terminating installment agreements, unless doing so would jeopardize collection.

Modifications necessary to facilitate tax administration: A notification requirement should not be imposed for denials of installment agreements, because this would permit taxpayers to stay collection during the notice period by merely requesting an installment agreement. During the 30-day period after notification of denial, a taxpayer that wished to evade collection enforcement actions could transfer assets to related persons, sell non-liquid assets and conceal its possession of the liquid asset proceeds, shift assets outside of the country, etc.

§ 204. Administrative Review of Denial of Request for, or Termination of, Installment Agreement. Under current law, the IRS is authorized to enter into written installment agreements with taxpayers to facilitate the collection of tax liabilities. In general, the IRS has the right to terminate (or in some instances, alter or modify) such agreements if the taxpayer provided inaccurate or incomplete information before the agreement was entered into, the taxpayer fails to make a timely payment of an installment or another tax liability, the taxpayer fails to provide the IRS with a requested update of financial condition, the IRS determines that the financial condition of the taxpayer has changed significantly, or the IRS believes collection of the

tax liability is in jeopardy. Except in cases where the collection of the tax liability is in jeopardy, regulations require the IRS to provide the taxpayer with a written notice that explains the IRS determination at least 30 days before altering, modifying or terminating the installment agreement.

The bills would permit a taxpayer whose request for an installment agreement is denied, or whose installment agreement is terminated, to seek an independent review of the decision.

Modifications necessary to facilitate tax administration: Denials of installment agreements should not be subject to appeal because this would permit taxpayers to stay collection during the notice period. See additional analysis and examples of concerns in section 203. The IRS has recently completed an eighteen-month pilot program for independent review of all collection activities (including enforcement actions) and is in the process of evaluating the pilot. The IRS would be happy to work with the Subcommittee to review the results of the pilot program. The Subcommittee may find such an approach helpful in evaluating the need for a statutory change in this area.

§ 501. Modifications to lien and levy provisions. To protect the priority of a tax lien, the IRS must file a notice of lien in the public record. Under current law, the IRS has discretion in filing such a notice, but once a notice is filed, the IRS may release it only if the notice was erroneously filed or if the underlying liability has been paid, bonded or become unenforceable. If a notice has been improvidently filed, it can not be released because release would extinguish the underlying lien. The IRS is authorized to return levied-upon property to a taxpayer only when the taxpayer has overpaid its liability for tax, interest, and penalty. In any event, certain property of a taxpayer is exempt from levy. The exempted property includes personal property with a value of up to $1,650 and books and tools necessary for the taxpayer's trade, business or profession with a value of up to $1,100.

Under the bills, the IRS would have the authority to withdraw a notice of federal tax lien if (1) the filing of the notice was premature or was not in accordance with the administrative procedures of the IRS; (2) the taxpayer has entered into an installment agreement for the payment of tax liability with respect to the tax on which the lien is imposed; (3) the withdrawal of the notice would facilitate the collection of the tax liability; or (4) the withdrawal of the notice would be in the best interest of the government and the taxpayer. If the taxpayer so requests in writing, the IRS would be required to notify credit reporting bureaus and financial institutions that the notice has been withdrawn. In addition, the IRS would be allowed to return levied-upon property to the taxpayer in the same four circumstances. Finally, the exemption amounts under the levy rules would be increased to $1,750 for personal property and $1,250 for books and tools. Both these amounts would be indexed for inflation.

Modifications necessary to facilitate tax administration: The IRS is concerned with only one of the four situations under which the IRS would be authorized to withdraw a notice of federal tax lien (i.e., the situation in which a taxpayer has entered into an installment agreement for the payment of tax liability with respect to the tax on which the lien is

imposed). Situations (1), (3), and (4) would give the Service the latitude to withdraw a notice of federal tax lien where taxpayers have entered into installment agreements, without the necessity of citing situation (2) as a candidate for potential relief. Citing situation (2) as a candidate for potential relief might permit less scrupulous taxpayers to enter into an installment agreement, convince the IRS to withdraw the notice of federal tax lien, and then default on the installment agreement after having disposed of assets that could be used to satisfy the liability.

§ 502. Offers-in-compromise. Under current law, the IRS may compromise any assessed tax if there is sufficient doubt about whether the tax is owed or is collectible. However, if the compromised amount is $500 or more, a written opinion of the Chief Counsel is required. Under the bills, the IRS would be authorized to compromise an assessed tax if doing so would be in the best interest of the government. A written supporting opinion of the Chief Counsel would be required only if the unpaid amount were $50,000 or more. The IRS would be required to subject these offers-in-compromise to continuing IRS quality review.

Modifications necessary to facilitate tax administration: Congressional concerns could be even better addressed by increasing the threshold for Chief Counsel review from $50,000 to $100,000. The IRS is concerned, however, that the proposed "best interest of the government" standard would be difficult to administer. The IRS now believes that its current interpretations of the existing standards for offer-in-compromise eligibility provide adequate flexibility to ensure that the program is fairly administered.

§ 702. Disclosure of certain information where more than 1 person subject to penalty. Under current law, the IRS may not disclose to a responsible person the IRS' efforts to collect unpaid trust fund taxes from other responsible persons who may be liable for the same tax. Under the bills, the IRS would be required to disclose to a person considered by the IRS to be a responsible person, if requested in writing by that person, the name of any other person the IRS has determined to be a responsible person with respect to the tax liability. The IRS also would be required to disclose whether it has attempted to collect this penalty from other responsible persons, the general nature of those collection activities, and the amount (if any) collected. Failure by the IRS to follow this provision does not absolve any individual of any liability for penalty.

Privacy-related modifications: To better protect taxpayers, the proposal should be modified to preclude recipients of the disclosed information from improperly re-disclosing it. Additionally, the statute or legislative history should clearly provide that if the IRS' determination as to whether a person is considered a responsible person is judicially overturned, the Service would not be considered to have violated the requirements of section 6103 of the Internal Revenue Code.

§ 703. Penalties Under Section 6672. Under current law, a "responsible person" is subject to a penalty equal to 100 percent of trust fund taxes that are not collected and paid to the IRS in a timely manner. The rules for determining

whether a person is a "responsible person" are the same for taxable and tax-exempt organizations. The IRS is not required to promptly notify taxpayers who fall behind in depositing trust fund taxes.

There are three components to the bills. First, the IRS would be required to take appropriate action to ensure that employees are aware of their responsibilities under the Federal tax depository system, the circumstances under which employees may be liable for the penalty, and the responsibility to promptly report failures in payments to the IRS. These actions would include printing warnings on payroll tax deposit coupon books and appropriate tax returns indicating that employees may be liable for this penalty, and developing a special information packet relating to this penalty.

Second, the section 6672 penalty would not apply to volunteer, unpaid members of any board of trustees or directors of a tax-exempt organization to the extent such members are solely serving in an honorary capacity and are not participating in the day-to-day or financial activities of the organization. This exception for unpaid volunteers would not apply if the volunteers had actual knowledge of the failure to pay or collect or if this proposal resulted in no person being held liable for the penalty.

Third, the IRS would be required, to the maximum extent practicable, to notify all persons who have failed to make timely deposits of trust fund taxes within 30 days after the return was filed reflecting such failure or after the date on which the IRS is first aware of such failure. If the person failing to make the deposit is not an individual, the IRS must notify the entity. The entity, in turn, would have 15 days from receipt of the IRS notice to notify all of its officers, general partners, trustees, or other managers. Failure of the IRS to provide notice under this proposal would not absolve any individual of any liability for a penalty.

> Modifications necessary to facilitate tax administration: These bills' provisions generally would complement IRS efforts to inform taxpayers about their responsibilities for trust fund taxes. However, the first part of the proposal raises some problems. As the IRS shifts both to alternative (non-paper) forms of making tax deposits and filing payroll tax returns, the use of the coupon booklets and forms to inform taxpayers about their responsibilities for trust fund taxes makes less sense. Fewer taxpayers will be using the coupon booklets and the forms in the future as these alternative payment and filing options grow. (The North America Free Trade Agreement, for example, requires use of electronic funds transfer for depository taxes. With this movement toward electronic payments, the use of paper coupons containing any written notification will substantially diminish or be eliminated.)
>
> Additionally, the Service is concerned that with its current information systems, it could not meet the 30-day notification requirement. A 60-day notification requirement is more realistic. Future improvements in IRS information systems under Tax Systems Modernization would facilitate meeting a 30-day requirement.

§ 803. Failure to agree to extension not taken into account. Under current law, to qualify for an award of attorney's fees, the taxpayer must have exhausted the administrative remedies available within the IRS. The bills

provide that any failure to agree to an extension of the statute of limitations could not be taken into account in determining whether a taxpayer had exhausted administrative remedies for purposes of determining eligibility for an award of attorney's fees.

Modifications necessary to facilitate tax administration: This provision generally reflects current law. However, the provision should not apply to taxpayers who fail to fully respond to IRS requests for information on a timely basis.

§ 904. Required notice of certain payments. Under current law, if the IRS receives a payment without sufficient information to credit it to a taxpayer's account, the IRS may attempt to contact the taxpayer. If contact cannot be made, the IRS places the payment in an unidentified remittance file.

The IRS would be required by the bills to make reasonable efforts to notify, within 60 days of receipt, taxpayers that have made payments which the IRS cannot associate with any outstanding tax liability. Such a requirement is consistent with current IRS practices.

Modifications necessary to facilitate tax administration: While this requirement is reasonable and consistent with current IRS practices, a minor technical modification is necessary to accommodate situations in which a taxpayer will deposit an amount toward a liability that technically is yet to arise (e.g., an estimated tax payment toward a current year's liability that technically is not yet an "outstanding tax liability"). When a taxpayer makes such a deposit, with or without specific instructions, the IRS generally credits the deposit to the current year's liability. In such situations, a requirement to notify the taxpayer of application of the deposit to its current liability would be unnecessary and potentially burdensome to the taxpayer. Either the statute or the legislative history should make it clear that routine deposits toward future liabilities are not intended to be affected by the provision. Perhaps this could be accomplished by substituting "identifiable tax liability" for "outstanding tax liability" in the statutory language and legislative history.

§ 1001. Explanation of Certain Provisions. Under current law, the IRS may enter into installment agreements, accept offers in compromise, and extend the time for paying tax. The bills would require the IRS to take appropriate actions to ensure that taxpayers are aware of the availability of installment agreements, offers in compromise, and extensions of time to pay tax. The IRS would have to do so in both instructions for income tax returns and collection notices.

Modifications necessary to facilitate tax administration: The IRS already informs taxpayers of their right to enter into an installment agreement in both instructions to income tax returns and collection notices. Although the IRS has no objection to including information on offers in compromise and extensions of time to pay tax in collection notices, inclusion of this information on the instructions to tax returns could cause some taxpayers not to pay their determined liabilities, even where they have the ability to pay. In evaluating the desirability of this provision, adequate consideration must be given to the rights of the majority of taxpayers who make timely and full payment of their determined liabilities.

§ 1011. Pilot Program for Appeal of Enforcement Actions. Under current law, a taxpayer who disagrees with an IRS collection action generally may appeal to successively higher levels of management with Collection.

The bills would require the IRS to establish a one-year pilot program allowing taxpayers to appeal enforcement actions (including lien, levy, and seizure) to the Appeals Division. This would be permitted where the deficiency was assessed without the actual knowledge of the taxpayer, where the deficiency was assessed without an opportunity for administrative appeal, and in other appropriate cases. The IRS would have to report to the tax-writing committees on the effectiveness of the pilot program.

Modifications necessary to prevent duplication of efforts: The IRS has recently completed an eighteen-month pilot program for independent review of all collection activities (including enforcement actions) and is in the process of evaluating the pilot. It seems likely that this proposal was carried over from H.R. 11 (which was debated prior to completion of this pilot program), without recognition of the fact that the IRS had already completed its pilot program. The Subcommittee may find it helpful to discuss the results of the pilot program with the IRS before proceeding with a statutory change.

Other provisions that would either codify current IRS practices or assist taxpayers in ways that would not undermine the administrative process are highlighted below. For certain provisions, minor modifications are provided to ensure that the administrative process is not compromised.

§ 505. Safeguards relating to designated summons. In general, current law provides that if the IRS issues a "designated summons" to a corporation at least 60 days prior to the expiration of the statute of limitations for the assessment of tax, the statute of limitations is suspended either until a court determines that compliance is not required or until 120 days after the corporation complies with the summons pursuant to a court's determination.

Consistent with current IRS practices, the bills would provide that no designated summons could be issued with respect to a corporation's tax return unless the summons first was reviewed by the IRS Regional Counsel for the Region in which the examination of the corporation's return was being conducted. The IRS also would have to promptly notify in writing any corporation the return of which is in issue of any designated summons (or another summons, the litigation over which suspends the running of the assessment period under the designated summons procedure) issued to a third party.

§ 602. Civil Damages for Fraudulent Filing of Information Returns. Current federal law provides no cause of action to a taxpayer who is injured because a false or fraudulent information return has been filed with the IRS by another person asserting that the other person made payments to the taxpayer. It does, however, provide for criminal sanctions that apply to the intentional filing of false information returns.

The bills would provide that if a person willfully files a false or fraudulent information return, the affected person may bring a suit to recover damages from the person who filed the return. A $5,000 damage floor is provided.

Modifications: If this provision is advanced, the legislative history should provide that the outcome of the parties' civil litigation on the issue as to whether a person willfully filed a false or fraudulent information return should have no effect on an independent action taken by the government with respect to the payor for the intentional filing of a false information return.

§ 701. Preliminary notice requirement. Under current law, a "responsible person" is subject to a penalty equal to 100 percent of trust fund taxes that are not collected and paid to the government on a timely basis. If the IRS determines that an individual is a responsible person, he or she may appeal that determination administratively.

As is current practice, the bills would require the IRS to issue a notice to any individual the IRS had determined to be a responsible person with respect to unpaid trust fund taxes at least 60 days prior to issuing a notice and demand for the penalty. The statute of limitations for the assessment of the penalty would not expire before the date that is 90 days after the notice was mailed. The proposal would not apply if the Secretary determined that the collection of the penalty was in jeopardy.

§ 801. Motion for Disclosure of Information. Under current law, a taxpayer that successfully challenges a deficiency may recover attorney's fees and other administrative and litigation costs if the taxpayer qualifies as a "prevailing party". A taxpayer qualifies as a prevailing party if it (i) establishes that the position of the United States was not substantially justified; (ii) substantially prevails with respect to the amount in controversy or the most significant issue or set of issues presented; and (iii) meets certain net worth and (if the taxpayer is a business) size requirements.

The bills would provide that once a taxpayer had substantially prevailed in court, it could file a motion for the court to order the IRS to disclose all information and records in its possession with respect to the taxpayer's case.

§ 802. Increased limit on attorney fees. The maximum base rate for attorneys' fees would be increased from $75 to $110 per hour and would be indexed for inflation.

§ 905. Unauthorized Enticement of Information Disclosure. The Internal Revenue Code currently contains no provision prohibiting a tax professional from disclosing information about his or her clients to the IRS in exchange for forgiveness of the professional's tax liability.

The bills would create a civil cause of action if a government employee intentionally offers to compromise the tax liability of a professional tax advisor in exchange for information from that advisor about its client. The cause of action would permit the taxpayer to sue the government in district court without regard to the amount in controversy. Damages would equal the lesser of $500,000 or the sum of (i) actual economic damages sustained by the taxpayer as a proximate result of the information disclosure, and (ii) the costs of the action. The provision would not apply to information conveyed to a professional for the purpose of perpetrating a fraud or crime. The provision is not intended to apply to examination and collection activities of the IRS done in the ordinary course of its determination or collection of tax.

§ 1002. Improved Procedures for Notifying Service of Change of Address or Name. Generally, under current law, the IRS posts the new address of a taxpayer only when the taxpayer files a subsequent return or Change of Address form. If the taxpayer notifies the IRS of a new address on a return, this information is recorded on the IRS master file immediately. If the IRS is notified in other ways, the change of address information is recorded by the IRS only after it processes refunds and returns that show a balance due.

The bills would require the IRS to provide improved procedures for address changes and to institute procedures for timely updating all IRS records with change-of-address information provided by taxpayers. The proposal is generally consistent with the spirit of current IRS initiatives to improve IRS procedures regarding name and address change notification.

§ 1003. Rights and Responsibilities of Divorced Individuals. Although the IRS provides information on the rights and responsibilities of divorced individuals, this subject is not discussed in Publication 1, "Your Rights As a Taxpayer." The bills would require the IRS to include a section on the rights and responsibilities of divorced individuals in Publication 1.

> Modifications: This type of information is not generally consistent with the other information discussed in Publication 1 and there may be better ways of communicating these rights and responsibilities to divorced individuals. It may be more helpful to taxpayers, for example, to include a cross-reference in Publication 1 to our Publication 504, "Divorced or Separated Individuals."

§ 1012. Study on Taxpayers With Special Needs. The bills would require the IRS to conduct a study of ways to assist needy persons in complying with the tax laws. These persons would consist of the elderly, physically impaired, foreign-language speaking, and other taxpayers with special needs.

This proposal is generally consistent with the substantial efforts exerted by the Service in reaching out to needy groups to assist them in understanding and carrying out their obligations under the Federal tax laws. Examples of these initiatives include (i) the Volunteer Income Tax Assistance (VITA) program for low income, disabled and non-English speaking individuals; (ii) the Tax Counseling for the Elderly (TCE) program; (iii) videotaped instructions for completing returns in English and Spanish; (iv) materials in Braille and large print forms and instructions for the seeing-impaired; and (v) telephone assistance for the hearing-impaired.

§ 1013. Reports on Taxpayer Rights Education Programs. The bills would require the IRS to report to the tax-writing committees on the scope and content of its taxpayer rights education program.

§ 1014. Biennial Reports on Misconduct of IRS Employees. The bills would require the IRS to report to the tax-writing committees on employee misconduct cases.

To some extent, this reporting requirement duplicates other efforts. The IRS is already required by the Inspector General Act to report information on Inspection's investigative activities, including employee misconduct, to the Treasury Department Inspector General every six months. The Inspector General prepares a semiannual report to the Congress. The report includes summary information,

statistics, and descriptions of significant investigative activities within the Department. The report is sent to the Senate Governmental Affairs and Finance Committees and the House Government Reform & Oversight and Ways & Means Committees. These reports are available to the public.

Modification: The provision should be clarified to provide that it is not intended to require information, by employee name, on complaints, allegations, and investigations. Without such clarification, the provision would have the potential to invade the privacy of employees. Irreparable harm could be done to an employee's reputation if allegations against the employee were later proved unfounded or frivolous.

§ 1015. Study of Notices of Deficiency. The bills would require the GAO to study the effectiveness of IRS efforts to notify taxpayers about tax deficiencies.

§ 1016. Notice and Form Accuracy Study. The bills would require the GAO to conduct annual studies of the accuracy of the 25 most commonly used IRS forms, notices and publications.

In their current form, the following provisions would pose serious administrative problems.

§ 101. Establishment of position of taxpayer advocate within IRS. Under current law, the Taxpayer Ombudsman is appointed by and reports to the Commissioner. The Ombudsman's responsibilities are to bring the viewpoint of the taxpayer to IRS' policy and planning formulation. In addition, the Ombudsman oversees the operation of two programs to assist taxpayers. The first is the Taxpayer Assistance Order Program, under which the Ombudsman is authorized to issue a Taxpayer Assistance Order ("TAO") to assist taxpayers who otherwise would suffer significant hardship as a result of the manner in which the IRS is administering the tax laws. A TAO can require the IRS to release property of the taxpayer levied upon by the IRS or to cease action or refrain from taking action against the taxpayer. The second Ombudsman program is the Problem Resolution Program (PRP), which deals with cases in which IRS systems do not properly or timely handle the taxpayer's case or inquiry. Under this program, taxpayers receive special attention until their issue has been resolved.

Under the bill, the Ombudsman's title would be changed to the Taxpayer Advocate. As under current law, the Taxpayer Advocate would head an office in the IRS that reported directly to the Commissioner and would have responsibility for all aspects of the PRP Program, including Taxpayer Assistance Orders. Instead of reporting to the head of office, which is the current IRS practice, IRS employees in the field participating in the problem resolution program would report directly to the Taxpayer Advocate. In addition to the currently mandated annual report on taxpayer services prepared by the Ombudsman and Taxpayer Services, the Taxpayer Advocate would issue two reports each year to the tax-writing committees on past activities and future objectives of the office. The reports would include legislative recommendations. The IRS would be required to establish procedures requiring a formal response to all recommendations submitted to the Commissioner by the Taxpayer Advocate.

The Office of the Ombudsman has successfully carried out the directives of the Taxpayer Bill of Rights 1. Requiring field personnel to report directly to the Taxpayer Advocate would undermine grassroots accountability of the Ombudsman.

A procedural modification under which TAO decisions of the problem resolution officers could be appealed only to the Ombudsman (rather than to the District Directors as under current IRS procedures) could address Congressional concerns over the independence of the Ombudsman.

§ 102. Expansion of authority to issue taxpayer assistance orders. Taxpayer Assistance Orders under current law include the power to release taxpayer property levied upon by the IRS and to require the IRS "to cease any action, or refrain from taking any action" against a taxpayer that will otherwise suffer "significant hardship" as a result of the manner in which the IRS is administering the tax laws. A TAO may be modified or rescinded by the Ombudsman, a district director, a service center director, a compliance center director, a regional director of appeals or any of their superiors.

Under the bills, the authority to issue TAOs would be expanded to permit the IRS to affirmatively "take any action" with respect to taxpayers who otherwise would suffer a significant hardship as a result of the manner in which the IRS is administering the tax laws. The persons who could modify or rescind a TAO would be narrowed to consist only of the Taxpayer Advocate, the Commissioner, or a superior of the Taxpayer Advocate or the Commissioner. The provision would clarify that the Taxpayer Advocate could not determine the substantive tax treatment of any item.

The bills would also authorize TAOs for taxpayer "hardship," rather than "significant hardship." Eliminating the "significant hardship" requirement is troubling in that it would make the special relief provided by TAOs effectively available to all taxpayers other than the very small group of taxpayers for whom the timely payment of tax does not pose any hardship. This TAO expansion could present significant revenue consequences. Also, given resource constraints, the significant increase in the number of applications for TAOs that could be expected to result from expansion of the TAO standard could seriously undermine the Service's ability to serve those taxpayers whose needs are most pressing.

Other portions of this provision that expand the Ombudsman's TAO authority are also unnecessary. By delegation order, the Commissioner already has expanded the Ombudsman's TAO authority. This expanded authority includes the authority to take those affirmative actions, in addition to the current authority to cause the IRS to cease any actions, that appear to be the focus of Congress' concern (e.g., to issue TAOs to abate assessments, expedite refunds, and stay collection activity).

Finally, the bills' provision narrowing the number of individuals who could modify or rescind a TAO to only the Taxpayer Advocate or his delegate, the Commissioner, or a superior of the Taxpayer Advocate or the Commissioner is generally consistent with one of the Service's preferred alternatives to section 101 of the bills (i.e., ensuring that problem resolution officer's decisions on TAOs are appealable only to the Taxpayer Advocate). The Service's suggested statutory language here, however, would (1) clarify that, for purposes of section 7811 (concerning TAOs), "Taxpayer Advocate" includes those individuals that are part of the Office of Taxpayer Advocate and all problem resolution officers, and (2) limit those individuals that could modify or rescind a TAO to only the Taxpayer Advocate (as defined above) or the Commissioner.

§ 201. Taxpayer's right to installment agreement. Under current IRS procedures, an individual who owes less than $10,000 of income tax and can pay within a short time period generally will be granted an installment agreement for the payment of that tax upon request without providing financial information to the IRS. The request will not be granted, however, if the taxpayer has delinquencies other than those that are the subject of the request. For other situations, case resolution depends on the taxpayer's financial condition. In all taxpayer interviews, the IRS first looks for sources of full payment.

Under the bills, non-corporate taxpayers would have an automatic right to an installment payment of income tax liabilities if (1) they request an installment agreement, (2) their tax liability is less than $10,000, and (3) they timely paid tax liabilities for the 3 preceding taxable years.

Permitting taxpayers to enter into installment agreements as a matter of right would undermine a major tenet of our system -- that taxes should be paid on time. It would provide a windfall to taxpayers with liquid assets in excess of those needed to pay taxes and result in substantial revenue losses. The IRS' accounts receivable inventory would balloon and substantial resources would have to be reassigned to intrusive, after-the-fact enforcement efforts.

§ 202. Running of Failure-to-Pay Penalty Suspended. Under current law, taxpayers pay both interest and a failure-to-pay penalty on amounts paid after the due date for payment of taxes. Therefore, amounts paid under an installment agreement are subject to both interest and the failure-to-pay penalty.

For any taxpayer that enters into an installment agreement that is requested on or before the return due date, the bills would provide that the failure-to-pay penalty is suspended during the period the agreement is in effect.

This proposal would have a severe negative effect on both revenues and collections. Taxpayers who otherwise could pay taxes on time would be encouraged to pay in installments, because the interest owed the government would be less than either the return taxpayers could earn by investing the delayed payments or the general market lending rates for unsecured borrowings.

§ 301. Expansion of authority to abate interest. Under current law, the IRS has the authority to abate interest assessed with respect to a deficiency or payment that is attributable to the error by or delay of an IRS employee performing a "ministerial" act.

The bills would replace the "error or delay in performing a ministerial act" criteria for the abatement of interest by the IRS with a "unreasonable error or delay" criteria. Therefore, the bills would authorize the IRS to refund or abate interest attributable to "unreasonable" IRS errors or delays, in cases in which a taxpayer's net worth or size exceeded applicable thresholds (generally a $2 million threshold for individuals and a $7 million or 500 employee threshold for businesses or organizations). For taxpayers for which net worth or size do not exceed applicable thresholds, the IRS would be required to refund or abate interest attributable to unreasonable IRS errors or delays, but only until the date demand for payment is made.

The broadening of the standard would encourage taxpayers, particularly large taxpayers with large amounts of interest at stake, to seek relief from interest assessments as a matter of course, thereby imposing significant administrative costs, as well as controversy-related costs, on the IRS. These costs ultimately would be borne by all taxpayers. Moreover, even during delays in the resolution of an issue, taxpayers do have the use of government money on which they could earn interest. Since interest (unlike a penalty) is compensation for the use of money, the provision would represent an economic windfall to taxpayers in many cases. Additionally, "means testing" the authority to abate by imposing a net worth requirement is incompatible with the purpose of the interest charge. It also is unnecessary, as the taxpayer will receive all interest paid if the taxpayer is found to owe no tax.

The vague "unreasonable error or delay" standard for abating interest also would present significant challenges in ensuring consistent application of the law. This could undermine taxpayer confidence in the fairness of the tax system. Furthermore, because net worth is not an item that is currently reported to the IRS, the net worth requirement could not be administered without great difficulty for the IRS and taxpayers.

The expansion of authority to abate interest also is unnecessary, because the cycles for tax audits (i.e., the time from initial taxpayer contact to resolution of the audits) are very reasonable. For example, the cycle times for office (i.e., generally correspondence) and revenue agent (i.e., generally person-to-person) audits of Form 1040 are 225 days and 364 days, respectively. The cycle time for revenue agent audits of Form 1120 (other than for large corporate taxpayers in the Coordinated Examination Program) is 371 days. Within these cycle times, 120 days is "built-in," because it is represented by the time necessary for 30-day and 90-day letters. The Service cannot significantly shorten the time it takes to select a taxpayer for an audit, because of systems limitations in its current matching programs.

§ 503. Notification of examination. In general, the IRS notifies taxpayers in writing prior to commencing an examination and encloses a copy of Publication 1, "Your Rights as a Taxpayer," with the notice.

The bills would provide that, prior to commencing any examination, the IRS would be required to notify the taxpayer in writing of the examination and examination procedures. These requirements would not have to be followed if (i) the examination was in connection with a criminal investigation, (ii) the collection of the tax was in jeopardy, (iii) the requirements were inconsistent with national security needs, or (iv) the requirements would interfere with the effective conduct of a confidential law enforcement or foreign counterintelligence activity.

In many respects this provision is consistent with IRS' current procedures; for example, we generally provide written notice and a copy of Publication 1, "Your Rights as a Taxpayer," prior to commencing an examination. The provision requiring advance notice, however, would undermine some compliance efforts, including roadside inspections of highway vehicles to ensure they are not evading federal motor fuels excise taxes, compliance checks for currency transaction reporting, and unannounced visits to Electronic Return Originators to determine whether they are complying with IRS procedures.

§ 504. Increase in limit on recovery of civil damages for unauthorized collection actions. Current law provides that if an officer or employee of the IRS recklessly or intentionally disregards a provision of the Internal Revenue Code or Treasury regulations, the affected taxpayer may sue the United States for the lesser of (i) $100,000 or (ii) direct economic damages plus costs.

The bills would increase from $100,000 to $1,000,000 the damage cap for reckless or intentional disregard of the law by IRS employees. Increasing this cap would encourage lawsuits, consume IRS resources, and disproportionately benefit large taxpayers.

§ 603. Requirement to conduct reasonable investigations of information returns. Under current law, deficiencies determined by the IRS generally are afforded a presumption of correctness.

The bills would provide that if a taxpayer asserts a reasonable dispute with respect to any item of income reported on an information return filed with the IRS by a third party, the IRS, when making a determination of a deficiency based on such information return, shall have the burden of proof with respect to such determination unless the IRS has conducted a reasonable investigation to corroborate the accuracy of the information return.

Shifting the burden of proof on income reported on information returns to the IRS would render the IRS' matching program inoperable. Taxpayers, without presenting any supporting evidence, could force the IRS to investigate the accuracy of information returns before issuing notices of deficiency. Without the IRS document matching program, the IRS would need substantial additional resources to reach the same level of compliance with the tax laws that is achieved today.

A proper balance is achieved under existing standards. The IRS presumption of correctness does not outweigh credible evidence presented by the taxpayer. To prevail, the IRS must counter the taxpayer's evidence with credible evidence establishing the accuracy of the return. Any law change that prevents the IRS from asserting deficiencies on the basis of information returns could have devastating effects on the tax compliance system and profoundly increase the resource needs of the Service. The biggest component of the tax gap is unreported income. The only practicable way to reduce that component is through computerized matching of information returns. Legislation of this nature would undermine that process and result in substantial revenue loss.

IRS Internal Revenue Manual procedures have already been updated to track a H.R. 11 provision that strikes an acceptable balance between taxpayer and Government burdens. Under the H.R. 11 provision, if a taxpayer, in a court proceeding, asserts a reasonable dispute with respect to any item of income reported on an information return filed by a third party and the taxpayer has fully cooperated with the IRS, the Government, in presenting evidence of the deficiency based on the information return, must present "reasonable and probative information" concerning the deficiency in addition to the information return. In order to fully cooperate, the taxpayer must provide, within a reasonable period of time, access to and inspection of, all witnesses, information, and documents within its control to the extent reasonably requested by the IRS.

§ 804. Authority for Court to Award Reasonable Administrative Costs. Under current law, a "prevailing party" in an administrative or judicial proceeding is entitled to reasonable costs.

Though the intent of the bills' provision is not clear, it appears to provide that administrative costs could be awarded from the first action by the IRS (instead of from the Appeals office decision or notice of deficiency as under current law). Cost recoveries, however, should only be allowed after the U.S. has adopted a litigating position. The position of the U.S. during the early administrative stages cannot be judged against the "substantial justification" standard used to determine if one is a prevailing party because examining agents pursue fact-finding investigations that do not consider the hazards of litigation.

§ 901. Required Content of Certain Notices. Under current law, tax deficiency and similar notices are required to "describe the basis for, and identify" the amounts of tax, interest, additions to tax, and penalties. An inadequate description does not invalidate the notice. The bills would require that tax deficiency and similar notices instead "set forth the adjustments which are the basis for, and identify" the amounts of tax, interest, additions to tax and penalties.

The IRS already provides details of adjustments which are the basis for proposed tax assessments in notices of proposed adjustments and statutory notices of deficiency issued by the examination function. Further, the IRS is engaged in a significant ongoing effort to clarify its notices to taxpayers in a manner that is compatible with its computer capabilities. Without modernization of IRS tax systems, however, it is not practical to provide details of adjustments and related interest, additions to tax, and penalty amounts on computer-generated notices. Only with full implementation of Tax Systems Modernization would such additional disclosures be feasible.

§ 903. Relief from retroactive application of Treasury Department regulations. Under current law, a taxpayer may rely on Treasury regulations and revenue rulings that accord with the taxpayer's particular facts. In addition, penalties are abated for taxpayers who rely on other written guidance of the IRS. The Secretary may exercise his discretion to issue tax regulations prospectively or retroactively.

The bills would generally ban the issuance of retroactive Treasury regulations. Such an unnecessary limitation would encourage aggressive taxpayer behavior and cause serious administrative problems. The New York State Bar Association and American Bar Association are of the view that, on balance, Treasury has exercised its discretion under current law intelligently and responsibly. Thus, there is no pattern of misuse or other emergency justifying the type of fundamental change contemplated by the proposal.

The prohibition would encourage aggressive return positions in the "window" between the date of change in the statute and the date of issuance of regulations interpreting that change. In addition, the exception for retroactive

regulations to curb abuse of a statute would not cover regulations addressing judicial decisions or substantive defects in prior regulations. The absence of an exception for regulations issued within twelve months of the related statutory provision (as provided in H.R. 11) would encourage the issuance of vague proposed regulations or notices that provide less guidance to taxpayers.

Additionally, the retroactive effective date of the proposal is counterproductive. By applying to regulations filed on or after January 5, 1993, the proposal would undercut legitimate reliance on regulations issued after that date.

March 24, 1995

Chairman JOHNSON. Thank you very much, Commissioner.

We do have four more panels today, and so I want to remind you that your entire statements will be entered in the record and are available to us.

Mr. Monks, if you could direct your comments in such a way that they don't reiterate comments of your colleagues, I would appreciate it.

STATEMENT OF LEE R. MONKS, TAXPAYER OMBUDSMAN, INTERNAL REVENUE SERVICE

Mr. MONKS. Thank you. Madam Chairman, distinguished members of the subcommittee, I am pleased to be here to comment briefly on the Taxpayer Bill of Rights II proposals and to respond to any questions you might have.

As the executive within the IRS with responsibility for administering the Problem Resolution Program on a day-to-day basis, I am in a most unique position. Although I don't have direct responsibility for day-to-day field tax administration programs, I am vitally concerned with how those programs are being administered and how they affect individual and business taxpayers.

One of my primary responsibilities is to ensure that the perspective of taxpayers is considered as decisions are being made and new programs are being implemented within the IRS. In addition, in my role as head of the Problem Resolution Program, I work with our field offices to provide assistance to over 400,000 taxpayers annually who experience problems when normal IRS processes or channels do not seem to work. Perhaps, most importantly, I am also responsible for the Taxpayer Assistance Order Program which was statutorily established by the first Taxpayer Bill of Rights to assist taxpayers who are experiencing significant hardship. On an annual basis, problem resolution works about 33,000 of these cases, more commonly referred to as ATAOs.

In the operation of these programs, a primary goal of PRP, problem resolution, is to identify IRS systems which may be contributing to taxpayer problems. We then work with those segments of the organization that have "ownership" of the process to suggest and make improvements designed to reduce problems of a similar nature in the future.

From an organizational perspective, I report directly to the Commissioner and, therefore, have been provided with a great deal of latitude and independence in accomplishing the mission of PRP. I provide functional direction, guidance, and support to the field problem resolution officers located in every IRS region, district, and service center. Since the vast majority of PRP casework is accomplished in our field offices, it is critical that PRP employees also receive strong support from their local head of office and appropriate functional management.

Today, I would like to share my thoughts on one particular area of the Bill of Rights which I understand is of concern to the Congress, and that is the independence of field problem resolution officers. Although we in the IRS feel that the PRP program is working well as it is currently constructed, and that both the Taxpayer Ombudsman and the field PRO's have been afforded the independence

necessary to accomplish our mission, I realize that many in Congress may not fully share that view.

Based on previously stated concerns in this area, I have given this matter a great deal of thought and would like to propose some specific changes that might alleviate some of your concerns. I must stress that these are my views and suggestions and are not presented as those of the administration, the Treasury Department, or the Commissioner.

First, concerning the Taxpayer Assistance Order Program, current procedures provide that a director, upon appeal, may overturn a taxpayer assistance order and deny relief to a taxpayer claiming significant hardship, based on the facts and circumstances of the particular case. I would propose that taxpayer assistance orders can only be appealed to the Taxpayer Ombudsman. This would address some of the concerns regarding problem resolution officer decisions on hardship cases being overturned by their directors. It would also strengthen the independence of field problem resolution officers regarding decisions relating to taxpayer assistance orders.

Second, concerning the reporting relationship of field problem resolution officers, I am strongly in favor of retaining the current reporting structure to the head of office for district and service center PRO's for a number of reasons. I would suggest the elevation of taxpayer assistance order appeals to the Taxpayer Ombudsman would address most, if not all, of those concerns. A further proposal would be to either designate the Taxpayer Ombudsman as the selecting official for all field problem resolution officer positions or ensure that the ombudsman has significant input into both their selection and annual appraisal. These actions would further enhance the relationship and accountability that currently exists between field problem resolution officers and the Taxpayer Ombudsman while also retaining the high level of support that problem resolution officers receive from their directors.

Field problem resolution officers have expressed their concerns, both to me and to their congressional representatives, regarding the impact of no longer reporting to the local head of office. They feel this could change the positive relationships they have established with their directors and other staff members and possibly impact on their ability to influence decisions and assist taxpayers on ATAO cases. I share that concern. The vast majority of these cases are handled in our field offices on an informal basis. This is due primarily to the positive working relationships established by our problem resolution officers with their functional counterparts. Any change to the current reporting structure could have an impact on those relationships with perhaps unintended consequences. I am of the firm belief that the current reporting structure, with the modifications I have proposed, is in the best interests of continuing our high level of support and assistance to taxpayers. Having said that, we are certainly willing to engage in additional discussions with the committee on this issue.

Earlier, the Commissioner in her remarks indicated I would comment on the proposal to change the ATAO process from taxpayers experiencing significant hardship to the more general standard of experiencing hardship. Problem resolution has already made a distinction in the categories of cases handled by the program. As I

mentioned earlier, we handle over 400,000 PRP cases annually. The general standards on these cases are: Subsequent contact by the taxpayer on the same issue; any contact that indicates the taxpayer has not received a response from the IRS by the date promised; any contact that indicates established systems have failed to resolve the taxpayer's problem; or where it is in the best interest of the taxpayer or the IRS that the case be worked by PRP.

ATAO cases, on the other hand, both have a high standard, significant hardship, and are afforded a higher priority as a result. The essence of the ATAO program is speed and individual attention. Substantially expanding the volume of cases by changing the criteria for an ATAO would inevitably diminish the level of attention and high priority these cases now receive. With over 150,000 ATAO's processed since the establishment of the program in 1989, my view is that the proposed changes would actually hurt those who are in most need of the immediate attention the program provides. Those cases not meeting the higher standard of significant hardship can still be included and receive attention as a regular PRP case.

In conclusion, I fully realize that despite the best efforts of the many hard-working, capable individuals in the Problem Resolution Program, we are not able to resolve every problem in the most timely and efficient manner. There are probably also instances where the program has failed to work as expected. I would certainly invite and encourage you to bring those situations to my attention in order that they may be examined and hopefully contribute to our continuing efforts to improve our services.

I would be glad to answer any questions you may have at this time.

[The prepared statement follows:]

STATEMENT OF

LEE R. MONKS
TAXPAYER OMBUDSMAN
INTERNAL REVENUE SERVICE

BEFORE THE

SUBCOMMITTEE ON OVERSIGHT
HOUSE COMMITTEE ON WAYS & MEANS

MARCH 24, 1995

Madame Chairman and Distinguished Members of the Sub-Committee:

I'm pleased to be here today to make some brief comments relating to the Taxpayer Bill of Rights 2 proposals and to answer any questions you may have.

As the executive within the IRS with responsibility for administering the Problem Resolution Program (PRP) on a day-to-day basis, I am in a most unique position. Although I do not have direct responsibility for day-to-day field tax administration programs, I am vitally concerned with how those programs are being administered and how they may be affecting individual and business taxpayers. One of my primary responsibilities is to ensure that the perspective of taxpayers is considered as decisions are being made and new programs are being implemented. In addition, in my role as head of the Problem Resolution Program, I work with our many field offices to provide assistance to over 400,000 taxpayers annually who have experienced problems when normal IRS processes or channels don't seem to work. Perhaps, most importantly, I am also responsible for the Taxpayer Assistance Order program which was statutorily established by the first Taxpayer Bill of Rights to assist taxpayers who are experiencing significant hardship. On an annual basis PRP works about 33,000 of these cases, more commonly referred to as ATAOs.

In the operation of both of these programs, a primary goal of PRP is to identify IRS systems which may be, inadvertently or otherwise, contributing to taxpayer problems. We then work with those segments of the organization that have "ownership" of the process to suggest and make improvements designed to reduce problems of a similar nature for taxpayers in the future.

From an organizational perspective, I report directly to the Commissioner and Deputy Commissioner and have therefore been provided with a great deal of latitude and independence in accomplishing the mission of PRP. I provide functional direction, guidance and support to the field Problem Resolution Officers (PROs) located in every IRS region, district and service center. Since the vast majority of PRP casework is accomplished in our field offices, it is critical that PRP employees also receive strong support from their local head of office and appropriate functional management.

I have previously shared my views on the Taxpayer Bill of Rights 2 with the committee in writing and recently testified before the committee on IRS efforts to reduce taxpayer burden. Today, I would like to share my thoughts on one particular area of the Bill of Rights which I understand is of concern to the Congress and that is the independence of field PROs. Although we in the IRS feel that the PRP program is working well as it is currently constructed, and that both the Taxpayer Ombudsman and field PROs have been afforded the independence necessary to accomplish our mission, I realize that the Congress may not fully share that view.

Based on previously stated congressional concerns in this area, I have given this matter a great deal of thought and would like to propose some specific changes that might alleviate your concerns. I must stress that these are my views and suggestions and are not presented as those of the Administration, the Treasury Department or the Commissioner.

First, concerning the TAO program, current procedures provide that a director, upon appeal, may overturn a TAO and deny relief to a taxpayer claiming significant hardship, based on the facts and circumstances of the particular case. I would propose that TAOs can only be appealed to the Taxpayer Ombudsman. This would address concerns about PRO decisions on hardship cases being overturned by directors. It would also strengthen the independence of field PROs regarding decisions relating to TAOs.

Second, concerning the reporting relationship of field PROs, I am strongly in favor of retaining the current reporting structure to the head of office for district and service center PROs for a number of reasons which I will cover in just a minute. I would suggest, however, that if there are concerns about the independence of field PROs in the current reporting alignment, the elevation of TAO appeals to the Taxpayer Ombudsman would address most if not all of those concerns. A further proposal would be to either designate the Taxpayer Ombudsman as the selecting official for all field PRO positions or ensure that the Ombudsman has significant input into both their selection and annual appraisal. These actions would further enhance the relationships and accountability that currently exists between field PROs and the Taxpayer Ombudsman while retaining the high level of support that PROs currently receive from their directors.

Field PROs have expressed their concerns, both to me and to their congressional representatives, regarding the impact of no longer reporting to the local head of office. They feel this could change the positive relationship they currently have with their directors and other staff members and possibly impact on their ability to influence decisions and assist taxpayers on ATAO cases. I share that concern. The vast majority of ATAOs are handled in our field offices on an informal basis. This is due primarily to the positive working relationships established by the PROs with their functional counterparts. Any change to the current reporting structure could have an impact on those relationships with perhaps unintended consequences. I am of the firm belief that the current reporting structure, with the modifications I have proposed, is in the best interests of continuing our high level of assistance to taxpayers. We are certainly willing to engage in additional discussion on this issue.

Earlier, the Commissioner, in her remarks, indicated that I would comment on the proposal to change the standard for ATAOs from a taxpayer experiencing significant hardship to the more general standard of experiencing hardship. PRP has already made a distinction in the categories of cases handled by the program. As I mentioned earlier, we handle over 400,000 PRP cases annually. The general standards for these cases are:

- subsequent contact by the taxpayer on the same issue (allowing time to resolve the initial inquiry);
- any contact that indicates the taxpayer has not received a response from IRS by the date promised;
- any contact that indicates established systems have failed to resolve the taxpayer's problem; or
- where it is in the best interest of the taxpayer or the Service that the case be worked in PRP.

ATAO cases, on the other hand, both have a higher standard (significant hardship) and are afforded a higher priority as a result. The essence of the ATAO program is speed and individual attention. Substantially expanding the volume of cases handled in the ATAO program would inevitably diminish the level of attention and high priority these cases now receive. With over 150,000 ATAOs processed since the establishment of the program in 1989, my view is that the proposed change would actually hurt those who are in most need of the immediate attention the program provides. Those cases not meeting the higher standard of significant hardship can still be included and receive attention as a regular PRP case.

In conclusion, I fully realize that despite the best efforts of the many hard-working capable individuals in PRP, we are not able to resolve every problem in the most timely and efficient manner. There are probably also instances where the program has failed to work as expected. I would invite and encourage you to bring those situations to my attention in order that they may be examined and hopefully contribute to our continuing efforts to improve our services.

I would be glad to answer any question you may have.

Chairman JOHNSON. Thank you, Mr. Monks. I will ask a couple of questions and then move on. If we need to come back, we will.

You mentioned at the beginning of your testimony that these were your thoughts and not those of the Treasury, I believe you said. I just wondered if your testimony had gone through the review process of the IRS and the Treasury as testimony traditionally does.

Mr. MONKS. My testimony was shared, but these are my comments.

Ms. BEERBOWER. Treasury did not receive a copy of his testimony in advance.

Chairman JOHNSON. Thank you. Ms. Beerbower, to shift gears just ever so slightly on you, one of the things that is of great concern to me is the whole matter of regulations and when they get written. And from the point of view of taxpayer compliance, I have come to feel this is a very important matter. Could you update us on how many regulations the Treasury and IRS are currently working, what your backlog is? Is the backlog decreasing or increasing? What is the general time lag between when Congress passes a tax law and regulations are written?

Ms. BEERBOWER. Yes, certainly. The IRS and Treasury have announced the 1995 business plan that has on it, I think, about 165—when I last counted it—regulatory projects. Now, these projects are on that plan because all of us, the IRS and the Treasury, are committed to finishing them before December 31.

Last year, I can't remember what our success rate was, but we try very hard to keep track of it. It might have been 85 percent, as I recall, that we completed.

The regulations are of varying degrees of difficulty. Some of them are very easy to write and very easy to issue. Others, such as the regulations that we have issued on contingent debt and synthetic securities and the accrual of income on certain financial products, are very difficult to write. They do take more time, and the lag is obviously greater depending upon the difficulty of the regulation. So it is very hard to say. In some instances, like section 385 in the code, the distinctions between stock and debt, there have never been satisfactory regulations issued.

Chairman JOHNSON. So what is the number of years that is the traditional gap between the passage of a major tax bill and the writing of the regulations?

Ms. BEERBOWER. It would be very hard to say. The OBRA regulations on the conduit provisions, on most of the areas in which significant guidance was needed, were provided last year. So within a year, we attempted to provide at least proposed regulations for most of those statutory provisions. But I think some will take longer.

Chairman JOHNSON. Could you get back to us with precise information on this matter of the gap between when a law is passed, when guidances are issued, and when regulations are adopted and finalized?

Ms. BEERBOWER. Certainly.

Chairman JOHNSON. Thank you.

Mr. Matsui.

Mr. MATSUI. Thank you, Madam Chairwoman.

Mr. Monks, maybe I didn't hear you because I went out for a moment, but did you talk about the abatement of interest issue?

Mr. MONKS. No, I did not.

Mr. MATSUI. What is your position on that?

Mr. MONKS. We have looked at that for quite a period of time, and we believe that there are some instances where abatement of interest may be appropriate.

Mr. MATSUI. So you would favor, then, perhaps something to make changes there to give the IRS and Treasury or both the authority to make changes—or to abate interest, should it become necessary?

Mr. MONKS. I think that it should be looked at on a case-by-case basis. We should take into account the circumstances of the situation.

Mr. MATSUI. In other words, you do favor——

Mr. MONKS. I generally would be in favor of looking at it further.

Mr. MATSUI. What about getting the Service and/or the Treasury Department to lift liens?

Mr. MONKS. I certainly think that there are circumstances where that should be the case, yes.

Mr. MATSUI. Did you speak to that issue in your testimony?

Mr. MONKS. No, I did not.

Mr. MATSUI. I guess the question I want to ask is: How independent are you? How many people do you have working for you, directly under you? Field office, everything.

Mr. MONKS. Directly under me, I have a relatively small staff in the headquarters office, about 25 employees. The field problem resolution officers do not work directly for me. They work for either the regional commissioner, the Service center director, or the local district director.

Mr. MATSUI. Yes. You know, when I was on the city council in Sacramento, we had a situation where we had a city manager form of government, and the elected officials hired the city manager, and the city manager ran the government and basically gave us policy input. And we decided that we needed a little more independence, and we hired a budget analyst, but we didn't give the budget analyst anything but an office. In fact, he had to go out and get his own telephone and all this stuff, and we gave him a little budget. And he failed miserably. I mean, it was the worst situation in the world, and this guy destroyed his career, essentially. He had to move out of Sacramento.

Do you feel you are understaffed? Can you handle your work? Because you have, what, I don't know how many hundreds of thousands of taxpayers you have to handle. I would imagine you receive thousands of telephone calls an hour during the tax season. Is that correct? How do you handle that?

Mr. MONKS. Most of the inquiries go into our field offices. We have about 400——

Mr. MATSUI. But you don't run those offices, though. You don't have any control over those.

Mr. MONKS. I don't run those offices, but I do have a lot of contact with them. They get field direction and guidance from the ombudsman's office. We meet with them——

Mr. MATSUI. But we need an ombudsman, then, because, I mean, the field office is under the direction and control of the Department, right? So, I mean, that is great that they make those calls to them, but what is your function? Do you do the big picture stuff? Do you do the small picture stuff? If an individual taxpayer contacted one of your 25 employees, how do you handle that?

Mr. MONKS. Some of the taxpayer inquiries do come into our office. We work with individual field offices on specific cases. We get information from them. We assist them where they are running into difficulty. So there is a lot of coordination.

Mr. MATSUI. Let me ask, how long have you had this job?

Mr. MONKS. Two years.

Mr. MATSUI. What are your big accomplishments?

Mr. MONKS. We have, I think, made a number of recommendations. One specific project that we worked on in the headquarters office dealt with how to effect improving the processes on changing and updating our master file on taxpayer addresses.

Mr. MATSUI. Was it implemented?

Mr. MONKS. A number of the recommendations have been implemented. We are in the process of monitoring those recommendations to ensure that we do have greater capability in that area.

We are also——

Mr. MATSUI. I guess the question I am going to ask is—well, and you can't answer it, but do you perform a valuable function given your staffing levels and given what you are up against? And if you do, well, then, I don't know how you define it, but if you don't, are you even relevant? And if you need more staffing, then we need to know that. But then that creates—you know, do you have a parallel system? And I don't quite know how you deal with it, but you are kind of in a hybrid position. Who do you represent? Who do you work for? Congress or the executive branch or the IRS or Treasury Department? All these things are a little confusing to me, and I guess when this office was created, those things were thought through. But now that you have been in for 2 years, I would like to kind of pursue this further with you beyond this hearing, obviously.

So that is all I have for you, but I am going to follow up, I guess, with your office to find out exactly what you do.

Mr. MONKS. Certainly.

Mr. MATSUI. Let me ask Ms. Beerbower a question. You indicated—and I tend to agree with you on the burden of proof issue. I think if you really want a system of voluntary compliance, you almost have to put the burden of proof on civil matters on the taxpayer. And so I do tend to agree in a rather strong way with both Commissioner Richardson and you.

The abatement of interest issue, though, I can understand if I got a notice saying that I owe $3,000 but then there was no effort to collect, I will remember that. I will remember even if it is 5 years later. And if I get hit with the $3,000 plus interest, that is my problem and I have to deal with it. But I am not at all sure all taxpayers are in that situation. I can imagine some taxpayers perhaps who live day to day, week to week, month to month, being in a situation where if they got a notice for $1,500 that they owe, they might put it aside, and if there is no collection because, let us say,

the files got lost and 5 years later all of a sudden they are hit with this $1,500 plus interest, they may not be in a position to deal with it.

I don't know how you deal with a situation like that. It just seems to me there is an equitable issue that has to be dealt with, not for me or somebody who perhaps hires a CPA, has an accountant, you know, has the ability and the structure in order to remember those things and think, hey, I might be able to get away with it. But really, you know, if I don't, I am in trouble. But there may be some people that are not in that position. How do you deal with them? Do you make them pay and do you make them sell their house? How is this done?

I think what Mr. Monks says is correct. Maybe you do need a little authority to pick up those cases that are hardship cases.

Ms. BEERBOWER. I think it is a difficult question. As you suggest, it differs case by case, and the individual circumstances of the taxpayer and the facts behind it are critical to one's judgment of whether the relief is necessary or desirable.

I think in situations like that, it is hard to legislate.

Mr. MATSUI. Well, see, I would suggest, I mean, perhaps we give you the authority and you promulgate with the IRS and the ombudsman regulations that would give you some discretion in order to make those judgments. I just don't think it is fair to certain taxpayers, particularly if somebody quits from the IRS, quits their job, and then that file gets misplaced in some cabinet. I don't think that is fair to that taxpayer who may not have quite the background or perhaps the infrastructure to remember those things.

I would imagine there are quite a few of those folks.

Ms. BEERBOWER. I think we would certainly consider the possibility of perhaps publishing standards.

Mr. MATSUI. But you don't have the authority to do anything right now, though; is that correct?

Ms. BEERBOWER. Well, right now what we are doing is working with the staffs on the Taxpayer Bill of Rights, deciding where we need additional authority.

Mr. MATSUI. I am not talking about the staff. I am talking about you don't have the—in other words, there must be taxpayers out there that are in that position.

Ms. BEERBOWER. Yes.

Mr. MATSUI. Now, how do you deal with them? You make them pay, right?

Ms. BEERBOWER. At the moment, I'd defer to the Commissioner on that.

Ms. RICHARDSON. I think that is correct, Mr. Matsui. But also, one of our proposals which would address some of your concerns is to send an annual reminder notice to taxpayers that they do have an outstanding obligation. We are doing this now, but also it is included in the legislation.

Mr. MATSUI. See, in that situation, that is fine. If you were making an attempt to collect, then obviously the taxpayer has the obligation—I don't care what level the income or background of that taxpayer is. The taxpayer owes the money. But there have to be situations where maybe a notice was sent, but then no collection

effort was made for 3 or 4 years, and in that situation, the equity may shift or perhaps the burden of proof should shift in that case.

Why should then the Service put a person in a position where they may have to sell their house in order to collect that back payment plus the interest? It would seem to me you would want the authority to protect those taxpayers. And if we gave you that authority, you can promulgate regulations to deal with the hardship cases, but don't let me get away with it or people in my position get away with it.

I don't understand why you don't want that authority. It would seem to me—I just think that you can't resist all of these provisions. There are some, like the burden of proof, that I think are a problem and that would create tremendous problems for all of you if, in fact, we shifted the burden of proof. We would really no longer have a system of voluntary compliance. But in some cases, it would seem to me that you would want some authority in order to make the proper decision and protect the taxpayer for decisions that are not good.

Ms. BEERBOWER. I think we are certainly willing to consider that. You know, we do work out installment agreements, other types of payment plans for people not able to pay. I would want to study the facts, but I would strongly doubt that the house is taken before——

Mr. MATSUI. Well, let's take somebody making $30,000 a year with 3 kids or 4 kids, a couple of them trying to get through college and they are working part-time. But essentially that person is basically making it month to month, and there are a lot of people like that, I know, in my district and throughout the United States. That person gets hit for $800. You don't collect or attempt to collect for 5 years. That $800 becomes $1,800, you know—I don't know what the interest would be. But that person may not then be in a position to go out and even borrow, and so they would probably have to find some way to put their equity on the line in that house in which they may have $10,000 worth of equity. Then they are going to have a further problem meeting those monthly payments.

It seems to me that there are a lot of people that could be put in that position.

Ms. BEERBOWER. I would certainly consider it.

Mr. MATSUI. I will finish with this comment. I just hope that when you look at these things that you use some discretion, because if you just oppose everything, we may do something that might be bad for you. And we want to work with you. We want some flexibility on your part so that we can come up with a smart decision.

Ms. BEERBOWER. Well, as I was describing in the 40-some-odd provisions that are being discussed now at the staff level, there is major disagreement on only 6. There is massive agreement and modification going on with respect to the balance. I certainly don't want to suggest that we oppose all of the provisions.

Mr. MATSUI. I understand, but this abatement of interest issue seems to me one that you should—I mean, it would seem to me you would want that authority and then you can promulgate regulations and protect yourself but also protect some taxpayers. That is just an example.

Thank you.

Chairman JOHNSON. I would just like to follow up on the report issue so that we may focus on one issue at a time.

Mr. Monks, I know you do provide reports to the Commissioner and that those reports cite problems, operational problems, statutory problems, and make suggestions. In the past, the Treasury has not opposed the provision of these reports to the Congress, and, in fact, we have received in the last 2 years very good reports from Mr. Monks at the request of my honored and esteemed and beloved predecessor, Congressman Pickle of Texas.

But it is my understanding that the Treasury now opposes the provision of those reports to Congress. Is that true?

Ms. BEERBOWER. Honestly, I do not believe we have seen a report from the ombudsman. They are not sent to us. We do regularly communicate with the Commissioner, and the Commissioner will have suggestions that are given to us, and we work on those suggestions to develop legislation where it is appropriate or to embody the suggestion in regulatory projects.

Chairman JOHNSON. Your testimony suggests on page 10 that you oppose the provision of these reports to the committee.

Ms. BEERBOWER. We oppose the provision of legislative tax from proposals going directly from the ombudsman to the committee without the review that is institutional in the Office of Tax Policy—the revenue estimating, the balancing, the input, the conflicts with other provisions—and without filtering that through the Secretary of the Treasury and ultimately the President in order to speak with one voice on tax legislation.

Chairman JOHNSON. I appreciate your concern with the Treasury having a single voice. I hope you will think this over and discuss it with us in the days ahead, because I think there is some merit, frankly, to that discussion going on publicly, to the ombudsman having the responsibility to report things as he sees it to us, and our having the responsibility to work with you and listen. I think certainly the Nation does need one voice on tax policy.

But particularly in today's world, it is important that some of those controversies be discussed and the resolution be a matter of public process. And so I hope you will work with us to reconsider that position on your part.

Second, I do want to mention just to both Treasury and the IRS, I want to raise the issue of the fact that under section 7430, the taxpayer must not only prevail over the IRS on the merits of his case, but he also has to show that the IRS was not substantially justified in maintaining its position against the taxpayer.

We talked earlier in terms of burden of proof, and Treasury gave excellent testimony on how hard it would be for Treasury to prove certain things. It strikes me that it would be very hard for the taxpayer to prove that the IRS was not substantially justified.

What would be your position on switching the burden of proof to the IRS to show that it was substantially justified in maintaining its position in order to defeat a victorious taxpayer's application for attorneys' fees? Now, this is somebody who has challenged the IRS, he has won; it has been adjudicated that, in fact, his case was the better case. Why should he then have to go on to prove that the

IRS was not substantially justified when in this case the IRS has the information and he does not?

Ms. RICHARDSON. Madam Chairman, if I might, I would like to introduce Stuart Brown, who is our chief counsel. I think he is prepared to address that issue.

Chairman JOHNSON. Thank you.

Mr. BROWN. Thank you. Madam Chairman, let me say first that the provision you are describing is our current operating practice; in other words, when our attorneys are involved in a case which leads to a request for attorneys' fees and we decide to oppose the request, our guidance to our attorneys is that they must be prepared to prove the Government's position was substantially justified.

Now, I understand that is not required by statute at the moment, but that is, in fact, the way we operate at the present time. We haven't really considered whether it would be appropriate to enact that into legislation, but we certainly would be willing to discuss that further with you.

Chairman JOHNSON. All right. So you would not have any objection to us clarifying that, in fact, it was the IRS' responsibility.

Mr. BROWN. It is our current practice. I don't think I am prepared to state a legislative recommendation, but I can tell you that is——

Chairman JOHNSON. I think you need to think about that because that is——

Mr. BROWN. We would be happy to work with you on it.

Chairman JOHNSON. That will be of interest to us.

Mr. BROWN. Sure.

Chairman JOHNSON. As you are keenly aware, this month the House passed the Attorney Accountability Act. This bill encourages the settlement of litigation by imposing attorneys' fees on a party which rejects a settlement offer in cases where the court later awards the party less than the amount of the earlier settlement offer.

What would be the IRS' position regarding adopting a similar approach for taxpayer disputes for the IRS?

Mr. BROWN. We would be very careful before we went in that direction for tax litigation, and I guess there are a couple of reasons why. I think you have to remember that attorneys' fees are the tail and not the dog. Our main objective in any tax controversy is to resolve it at the earliest possible level, hopefully, when the questions are first asked by the agent; if not then, through the administrative appeals process; and if not then, in court, in a docketed status. But even though we resolve about 30,000 tax court cases a year, only about 1,000 to 1,500 are actually tried. The others are settled in the process leading up to the trial. And we are concerned that changes that would shift that balance would provide significantly more burden both to us and to the tax court if we do anything that confuses the situation or encourages additional litigation.

Beyond that, if Congress felt that it was appropriate to provide more liberal rules for attorneys' fees, our suggestion would be to make the rules as clear as possible. If you feel it is appropriate that the Government should spend more money to support tax-

payers who want to litigate cases against the Government, the only recommendation I would have is that we should find rules that make that process not interfere with the basic process of resolving the issue on the merits; and, secondly, that in itself, it should not become a major controversy and a source of continuing litigation. But let's just find some rules that are fairly simple and straightforward, and we can go forward from there.

Mr. CARDIN. Would the gentlelady yield on that point?

Chairman JOHNSON. I would be happy to.

Mr. CARDIN. I think this is a very important discussion because many of the cases that you are referring to have implications far beyond the specific case that may be under active consideration, and the IRS position and, indeed, the taxpayer's position may very well be influenced by the impact it has on other cases that are pending. And if we just look at the counsel fees related to a settlement offer and the cost after a settlement offer and the amount of dollars involved, it may not really reflect the importance of that litigation either to the taxpayer or to the IRS.

Mr. BROWN. That is absolutely true. We emphasize over and over again that the reason that we litigate particular cases is not only to collect the proper amount of tax from that taxpayer, but much more importantly, to make sure the rules are clarified and the law is understood and followed by everyone.

So the 1,000 or 1,500 cases that are actually tried to decision in tax court every year are an infinitesimal percentage of the total revenue we collect. The importance of those cases comes from the rules they establish for other taxpayers.

Mr. CARDIN. And, in fact, if you reach settlement you may not even have a clear understanding as to how it impacts on other taxpayers of similar nature if there is a settlement that is not clear as to the effect of it.

Mr. BROWN. I would agree with that. I think that this provision, as I understand this provision, has been available to the Federal Civil Procedure for a fairly long time, and it is only infrequently used in civil litigation generally.

Mr. CARDIN. I would like some time on a different subject.

Chairman JOHNSON. You will have some time.

Mr. Hancock.

Mr. HANCOCK. Thank you, very much. I recognize that this question about the burden of proof is a very, very complicated issue. I just was wondering if there is a way to come up with some type of language which breaks down the responsibility for the burden of proof rather than just saying the burden is entirely on the Internal Revenue Service or it is entirely the individual.

For instance in the cases that Ms. Beerbower mentioned, it is pretty obvious that if you claim a dependent, the burden of proof should be upon the claimant, not on Internal Revenue to prove whether you have the children or whether you do not.

The only trouble is once you start that method or start trying to itemize, especially with our complicated tax law, I am afraid you get into trouble. But it is something we might consider.

One of the things that concerns me is that compliance costs in our system is extremely expensive. There is a lot of money spent

just to comply that could better be spent for better purposes than complying with the tax law.

What about the cases where Internal Revenue obviously makes a mistake. For instance, an individual files the proper papers and everything, and Internal Revenue, in its own system, has the papers, but they get lost. And they end up saying, oh, yes, we are going to send this person a notice of deficiency. We will not give them a name, nobody that they can correspond with, and we are going to send them a little notice that says, you owe us $4,500, a general penalty.

Then that taxpayer has to hire a CPA, or uses his regular CPA or his attorney, whoever the taxpayer is, and files a power of attorney. A month later he still cannot get an answer. He starts trying to make telephone calls, and finds out Internal Revenue says, we will not talk to you on the telephone, we have to do it by correspondence.

Six months later after the individual or the company is out several hundred dollars in fees, Internal Revenue says, ah ha, we found the paper, it was here all the time.

Now, should not there be some way that that taxpayer could be reimbursed for the expenses they have incurred when Internal Revenue had the papers properly filed, the entire 6 or 8 months that they were trying to collect or say that there was a deficiency?

I mean should not the taxpayer have some type of reimbursement other than being able to take his $500 worth of additional attorney fees, or the CPA fees off of his next year's income tax?

Mr. BROWN. Mr. Hancock, if I understand the situation you are describing, I do not think it happens all that often, but it probably happens some times.

Mr. HANCOCK. Yes, it happens some times.

Mr. BROWN. And that when it does happen, I am told that we have some discretion to allow for small amounts to be paid to compensate taxpayers who are in that situation, under section 7430 in current law, as long as they have gotten to court.

Mr. HANCOCK. Well, what if you have a situation though where you cannot even get anybody to agree it ever happened. It happened but nobody says, well, we do not know, everything is OK.

Mr. BROWN. That is a much harder case for us because then we have two different people telling us two different stories.

Mr. HANCOCK. But you are telling me that there is a remedy for this type of situation.

Mr. BROWN. I was not completely aware of it until just now, but I am told that it happens on a fairly regular basis, we do allow small claims like that to be paid when taxpayers can convince us that it really was our fault that something got lost.

Mr. HANCOCK. Can you cite for me the code section that allows that?

Mr. BROWN. I can provide that to you later.

[The following was subsequently received:]

SERVICE'S AUTHORITY TO REIMBURSE TAXPAYERS

Question. At the hearing, Representative Hancock posed the following factual situation and question. A taxpayer files the proper papers, presumably for a correspondence audit, and the Service makes an obvious mistake and loses them. The Service does not provide any person that can resolve the matter and issues a Notice of Defi-

ciency. After the notice, the taxpayer hires an accountant or attorney, who files a power of attorney and tries to convince the Service of its error. Finally, the Service admits its error. The question posed by Representative Hancock was whether the Service could "reimburse" the taxpayer for the expenses.

Answer. As both the Commissioner and the Chief Counsel stated at the hearing, the present formulation of I.R.C. § 7430 allows the Service to reimburse the administrative costs described. Section 7430(a)(1) and (c)(2) address the situation where, after the issuance of a notice of deficiency as described here, costs are incurred. That statute provides for the allowance of reasonable administrative costs where the position of the Service in the notice of deficiency was not substantially justified. Clear administrative errors resulting in an unwarranted notice are obviously not justified. Reasonable accountant or other representative's costs are included in the allowable award amounts. I.R.C. § 7430(c)(1)(B)(iii) and (3). The Service can allow these costs without the taxpayer going to court or the court can require the Service to pay them. I.R.C. § 7430(f) (1) and (2).

The Service has promulgated regulations providing for taxpayer applications for administrative costs after resolution of the merits of the tax liability. Treasury Regulation § 1.7430–2 provides for the filing of the claim with the office that resolved the merits of the tax, or with the district director if the office is not known. The contents of the claim and the procedures for resolving the claim are clearly set forth in the regulations. Treasury Regulation § 1.7430–2(c)(3). These claims are normally handled by the Appeals division administratively following internal procedures published in Internal Revenue Manual (IRM) 8465.

Ms. RICHARDSON. And I think, Mr. Hancock, just to make clear, I think that that provision, as Mr. Brown said, is applicable once a case gets into court. We would certainly be willing to work with you and the staff to try to come up with something that might be equitable through the administrative process.

I think the problem is being able to define a standard that would be workable.

Mr. HANCOCK. Well, naturally they can go ahead and deduct their accounting fees or what have you, but they ought to get the full amount, not just the taxable amount of that deduction. That would make it a little bit more palatable.

Thank you.

Chairman JOHNSON. Mr. Cardin.

Mr. CARDIN. Thank you, Madam Chairman.

Mr. Monks, I am trying to get a better understanding as to how your office operates and I understand that you handle different types of cases, some that are more involved than others.

I would like to concentrate on the TAO's, taxpayer assistance orders. If I understand your written testimony, you receive approximately 33,000 requests a year where the taxpayer has alleged significant hardship. And you have received since the inception of the TAO's about 150,000 requests.

Could you give me some indication of how many of those have led to your intervention and actually issuing taxpayer assistance orders?

Mr. MONKS. The application for a taxpayer assistance order is filed either by a taxpayer representative or by a Service employee when a taxpayer comes to them with a situation that appears to be a case of significant hardship.

We process all of those cases and in approximately 80 percent of the cases have found a form of relief of some sort for the taxpayer.

There are some cases where a——

Mr. CARDIN. A form of relief——

Mr. MONKS. Full relief or partial relief of the circumstances that created the hardship.

Mr. CARDIN. Without the need of formal——

Mr. MONKS. Without the need for the formal issuance of a taxpayer assistance order.

Mr. CARDIN. In those 80 percent of the cases, have you satisfied the taxpayer or you have satisfied yourself that the issue is resolved?

Mr. MONKS. I think both. In the vast majority of the cases, hardship is found and a change is made in favor of the taxpayer.

In some cases, we may not find that significant hardship exists, but it may meet the other criteria for a PRP case and we work that case and try to resolve the issue that led to the taxpayer coming to us.

Mr. CARDIN. And what difference is that from the 400,000 that you handled through the normal routine?

Mr. MONKS. The 400,000 cases refer to our problem resolution type cases. Those cases generally come to our attention as a result of a taxpayer having to contact us a second time on the same issue. Perhaps there has been a system breakdown, perhaps there has been a response promised to the taxpayer that was not made timely. Again, practitioners and Service employees have been trained to recognize those situations and refer those situations to problem resolution.

So we can look at the system that created the problem and try to determine what caused the problem.

Mr. CARDIN. So your 80 percent are screened through informal methods of resolving the problem; what happens to the other 20 percent?

Mr. MONKS. Let me go back. Those are the applications for taxpayer assistance orders.

In some cases the relief cannot be provided and we advise the taxpayer of the action that has been taken to research their account and let them know what the situation is. There are other situations where the relief is denied because it is barred by a statute or it is not the appropriate action to take.

Generally, when a case comes in, we discuss it with the function involved. For example, it may involve a collection issue. We discuss the issue with the taxpayer, and with the collection function and determine the most appropriate course of action to take.

Mr. CARDIN. How many cases actually end up where you have to issue an order?

Mr. MONKS. Not very many. In calendar year 1993 we issued 65 taxpayer assistance orders, and in calendar year 1994 we issued only 12. But again, generally these cases are discussed with the function involved and resolution is reached informally. Let me cite an example involving a collection issue.

We may reach a determination mutually that the case could be resolved better. The taxpayer's hardship can be relieved by granting an installment agreement instead of perhaps a levy on that particular account at that point in time.

So, in many cases, the resolution is reached informally without the need for the filing of a taxpayer assistance order.

Mr. CARDIN. And only 12 cases in 1994 you were unable to resolve the issue with the IRS then?

Mr. MONKS. And the taxpayer assistance order was subsequently issued.

Mr. CARDIN. Well, either you are very, very efficient, or there is not much independence from the agency. You could draw one of two conclusions from that.

Mr. MONKS. Well, what I would like to believe is that the problem resolution officers have been very effective in making their case, because again, on 80 percent of these cases we do provide relief to the taxpayers.

Mr. CARDIN. What standards do you use to issue an order? When will you issue an order?

Mr. MONKS. We would issue an order if we felt that the taxpayer presented a compelling case, we had presented our arguments to the function involved and they did not agree with us, and we felt strongly about the position that we were taking.

We would issue a taxpayer assistance order if we felt that that was the correct procedure to take and that there were no other ways to relieve that hardship.

Mr. CARDIN. And that happens in 12 cases out of 33,000 a year?

Mr. MONKS. That was the case for 1994.

Mr. CARDIN. Thank you.

Chairman JOHNSON. Mr. Monks, I would like to request a copy of the TAO's issued by the ombudsman for my safe, and a summary of the orders that were issued that would be available to the committee.

Mr. MONKS. The orders were issued by problem resolution officers in our field offices, but I can provide that.

Chairman JOHNSON. If you would provide an edited version for the members and then provide the cases, themselves, for the safe, I would appreciate it.

Mr. MONKS. Yes.

Chairman JOHNSON. Thank you.

DEPARTMENT OF THE TREASURY
INTERNAL REVENUE SERVICE
WASHINGTON, D.C. 20224

TAXPAYER OMBUDSMAN

April 26, 1995

The Honorable Nancy L. Johnson
Chairman, Subcommittee on Oversight
Committee on Ways and Means
1135 Longworth House Office Building
Washington, DC 20515

Dear Madame Chairman:

At the hearings you conducted on March 24, 1995, you requested that I provide you with copies and edited versions of all Taxpayer Assistance Orders (ATAOs) issued during 1994. At that time, I informed you that there had been twelve (12) TAOs issued during 1994. When gathering the information, it was discovered that one of the TAOs had been incorrectly coded; therefore eleven (11) TAO were issued during 1994. Enclosed are copies of the 11 TAO files and a synopsis of the 11 files with identifying information deleted.

If you have any questions, please contact me or a member of your staff may contact my Executive Assistant, Tom Tiffany. We may both be reached at 202 622-6100.

Sincerely,

Lee R. Monks

Enclosures

TAXPAYER ASSISTANCE ORDERS (TAOs)

1. Case #1

This taxpayer is 73 years old and in poor health. She did not file a tax return for tax year 1991. Based on information reported to I. R. S., we prepared a tax return for her under Internal Revenue Code Section 6020(b) showing social security income of $8,578,00, dividend income of $15.00, interest income $1,711.00, and gross distributions from pension funds of $18,539.00 and $2,009.00. The tax due based on this unreported income is $2,501.00, plus penalties and interest from April 15, 1992. The taxpayer was very upset when she received the proposed tax assessment. She contacted her local office with a Form 911, Application for Taxpayer Assistance Order. I.R.S. did not locate any prior year liabilities. The Problem Resolution Officer (PRO) decided that the taxpayer's situation warranted relief. The PRO set up a meeting with the Examination Division to request the additional tax not be assessed due the taxpayer's age, poor health, and financial situation. Examination insisted the tax must be assessed. The PRO determined that a TAO would be necessary. A TAO was issued, Examination did not contest and the tax was not assessed.

2. Case #2

This taxpayer is 72 years old. She had major surgery three times, 1991, 1992, and 1993. Her only recreation and enjoyment is playing bingo. Her bingo winnings were reported to I.R.S. and additional tax was assessed for tax years 1990 and 1992 by Examination Division. Additional tax was proposed for tax year 1991 by Examination Division. The taxpayer contacted her local office with a Form 911, Application for Taxpayer Assistance Order, because she did not have the ability to pay the additional tax assessed and the tax proposed to be assessed. The taxpayer met with the Problem Resolution Officer (PRO) and gave her an affidavit stating that she spent any bingo winnings on additional bingo games and on auto expenses, etc. to travel to the Indian Reservations where the bingo games were held. She can no longer attend the bingo games as she is elderly, in poor health, and her sister-in-law, who drove her to the bingo games, is now deceased. The taxpayer owns no property and her only income is social security. The PRO determined that relief was warranted. A TAO was issued and the tax for 1991 was not assessed. The tax for 1990 and 1992 was determined to be currently not collectable and will not be pursued.

3. Case #3

This taxpayer owed a joint tax liability for tax year 1982 with her former husband. The taxpayers divorced in 1985 and the taxpayer wife was awarded the personal residence in the divorce settlement. Notice of Federal Tax Lien (NFTL) was filed for the 1982 joint liability, however, the divesting of the taxpayer husband's interest in the personal residence was never recorded. Therefore, the full lien attached to the personal residence. When the Service began seizure action for payment of the taxes due, the taxpayer wife filed a Form 911, Application for Taxpayer Assistance Order (ATAO). The District Office Problem Resolution Officer issued a TAO to settle the matter. The TAO instructed the taxpayer wife to full pay her portion of the 1982 joint tax liability ($17, 233.39), which she did on March 30, 1994 and the NFTL on the personal residence was discharged on July 7, 1994.

4. Case #4

The taxpayer is a clothing business, delinquent on quarterly returns and payment of Federal Tax Deposits and prior taxes. The Revenue Officer has attempted to work with the taxpayer and set up payment plans but the taxpayer has repeatedly not complied. The Revenue Officer was going to seize the business. A TAO was issued to stop the seizure. After review by the District Director, the TAO was rescinded.

5. Case #5

This taxpayer is the mother of new born twins and a 4 year old child. She is single and currently is unemployed and receives only Aid to Families with Dependant Children (AFDC). Her telephone is about to be disconnected and she needs to buy food for herself and her children. Her income tax refund from a prior year is to be offset to a tax liability of her ex-husband. A TAO was issued to provide the taxpayer her refund to purchase food and pay her phone bill.

6. Case #6

This taxpayer is homeless, in desperate need of refund. Currently staying at local motels, one day at a time. There is an outstanding balance due from a prior year. Issued a TAO to provide taxpayer refund and bypass balance due.

7. Case #7

These taxpayers are in need of their refund due to imminent foreclosure because they are 3 months in arrears on the mortgage payments. Their car was stolen with no insurance and recovered with a blown engine. A prior balance due is shown (debtor master file DMF) for child support owed by son who has used father's SSN. Child support enforcement agency verified that this taxpayer does not owe the child support. A TAO was issued to provide a manual refund and bypass erroneous liability.

8. Case #8

This taxpayer suffers from severe depression and has threatened suicide on several occasions. He is responding to psychotherapy and medication. A Revenue Officer set up a wage levy agreement of $543.00 per month which the taxpayer cannot afford. A TAO was issued to reduce the wage levy to $125.00 every pay period ($250.00 per month) so that the taxpayer can afford to continue medical care.

9. Case #9

This taxpayer was a non-filer. Tax returns for 1988, 1989, 1990, 1991, and 1992 were secured with current tax and accruals due in excess of $6,000.00. The taxpayer is 84 years old (as of October 1993). She made an Offer in Compromise which was rejected. She paid $700.00 with the offer. Almost simultaneous to the offer rejection, the Revenue Officer filed a levy on her wages (she was still employed at this time). Because the taxpayer was not given her appeal rights or an appropriate time to respond to the offer rejection, she filed a Form 911, Application for Taxpayer Assistance Order (ATAO). Based on the taxpayers health, age and doubt as to collectability, a TAO was issued to release the wage levy.

10. Case #10

The taxpayers are principals of a Sub-chapter S Corporation with a personal tax liability for tax year 1992 in excess of $39,000.00. They entered into an installment agreement with the Andover Service Center of $1,300.00 per month. The taxpayers requested that no Notice of Federal Tax Lien (NFTL) be filed as they planned to use personal assets as collateral for a loan to pay the taxes. It was evident that the taxpayers had not made adequate estimated tax payments or withholding allowances for the tax resulting from the reported $224,411.00 adjusted gross income

(AGI) shown on their 1992 tax return. Therefore, Collection denied the request and advised the taxpayers that the NFTL would be filed. A TAO was issued to delay the filing of the NFTL until February 4, 1994. The taxpayers agreed to an immediate payment of at least $5,000.00, agreement to a very short term installment agreement, and to furnish I.R.S. with complete financial information (both personal and corporate).

11. Case #11

These taxpayers desperately need their refund which is being offset to the Department of Education for a student loan which the taxpayers claim was repaid in 1984. The husband is currently unemployed and they need the refund to avoid foreclosure on home, continuance of health insurance, and to avoid utilities being disconnected. The taxpayers have a disabled child who needs to be on an electrically powered feeding apparatus 18 hours per day. A TAO was issued to provide refund and bypass Debtor Master File offset.

Mr. Zimmer.

Mr. ZIMMER. Thank you very much, Madam Chairman.

Commissioner Richardson, there was a problem that has been brought to my attention by a police detective who lives in my district. He pointed out that because the mailing label on the forms 1040 include the taxpayer's Social Security number, there is a real possibility of fraud being committed on the part of people who see that label in the mail.

I will not describe the kind of fraud that he said was possible in public, but you can imagine, I suppose. And because he is involved in prosecuting this sort of fraud, he believed that it was foolish for the IRS to include this ordinarily confidential information on a document which is seen by so many people.

Can you explain why the Social Security number is made available in this way?

Ms. RICHARDSON. Mr. Zimmer, we are also concerned about it, and in fact, have been trying to take steps to address it. I think a number of tax packages did not have the Social Security number on the outside this year.

I just became aware this morning of your specific question. I would like to get you the information about what we have done to address it, not just this year, but what we are doing longer term to eliminate that because we are very concerned about it. It is an issue that has been raised.

I think a lot of the problem about addressing it has been a technological one, because of the way our processing systems work. But I will let you know specifically. And we certainly concur with his concerns about fraud. I feel like I know a lot about that subject right now.

Mr. ZIMMER. It is your intention to eliminate this practice?

Ms. RICHARDSON. Absolutely.

Mr. ZIMMER. Can you give us an idea of how soon that will be done?

Ms. RICHARDSON. I will get you the specific information of how we are doing it. Some of it was done this year actually.

Mr. ZIMMER. Thank you very much.

Ms. RICHARDSON. Okay, thank you.

[The following was subsequently received:]

SOCIAL SECURITY NUMBERS [SSN'S] ON LABELS

IRS has received comments from taxpayers concerning the SSNs used on mailing labels for the tax packages. It is our experience that returns filed without the preprinted IRS label contain a high percentage of errors in the entry of the SSN, such as transposed characters and other mistakes. Such errors cause both the IRS and taxpayers unnecessary delays in processing these returns and in issuing any refunds that may be due.

IRS appreciates the privacy concern and is advising taxpayers that IRS mailing labels contain SSN's only when necessary and that the practice conforms to the requirements of the Privacy Act. Nevertheless, because of the privacy concerns raised by taxpayers, we are currently exploring and implementing, where possible, methods to hide or camouflage the SSN whenever technology and production costs permit.

Currently, the SSN is not visible on the outside cover of over 22 million individual tax package postcards, over 7 million individual tax packages and 18 million form 1040ES tax packages. The outside of the tax product contains the taxpayer's name and address and the complete mailing label with the SSN is inside the tax product.

For tax year 1995, the individual tax package postcard program (with the SSN concealed) will be expanded by 10 million. IRS plans to continue to expand the con-

cept of concealing the SSN for all tax packages. However, there are two concerns. First, the production cost of the tax packages will increase. The second concern is with the printing industry capacity for this technology (inkjet image) and the critical paper shortage.

IRS will continue to bid all individual tax package production contracts with the specification for concealing the SSN. And, as long as price increases are reasonable and production capacity exists, IRS will conceal the SSN on all 1995 Individual Tax Packages.

Note: For Tax Year 1994 there were approximately 80 million individual tax packages with the SSN displayed on the outside label.

Mr. ZIMMER. Next, I would like to bring up an issue related to taxpayer compliance. I suppose either the Commissioner or Ms. Beerbower can respond to this. Does the IRS recognize the concept of an accountant-client privilege?

Ms. RICHARDSON. Actually, no, we do not. I will let my lawyer answer that.

Mr. BROWN. No, we do not.

Ms. RICHARDSON. But, no, we do not.

Mr. ZIMMER. So that means that the IRS can request all the documents that are in an accountant's possession, including those given to the CPA by his client, and it would also mean, I suppose, that the IRS could force an accountant to testify against his client?

Mr. BROWN. Yes; that is correct.

Mr. ZIMMER. Now, if the client went for professional advice to a tax attorney, instead, that information would be privileged?

Mr. BROWN. I think it depends on the situation. Give me a minute. I think the answer is that the tax system is not unique in this respect. And we follow the rules that apply in Federal litigation generally, and so, to the extent there is an attorney-client privilege recognized generally in Federal litigation, we would respect that as part of the tax administration process as well.

To the extent that that differs from the privilege that is recognized for accountants, we also follow that difference.

Mr. ZIMMER. Now, does this not have an impact on the ability of people to get their tax advice, their tax planning consultation with a professional of their choice? The exact same information, the exact same services, in many cases, are provided, yet, in one case the communications are protected, and the other case they are not.

Now, I understand the general principal and I understand the attorney-client privilege is more universally recognized, but can you explain the public policy grounding for this position on your part?

Mr. BROWN. I can explain our position only to the extent of saying that we have followed the general principles that apply across-the-board in other Federal litigation.

And, second, we have a principle that we try to stay out of the disputes between the lawyers and accountants over who has the market for providing tax advice. This comes up in a number of contexts over time, including the question of what can accountants do in litigation, particularly in Tax Court. The question of privilege is another aspect of it.

And we generally try not to get put in the middle of those disputes.

Mr. ZIMMER. But your neutrality, in effect, has an impact on taxpayers and the policy, as it exists, would encourage taxpayers to go to tax lawyers rather than accountants.

Mr. BROWN. Let me be clear on this. The attorney-client privilege we recognize is no greater than the attorney-client privilege that we recognize generally.

So, for example, to the extent that you went to an attorney to prepare your return, the information you gave to the attorney for that purpose would not necessarily be privileged.

Mr. ZIMMER. I understand that.

Mr. BROWN. But I think in fairness to your question, there are some differences in the rules. And those rules might benefit attorneys relative to accountants in certain situations. I don't doubt that.

Mr. ZIMMER. Thank you very much.

Thank you, Madam Chairman.

Chairman JOHNSON. I would like to raise the issue of the problems involved in joint and several liability. And Mr. Monks, this surely must touch on many of the problems that you get, but Commissioner Richardson may also have some comment.

Where there is joint and several liability among two or more taxpayers, problems often arise as to which taxpayer is actually morally obliged to pay the debt.

In case of a missing spouse, under current law the incentive for the IRS is to go to the spouse that is quickest and easiest to find. That is often the divorced wife who stayed in the home.

There is no incentive at all for the IRS to find, to locate the other party that may simply be difficult to locate only because they don't bother to respond to IRS letters.

Sometimes this results in tremendous penalties building up and liabilities. Should the IRS be required to at least attempt to locate all jointly liable taxpayers, should they be required by law to try and collect from both taxpayers?

You must see a lot of these cases. I ask this because I see these cases in my district office. I think every Member of Congress does. And there are terrible inequities that occur in these situations.

Have you made any recommendations, Mr. Monks, as to how to deal with them? Is the IRS developing any new policy as to how to deal more equitably in these situations of joint and several, especially when there is often clear evidence of who actually is liable?

Mr. MONKS. We do receive a number of cases of that nature, and, generally, what we try to focus on is that individual taxpayer's specific circumstances. We try to look at their situation and to provide the most appropriate relief.

Chairman JOHNSON. When you say, look at their situation, do you mean looking at their ability to pay?

Mr. MONKS. No, no.

Chairman JOHNSON. Do you mean looking at——

Mr. MONKS. We look at their situation of hardship and what has led to that hardship. And we try to investigate the facts behind that situation. We may end up, as a result, communicating with other IRS offices about that case and what action is being taken.

But you are absolutely correct. A number of situations do come to a problem resolution officer specifically citing those kinds of concerns. I currently have a group in one of our regional offices taking a look at this specific issue. We have had a number of recommendations that have come in from various field offices and

what we are trying to do is to put that together and develop a comprehensive package that we can submit to the Commissioner. It will have more specific recommendations on what the Service might be able to do in this particular area.

It is of concern to us. It represents a major portion of the problems that do come into problem resolution and it is a very difficult situation for us to deal with.

Chairman JOHNSON. Commissioner, do you care to comment?

Ms. RICHARDSON. Yes, Madam Chairman. I think that we clearly should be looking at both taxpayers. In a situation where parties are jointly liable, we should be making equal efforts to try and find both parties. And, clearly, the one who has the best source of leviable income is probably the one we should look at first.

I think this is a good opportunity to mention something that we have begun implementing this year. It is what we call our early intervention program, we are trying to get to people much sooner than we once did. And that, I am hopeful, will address some of the problem.

But it also, I think, is an opportunity to make another commercial for improving our technology. To the extent that we can have up to date records, up to date information, including addresses, and can make on-line changes to that kind of information, we will be in a much better position to locate both of the parties and assure that they discharge their joint liability promptly.

Chairman JOHNSON. I would ask you to accelerate your working groups' focus on this issue. I think this is something that is very important to address because it does touch so many families. Most of them at a time in their lives when they have very, very meager resources.

I also want to put in the record that my office has had excellent success in referring people to your problem resolution officers.

Ms. RICHARDSON. Thank you.

Chairman JOHNSON. And that has been a real Godsend in these cases, both in terms of their timely response, and the fairness of their management of these problems.

So I know that you are making efforts. I just think we need to clean this up and if you could help us on that, the taxpayer bill of rights might be a very good place to attack that.

One last question that I would like to put on the record and then I would be happy to yield to my colleague, Mr. Cardin, if he has additional questions.

Under current law, taxpayers can't appeal collection decisions. And sometimes their first knowledge that there has been a problem is the notice of a lien on their property. Now, this can have catastrophic effects especially if you are a small businessman and you depend on regular revolving loans to fund new orders, and things like that.

And once that lien gets on, they are very hard to remove and it costs money to remove them. There is no notice of deficiency. I really think this issue is very important from the point of view of the taxpayers. It also goes to the resolution of these problematical cases that Mr. Monks office deals with.

People are not satisfied that they never hear back about what did happen in a timely fashion. On that issue of responsiveness, could you comment?

Mr. MONKS. On the issue of the collection appeals matter?

Chairman JOHNSON. Well, and should there be a formal IRS collection appeals process?

Mr. MONKS. We have just concluded a fairly lengthy test of a collection appeals process and a number of recommendations have been made to the Commissioner.

Ms. RICHARDSON. Well, they have not yet been made. They are in the process of being made.

Mr. MONKS. They are in the process of being made.

Ms. RICHARDSON. We hope to be able to make some decisions on that program within the next month or month and a half.

Chairman JOHNSON. I think this also would be a very appropriate focus of a taxpayer bill of rights because there are snarls that are causing real hardship.

Ms. RICHARDSON. It is clearly an area we have addressed in the last 18 months. We have done a test and we are in the process of evaluating it. We will be getting those recommendations in the next month or so and making a decision.

We will be happy to share those conclusions with you.

Chairman JOHNSON. I hope you also will consider allowing taxpayers to seek injunctive relief if they haven't had notice. So that they can stop a process that is destructive to them if they feel they have not been a part of resolving it.

I look forward to hearing from you on those issues, and I yield to Mr. Cardin.

[The following was subsequently received:]

IRS WILL SHARE CONCLUSIONS ABOUT COLLECTION APPEALS TEST AT LATER DATE

Commissioner Richardson is in the process of reviewing the report of the Collection Appeals Test and is considering recommendations. We will share our conclusions with Chairwoman Johnson as soon as they are available.

Mr. CARDIN. Thank you. Just for the record, I would ask the IRS and the Treasury to give us some ideas or thoughts on how we could expand the opportunity under the taxpayer bill of rights.

I think the taxpayer bill of rights is going to move legislation in this area. There seems to be strong bipartisan support for the legislation. But, perhaps this is also an opportunity to move forward in two other areas which you have both mentioned and which are important to taxpayers.

That is modernization, as well as tax simplification. I would be curious as to whether you would have some recommendations—I am not asking you to respond now, but to think this over and respond if you would later—as to some specific provisions that we may be able to include in the taxpayer bill of rights legislation to focus in on procedures to simplify the Tax Code with regards to common complaints by taxpayers, as well as providing the wherewithal to modernize the capacity of the IRS.

And if you could get back to us on that I would appreciate it.

But the second point, if I might, following up on Mr. Zimmer's point, I think it would be useful for us to know when we could expect Social Security numbers to no longer be on mailing labels. So

if you could get back to us with the specific date on which that practice would be terminated, I think that would be helpful for us.

[The following was subsequently received:]

DATE FOR REMOVAL OF SOCIAL SECURITY NUMBERS FROM MAILING LABELS

The IRS will be able to conceal the SSN on all 1995 Individual Tax Packages as long as price increases are reasonable and production capacity exists.

Chairman JOHNSON. I thank the panel for your participation this morning, your good testimony, and for your agreement on a lot of the things we are trying to do. We did not spend much time on the areas in which we are in agreement that we can move forward and I thank you for that agreement.

We will be submitting some additional questions for the record. We just do not have time to get to them today. And we will look forward to your answers on that, and we will look forward to your follow-up on some of the things that you are working on that we believe will fit into our work.

Thank you very much.

Ms. RICHARDSON. Thank you, Madam Chairman.

Chairman JOHNSON. The next panel will come forward, Jeff Jaeger of the Rutherford Hill Winery, from Napa Valley, Calif.; Georganne Howden, Houston, Tex.; Richard Beck, professor of law, New York Law School.

And we will start with Mr. Jaeger.

STATEMENT OF JEFF JAEGER, MANAGING GENERAL PARTNER, RUTHERFORD HILL WINERY, NAPA VALLEY, CALIF.

Mr. JAEGER. Madam Chairman and members of the subcommittee, my name is Jeff Jaeger, and I am here to talk about some IRS tactics used on my family's business that I consider to be extremely unfair treatment that makes honest taxpayers angry at government and those who created the system.

My company, Rutherford Hill Winery, is in the fine wine business in California's Napa Valley. We consider ourselves a small business, and although it may sound glamorous, it is very hard to make a profit in it.

The profits become simply impossible when we must spend $85,000 in attorney's fees to beat an insupportable IRS tax assessment, then are denied the recovery of $70,000 of those tax fees in court.

We have been audited by the IRS before several times. We have never lost a dime to the IRS when we have been audited because our tax accounting systems are sound.

In our recent tax court case, the IRS conceded every single item that they had assessed against us, but we still lost big money on the attorney's fees because of the coercive and deceptive practices of the IRS.

The main tax issue in our tax case was about our single pool LIFO (Last-in-first-out) inventory valuation method. It is the same method we had used from our beginning, 15 years earlier; the same method used by many of our competitors, including our sister winery, that cleared an IRS audit the same year with an identical LIFO situation; and a method that reflects income as well as any

other inventory or valuation method there is for our type of business.

According to tax law, the choice of the LIFO method is a taxpayer's. The IRS agent assigned to our case liked other pooling methods and wanted to force her choice on us.

Her approach was not only novel, but it created serious disagreement even within the IRS. However, she was allowed to send us the equivalency of a deficiency assessment notice. In saying this, I recognize that the Internal Revenue Code gives the Commission broad authority to change a taxpayer's accounting method if it does not clearly reflect income.

But the Code does not permit the Commissioner to order a change simply because an IRS agent thinks that a different method might reflect income more clearly. That, however, is exactly what the IRS was trying to do here.

Partway into our preparation of the tax court case, two issues unrelated to the LIFO issue were conceded to us by the IRS but not before we spent serious money getting ready to defend them.

It has now become clear that the IRS never intended to litigate our case at all. The agent on our case and her IRS cohorts were trying to force a different inventory valuation method on us, one that was neither accurate nor practical.

The agents were using the IRS's current protective shield against recourse to try and intimidate us into submission, even with an unwinable tax case, knowing it would cost us dearly to defend ourselves.

This is government gamesmanship at its worst. It was the agent's hope and the hope of her cohorts to pick on a few wineries, get them to concede, and then use those concessions, as they would use a tax court case, to coerce other wineries to change their methods to those preferred by the agents.

It is only natural that the IRS would not want to pick on too many wineries at once for fear that the wineries could join together and better defend themselves. Instead the agent used the old "divide and conquer" technique even without a legally supportable test case.

The fact we know now is that the IRS would not, in fact, could not possibly have gone to trial with our case. That does not mean that we knew of their intentions earlier. We had to assume there would be trial and we had to prepare for it. That preparation was extensive and expensive. We now feel like someone who had been held up by a man with an unloaded gun. Not only were we robbed, we were deceived as well.

Our case may sound as though we were an unlucky taxpayer singled out as a guinea pig by the IRS in its efforts to create government-favored retroactive tax law. While the practice of allowing the IRS to get pro-government court opinions, after the fact, is always unfair to tax planners, that is not what happened to us and not why I am here today.

The IRS was far more sneaky than that in our case. For us, the IRS proposed a tax adjustment that it could not possibly substantiate. Its proposed changes were so seriously flawed that it knew it could not dare to go trial.

Knowing there would be no trial, the IRS attorneys made no real trial preparations, but kept up a pretense that they were ready for trial.

The sole reason the IRS attorney kept the case alive was their hope we might concede enough to give the IRS an appearance of victory which it could then use to coerce concessions from other taxpayers.

Because present law makes the recovery of attorney's fees virtually impossible in tax court cases, no matter how ridiculous the Service's case, IRS agents and attorneys had no fear of proceeding with their "mission impossible" case against us. They faced no prospect of losing money, no consequent exposure of the bureaucratic bungling and chicanery, no risk at all in proceeding with their extortion plan against us, because in the end they would be accountable to no one. It was a no-lose proposition for them; it was a no-win proposition for us.

With the law, the way it is written now, we decided that pursuing an appeal to get our attorney's fees would likely be throwing good money after bad. It is never easy to get an appellate court to reverse a tax court decision and when the tax court reads the law to say that the position of the IRS is substantially justified in virtually all instances, no matter how far-fetched, and unfounded the IRS' legal theory may be, then the taxpayer stands no chance at all of getting reimbursement for attorney's fees. We thought it better to bring the case here, to this committee, in the hope that Congress would be more inclined to see that justice is done for the taxpayer when the IRS proceeds in bad faith.

Currently the Congress is searching for a way of dealing with the unfairness of the American legal system, where winners must now shoulder their own legal expenses, even though they win their case. To extend that search for fairness to legal actions involving the Government is only logical and just. The opinion in our tax court case denying us attorney's fees is not only another nail in the coffin of justice, but it is also a masterpiece of bureaucratic double talk.

The Service was well served, but justice surely was not. On behalf of businesses nationwide, my hope is for a change that would award attorney's fees to a petitioner in tax court any time the IRS answers the petition, reaches no settlement with the taxpayer, then fails to take the case to trial.

Furthermore, I hope Congress will seriously consider establishing a presumption, if not a rule, that attorneys' fees will be awarded to a taxpayer any time that taxpayer wins his tax court case.

Thank you.

Chairman JOHNSON. Thank you for your excellent testimony. It is sobering.

Ms. Howden.

STATEMENT OF GEORGANNE HOWDEN, HOUSTON, TEX.

Ms. HOWDEN. Thank you. Chairman Johnson, thank you for having me here. I feel my story is kind of simple. In 1985, I was divorced after 21 years of marriage. I was a high school graduate and married early and had kids early and never worked outside the home.

I never saw or signed a tax form. My husband made the money and he did not think it was my business to know what money he made or how he dealt with it.

In 1985, I filed for divorce and I got a job in retail. In 1986, in December of 1986, I got a notice from the IRS of some tax due and it was $600 or $400. It was in the hundreds of dollars.

I asked my attorney about it. At that point I wrote a letter to the IRS stating that I was in the process of divorce, that I was still in the family home, what his address was, the attorney's and mine.

My divorce was final in 1987. In that divorce my house was awarded to me. It was filed in the district court clerk's office. My attorney told me to file it in the property records and the tax records in Harris County. I also sent a certified copy of my divorce decree that stated the house was mine, to my mortgage company.

That was in September 1987. In January 1988 I went with my divorce lawyer down to the IRS because during my divorce I became aware of tax liabilities. I went down to the IRS and met with an agent there. And showed my divorce decree and she asked that I try to borrow money on the equity in my home. I went to three banks to do it, and it was kind of a bad time in Texas right then.

And with my lack of job history I was unable to do that. I also filled out the forms necessary, giving all my financial information. I was awarded this status of uncollectible.

At that time, the decision I made was because I had a son at home, 11 years old, and he wanted to stay in the house he had grown up in. And so we decided to try to make it there.

So a month at a time we stayed in the house, and because the only thing I had gotten from my divorce of any value was my home—I was unable to collect on the other things that were awarded—I thought, well, I'm putting a lot of money in the house, but I can get it out when I sell it, you know.

So I planned to keep it until he graduated from high school and then, at that time, sell my house—4 years passed. The only thing that happened that I got notification from, from the IRS, in those 4 years, was in 1991.

That was the first year of 3 years that I received notice that my $1,000 refund on my income tax was being applied to another person's Social Security number. And I assumed it was my husband's.

So I thought, well, that is fair. I am uncollectible, they can have my refund. In December 1991, I received a call on my answering machine from the problems resolution officer in Austin, Tex., which is our capital.

And it scared me to death. So I talked to a friend and he recommended a tax counselor, who is accredited with the IRS and he was a retired IRS officer of 30 years or something.

So I went down and hired him because I couldn't afford an attorney to counsel me. We had a series of meetings going over my problem.

And what we came up with during those months was I could either get an attorney and go to court, or I could sell my house. But the problem that came up when he talked to the IRS in Austin was they were going to take the house for the taxes from my marriage, but also my ex-husband had not filed any taxes in the years I had been divorced.

And they decided that somehow they figured out he owed $100,000 in income tax, and the IRS was going to take this stance. They said that the house was still his. And if they took that stance, it would take every bit of the equity, plus some, but then I would also end up owing about $15,000 in capital gains tax. So it was a lose-lose kind of deal for me.

In July 1992, I came home from work and found this seizure notice on the front door of my house. I had decided to sell my house after talking with my tax consultant, and see if the IRS would not be reasonable about his taxes.

So I had a for sale sign out and the seizure notice on the front door which does not do much to sell your house. And that was a shock. I had had no notice of this.

The next month I was in Austin and I decided to go and see the tax collection group manager who was handling this case. I happened to be in town, and I thought what do I have to lose?

So I went to see him and to discuss my problem with him. It was not very long after I arrived I found out that my case had turned into a personality issue not a principal issue.

And that my ex-husband had made him very angry. He said because my house records were not filed, my divorce records were not filed in the Harris County clerk's record, that he considered the house still joint property.

When I said, I would like to sell the house, because I knew I could gain more money that way in a forced sale. He said, you sell it, we are glad you do that, we will get more money.

He told me a lot of information about my ex-husband I did not know and said he would deny ever telling me that. He discussed his personal problems, but at the end of the conversation—and I listened like a lot of women do hoping to get some compassion—he said, you are going to lose it all and you just start all over again, and your capital gains you can pay out over time.

I was really in a no-win situation and though I am shaky, I am OK about all this today. In August 1992, the Republican Convention was being held in Houston, Tex., and I was fortunate to run into Donna Steele of Congressman's Archer's office.

And when she heard my case she was interested in looking into it and taking action for me. We started a long series of written communications. I was shocked that the IRS was so casual in their response to Congressman Archer. And it certainly made me realize I would have been wasting my money if I could have gotten an attorney, if they would not pay any attention to Congressman Archer.

The IRS held the position that the IRS was not a notified creditor, that they did not know about my divorce. And, in fact, I had gone in, personally, and showed them my divorce decree and it was filed everywhere that it was required in Houston.

In December 1992, the district director wrote and said he would take the proceeds of any voluntary or forced sale of my house for my ex-husband's $100,000 in current taxes, plus the amount of the 1992 taxes still owed from my marriage.

All through this process I was kept uninformed. I was never informed of any negotiation with my ex-husband toward the community debt from 1992. It felt real familiar, similar to my marriage.

November 1993, I got a call from an IRS office, saying that if I would pay all of the 1992 taxes, which was approximately $20,000 plus pay $10,000 additional they would release my husband's taxes off my home.

The problem I had with this was that I did not have any resources to come up with this kind of money because I could not sell my house because it was seized. So it was kind of a circular problem.

I, at that point, called my ex-husband—we do not communicate—in order to ask him if he would be willing—I had a judgment of unpaid child support for $50,000—and I asked him if he would be willing to buy that from me. That was my focus of the phone call.

At that point, he told me that a few months earlier he had made a settlement with the IRS. My ex-husband has a master's degree in engineering and he works for an engineering company. He has a home in Houston, a farm outside of town, cars, trucks, and an airplane.

He made a settlement with the IRS that they said he owed $99,286 so they asked him to pay $150 a month. And he thought it was a little foolish that I was having this trouble, that I could not resolve it. He sent me a copy of that.

I notified Congressman Archer about that discovery and think that that was probably the spark to the tinder. Congressman Archer wrote a very strong letter to the IRS and sent me the answer. Once again, I was amazed. They did not bother to answer most of his questions.

But they did say that out of respect to him they would release me from my tax liens if I would pay $17,600. So that is $15,000 in interest, and $3,500 in the 1982 tax that was due.

This was signed by the district counsel, the problem resolution officer, and the chief of the collection division. Two weeks later, I wrote the district counsel requesting a closure. I received no answer. That was December.

I was struggling with how to come up with the money and in March 1994, Mr. Archer suggested that I call the local Houston problem resolution officer, and try to set up a meeting. I got immediate response from them.

How I had managed to come up with money was that I sold my $50,000 child support judgment to an attorney for $17,500. I had a meeting with the IRS on March 28, 1994, and I was told I had a right to offer and compromise.

I filled out the papers. At the meeting 2 days later I was told I had no right to offer and compromise. That I had to pay the $17,500.

I paid the $17,500 and the 1982 taxes and I was told that I would receive a release of my home within a few days. This was March and I hoped to be able to sell my house during the summer when the sales are better. I was able to maintain my house until my son went to college, but after that it became very difficult to make ends meet.

And my credit rating was not the best. I am a real slow payer sometimes. I had to wait 5 months for that discharge. It came in August.

I lost the window of opportunity for sale for that year. Because I am in sales I do a little better over Christmas, so my house is on the market today. The problem resolution officer in Houston said that I could apply for a refund of some of the penalties and interest which I did do under her direction and her assistance. And she also included a letter of her struggle for the 5 months to get my house released.

For 5 months I received no answer. I resubmitted the letter. I got a call from the IRS that said I need to reapply on a different form but there was not really any reason to because they never refund.

I do plan to go forward with this. And without the intervention of Congressman Archer I would have a very, very sad story to tell here today. And I have found out that I am not the only person who has had this problem. And I do hope that I will be heard for not only myself but for others.

The system really did not work for me. Thank you.

Chairman JOHNSON. Thank you, Ms. Howden.

Mr. Beck.

STATEMENT OF RICHARD C.E. BECK, PROFESSOR OF LAW, NEW YORK LAW SCHOOL, NEW YORK, N.Y.

Mr. BECK. Madam Chairman and distinguished members, I am Richard Beck and I teach tax law at New York Law School. I appreciate very much the opportunity to be here and speak.

I have studied the problem of spousal tax liability for many years. I have written articles about it. I have worked with the American Bar Association about it, and I can tell you that the testimony you have just heard here is not an unusual case at all. It is very common for women to get stuck with their ex-husband's tax bills.

I have not been able to find out exactly how common it is because the IRS tells me they do not keep statistics. I once estimated that there are at least 10,000 cases a year in which collections were made from the wrong spouse. I think I was off by an order of magnitude. I now think there are probably from 50,000 to 100,000 cases a year.

To try to keep things short here, I disagree with some of the testimony that we heard earlier. I do not think that the answer to these problems is to improve the procedures for relief. I think the better approach is to cut the Gordian Knot completely, and end all spousal liability.

There is no reason in my opinion and in the opinion of the American Bar Association, ever, for one spouse to be liable for the taxes on income earned by the other spouse.

It should just be ended. I would like to point out that no other country in the world imposes this sort of liability. We are alone here in both kinds of liability that were suffered by Ms. Howden. Both joint and several liability for joint returns and community property liability for one-half of the other spouse's income are both virtually unknown in other countries.

Taking the easiest one first, the *Poe* v. *Seaborn* community property liability, there are many community property countries in the world. Not one of them uses family property law to impute income for tax purposes from one spouse to another, not a single one.

Canada had the same problem. They have a community property province in Quebec, and a gentleman there tried to do what Seaborn did here some 28 years before, and the Supreme Court of Canada came to the opposite conclusion. Spouses cannot split their income, each spouse is liable solely for the tax on his or her own earnings. I think that is the rule that we should have; we should repeal *Poe* v. *Seaborn*.

As for joint and several liability on joint returns, that rule dates from 1938 and there never was any good reason for it. The only reason the Treasury gave when it asked Congress for the rule after it lost in court, in 1935, was that it could not tell on a joint return whose income was whose, and therefore both had to be jointly liable for the full amount.

Now, that problem does not exist. In almost all cases it is very easy to determine whose income is whose. We have rules for that. And there were rules for that in 1935 when the Cole decision was made.

And even worse, at the very time that the IRS was saying it could not make these determinations it was, in fact, arguing that charitable contributions on joint returns should be limited by the separate income of each spouse on a joint return. In other words, the IRS knew full well how to separate the husband's income from the wife's income on a joint return when it was good for the government.

I would urge you to consider enacting the American Bar Association's proposal to end spousal tax liability. We have been considering these issues now for seven years in the ABA Tax Section. It is true that the innocent spouse rules could be improved in many ways, but we finally concluded that there is no principled place to draw a line.

The innocent spouse rules have been amended twice. They still do not work. The IRS now has the authority to ignore the husband and pursue the wife, even if the husband is readily available and has the money to pay. As long as the IRS has this authority, I think we can expect unfairness.

The law itself is unfair, not just the way it is administered. I would urge you to adopt the American Bar Association's proposal which is very, very simple. It does not affect tax rates. It does not affect joint returns. It does not affect any other issue except the apportionment of liability. And the only times when it would be necessary to make an apportionment is when there is a disputed deficiency for an unpaid tax.

In other words, everything would go on as it does now, except in a case when the IRS asks a spouse to pay a deficiency. That spouse should always have the right to say, I want to be assessed strictly on my own income.

I think it should be a fundamental right of all taxpayers to be taxed solely on their own incomes. Thank you very much.

[The prepared statement follows:]

STATEMENT OF PROFESSOR RICHARD C.E. BECK

In Support of Repeal of Spousal Joint and Several Liability for Income Taxes under IRC § 6013(d) and under *Poe v. Seaborn*

I. Joint Returns. Section 6013(d) requires joint and several liability of the spouses if they elect to file jointly. More than 98% of married taxpayers file jointly each year, because filing separately usually results in a higher tax. The incentive is all but irresistible, and joint filing has aptly been called "mandatory in fact." Thus virtually all married taxpayers are subject to joint return liability.

The statute itself is gender-neutral, but it appears that the vast majority of collections from the "wrong" (or non-earning) spouse are from women. The figure would be over 90% if the litigated innocent spouse cases reflect the general percentage of all collections.

This liability is aberrational when compared to tax systems in other countries,[1] even those which also provide valuable tax benefits to married persons filing jointly.[2] No other OECD country taxes wives for their husbands' income as a general rule, much less women who are separated or divorced.[3] Under U.S. law, by contrast, thousands of separated and divorced women each year are taxed for no other reason than that they were married at the time their ex-husbands earned income.

The rule of joint return liability was first enacted in 1938. Until then, filing jointly (which had been allowed since 1918) did not entail joint and separate liability of the spouses, despite the government's insistence to the contrary. See *Cole v. Comm'r*, 81 F.2d 485 (CA-9, 1935), *rev'g* 29 B.T.A. 602 (1933).

In *Cole*, the Ninth Circuit held that a taxpayer's cardinal right to be taxed only on his own income was unchanged by joint filing, and rejected the government's argument that administrative necessity requires joint and several liability, at least where the respective separate incomes of the spouses are ascertainable. The government argued that because joint returns do not explicitly set forth the respective separate incomes and deductions of the spouses, it would be unable to determine the separate amounts for which each spouse should be liable.

This purported "administrative necessity" was the only reason put forth in the committee reports when Congress overruled *Cole* by enacting the predecessor of Section 6013(d) in 1938. Yet the argument is palpably insufficient. There is ordinarily no difficulty in determining each spouse's net income on a joint return. The audit process almost necessarily reveals the source of any asserted deficiency.[4] Moreover, such determinations are in fact sometimes required under

---

[1] For example, no marital liability for income taxes is imposed in any form in Canada, Australia, Japan, Italy, Spain, Sweden, or the United Kingdom.

[2] Cf. Germany, which provides for income-splitting computed as under U.S. law, but without joint and several liability, and Belgium, which has a still more generous system of income-splitting.

[3] In France, joint liability is imposed in principle, but wives who are no longer living with their husbands at the time of enforcement proceedings are nearly always excused. Also, unlike U.S. law, in France the tax authorities must exhaust all possibilities of collecting from the husband before turning to the wife. In the U.K., husbands were formerly liable for tax on their wives' income, but wives were never liable for their husbands' taxes. This system was abolished in 1990 in favor of completely separate liability for both spouses.

[4] There was no such difficulty in the *Cole* litigation either; the Bureau of Internal Revenue had simply assessed the husband by mistake, and negligently let the statute of limitations run as to the wife. In case of doubt, the IRS can always assess both spouses, and let the taxpayers

current law in order to limit the amount of each spouse's separate losses which may be carried forward or back to offset his or her share of income in a joint return year, and in order to calculate the amount of each spouse's separate right to a refund from a joint return.[5] The method used is to calculate each spouses's separate net income as if he or she had filed separately. There are adequate rules under current law for apportioning personal deductions and dependent exemptions for this purpose.[6] Over 2,000,000 separate returns are filed each year by married persons, with no apparent difficulty.

Adequate reasons for imposing joint and several liability have never been provided. There is no evidence that couples ordinarily share all their property to such an extent that they should be presumed indifferent to the incidence of tax liability. And even if such sharing were the norm, it could not justify joint liability after termination of the economic unity of the family by divorce.[7] Contrary to widely held belief, joint return liability was not enacted as the "price one must pay" for lower tax rates on joint returns. The favorable tax rates for joint returns computed by income-splitting were not introduced until 1948, some 10 years after enactment of joint return liability.[8] Moreover, the right of spouses to offset deductions and losses against each other's income and gains had been available to taxpayers from 1918 until 1938 without the "price" of joint and several liability. Joint returns were introduced in 1918, apparently for the sole purpose of convenience both for taxpayers and for the government, without any thought of special rates or privileges for married persons.

The quid-pro-quo justification for joint return liability is as weak logically as it is historically. The size of the benefits of joint filing (if any) bears no relation to the joint return

---

prove the sources of their income, as the *Cole* court pointed out.

[5] See Rev. Ruls. 80-6,7,8; 1980-1 C.B. 296 ("separate tax method of allocation" applied to refunds; and for losses see Rev. Rul. 60-216, 1960-1 C.B. 126; Rev. Rul. 65-140, 1965-1 C.B. 127; and Rev. Rul. 75-368, 1975-2 C.B. 480.

Similar rules were in effect at the time of the *Cole* litigation, as well as other regulations (later invalidated) which required the same determination of the separate net incomes of the spouses for the purpose of limiting each spouse's charitable contributions and capital losses on joint returns. The Treasury has apparently never experienced any difficulty administering these rules. They all worked to the Treasury's advantage, however. The government's litigating position in *Cole* was thus at best uninformed, and was possibly in bad faith.

[6] The current rules are as follows: Business income and deductions are allocated to the owner(s) of the business. Investment income from community property and jointly owned property is divided equally between the spouses, even if one spouse actually receives all the income. Items of personal deduction (such as medical expenses) which are paid out of community or jointly owned funds are ordinarily divided equally between the spouses, but items paid out of separately owned property are normally deductible only by the payor spouse, even if the payment is for a joint obligation. (The limitations as to such items, such as the 7.5% floor on medical expenses, are separately applied to each spouse.) If the taxpayer can prove that the funds used were his own, however, he will be entitled to the entire deduction even when payments are made out of a joint account.

[7] Application of Section 6013(d) liability against separated and divorced women seems to be an unintended consequence of the original enactment of the general rule of joint return liability. Not one of the half-dozen cases litigated before its enactment in 1938 involved separation or divorce. The IRS seems to have developed its aggressive position in this area in the 1960's, during the post-war explosion in divorce rates. This social development could not have been foreseen in 1938.

[8] Income-splitting was not enacted as compensation for assuming joint return liability, but for the entirely different purpose of equalizing the tax burden between the common law states and the community property states, where income-splitting was already allowed on separate returns under the doctrine of *Poe v. Seaborn*, 282 U.S. 101 (1930).

liability assumed, which may be unlimited in amount. The benefit explanation cannot justify joint liability for an amount greater than the tax saving from filing jointly.

Finally, the "benefits" usually inure to the husband, while the liability almost always is borne by the wife. Joint return liability is not only unfair in principle, it is highly discriminatory against women in fact.

Innocent Spouse Rules. Congress enacted the "innocent spouse" rules under Section 6013(e) in 1971 in order to mitigate the harsh effects of joint return liability. Under these rules, a wife may be relieved of liability for tax items of the husband only if they are "grossly erroneous";[9] they cause a "substantial understatement;"[10] the wife did not know, and had no reason to know of the substantial understatement caused by such items ("innocence");[11] and taking into account all the facts and circumstances, it would be inequitable to hold the wife liable for the understatement ("equity").[12] The wife has the burden of proof as to all the elements for relief.

The relief rules are unsatisfactory in two respects. First, they limit relief in many deserving cases due to the arbitrary restrictions to "grossly erroneous" items and to "substantial understatements," and second, they are vague and unpredictable due to the nature of the "innocence" and "equity" requirements. There is a large body of case law interpreting the innocence requirement,[13] but the decisions are in conflict,[14] and the outcomes are largely

---

[9] An item of omitted income is "grossly erroneous" per se. Erroneous claims of deduction, credit, or basis may also qualify for relief, but such items must in addition be "without foundation in fact or law." This phrase has severely limited relief for such items. Mere disallowance of a deduction does not qualify. There is no relief for simple nonpayment of tax where the return is correct; relief is in effect limited to items of negligence and fraud. There is no obvious reason for these limitations, and they have the somewhat bizarre effect of putting the wife in a better position if the husband misreports than if he reports honestly.

[10] There are dollar limitations under Section 6013(e)(3) and (4) restricting relief to items exceeding $500, and in the case of erroneous claims of deduction, credit, or basis, the item must in addition exceed 10% of the wife's pre-assessment year income if $20,000 or less, or 25% if her income exceeds $20,000. For these purposes, if the wife has remarried, her current husband's income must be included in the floor whether or not they file jointly.

[11] Factors which have been used by the courts as indicating that the wife had "reason to know" include lavish or unusual expenditures, involvement in the family budget or the husband's business, and higher education or business experience. The courts have not applied these factors consistently.

The cases are split as to whether the wife has a duty to review the return. Compare e.g. the recent tax shelter decisions in *Cohen*, 54 T.C.M. 944 (1987) and *Shapiro*, 51 T.C.M. 818 (1986)(taxpayers lost) with *Hinds*, 56 T.C.M. 104 (1988) and *Killian*, 53 T.C.M. 1438 (1987)(taxpayers won).

The wife has sometimes been held to have "reason to know" if she is aware of the existence of the underlying transaction, even if she knows nothing of its tax consequences or how the husband reported it. This doctrine that "ignorance of the law is no excuse" is without foundation in the statute.

[12] The principal factor considered under the equity test is whether the wife benefitted from the item over and above ordinary support. The courts have been extremely inconsistent as to what this means. Note, too, that because all elements for relief must be met, the wife may lose even if she did not benefit at all, if she is found to have had reason to know of the item.

[13] There are over 400 reported decisions under Section 6013(e), and the confusion grows ever greater. A considerable simplification would result if the relief rules could be repealed together with joint return liability.

unpredictable.[15]

The arbitrary limitations could be adequately reformed by amending the statute to omit the dollar limitations and the requirement, in effect, of negligence or fraud on the part of the husband. But there is no way to amend the innocence and equity tests, because they are essentially misconceived.[16]

The "innocence" test is at the heart of the relief rules.[17] But this test is illogical and inappropriate as a basis for relief. Ordinarily a reason to know (or due diligence) test is applied in the context of assessing whether a person who is in a position to prevent foreseeable harm to others has breached his duty of care. But the wife has no duty to certify the accuracy of her husband's tax items, except as created by the innocent spouse rules. Women generally do know that they have any such duty of certification,[18] and do not act as if they did. In countless instances, the wife simply signs the return as an accommodation to her husband.[19] And if she refuses, she may risk her marriage.

---

[14] A particularly glaring conflict is presented by the "ignorance of the law is no excuse" doctrine. This doctrine seems to have been selectively applied only against women who are still married at the time of trial.

[15] At least as to the stated grounds of decision. It appears that many of the inconsistencies in the reported decisions can be accounted for by supposing that unconscious preferences of the judges have been at work. It appears that divorced women who had been housewives or who fulfilled traditional roles of dutiful dependency have fared better in the Tax Court than independent and educated women. Higher education and business experience have no obvious relevance to whether the wife had reason to know of the husband's understatement, but they are routinely treated as factors unfavorable to the wife.

[16] The reason for most of the defects in 6013(e) is that the rules were narrowly drafted to track the *ad hoc* reasoning used by the Sixth Circuit to nullify joint and several liability in a spectacularly unfair case. In *Scudder v. Comm'r*, 405 F.2d 222 (1968), *rev'g* 48 T.C. 36 (1967), the husband had embezzled large sums from a business owned by the wife and her sisters, without their knowledge. The IRS pursued her for taxes (including the 50% fraud penalty) on the embezzlements, and won in the Tax Court. The Sixth Circuit simply refused to apply the law, and exonerated the wife on the ground that she could not have intended to file jointly as to these fraudulent items, where she did not know of them, and did not benefit from them.

The Sixth Circuit's ingenious approach allowed it to do justice in the case at bar at a time when no statutory relief at all was available. But the relief was crafted to fit unusual facts, and it was inappropriate for Congress to use this narrow *ad hoc* device as the basis for general statutory reform.

[17] The importance of the innocence test is perhaps due to an intuitive perception that joint return liability is itself simply unfair. To the extent that the liability can be rationalized as somehow due to the wife's own fault, liability can be imposed in a manner less troubling to the conscience.

[18] It appears that very few taxpayers are, or have any reason to be aware of this assumption of liability. There is no warning on the Form 1040. Nor does it appear that preparers or divorce lawyers generally take this liability into account. Even if a wife is aware of this "duty," the penalty for breaching it is unfair. If a professional return preparer or an IRS agent fails to use due diligence, he does not become liable for the tax deficiency he could reasonably have been expected to discover on someone else's return. And yet such persons have both tax expertise and awareness of their professional duties, upon which the IRS does reasonably rely.

[19] When the duty of due diligence is pushed as far as it was in *Bokum*, it in effect requires the wife to seek a second professional opinion in all cases.

Such a requirement is not only unrealistic and unreasonable, it also defeats the original purpose of joint filing, which was to provide convenience to both the taxpayer and the government. It is unreasonable to expect both spouses to duplicate the effort of preparing the return, particularly if only one has income, or any complexity to his tax affairs.

In short, it makes no real difference at all to the government's interests whether the wife is innocent or not, nor whether she makes any effort at due diligence when she is "put on notice." For that reason, there is no underlying purpose or principle to guide the courts in weighing the variety of factors used to determine degrees of "innocence."

Under these circumstances, it is not surprising that the various legal "tests" have in large part degenerated into a global subjective one of whether the woman and her plight can move the judge to sympathy. It is obvious that taxation should not depend on such subjective criteria, and for that reason the innocent spouse rules cannot provide the remedy for the unjust effects of joint return liability.

Effects of Repeal of 6013(d). In order to institute a regime of elective separate liability for married persons, no other changes will be required. The current rate structure and system of filing statuses can remain unchanged, and the benefits of income-splitting for joint filers can be preserved. The separate liability of each spouse will be calculated according to the "separate tax formula" cited above. First each spouse's tax is calculated as if he or she filed separately, and then the ratio of wife's separate tax to the sum of both separate taxes is applied to the total joint tax due. In this way the benefit of the income-splitting rate structure is preserved, but the wife is liable only for the portion of the joint tax which is due to her separate income.[20] The formula is thus:

sep. liability = (sep. tax / both sep. taxes) x joint tax

Calculation of the wife's separate tax liability in the first instance will not require any changes in current law.

II. Abuse Potential. There would appear to be no abuse potential in repeal of joint return liability. Whatever abuse potential might arise from repeal of joint return liability would appear to exist already under current law. A couple planning to avoid the husband's taxes while leaving the wife with property not subject to tax can simply file separately. If there were any abuse potential here, it would already be exploited.

If joint return liability is repealed, the IRS may be expected to rely upon transferee liability under Section 6901 as a substitute. Although transferee liability will not apply in many cases where Section 6013(d) currently does apply, transferee liability should be adequate to police any potential abuses. Establishment of transferee liability for taxes depends upon state law of fraudulent conveyance, or federal bankruptcy law, where applicable. This will usually require the IRS to prove that the husband was insolvent at the time of a transfer of property to the wife, or that he became insolvent as a result of the transfer, and that the property was transferred without adequate or fair consideration. Where there is inadequate consideration for the transfer, it is presumptively fraud and there is no need to prove actual fraudulent intent on the part of either the debtor or the transferee.[21] Transferee liability can therefore apply under current law even if the wife is an innocent spouse within the meaning of IRC 6013(e).[22] Even if adequate

---

[20] This calculation will not increase the complexity or difficulty of preparing returns, because it will only be employed on audit in cases where there is a deficiency which is contested by the wife.

[21] See e.g. *Mysse v. Comm'r*, 57 T.C. 680 (1972)(transfer of $10,000 C.D. to wife without consideration set aside where embezzler husband was insolvent at time of transfer because unassessed tax liability of over $115,000 from unreported income exceeded his total assets of $46,429. (Montana law)).

[22] In *Mysse*, the wife was held to be an innocent spouse with respect to IRC 6013(e) because she had no actual or constructive knowledge of the embezzlements, and received no significant benefit beyond ordinary support. She was nevertheless liable as a transferee for her husband's

consideration supports the transfer, however, if the wife is aware of or participates in her husband's fraud on his creditors, the transfer may still be set aside as fraudulent.[23]

Transferee liability cannot apply unless the husband is insolvent and unable to pay at the time of attempted collection, as well as at the time of the transfer. Thus if the IRS is restricted to exclusive reliance on transferee liability because joint return liability is unavailable, that will automatically have the desirable effect of forcing the IRS to exhaust all remedies against the husband before proceeding against the wife. In addition, transferee liability is limited to the amount of the transfer, and therefore (unlike liability under Section 6013(d)) the wife's liability cannot exceed the amount by which she was benefitted.

Finally, under transferee liability the wife is not at any unfair disadvantage compared with other transferees. All transferees are treated alike under Section 6901, without regard to marital status. By contrast, 6013(d) applies only to spouses. Children, parents, and even an adulterous girlfriend may receive gifts out of the husband's untaxed income, even with actual knowledge of his tax cheating, without incurring any liability (provided that the husband is solvent). Wives alone incur a liability in this situation.

I do not claim that transferee liability will be a complete substitute for joint return liability. Some situations will inevitably arise where the IRS will not be able to recover property of the wife which is in part derived from untaxed income of the husband. It seems unlikely, however, that such situations will arise frequently or will present a problem serious enough to require a remedy in anticipation, and none is suggested here.

It is well to remember that every other modern country manages to collect its taxes without reliance on joint and several liability.

III. Community Property Liability. A wife who resides in a community property jurisdiction is subjected to liability for one-half of her husband's taxes under the doctrine of *Poe v. Seaborn*, 282 U.S. 101 (1930), which construed family property law in the community property states to create a separate liability of each spouse for one-half of the tax on the income of the other on the theory that all earnings during marriage inure to the marital community, and are therefore owned by and taxable to each spouse in equal amounts. This form of liability does not depend upon filing a joint return, and results automatically from residence in a community property jurisdiction.

The *Seaborn* decision was very questionable when decided. Under community property law generally the wife has no right to spend or otherwise dispose of any part of her husband's earnings.[24] Her "ownership" rights to such income arise only upon dissolution of the marital community by divorce or death, and then only to such income that the husband has not already spent.

The *Seaborn* decision arose in the context of rates rather than liability, because the wife was willing and eager to accept liability in order to reduce her husband's taxes through income-splitting. The question was whether the wife had the right to report half of her husband's income on her separate return, rather than whether she had the duty to do so. It was not long before the IRS seized upon the decision to construct such a duty, however, and the result was a number of very harsh decisions requiring divorced women to pay half of their ex-husbands' taxes in

---

taxes to the extent of the transfer.

[23] See e.g. *Wilkey v. Wax*, 225 N.E. 2d 813 (App.Ct.Ill. 1967) and *U.S. v. Alaska*, 661 F. Supp. 727 (N.D.Ill. 1987).

[24] This is still true even under the modern dual-management community property regimes. See Smith, *The Partnership Theory of Marriage: A Borrowed Solution Fails*, 68 Texas L.Rev. 689 (1990).

situations where they had received no benefit from his earnings.[25] A woman cannot protect herself from this form of liability even by filing separately, unless she first dissolves the community of property.

Apparently, no other income tax system in the world today except the U.S. imputes earned income from one spouse to the other on the ground of community property law,[26] including Spain, France, and Mexico, from which our state community property laws derive. In Canada, a situation arose which was identical to that in *Seaborn*, and the Canadian Supreme Court reached the opposite conclusion interpreting Quebec community property law. Because the husband had the absolute right to dispose of his earned income as he pleased, he must be taxed on it despite the wife's contingent rights under the community property regime.[27]

Still more surprising is the fact that at least two community property states, Arizona and California, reserve the right for state income tax purposes to tax either the earner for the full amount, or the community property owner for one-half. Thus the federal tax system defers to state matrimonial property law where the state's own tax law does not.[28]

Relief Under Section 66. There are relief provisions under IRC 66, first enacted in 1980, for the innocent spouse which provide limited relief from community property liability analogous in many respects to relief under IRC 6013(e).[29] The rules are far too restrictive, and have often failed to prevent obviously unfair results. Nearly all petitioners for relief under Section 66 have lost. It is revealing to note that when Section 66 was enacted, its revenue cost was estimated to be "negligible."

Section 66(c) (enacted in 1984) contains the same requirements of "innocence" and "equity" which are criticized above in connection with Section 6013(e). The innocence test is nearly impossible to meet under Section 66, because if the wife knows her husband was employed, she loses. Two other provisions allow relief without proof of innocence, but they

---

[25] See *U.S. v. Mitchell*, 91 S.Ct. 1763 (1971). The Supreme Court noted the harshness of the result, but said the law was clear and the only remedy was legislative action similar to the newly enacted Section 6013(e). Enactment of Section 66 was nine years in coming, and probably would not have protected the wife in *Mitchell* any event.

The *Seaborn* briefs did not anticipate that the government might someday use the rule as a sword against non-earning wives. The anti-taxpayer use of the rule seems wholly unintended.

[26] Countries which ignore their community property law for purposes of taxing earned income include Canada, Germany, Belgium, the Netherlands, Sweden, and Italy, as well as France, Spain and Mexico.

[27] See *F.Sura v. M.N.R.*, 62 D.T.C. 1005 (1957)(Quebec taxpayer not permitted to split his income with his wife through community property law; *Seaborn* rule rejected)

[28] If it had been thought necessary to respect the matrimonial property law of the community property states for purposes of taxing earned income, the result should probably have been as it was generally in Europe in the early part of the century: mandatory joint returns with the husband primarily responsible for payment as sole administrator of the community property. See generally Dulude, *Taxation of the Spouses: A Comparison of Canadian, American, British, French, and Swedish Law*, 23 Osgood Hall L.J. 67 (1985). This would have been a far more realistic interpretation of community property law than the *Seaborn* decision, which imputed half of the husband's earned income to the wife. Also, it would not have created the intolerable disparities in the level of tax burden between the states which arose in consequence.

[29] Before enactment of the relief provisions, at least one court refused to apply the rule of *Seaborn* to avoid the "horrendous" result that the wife was "stripped clean" by the IRS though she had received none of his income. In *Bagur v. U.S.*, 603 F. 2d. 491 (1979), Judge Wisdom remanded the consolidated appeals to the Tax Court to determine whether the wives had suffered the equivalent of theft losses of their share of the community income.

suffer other shortcomings. None of the Section 66 provisions provides any relief for items other than omissions of income. Section 66(a) provides relief only if the couple lived apart at all times during the calendar year, and none of the earned income in question was transferred between them. Even one day of cohabitation during the year, or payments of support which are not *de minimis*, will preclude relief.

Section 66(b)(enacted in 1984) provides that the benefits of community property law may be disallowed to any taxpayer if he acts as if solely entitled to the community income, and fails to notify his spouse of the nature and amount of such income before the due date for the taxable year. The "benefit" here is the husband's relief of liability for one half of his earnings. This provision may be defeated if the husband notifies the wife of her liability, even if he gives her nothing.

Repeal of *Seaborn*. There is no doubt that Congress has the authority to overrule *Seaborn*, and it has already done so in many limited contexts.[30] The *Seaborn* rule has never been applied at all for purposes of the payroll taxes (social security and hospital insurance) and for the tax on self-employment income. Also, in 1976, Congress in effect repealed the *Seaborn* rule for couples one or both of whom are nonresident aliens.

The *Seaborn* rule now provides no benefit to taxpayers, and is advantageous only to the government.[31] This is a ironic in view of the fact that the *Seaborn* doctrine arose as a device to benefit residents of community property jurisdictions. This benefit was jealously guarded by representatives of such jurisdictions when repeal was attempted in 1940 (by means of proposed mandatory joint returns, without joint and several liability) in order to equalize the tax burden among the states. But since the 1948 introduction of income-splitting on joint returns for all married persons, the *Seaborn* rule no longer provides any advantage to taxpayers, and there should be no opposition to its repeal from the community property states.[32]

III. Effect on the Tax System. Neither repeal of Section 6013(d) nor repeal of the *Seaborn* rule need have any effect upon current tax rates nor filing statuses, and none is recommended here. These proposals for separate tax liability are put forward on their own merits for the sake of fairness and simplicity.

Revenue Cost. The IRS keeps no statistics on the frequency or amounts of collection from the non-earning spouse. It is therefore difficult to estimate the revenue loss from repeal of

---

[30] Many sections of the Code contain provisions which are to be applied "without regard to community property laws." Among these are Section 32(c)(2)(B)(i) [earned income credit]; Section 402(e)(4)(G) [lump-sum benefits]; Section 408(g) [individual retirement accounts]; Section 414(d)(4)(A) [limitation on cash method of accounting]; Section 457(d)(7) [deferred compensation plans of state and local governments]; Section 911(b)(2)(C) [foreign earned income]; Section 4980(d)(4)(A) [excess distributions from qualified plans], and, of course, Section 6013(e)(5) [innocent spouse rule] and Section 66 itself.

[31] Except for a husband who may escape tax on half of his income. Note that this is a complete escape, since the wife has no right to contribution from him for her payment of his taxes, as she does in the case of joint return liability.

[32] Repeal of *Seaborn* would of course have no effect on community property law itself, and no recommendation is made here as to any issue of state family property law.

Note that even after repeal of *Seaborn*, women subject to community property law will remain under a tax disadvantage, because the husband's community half interest in her earnings is a property interest within the meaning of Section 6321 and subject to levy even for his antenuptial tax debts. Thus one-half of the wife's earnings may be levied upon to pay *all* husband's taxes even where she has no personal liability for them under *Seaborn*. See, e.g. *Medaris v. U.S.*, 884 F.2d 832 (CA-5, 1989).

6013(d) or *Seaborn*. It is probable that the loss (if any) will not be large, because often the husband is available to pay, and the wife is taxed only because her assets are more easily accessible to levy. In such cases, there may be an added cost of collection, but no revenue loss. In other cases, transferee liability would apply. In some instances, the Treasury will even profit from repeal.[33] In the community property states, some husbands report only half their income and force the government to collect the remaining half from an absent wife. Repeal of *Seaborn* would end this practice. Some revenue loss is probably inevitable, however.[34] But it must be borne because the government's revenue needs cannot justify taxing the wrong taxpayer in amounts bearing no relation to ability to pay.

---

[33] For example, under current law a wife may actually escape tax on her *own* earnings by achieving innocent spouse status under Section 6013(e). This seems to have occurred in *Price v. U.S.*, 887 F.2d 959 (CA-9, 1989).

[34] The expected revenue loss should not estimated by simply writing off all potential assessments under Section 6013(d), because many such assessments are unrealistic or illusory. The IRS often assesses huge deficiencies on insolvent taxpayers (typically, but not limited to narcotics dealers and embezzlers) where it is obvious that the deficiency cannot be collected from either spouse. See, e.g. *Ratana v. U.S.*, 662 F.2d 220 (CA-4, 1981).

Chairman JOHNSON. Mr. Beck, do I understand you to say that everything the IRS did in the *Howden* case was legal? It was legal for them to ignore that she owned the house, and legal for them to ignore that he did not?

Mr. BECK. I do not know the details of that aspect of it. I cannot speak to that part of it.

Chairman JOHNSON. But the IRS does not have the right to ignore legal documents governing property ownership, do they?

Mr. BECK. That is correct. If they had some——

Chairman JOHNSON. But they do have the right or they do not have the right?

Mr. BECK. No; they do not have the right. I do not know the facts of what went on in this case.

Chairman JOHNSON. Right. I appreciate that you do not know the facts, but the law does not give them the right to ignore legal ownership, does it?

Mr. BECK. It does not. But even if the house belonged entirely to Ms. Howden, if she had a personal liability under *Poe* v. *Seaborn* to pay half of her ex-husband's taxes, that is a personal liability of hers and her own separate property can be levied upon to pay it.

So, again, I do not know the facts, but even the fact that it is entirely her house does not answer the question. Joint and several liability and *Poe* v. *Seaborn* liabilities are personal liabilities of the taxpayer that can be satisfied out of the separate property of the taxpayer, not necessarily out of joint property.

Chairman JOHNSON. Thank you.

Mr. Jeager, your testimony was very vivid and we will certainly review it and see what we can do about the IRS operating under startingly different assumptions in some cases than in others. I appreciate your taking the time to be here with us today and to go through your experience with us.

Mr. JEAGER. Thank you, Madam Chairman.

Chairman JOHNSON. You indicated in your testimony that the IRS never intended to actually take your case to Tax Court. What makes you think the Service did not intend to litigate?

Mr. JEAGER. Well, firstly the IRS used information from our filed tax returns in determining our deficiency notice. And when we had a chance to review their information the numbers they used in their computations were incorrect, and did not reflect the accurate numbers that we had on a similar tax return that we had in our possession.

On several occasions we invited the IRS to sit down with us, to correct their misinformation and they never responded. We were trying to give them the precise numbers, and they were unwilling to take the time to review their information with us.

We could not understand why they would not meet with us and had to assume they were only trying to drag us along until we would settle. And never really having the data that they needed to win in that court case.

Second, to further illustrate this fact, only a few weeks before trial one of our attorneys was having a discussion with the lead agent for the IRS who advised us for the first time that work papers, and I quote, "There were several serious computational er-

rors," in their work papers of the agent who did the audit of our business.

If the IRS was serious about going to trial and knew it had the burden of proof, it surely would have revised its computational errors before bringing the matter to the court, and to our knowledge, no such corrections were ever prepared.

Third, they were to file with the court, on a certain date, their expert witnesses with no witnesses being designated. With none available and inaccurate information it became increasingly obvious to us that they had never intended to try the case.

Chairman JOHNSON. To gain attorney's fees you would have had to prove that the IRS was not substantially justified in bringing their case. How hard would it have been to prove this? How much access would you have had to those figures?

Mr. JEAGER. It is extremely difficult. As the lawyers explained it to me the Tax Court—I am sorry, could you repeat the question?

Chairman JOHNSON. Under current law in order to get attorney's fees, which you would like to do and anybody in their right mind would want to do under these circumstances, you would have to prove that the IRS was not substantially justified in bringing the case.

How difficult would it be to prove this?

Mr. JEAGER. Well, it is extremely difficult. It is extremely difficult, Madam Chairman. As the lawyers explained it to me, the Tax Court says that no matter how marginal of the IRS' chances of success may be in bringing a case before the Tax Court, and no matter how burdensome and expensive it may be for the taxpayer to defend itself, the IRS' position is still substantially justified.

If that is the hurdle that a winning taxpayer has to clear to get its attorney's fees reimbursed then the taxpayer is almost going to win in its motion for litigation costs.

Chairman JOHNSON. Thank you very much, Mr. Jeager.

I am going to yield to my colleague, Mr. Cardin, and come back.

Mr. CARDIN. Thank you, Madam Chairman.

Let me thank all three of you for your testimony.

Mr. Jeager, your case is certainly one that disturbs all of us, that you had to go through the type of litigation costs in a case that, from your testimony, was rather straightforward and a practice that was long standing within the industry, which had not previously been challenged, and where there was no indication of any justification for the challenge.

I am having a hard time though understanding what happened in your case and why you were unable to successfully recover your costs, including counsel fees.

The Tax Court, you made a request to the Tax Court for costs and were denied because you could not establish that the Federal Government was not substantially justified in the position?

Mr. JEAGER. That is correct. That is accurate. I mean it is our opinion that no matter how small of an opportunity that the IRS has to extract money from the taxpayer, so to speak, they are substantially justified. And that substantially justified to us is unreasonable.

I think the true definition of substantially justified needs to be addressed.

Mr. CARDIN. Well, the legislation that has been filed in this Congress takes a different approach and I would like to get your views as to whether you think that would be effective or not.

It does two basic things. It first allows you to get information about your case from the IRS in order to be able to help the court in determining whether there was substantial justification in the Government's position.

And second, the legislation increases the dollar amount of the counsel fees which you can be awarded. I believe those are the two changes that are in the Taxpayer Bill of Rights II.

Do you believe that would help you in being able to recover your fees?

Mr. JEAGER. Well, you know, yes, I believe it would help. I mean I honestly think I would like to take it a further step. I think the law should require that the IRS take reasonable—and I use that word very hardly here, and very succinctly—because reasonable positions, they need to take reasonable positions before the tax court and it should be defined in a common sense fashion.

I mean as IRS legal theory that has a marginal chance of success and it is not reasonable and the law should so hold. I further think that when the IRS concedes a case, in its entirety, prior to trial the law should treat that the same as if the IRS had gone to trial and lost.

And I believe that in both those situations, the winning taxpayer should be reimbursed for their attorney's fees. The spirit of the current Congress is that government keeps its commitments with the American people and lives by the same standards and reasonableness and fair play that are supposed to be at the heart of our legal system.

I believe that that was the first law you passed shortly after this Congress convened. I want to make clear that I am not here solely to ask that businesses like mine get back some of the money they have expended on attorney's fees. That certainly would be fair, but there is another, larger good to be served by making the IRS act in a more reasonable manner.

The sure prospect of having to pay a winning taxpayer's litigation costs would incentivize the Service to pick and choose its cases more reasonably and responsibly, and the American people would be better served by having the IRS use its resources in that more efficient and effective manner.

Mr. CARDIN. Mr. Jeager, I am very sympathetic to your problem and think that we need to change the system so that in your type of case, you are able to recover your costs.

Mr. JEAGER. And my fellow wineries, as well, my fellow businesses that are in the same predicament that I am.

Mr. CARDIN. Right. I understand that. Let me compliment you on the product you produce. It is a very good product.

Mr. JEAGER. Thank you on behalf of the wine industry.

Mr. CARDIN. The concern I have is that the standard passed by the Congress would appear to be a rather generous standard to the taxpayer, would appear to be. So, because it requires the government to substantially justify its position. If I understand the IRS position today, they are willing to assume the burden of that proof,

where they would have to come forward and prove that their position was substantially justified.

That appears to be a pretty strong standard that the Government must meet. It is certainly different from the frivolous lawsuit standards which we use in typical lawsuits for the litigant to be able to recover costs.

So I am somewhat puzzled as to why the Tax Courts are imposing such a burden on the taxpayers, when Congress has already spoken to provide a mechanism for the taxpayers to be able to recover costs against the Government. That is what we intended in the Taxpayer Bill of Rights I.

I understand your position, and we certainly need to take a look at this to make sure that people who are put in a wronged position by the government are able to recover their costs.

Mr. Beck, I understand your position very well. In particular, it is troublesome in cases where spouses are no longer living together or living in a less than harmonious circumstance.

Are you concerned at all if we eliminate all joint liability that where a husband and wife are living together, that they may be able to concoct some form of property ownership that the government may not be able to get at in an effort to try and avoid tax liability, because one spouse earns the income, and using a joint-type of an ownership of certain properties in order to avoid paying their taxes?

Mr. BECK. I have devoted a lot of thought to that and so has the ABA and we all concluded that there is very little abuse potential in this for various reasons.

First is that under current law you can do all this anyway by just filing separately. You can avoid joint liability by just filing separately. It usually costs a little more in taxes, which is why people file jointly.

But if you could avoid taxes on any scale that was significant, people would be doing it right and left, because it does not cost all that much extra to file married filing separately.

That is the easy answer. The longer answer is that——

Mr. CARDIN. You have not seen any significant abuse by married taxpayers filing separately so that they can avoid joint liability, and then filing——

No. I do not think so.

And then you also have transferee liability that applies. If one spouse makes himself judgment proof by giving property to the other spouse, or to anyone else for that matter——

Mr. CARDIN. A little more difficult to establish though. Your first argument was very good; your second one I am not so sure transfers.

Mr. BECK. True. It will not apply in every case and there are hurdles. The IRS would have to show insolvency and you are quite right, it is not automatic. It is not a complete substitute.

Mr. CARDIN. But you convinced me on your first point. The first point was a good point. I am finished, thank you.

Chairman JOHNSON. I want to quickly run down a series of questions, Ms. Howden, since we do not have your testimony in writing. They are easy and it will not take long. We do have this vote coming up and we will adjourn between panels and go vote.

But as I understand it the deficiency asserted by the IRS related to your 1982 joint tax return. Did you sign that return?

Ms. HOWDEN. No, I did not.

Chairman JOHNSON. Did you qualify for the innocent spouse protections under the law.

Ms. HOWDEN. I was told that I did not because I was able to enjoy his income.

Chairman JOHNSON. Did the IRS ever attempt to contact you during the process of assessing the deficiency on your 1982 return?

Ms. HOWDEN. No, no.

Chairman JOHNSON. When did you first learn that the IRS had filed a lien against your house for the 1982 deficiency?

Ms. HOWDEN. When I found the seizure notice on the front door.

Chairman JOHNSON. So that was in what year?

Ms. HOWDEN. That was 1992.

Chairman JOHNSON. Did the IRS inform of any efforts it was taking to collect the taxes due on the 1982 return from your former husband?

Ms. HOWDEN. No, they did not. And when I asked for that information they said it was privileged. That they could not disclose what they were doing with him.

Chairman JOHNSON. I understand that your former spouse was permitted by the IRS to enter into an installment payment plan with the IRS. How much was he asked to pay, do you know that?

Ms. HOWDEN. He was asked to pay $150 a month on a $99,000 judgment or debt owing. He pays $150 a month.

Chairman JOHNSON. That is $150 a month on a $99,000 debt. Do you have any rough idea what his income is?

Ms. HOWDEN. I do not know. I imagine close to $100,000, I would think.

Chairman JOHNSON. Does he not own a couple of houses and an airplane?

Ms. HOWDEN. Yes. They seized one airplane but he has another one.

Chairman JOHNSON. But they settled for $150 a month on a $99,000 debt. Were you given the same opportunity?

Ms. HOWDEN. No, Ma'am.

Chairman JOHNSON. So you had to come up with how much did you say on how much debt?

Ms. HOWDEN. That was $17,500.

Chairman JOHNSON. On a $17,500 debt. In cases where a joint return has been filed, do you think the IRS should be required to give both parties who signed the return the opportunity to participate in the appeals process before the assessment, when the joint return is made final?

Ms. HOWDEN. I absolutely do. And on every occasion I told them I was willing to take responsibility for our joint debt.

Chairman JOHNSON. I will tell you, I have been in elective office almost 19 years now, and we have dealt with a lot of these cases in my office. And many of them arouse outrage. I have never heard such an outrageous story as yours today. I have never seen the IRS literally torment a single parent, struggling to support a child, for as many years as they have tormented you.

And believe me this case will drive one section of the Taxpayer Bill of Rights, with Mr. Beck's ultimate assistance.

And Mr. Jeager, I hope that small businessmen in America, when we get done writing a Taxpayer Bill of Rights, will be far more secure and far safer from the kind of attack that was launched against you and your business.

And if Mr. Hancock would like to make any comment or ask any questions, I would be happy to yield to him.

Mr. HANCOCK. Thank you, Madam Chairman.

About the only thing that I would say is that this has been building for the past 50 years, and it is going to come to a head one of these days.

And I am glad to see that we are holding a hearing and finally recognizing that, yes, we do have a problem. That IRS has a specific problem. There are people out there that will try to defraud. But this situation of rogue agents going after somebody and not exercising any judgment must be addressed. Otherwise, we will have more and more situations where people say, look, if they are not going to be fair, then I am not going to even attempt to pay my fair share.

This situation of Mr. Jeager. In your particular situation, you could afford the $80,000. I mean you are going to be able to stay in business.

There are a lot of small companies that would go out of business under these same circumstances. In fact, that has happened.

There has to be a balancing act, and I am glad to see that we are finally getting around to it. I would recommend a book to you, "The Good and Evil of Taxation." Pick it up and read it and that will tell you exactly what we have got to accomplish.

Thank you.

Chairman JOHNSON. Just as our system depends on the great majority of Americans, paying the amount of tax that they owe voluntarily, and fairly accurately, our system of problem resolution has to start from the assumption that the vast majority of people who have tax problems are not trying to defraud the Government.

Certainly some are and we have the capability to go after fraud where fraud exists. But the number of innocent Americans that become the victims of our tax system has simply got to be reduced. We made some efforts to do that in the 1988 law, we made some efforts to fix some things in 1992, and we are going to work hard to pass an aggressive law that protects the little guy in this round.

And I thank you very much for your testimony this morning, and as we work our way through the process we will keep you informed by our final drafts. And I hope by the end of it, you will see that democracy, in fact, works.

Thank you.

And we will convene the next panel in 10 minutes.

[Recess.]

Chairman JOHNSON. The committee will reconvene. We are in the process of a recommit vote, and I think the other committee members probably decided we were not going to reconvene until after the recommit vote. At least I am guessing that that is what they concluded, since none of them are back.

So as much as I hate to proceed, I think if we do not we are going to run into all kinds of other problems with afternoon planes.

So, my understanding that because of the delay you are interested in foregoing your comments, because we do have your testimony and we really are interested in what you have to say.

But some of the things that have come up, you have heard the issues that we are raising, and I would like to see if you have further comments on those issues. I am particularly interested in your comments on the preceding panel and the difficulty of joint and several liability, but also on electronic filing, and the modernization program. You have some expertise that goes beyond the narrow purview of this committee.

So if you would each make some comments on the issues that have been raised this morning, and also on these other issues I would be interested.

Commissioner Goldberg, would you start, please?

STATEMENT OF FRED T. GOLDBERG, PARTNER, SKADDEN, ARPS, SLATE, MEAGHER, & FLOM (FORMER COMMISSIONER, INTERNAL REVENUE SERVICE)

Mr. GOLDBERG. Sure. Thank you very much, Madam Chairman. It is a pleasure to be here this morning. With respect to tax systems modernization, my belief is that that is the single most important step that can be taken to enhance the rights and safeguards for the taxpayers of this country.

I think the tax system imposes an intolerable burden and I believe that modernization is the necessary step, the necessary predicate to relieve that burden. I think the problems we are seeing in the filing season this year would be largely remedied if tax systems modernization were in place.

I think you would have a world where you could both address those few taxpayers who engage in fraudulent activity without unduly and unfairly burdening the vast majority of citizens who are attempting to pay their fair share.

With respect to attorney's fees, I think the provisions in 988, the Contract With America ought to be applied to tax cases. I believe the government should be held to that liability. In effect, a strict liability standard comparable to that in 988. I also believe that the scope of 7430 should be broadened substantially.

I do not criticize——

Chairman JOHNSON. What do you mean by that?

Mr. GOLDBERG. I think that the IRS has been criticized for the limited awarding of attorney's fees. I do not believe that that is an IRS problem. I believe it is a statutory problem. And 7430 is drafted, it is simply a lot less than meets the eye.

For example, I would make attorney's fees available to all taxpayers. I would shift the burden of proof to the government in cases where taxpayers prevail. I would relax the definition of substantially prevailed and I think that the underlying assumptions of 988 apply with even greater force to the Internal Revenue Service.

There are lots of other issues that have come up. It is inappropriate to monopolize the time, and I turn it over to my colleague.

The one other issue I do want to comment on very briefly is the shifting of burden of proof to the government in tax cases. I think

that that is the gap between good intentions and disastrous consequence in that legislation is as striking as any proposal under consideration.

If that proposal were enacted it would be the worst of all possible worlds. It would result in a substantial loss of revenue from those who are bound and determined to cheat. And I think it would lead to an IRS that would be terribly intrusive.

For all of the honest taxpayers out there I think it is a very well-intentioned idea, but it is the siren song.

Chairman JOHNSON. Could you comment, lastly though, on this issue of whether or not a spouse should be liable for——

Mr. GOLDBERG. Yes. I think the current law has problems but I think the lesson is beware of unintended consequences. That with the best intentions in addressing that issue, and I do encourage you to address that issue, if you have, for example, a situation where a spouse works to put his or her mate through college and graduate school and earns all of the income, and that mate is responsible for filing returns, doesn't file a return.

Then subsequently gets divorced and thanks to his or her education is making a great deal of money. And the other spouse who earned that earlier income is supporting the kids on $15,000 a year. Under the rule you were talking about, it would be that spouse who had educated his or her mate, who had cared for the children who would be stuck with the liability. I do not think that is fair.

So my only advice is to be careful as you address that issue to be sure you do not create other unintended inequities.

I think the case you heard this morning is extraordinarily sympathetic.

[The prepared statement follows:]

Statement of
Fred T. Goldberg, Jr.
Before the
Subcommittee on Oversight
House Committee on Ways and Means

March 24, 1995

Madam Chairman and Members of the Subcommittee:

I appreciate the opportunity to testify before you today on ways to enhance taxpayer rights and safeguards. Properly defined, this objective embodies the most important challenge facing tax administration. I applaud your interest, concern and ongoing oversight in this area.

While I am appearing today solely in my individual capacity, and not on behalf of any client or organization, I have had the privilege of addressing this issue from other perspectives: as IRS Chief Counsel, IRS Commissioner, and Assistant Secretary for Tax Policy. I also have perspectives on this issue as a private practitioner, taxpayer, and citizen. These different vantage points have shaped my views on how best to maintain and enhance taxpayer rights and safeguards. In particular, they have convinced me that all participants in the tax system -- the Federal government, Treasury and the IRS, taxpayers, tax practitioners and citizens -- share the same overriding objective of enhancing taxpayer rights and safeguards. Moreover, I am convinced that all parties can agree in large measure on the best avenues to achieve their common goal.

A. Preliminary Comments. Before turning to the specific questions you raised in the hearing announcement and in your invitation to appear before this Subcommittee, I would like to offer one general observation. So much of what we do in our public and private lives is about setting priorities and making choices. The same applies to the issue you are addressing today. The list of "things" that could be explored to enhance taxpayer rights and safeguards is truly endless. Any effort to consider (or do) them all would be futile and counterproductive. The challenge is to identify the "vital few" and assure that they are pursued vigorously and successfully.

In my opinion, there are two steps that must be taken to enhance taxpayer rights and safeguards. They both embody the same objectives as an item in the Contract With America: the "Job Creation and Wage Enhancement Act" provisions that focus on reducing the regulatory burden on our citizens. In the context of the tax system, the most important single step that can be taken is to achieve a dramatic reduction in the administrative and compliance burdens placed on taxpayers. The importance of this effort cannot be overstated: an intrusive, unresponsive and unworkable tax system is imposing an unacceptable burden on our citizens, and is a primary cause for the widespread distrust of government.

The two steps I recommend are:

1. *Tax Systems Modernization ("TSM").* Fully fund Tax Systems Modernization ("TSM") (including the funds requested in the Administration's Budget Request for FY 1996), and provide the constructive oversight necessary to assure its timely and successful implementation. The IRS is running on outmoded computers and stone age information systems. As a result, taxpayers waste hundreds of millions of hours and dollars each year in their dealings with the IRS. Issues that should never arise take months to resolve. Issues that should be resolved in a phone call require years of correspondence. Taxpayers must deal with numerous IRS employees to resolve the simplest of matters, when only one contact should suffice. A taxpayer needing a copy of his or her tax return to apply for a loan or a scholarship should be able to get a copy from the IRS in days; it now takes an average of several months, and millions of taxpayer requests for copies of their returns are never filled.

TSM can be and has been described in many ways. My own preference is for the framework embodied in the notions of burden reduction and "one stop service." Taxpayers ought to be able to resolve most IRS matters by dealing with one individual, most often through a single phone call. Based on my various experiences in government and the private sector, I am confident that TSM, properly designed and implemented, will save taxpayers hundreds of millions of dollars and hours each year. As a result, full funding of TSM, coupled with constructive oversight, is the single most important action that this Congress can take to enhance taxpayer rights and safeguards.

I recognize that TSM, standing alone, will not be sufficient. I should also emphasize that it will only succeed if the IRS is committed to a vision built around reducing the burden on taxpayers. Finally, I acknowledge that many mistakes are certain to occur along the way in an endeavor of this magnitude. Having said as much, the fact remains that TSM is the one essential step that must be taken. If that effort is delayed, or is not successful, there is nothing that this Subcommittee or any one else can do to rescue our citizens from an intrusive, burdensome and overreaching system of tax administration.[1]

---

[1] As I've indicated, the IRS has made mistakes in pursuing TSM, and will make more mistakes as it goes down the road. That's reality, and to be expected. All in all, the IRS is doing a fabulous job. While it should be encouraged and supported in its efforts to do better, there is no turning back. If anything, the pace should be accelerated.

In this regard, I should acknowledge recent GAO criticism of the IRS modernization effort. In my opinion, the GAO commentary is simply wrong. It displays a stunning lack of perspective. It ignores reality and is often misleading. I believe it can be fairly characterized as destructive and counterproductive. I realize that these are harsh words. Unfortunately, I believe

(continued...)

2. *Tax Simplification*. Pursue tax simplification -- relentlessly and creatively. We are crushing our citizens, as well as our business, charitable and religious institutions with laws, regulations and procedures that are burdensome, duplicative, frequently unworkable, and often counterproductive. Simplification is another essential step that must be taken to enhance taxpayer rights and safeguards.

I acknowledge the common wisdom: when Congress threatens to simplify the tax law, most taxpayers and practitioners decide it's time to duck. That pattern must change. While fundamental reform may be the only way to achieve the kind of dramatic simplification that is called for, major steps can be taken within the confines of the current system. In particular, "think outside the box" -- recognize that any tax system is a grotesque necessity, not an end in itself; abandon the pathological quest for theoretical purity. Skip cosmetic surgery; excise whole tumors. When given the choice, simplify in a way that "loses" a little revenue -- increased receipts from improved compliance and reduced administrative costs will far off-set the "estimated" loss. Don't bother trying to simplify in a way that "raises" revenue -- it simply replaces one form of tax with another; it's just not worth the effort. Beware of "loophole closers": for the most part, they amount to surgery on the capillaries of a patient that's expiring from ruptured arteries. If truth be told, the revenue that most "loophole closers" generate goes to line the pockets of lawyers, accountants, investment bankers and other intermediaries.

B. Comments on Specific Proposals. Various measures previously considered by Congress (*e.g.*, H.R. 3838, as proposed and as modified for inclusion in H.R. 11), and measures introduced in recent months (*e.g.*, H.R. 390, H.R. 661, and S. 258), contain numerous proposals that are intended to enhance taxpayer rights and safeguards. I will limit my comments to the following broad areas: (1) the burden of proof; (2) attorneys' fees; and (3) a suggested framework for considering myriad specific provisions.

1. *Suggested Changes in Rules Governing the Burden of Proof*. From time to time, and for many years, it has been suggested that the IRS should bear the burden of proof in tax litigation. Boiled down to its essence, the appeal of this Siren song is obvious: in a democracy, it's simply wrong to put the burden of proof on a citizen in his or her dealings with the government. Framed this way, I'm certainly tempted to agree.

Unfortunately, I am convinced that shifting the burden of proof in tax cases would be the surest and most direct route to the worst of all possible worlds. It would be an enormous windfall to the few taxpayers who

---

[1](...continued)
they are accurate. I recommend that this Subcommittee, and other affected Congressional committees, consider restructuring or terminating GAO's responsibility in this arena and pursue other oversight avenues that will help assure that TSM is carried out successfully.

are bound and determined to cheat the system; it would impose an intolerable burden on the vast majority of honest taxpayers who do their best to comply with the law.

For better *and for* worse, our system relies on self-assessment by taxpayers. The system functions because taxpayers are expected to maintain adequate records and to report properly their items of income, deduction, credits and the like. Changing the burden of proof would have two consequences:

First, it would reduce voluntary compliance. While most citizens would continue to try to pay their fair share, there would be some who would take advantage of the new framework to understate their liability and leave it to the government to prove a different result. While I am convinced that most taxpayers are fundamentally honest, and that the decline in voluntary compliance would be small in percentage terms, the revenue loss and the gradual erosion in the perceived fairness of our system would be sizeable. To put this in perspective, a decline of only 1% in voluntary compliance would cause an annual revenue loss of more than $10 billion. While estimates of this sort are highly speculative, my personal view is that the annual revenue loss ultimately would exceed this amount.

Second, largely in response to the foregoing, the IRS would be compelled to alter its approach to enforcement. Most of us believe that the IRS is far too intrusive today, and that tax administration is far too cumbersome, contentious and burdensome. Well, as the saying goes, "you ain't seen nothin' yet." Change the burden of proof and IRS tactics of today will seem like child's play. ***Of necessity***, the IRS would be forced to resort to far more aggressive techniques in auditing taxpayers and developing cases. Summonses, including third party summonses, would become routine. Expanded record-keeping requirements and increased litigation over discovery issues would be standard fare. In addition, the number of revenue agents and audits of taxpayers would likely increase dramatically. In the world of tax administration, it's hard to imagine a more well-intentioned idea that would have more undesirable consequences.

Having said as much, I do believe there are several areas where the burden of proof question could be addressed by Congress. The first involves a clarification included in H.R. 11 in response to the Tax Court's decision in Portillo v. Commissioner, 58 TCM 1386 (1990), *rev'd in part and aff'd in part*, 982 F.2d 1128 (1991). Section 5503 of H.R. 11 would have required the IRS to provide additional probative evidence in addition to the copy of an information return in litigation regarding the inclusion of additional income reflected on that return. Because taxpayers are faced with the need to "prove a negative" in unreported income cases involving information returns, I believe a change along these lines is warranted. At the same time, however, I should note that this provision reflects current IRS administrative practice and is therefore likely to have little practical impact except in rare and unusual circumstances.

A second area where the burden of proof should be shifted involves attorneys' fees. As noted below, I believe that the award of attorneys' fees to taxpayers should be automatic in certain circumstances. Under the current regime, Section 7430 requires a taxpayer who has substantially prevailed to prove that the government's position was "not substantially justified." Once the government has lost, I think it appropriate to require the government to prove that it's position was substantially justified.

2. *Attorneys' Fees.* As a citizen, and as an attorney, I believe that provisions contained in the Contract With America's "Common Sense Legal Reforms Act" are long overdue. I congratulate you and your colleagues for your timely action. My one observation is that the original proposals have already been diluted needlessly in some respects; hopefully, they will sail through the Senate during the coming months without taking on any more water.

The rationale underlying H.R. 988 is even more compelling in tax cases. I am confident that the government does not engage in "strike suits" for the purpose of extracting settlements from taxpayers. On the other hand, the practical effect can be the same. Moreover, the government lacks the same kind of settlement incentives that are present in the private sector because there are no market pressures requiring a rational allocation of resources. Finally, the government occasionally insists on litigating a case to "make" or "clarify" the law without regard to its risk of losing. While such action may be appropriate, there is no reason why a prevailing taxpayer should be required to foot the bill. Accordingly, I recommend that costs and expenses should be imposed on the government under circumstances similar to those identified in H.R. 988 (tailored to meet various procedural considerations unique to tax controversies).

I recognize that consistency would impose a corresponding liability on taxpayers. While that approach might be warranted, I urge the Subcommittee to address that question in light of the other sanctions imposed on taxpayers under current law (*e.g.*, the Section 6662(b)(2) substantial understatement penalty, the Section 6662(b)(3) and (b)(5) valuation misstatement penalties, the Section 6662(b)(4) pension liabilities overstatement penalty, the Section 6621(a)(2)(B) excess interest charge on taxpayers, the Section 6621(c) penalty interest provision applicable to large corporations, and the Section 6673 sanctions where a taxpayer's litigating position is "frivolous").[2] Stated differently, if a parallel regime governing attorneys' fees is desired,

---

[2] My personal view, unsupported by any particular logic, is that taxpayers should be permitted to spend their time and money litigating against the government in tax matters despite the odds -- without liability for attorneys' fees. While I recognize that this has the practical effect of imposing costs on all other taxpayers, there is something quintessentially American about challenging the government "just to make a point" (perhaps, about the unintended consequences of the law or the absurdity of the government's own rules).

these other sanctions should be revisited and modified. Under no circumstances, however, would I make taxpayers involved in small case litigation (so-called "S" Cases) subject to liability for attorneys fees.

I also recommend that the provisions of Section 7430 be broadened and relaxed in several respects (*e.g.*, as noted above, shift the burden of proof to the government; make the award of attorneys' fees under Section 7430 available to all taxpayers; delete the limitations contained in subparagraphs (b)(1), (b)(3) and (b)(4); relax the "substantially prevailed" standard). The IRS has done a reasonable job of administering Section 7430 as drafted. The problem is that the statute, as drafted, is too narrow.

Finally, while it does not relate directly to the awarding of attorneys' fees, I would like to comment on costs incurred by taxpayers arising out of the so-called Taxpayer Compliance Measurement Program (TCMP). While such examinations are wholly appropriate in that they seek to determine the taxpayer's proper tax liability, they also purport to serve other objectives relating to tax administration.[3] The ordeal that taxpayers must endure to survive a TCMP audit defies description. If this program is continued, I believe that taxpayers should be entitled to recover reasonable costs incurred in the process.[4]

3. *Framework for Considering Other Proposals.* I suggest that the Contract With America, and Phil Howard's recent book, The Death of Common Sense: How Law is Suffocating America (1994) serve as a starting point for considering myriad other proposals to enhance taxpayer rights and safeguards. I also recommend Bayless Manning's remarkably prescient article, "Hyperlexis: Our National Disease," 71 Northwestern University Law Review 767 (1977), as well as Gordon Henderson's "Controlling Hyperlexis--The Most Important 'Law And . . . . .'," 43 Tax Lawyer 177 (Fall 1989).

The Contract, Mr. Howard's book, and the articles by Mssrs. Manning and Henderson make a simple and compelling case. We can't legislate common sense or good judgement. We cannot enact laws to right every wrong. While such efforts may be well-intentioned, they do more harm than good.

The same applies to tax administration and to legislation designed to enhance taxpayer rights and safeguards. Legislation that is intended to mandate common sense, or to right every wrong, is sure to fail. There are simply too many areas where common sense is required, and where its application to specific circumstances cannot be adequately anticipated. Likewise, there are too many "wrongs" that cannot be "righted" by legisla-

---

[3] As noted above, this same concept provides an additional rationale for requiring the government to pay attorneys' fees.

[4] In the spirit of full disclosure, I should acknowledge my oft-stated view that TCMP has outlived its usefulness and should be restructured or abandoned.

tion. The law of unintended consequences has far too wide a reach.

The best of legislative intentions often pave the road to more litigation, greater taxpayer burdens, increased uncertainty, and counterproductive side effects. In all too many cases, legislation of this type is a futile effort to treat symptoms, while ignoring causes. If Congress concludes that there are areas where the Service consistently displays a lack of common sense, the better approach is to use the oversight process.

The primary focus of legislation -- *and administrative actions* -- should be to ***remove barriers*** to the exercise of common sense. I am convinced that taxpayers' rights are violated most often in cases where "the rules" prevent (or are perceived as preventing) fair play and the exercise of good judgement.

Finally, I would like to return briefly to the point I made at the outset regarding choices and priorities, and reference the Contract With America's attack on unfunded mandates. Every measure you enact entails a choice, and sets a priority. Every measure you enact imposes a "mandate" on the IRS. If you require the IRS to take any action, it means the IRS will not do something else, or will do something else less well.

With these observations in mind, I have the following comments on various proposals that may be considered by this Subcommittee as it deliberates in the months ahead. They are not intended as an exhaustive list; rather they are intended to illustrate the difference between attempting to legislate common sense and empowering the exercise of good judgement. Because I am more familiar with H.R. 11 as approved by Congress in 1992, my references are to provisions of that bill. By and large, my comments are equally applicable to taxpayer rights legislation introduced since that time.

Proposal	Comments
Restructure the Ombudsman position, and limit authority of senior officials	This is an effort to legislate common sense by imposing rigid lines of authority and reporting chains. It would accomplish little good, could cause much harm, and would be a barrier to the exercise of good judgement.
Installment Agreement Changes: automatic right, mandatory 30-day notice, mandatory "independent administrative review"	Once again, an effort to legislate common sense by imposing rigid rules. Proposals would accomplish little good, would cause much harm (including a substantial increase in noncompliance and lost revenue), would impose needless administrative costs and prompt needless litigation, and would be a barrier to the exercise of common sense. The IRS is doing a far better job in administering Offers in Compromise and Installment Agreements (thanks in large measure to the work of this Subcommittee). The primary challenges are to achieve greater consistency (there are still pockets of resistance to change) and to continue refining standards (not every taxpayer can be expected to win the lottery or inherit a million dollars). Legislation is not the way to assure progress on these fronts. On the other hand, it is clearly appropriate to suspend the failure to pay penalty during pendency of an installment agreement.
Preclude the issuance of retroactive regulations	In very rare and unusual circumstances, retroactive regulations may be justified. While Congress may wish to legislate guidelines limiting their use, I believe that the government has generally (though not always) exercised its retroactive authority with proper care. A more effective avenue may be ongoing oversight to assure that Treasury and IRS use good judgement. It is also worth noting a related problem: the rush to judgement. While I would not recommend a legislative solution at this time, I am concerned that a preoccupation with "protecting the revenue" leads to IRS rules and regulations with immediate effective dates that are not well thought out from a policy or implementation perspective. While nominally prospective, these pronouncements can be every bit as pernicious as facially retroactive rules.

Interest abatement	I am of two minds on this issue. The arguments against abatement authority are: interest is simply a charge for the use of money; it is a mechanical computation and abatement is inappropriate. Moreover, abatement authority would spawn substantial new litigation over standards that would be extremely difficult to apply in practice. The argument in favor of abatement focuses on IRS-caused delays, and the additional cost that those delays impose on taxpayers. I think this debate misses several points. First, many taxpayers do not see themselves as "borrowers" -- as the result of an honest mistake, a financially strapped family is faced not only with an unanticipated tax bill, but an enormous interest charge as well. Second, the tax law imposes numerous "finance" charges in addition to interest (*e.g.*, failure to file and failure to pay penalties). Third, deficiency interest rates do not reflect the government's cost of funds; they purport to reflect taxpayer borrowing costs. On balance, I think that the interest abatement proposals under consideration will accomplish less than hoped (*c.f.*, attorneys' fees under Section 7430), and will cause far more administrative difficulties than imagined. As a first step, I think that the better approach would be to do a better job of clarifying objectives, and explore various mechanical changes (*e.g.*, lower rates under certain circumstances) to achieve those ends. If it's not possible to make the mechanics work properly in that context, I would recommend abatement authority that is broader than currently proposed: permit the IRS to take all factors into account (*e.g.*, hardship, nature of the adjustment, taxpayer's prior compliance history, role of outside advisors, etc.). It may also be appropriate to limit the abatement authority to amounts above the government's cost of funds.

Following are other examples of provisions that give taxpayers or the IRS more latitude to exercise common sense:

- Sections 5301 and 5302 of H.R. 11 (relating to joint returns) -- provides taxpayers with greater latitude to exercise common sense
- Sections 5401 and 5402 of H.R. 11 (modifications to lien and levy and offer-in-compromise provisions) -- provide the IRS with greater authority to exercise common sense

Following are examples of provisions that I believe are futile or counterproductive efforts to legislate common sense:

- Sections 5604(a) and (c) of H.R. 11 (relating to the Section 6672 penalty for failure to collect and pay over tax) -- the goals and the approach are both laudable, but the mechanical rules are likely to create more problems than they solve

- Section 5801 of HR. 11 (required content of certain notices) -- notice clarity, like beauty, is in the eyes of the beholder; more to the point, neither can be legislated. (And, moving from the sublime to the ridiculous, the legislative history provides that IRS failure to comply with the statute has no consequences.)

- See, also, Sections 5901 and 5902 if H.R. 11.

C. Conclusion. Perhaps the best way to summarize my views is to urge you to heed the teachings of the Contract With America: set priorities -- don't try to enact laws to solve all the ills that afflict tax administration; focus on reducing the burden that the tax laws and tax administration place on taxpayers and citizens; don't try to legislate common sense -- empower the exercise of good judgement; be sensitive to unfunded mandates, even on the IRS.

Chairman JOHNSON. Thank you.
Mr. Gibbs.

STATEMENT OF LAWRENCE B. GIBBS, PARTNER, MILLER & CHEVALIER (FORMER COMMISSIONER, INTERNAL REVENUE SERVICE)

Mr. GIBBS. As usual, I find myself in agreement, Madam Chairman, with another former commissioner. So I will not repeat what Fred said. I will simply comment on another area that was discussed this morning, and that is the issue about the ombudsmen or the taxpayer advocate.

Frankly this is one where my prior public statements have been sympathetic toward the IRS. I think I understand what you are trying to do, and I would like to make what I hope might be a constructive suggestion.

Chairman JOHNSON. Go ahead.

Mr. GIBBS. I think the biggest concern that I have, and I heard it somewhat this morning, is the attempt to legislate good sense or common sense for these kinds of rules. The problem this creates, when you think you are legislating good sense, is that it gets you into some of the issues that deal with the organization and management of the IRS, and it tends to take on a micromanagement flavor.

On the other hand, with respect to some of the questions you have asked today, the things you have gotten into, the issues with respect to the ombudsmen reports, and similar types of things, I am wondering whether you could not accomplish the same thing by letting the American public know that this is going to be an issue, and asking the IRS and Treasury to give you a report by a certain date on each of the items.

And hold hearings and have an ongoing type of dialog to see why you cannot get the information you want. If there are management concerns with what you are suggesting, in terms of line authority of the ombudsmen or the taxpayer advocate over all of the IRS field organization, get into that to explore it.

But I would urge that in the context of the changes you propose, and in light of everything else that is happening at IRS, you should do that on more of an oversight type of basis, rather than trying to simply legislate the answers.

[The prepared statement follows:]

TESTIMONY OF LAWRENCE B. GIBBS

BEFORE THE SUBCOMMITTEE ON OVERSIGHT

COMMITTEE ON WAYS AND MEANS

U.S. HOUSE OF REPRESENTATIVES

REGARDING EXPLORATION OF THE DEVELOPMENT OF

TAXPAYER BILL OF RIGHTS II LEGISLATION

MARCH 24, 1995

Madam Chairwoman, I am pleased to be here today to testify regarding the Subcommittee's exploration of the development of Taxpayer Bill of Rights II legislation. I was the Commissioner of Internal Revenue at the time the original Taxpayer Bill of Rights was passed in 1988. Although I did not initially support all of the provisions in the 1988 legislation, when it became clear that the Congress intended to pass the legislation, I worked with members of the tax writing committees in Congress and their staffs in the development of the 1988 legislation, and I oversaw the initial activities by the IRS to carry out the provisions after enactment. After leaving the IRS in 1989, I have continued to take an interest in the subsequent Taxpayer Bill of Rights proposals including correspondence with members of Congress and discussions with their staffs about various provisions in those proposals. Some of my comments today have been adapted from, and therefore are similar to, my prior communications.

During my tenure as Commissioner I worked with your predecessor in attempting to assure that the IRS met its obligations to fully and fairly collect the proper amount of tax owed to the Federal government. In addition, I have represented taxpayers in dealing with the IRS before and after serving as Commissioner. I therefore recognize, as I know you do, the difficulties that the IRS faces in collecting the amount of tax properly owed and at the same time doing so in a fair, even-handed and professional manner.

I take seriously the importance of balancing the authority needed by the IRS to discharge its obligations with the rights of individual taxpayers in their dealings with the IRS. You well know, and I recognize, that the balancing of such authority needed by the IRS with the rights of individual taxpayers is often as difficult as it is important. This is particularly true at the present time in light of the government's need for revenue, the complexity of our Federal tax laws, and the increasing lack of confidence and respect of our citizenry in governmental authority.

In view of these competing considerations, I have considered carefully many of the provisions in the subsequent Taxpayer Bill of Rights proposals. Some of the provisions may be helpful, but I have substantial concerns about the impact of other provisions on our Federal tax system. There are three provisions that I feel so strongly about for the reasons indicated below that I urge you not to include them in any legislation that you may subsequently consider.

1. **Shifting the Burden of Proof.** H.R. 390 would change the law to provide that in any Federal tax proceeding the burden of proof with respect to all issues would be upon the IRS. As indicated in the excellent summary prepared by the Staff of the Joint Committee on Taxation for this hearing, under present law the taxpayer generally has the burden of proof in all civil Federal tax proceedings. Therefore, the change proposed by H.R. 390, if

enacted, would shift the burden of proof from the taxpayer to the government. I oppose this change because I believe it is misguided, is likely to result in increased noncompliance with our tax laws, and is likely to mislead innocent taxpayers.

The policy behind this change is misguided because, I believe, there is a failure to understand how our Federal income tax system operates. In many countries, the tax collector initially decides how much tax to assess against a taxpayer, and then the taxpayer has the burden of proving that the tax collector is wrong. In the United States, taxpayers initially decide how much tax to pay and assess themselves by filing their Federal income tax returns. On the basis of taxpayers' self-assessments, the IRS each year pays refunds that average about $1,000 each to approximately 85 million taxpayers, for a total annual cost to the government of around $85 billion.

This is particularly significant when one considers that for most taxpayers the chances are less than 100 to 1 that the taxpayer's return will be audited. Further, if a taxpayer is audited, it also is significant that the taxpayer, and not the IRS, generally has all of the records and personal knowledge of the facts surrounding the transactions and activities reflected in the tax return. In light of all this, our present system is predicated on the assumption that because a taxpayer initially prepared and filed the return based on the taxpayer's information and knowledge (and often received a substantial refund based on the return as filed), it is fair to ask the taxpayer to bear the burden of proving that the return is correct if the IRS subsequently disagrees.

In short, under our present system, the taxpayer is presumed to have correctly prepared and filed the return, and for 85 million taxpayers--almost 75 percent of all taxpayers--the IRS relies on this assumption to pay substantial refunds without any questions asked. For these reasons, it is totally inappropriate to suggest, as some have stated, that a taxpayer is "presumed guilty" until "proven innocent" under the present system.

If the Congress passes the proposal in H.R. 390, I believe that some taxpayers may be led to understate their tax and overstate their refunds. Last Wednesday's Wall Street Journal discussed a recent survey which suggests that five percent of our taxpayers cheat on their taxes, and twelve percent would do so if they thought they would not be caught. Similar studies suggest that, apart from cheating, many taxpayers are more inclined to take aggressive positions on their tax returns if they believe that they are less likely to ultimately have to pay any additional tax. If Congress passes legislation shifting the burden of proof and taxpayers become less compliant because of their belief that the IRS will not be able to prove the lack of compliance, not only will our government's tax revenues decrease but also in such event the tax burden on compliant taxpayers will increase.

Finally, taxpayers who subsequently litigate with the IRS and do not properly prepare their cases under the mistaken belief that the shift in the burden of proof means that IRS must "prove everything" may be surprised and upset when they are confronted with discovery demands by the IRS and ultimately by an adverse decision by the court. All of us who have been involved in litigation understand that in today's climate of substantial discovery, it is likely to be difficult for a taxpayer to use burden of proof as a substantial sword or shield. Taxpayers representing themselves before the IRS and the courts, however, may be misled into believing that they do not have to produce information and arguments justifying the amount of their income and deductions if the government is required to bear the burden of proof. For these taxpayers, any new legislation shifting the burden of proof ultimately may be seen as a cruel hoax.

Because of the inherent fairness of our present system, the risk of potentially substantial losses of revenue if the burden of proof is shifted, and the confusion and uncertainty of pro se taxpayers about the implications of the shift, I oppose and would urge you to reject this legislative proposal.

2. Retroactivity of Treasury Regulations. Presently, Treasury and IRS officials have discretion about the extent to which regulations can be promulgated retroactively. Under Section 5803 of H.R. 11, proposed and temporary regulations could not be applied retroactively to periods preceding the date of publication unless Congress so provided or unless necessary to "prevent abuse of the statute to which the regulation relates" or "correct a procedural defect in the issuance of any prior regulation."

As a former Commissioner and as a practitioner, I support the notion that regulations should be issued promptly after legislation is enacted in order to provide affected parties with appropriate guidance and also to avoid the problems that retroactivity creates. However, because of the volume and complexity of tax legislation so frequently passed by Congress over the last thirty years, in my experience it has been increasingly difficult (maybe impossible) for the Treasury Department and the IRS to issue regulations as promptly as desirable and needed. Further, it is my experience that, under our government of checks and balances, it often is easier for taxpayers and their representatives to block or defer the issuance of regulations than it is for the Treasury and IRS to issue them timely, particularly those regulations that are perceived to affect the interests of taxpayers adversely.

Tax policymakers and administrators must deal with the delicate and difficult decision as to whether and to what extent a regulation should be retroactive or prospective. They must deal with a variety of different situations in which retroactivity, rather than prospectivity, is called for or required. I do not believe that the exceptions in the proposal to permit retroactivity are sufficient to cover the myriad of situations and conditions in which the issues arise. Indeed, in light of these circumstances, I seriously doubt the wisdom of attempting to prescribe in advance when regulations should be promulgated retroactively or prospectively. I believe that flexibility to respond to the exigencies of the particular situation is critically important, and that such flexibility is fundamentally what is included in the present provisions of Section 7805(b) of the Internal Revenue Code.

In balancing the needs of the IRS with the rights of taxpayers, I believe that the present flexibility should be continued. Courts have fashioned numerous remedies to permit taxpayers to overturn or circumvent regulations in appropriate circumstances. Over the last thirty years the courts consistently have demonstrated a willingness to uphold taxpayers' actions despite contrary provisions of the regulations when a court determines that the taxpayer has substantially complied with his or her tax obligations or that the IRS has abused its discretion in formulating or administering its regulations. Therefore, I urge you to reject this proposal.

3. Political Appointment of Ombudsman. Presently, there is a Taxpayer Ombudsman on the staff of the Commissioner of Internal Revenue who is appointed by the Commissioner and who oversees the Problem Resolution Program (PRP) of the IRS. Section 5001 of H.R. 11 would replace the Ombudsman with a "Taxpayer Advocate" who would be appointed by the President and confirmed by the Senate and who would supervise all of the PRP personnel. As a former Commissioner and a practitioner, I have worked directly with the Ombudsman and PRP representatives, and I enthusiastically support their goals and activities. My experience suggests that the role and importance of the Ombudsman and the PRP programs are increasing. I believe that among the keys to continued

effectiveness of these programs is the need to institutionalize the attitudes and objectives of the Ombudsman and PRP throughout the policies, procedures and personnel of all of the functions of the IRS.

In my opinion, the proposal in H.R. 11 would do just the opposite. By creating a new office headed by an independent Presidential Appointee and given a statutorily mandated independent function, the proposal separates PRP. In any large organization, once a program is separated, it becomes almost impossible to institutionalize the attitudes and objectives of the program. If the present proposal is enacted to statutorily mandate the Presidential appointment of a Taxpayer Advocate to whom the PRP program will be responsible, I believe that the detriments resulting from such change will more than offset any intended benefits.

Further, I am concerned that the rigidity and difficulty of amending statutory provisions will stifle the activities of the Ombudsman and PRP. At a time when the business, organization, and activities of the IRS are undergoing substantial and continuing change, I believe that the Ombudsman and PRP must have the flexibility to make changes in organization, activities and functions that will not be permitted by the proposed statutory provisions in H.R. 11. In light of the difficulty that Congress has had in passing technical corrections bills in recent years, I do not believe that there is sufficient flexibility in the Congressional tax legislative process to be able to accommodate the need for changes in the statutory provisions that future events affecting IRS in general, and the Ombudsman and PRP in particular, may require.

I am particularly concerned that the changes proposed may politicize the Ombudsman and thereby render the Ombudsman less effective in leading and managing PRP. As you may know, the Ombudsman presently is involved personally on a daily basis in numerous audit, collection and other enforcement activities affecting specific taxpayers. Often taxpayers or their representatives request the involvement of the Ombudsman. History has taught all of us about the dangers inherent in the involvement of political appointees in such activities on a day-to-day basis at the request of taxpayers. I therefore oppose and urge you to reject this proposal.

Thank you for inviting me to testify. I will be happy to answer any questions.

Chairman JOHNSON. That is a very interesting comment. It is particularly interesting because the one thing the Congress has been really outstandingly bad at is oversight.

And then we come in with either extraordinary penalties or micro-managing the administrative structure and then we wonder why government costs more, and it is more burdensome and more tangled. But that is a thought that I will take to heart and think through.

Mr. GIBBS. Ms. Johnson, this is my second time to attend one of your hearings. I worked closely with your predecessor, and I must tell you that in terms of the quality of the hearing that was the last hearing you had with the IRS and the quality of the hearing today, you ask good, hard, tough questions. So do the other members. That is the tradition here. And I would simply tell you that I think that with the quality of the staffs that you have, and under your leadership, I think something like that could really work with the IRS.

Chairman JOHNSON. Thank you.

I do think that the Congress, as the rest of the world—but certainly government policymaking is entering a new era. I think when you have to make change in the way this society has had to make change, when you look at the change in authority from the CEO, the guy at the machine in the factory and that is true in every other sector.

But we are going to have to make that power shift in government, too. We are going to have to make the power shift from the central power to the people on the line who are dealing with the constituents. But if we are going to have any quality, we are going to have to figure out how to oversee that and in the public sector we have never been very good at that.

One of the issues that the preceding panel brought up was the catastrophic level of victimization of some people in the current system.

And all of our regulatory reform is coming from bureaucrats in EPA who will not be rational. I mean I have dealt with them and they are in every agency. And it is unfortunate because there are lots and lots and lots of folks in all those agencies who are doing a wonderful job and are thinking through the implications of the law and the circumstances of a particular case.

And it is, in a sense, the irrational one or the hard-nosed one, the one who does not give a damn anymore that gives the bureaucracy a bad name and sometimes results in the wrong kind of legal change.

So if we can do a better job of oversight and we are going to try it very soon, so that we can see what is that tangle down there that needs to be released and can it be released through that current structure.

But I thank you. I am very proud of this committee. We have been preoccupied with other things, but I think we have never had a stronger oversight committee in terms of the quality of the members and the breadth of their knowledge.

And I am looking forward to doing a far better job of oversight not only for members' knowledge, but for the public's knowledge. I appreciate your comment, thank you.

Mr. GIBBS. I think your comments, and those of the other members as well, about the ombudsman program are correct. My instinct is that it is working. What you are trying to do is to make it work better, and I understand that.

One comment to you though is that, as the Congress is beginning to look at putting things back to the local level and to the States, I am concerned because this proposal, in effect, attempts to address the problems by bringing more power and centralization into the taxpayer advocate here in Washington, D.C.

Chairman JOHNSON. Right, exactly, I understand that. I hear your comment and it is well taken.

Mr. GIBBS. Another thing that I would comment about: I thought Mr. Monks this morning said something that is very significant in the IRS culture and organization when he said, "let me sit on the selecting committees and let me review folks and their pay and promotion."

If you start building the advocate or ombudsman into pay and promotion, then there is a way of doing the matrix management. I think that will work and pick up the same benefits you see of having him involved in the field.

Chairman JOHNSON. I thought that was a very good comment. I thought the other point of his testimony that we actually did not pursue in questioning, but that was very significant is the issue of relationships within the office. How do you deal with this difficult problem and are you going to make people adversaries out there on the front line?

And how are you going to lead them as a team cooperating on tough problems that clearly are not ones that we are all proud of.

Mr. GIBBS. Yes, Madam.

Chairman JOHNSON. Mr. Alexander.

STATEMENT OF DONALD C. ALEXANDER, PARTNER, AKIN, GUMP, STRAUSS, HAUER, & FELD, L.L.P. (FORMER COMMISSIONER, INTERNAL REVENUE SERVICE)

Mr. ALEXANDER. In view of the passage of time and in view of the fact that I agree almost completely with——

Chairman JOHNSON. We are all right. You do not have to rush. We have time.

Mr. ALEXANDER. I agree completely with almost all of what Commissioner Goldberg said, and I agree with what Commissioner Gibbs said about oversight.

When I was commissioner during those tranquil days of Watergate we badly needed oversight. We needed it in the Ways and Means Committee, the best committee to give it to us. And we did not get enough of it.

I was delighted with the hearing this morning, Madam Chairman. I am delighted to hear you say that you intend to followup and have further and searching oversight hearings like this one.

IRS badly needs to have an updated computer system. I agree with what Fred Goldberg said and I agree with what he said about, please do not pass any measure which would shift the burden of proof on all issues, in all tax cases, to the IRS.

The system can stand much, but it cannot stand that.

[The prepared statement follows:]

TESTIMONY OF DONALD C. ALEXANDER
BEFORE THE
SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
UNITED STATES HOUSE OF REPRESENTATIVES
MARCH 24, 1995

INTRODUCTION

Our system of income and employment taxes imposed on a very wide base of individuals and corporations depends not only upon withholding, information reporting and reasonable but effective enforcement by the Internal Revenue Service but also upon the public's willingness to comply. The last factor does not lend itself readily to analysis, but I think that significant to the public's willingness to comply is a basic belief that the tax system is reasonably fair and is soundly administered. Unfortunately, the mind-boggling complexity of current law, much enacted largely in an effort to seek exact statutory fairness, threatens acceptance of the system and, therefore, compliance with it.

Another important element, as I see it, is how the public views tax administration. Now, no one likes to pay taxes, and no tax collector is likely to win a popularity contest. (I am continually surprised about how two former tax collectors in North Dakota were elected to the Senate.) But the job of the Internal Revenue Service is to try to make sure that all taxpayers pay the taxes due from them. This means filing all required returns, accurately reporting income and determining tax, and paying the tax due. Now there is bound to be some slippage in a system like ours, and there certainly is. If IRS' estimates of the tax gap (roughly the excess of what is actually due from legal-sector taxpayers over what is paid) are reasonably accurate, and I think they are probably low, then our budget would be almost in balance if we could close the tax gap completely and collect a reasonable part of what the illegal sector owes. Of course, this won't happen. But we need to narrow the tax gap if we can, and surely we shouldn't permit it to widen. Not only would widening the gap increase the deficit but it would also send the wrong signal to our many compliant taxpayers: Why should they pay if their neighbors don't?

The IRS is a large organization, as it must be. It should be larger. It badly needs a new computer system but in the meantime it does the best it can with the aging, inadequate system that it has. It has the vast responsibility of trying to make the system work and, like other human organizations, it is not perfect. Some of its many people at times come on too strong with taxpayers, at times are arbitrary, at times are forgetful, and at times are too lenient. I have great respect for the present Commissioner and she is doing an excellent job in trying to reconcile IRS' duty to assist taxpayers and be reasonable toward them and IRS' duty to cope with tax avoidance and evasion and collect overdue and unpaid taxes. By the way, I think it ironic that while IRS is being beat around the head and shoulders (not without some reason) for being overzealous in collecting revenues, the job of collecting child support payments is being pushed on the IRS. If IRS does such a bad job in collecting taxes, why give it an additional nontax task?

H.R. 390

This measure, proposed by Mr. Traficant, would place the burden of proof on the Internal Revenue Service on all issues in all tax cases. In my judgment, this is unwarranted and ill-advised. Within a short time it would do great damage to our broad-based income tax system. Without large increases in staffing--which I don't believe will occur--the Internal Revenue Service would be overwhelmed in its efforts to require compliance with the tax laws. Taxpayers (and there are some) who don't want to meet their obligations to their country and to their fellow

citizens would soon overlook income and make exaggerated claims to deductions and credits on their returns. The Internal Revenue Service, called on to prove in all matters and all cases that the taxpayer's reporting was wrong, would simply be unable to satisfy this burden. How can the IRS prove a negative without demanding and reviewing all records relating to a taxpayer? It would be unrealistic to believe that the many honest taxpayers who attempt to meet their tax burdens in full would not soon realize that others were beating the system and getting away with it. The tax gap would increase substantially, and compliance with the system would have a commensurate decrease. The deficit would correspondingly increase.

If Congress perceives that current law is not sufficient to rein in overzealous IRS agents, the way to meet the problem is to review and strengthen section 7430 of the Code, which calls for the United States to pay taxpayer's costs in defending against IRS actions which were not substantially justified. One must remember that IRS agents are "real people" too; they don't leave the human race when they sign on with IRS.

TAXPAYER BILL OF RIGHTS

The following represents my preliminary comments on Taxpayer Bill of Rights 2 (T2) as contained in H.R. 661 and S. 258.

My general comment about T2 is that, as a general rule, it is inadvisable to try to micromanage the Internal Revenue Service through legislation. Although the exercise of oversight responsibilities does consume valuable Congressional time, and I realize how little time Members actually have, I recommend that there be more oversight on how the Internal Revenue Service fulfills its vast responsibilities and less direction in the statute on exactly what the Internal Revenue Service must do and must not do.

1. *Taxpayer Advocate.* Let's give the current Ombudsman provision a chance to work. I think it is working reasonably well, but this can be tested, and should be tested, at Oversight hearings. A statutory taxpayer advocate of the kind envisioned would, I think, create as many problems as it would solve. In trying to balance rights of taxpayers against effective and economical administration of the tax laws, I think this drastic step is not needed at this time.

2. *Installment Agreements.*

A. Installment agreements should be fostered, not discouraged, and I believe the recent step in imposing a $43 charge for installment agreements was ill-advised and should be rescinded. If for some reason any charge of this kind must be made, it should be limited to amounts of unpaid taxes exceeding, at least, $50,000. I do not think that the authority to issue taxpayer assistance orders under IRC § 7811 should be extended to eliminate the current limitation to a "significant" hardship. In a broad sense, all Internal Revenue actions which seek to separate a taxpayer from money create "hardships", for all of us are better off with our money than without it. Surely this should not be the sole test.

B. T2 would provide an automatic right on the part of an individual taxpayer to cause the Service to enter into an installment agreement if the unpaid tax in questions is less than $10,000 and if the taxpayer "has paid any tax liability for the three preceding taxable years". If I understand this provision, I think it goes much too far. However, T2 is correct in suspending the failure to pay penalty while an installment agreement is pending, and I do not take exception to its proposal for 30-days notice by IRS if an agreement is denied or terminated. The exception for cases in which collection of tax is in jeopardy should meet IRS' administrative needs. In my judgment, any gain by

providing an administrative appeals structure is outweighed by additional costs.

3. *Interest*. T2 would extend the provisions permitting abatement of interest, and would extend the interest-free period for payment of tax after notice of demand from 10 days to 21 days. I am concerned about these provisions, particularly that calling for mandatory abatement for small taxpayers. Small taxpayers deserve to be treated exceptionally reasonably and fairly, but I don't think this should extend to interest-free loans from the Federal government to those who haven't paid their taxes. While some of the changes seem worthy, I suggest you move cautiously here to preserve equity while forestalling another rash of lawsuits.

4. *Joint Returns*. These provisions are all right with me in principle. As to technical issues, I believe that the American Bar Association will comment.

5. *Collection Activities*. This is the most sensitive area, as I see it. The Internal Revenue Service has been heavily criticized for not being an efficient bill collector, and recently some have wanted to privatize collection of taxes. Perhaps on the basis of obsolete information about how private bill collectors go about their jobs when they are paid a percentage of the amount collected, I think that if collection of taxes were privatized, within a very few years taxpayers would be beseeching Congress to give the job back to the IRS. In the past the IRS has not been fully consistent in its collection stance either from time to time or from one locality to another. Some districts have been hard-line and some have taken a much softer approach. Surely the IRS should strive to prescribe uniform and reasonable rules and apply such rules uniformly throughout the country. But curtailing IRS powers to collect taxes means, to me at least, that less taxes will be collected and more will be written off. Again, we have a balancing problem.

My specific comments are as follows:

(a) *Withdrawal of Lien Notices*; Why not? (But we need administrable standards.)

(b) *Return of Levied Property*; Why not?

(c) *Increasing Exemption Levels*; Why not?

(d) *Expanding Authority to Accept Offers in Compromise*; Clearly $500 is too low, but $50,000 may be high. Given possible integrity and other problems, I would settle for $30,000. We can always increase the ceiling further if needed.

(e) *Notice Before Examination*; Is this really needed? What happens if the notice is defective?

(f) *Limits on Recovery of Civil Damages*; $200,000 would be plenty. Raising the level to $1 million would encourage bounty-hunting by contingent-fee lawyers whose practice will soon be diminished, I hope, by the enactment of long-needed legal reform.

(g) *Review of Designated Summons*; I think this should be left to the IRS; is this legislation really needed?

6. *Information Returns*. While I think that taxpayers receiving information returns should be provided with access to those issuing returns in order to clear up questions, this proposal raises questions which, at this very preliminary stage, I am unable to evaluate. What effect would an incorrect telephone number have on the information return? On balance, I would strongly encourage

the IRS to seek to provide taxpayers with what they need, but I would hesitate to put it in the law until further consideration. Moreover, I would extend the effective date until 1996.

7. *Civil Damages for Fraudulent Information Returns;* Why not?

8. *Requiring IRS to Make "Reasonable Examination" of Information Returns;* Given the enormous volume of information returns, I think this goes too far.

9. *Section 6672 Penalty.* The exception for jeopardy situations makes the proposed requirement of preliminary notice rules of somewhat less concern, but on balance, I question whether it is needed.

10. *Warnings and Notification Requirements.* If my understanding is correct that taxpayers may not use the lack of warnings to escape the 6672 penalty otherwise due from them, then I don't object to the warning provisions. However, I have substantial doubt about whether the notification requirements are administrable, and I recommend they be dropped. Both of these issues are better handled without legislation.

11. *Litigation Costs and Fees.* I would increase the cap as recommended but omit the other changes.

12. *Other Provisions.*

(a) *Required Content of Notices.* Provided the proposed change doesn't give rise to wholesale invalidation of notices, it seems all right.

(b) *Substitute Returns.* Seems fine.

(c) *Retroactivity of Regulations.* Although I certainly don't agree with Treasury and IRS all the time about their substantive pronouncements or, in a very few cases, about their respect for the rule that sound tax administration calls for fairness and leniency in selecting the effective dates of regulations, I don't think that the proposed changes are a good idea. Let's caution the administrators to turn square corners with the public, but in this situation, as in many others, it is better to leave the law where it is. Through oversight hearings and correspondence Congress can see to it that the administrators try to do their jobs correctly. I am particularly concerned about the proposed effective date of this provision: Eliminating retroactivity of regulations would be implemented retroactively.

(d) *Required Notice of Payments.* How about 90 days?

(e) *Unauthorized Enticement of Information.* Unless I am missing something, this seems all right.

13. *Form Modifications.* Let's leave this to the administrators and ask them at oversight hearings and otherwise what they are doing to make sure that taxpayers are fully informed.

14. *Studies and Reports.* Same comments as above. Besides, I don't think a law is needed for Congress to communicate with the General Accounting Office about Congressional needs and priorities.

Chairman JOHNSON. Thank you.
Mr. Cohen.

STATEMENT OF SHELDON S. COHEN, PARTNER, MORGAN, LEWIS & BOCKIUS (FORMER COMMISSIONER, INTERNAL REVENUE SERVICE)

Mr. SHELDON COHEN. Thank you, Madam Chairman. I would associate myself with just about everything that my colleagues have said on the taxpayer advocate, I think it is important. The commissioner goes around the country saying, "I am the only political appointee in this system." I think that is important. I think that is useful. I think it breeds confidence.

As to the innocent spouse, joint liability, I was there. The case that gave rise to innocent spouse came up when I was there and I proposed that legislation.

I think that what has been proposed to you is more far reaching than has been discussed here. And I think you need to go into that in a lot more detail before you dive into a pool where there may be some fish that you do not want to be in the pool with.

As to attorneys' fees, I have not personally had a problem. But I would agree that if the government goes down in blazing defeat that is the appropriate time for it to justify itself.

On equity jurisdiction, I once said before the Appropriations Committee when one of the members put the question to me, should I have equity jurisdiction? I said, yes, I have absolute confidence in my own judgment. I said, but on the other hand, I do not have confidence necessarily in those who might replace me. So maybe you had better not give it to me either.

So you have to be very careful about giving equity—do you want the Revenue Service to respond to a sad story? It may, it may and it may do it in a way that you do not like and then your oversight is going to be all over them.

So I would think long and hard about too much equity jurisdiction. Giving me equity is to do a dis-equity to everybody else. Because they have complied with the law.

[The prepared statement follows:]

TESTIMONY OF SHELDON S. COHEN
BEFORE THE
COMMITTEE ON WAYS AND MEANS
UNITED STATES HOUSE OF REPRESENTATIVES
SUBCOMMITTEE ON OVERSIGHT
MARCH 24, 1995

Madam Chairman and Members of the Subcommittee on Oversight:

My name is Sheldon S. Cohen. I am a partner in the law firm of Morgan, Lewis & Bockius in the D.C. office. I am delighted to appear before your Subcommittee today to give you my personal views on a possible expansion of the **Taxpayer Bill of Rights.**

The Congress has visited this area -- of protecting the rights of taxpayers from real or perceived ills -- since the original Taxpayer Bill of Rights became law in 1988. Several members of this House and of the Senate have from time-to-time suggested changes to further expand the rights of individual taxpayers during audit or collection activities. H.R. 11 was included in the Revenue Act of 1992 but was vetoed by President Bush and thus never became law.

I would like to discuss a few of the provisions of H.R. 11 which I believe should be modified and one new idea which has been raised recently which would require the government to bear the burden of proof in all tax situations.

I would remind the Committee that I served in the Internal Revenue Service on several different occasions. During the period 1952-1956, I served as a legislative draftsperson during the drafting of the 1954 Code and Regulations. In the period January 1964 through January 1969, I served as Chief Counsel for one year and Commissioner of the Internal Revenue Service for four years. I have also served as a Trustee of the National Academy of Public Administration and have served as a panel member of several studies for the administrative aspects of the Internal Revenue Service. I also served as Co-Chair of a study of the collection and privacy portions of the Internal Revenue Code for the Administrative Conference of the U.S. (The changes recommended by that group, co-chaired by Justice Scalia, were adopted by the Congress in 1976.)

The object of the **Taxpayer Bill of Rights** is salutary. Every taxpayer, in dealing with his government, should be treated fairly and courteously. There is no excuse for overbearing or harsh behavior on the part of any government official in dealing with any taxpayer. Most IRS employees do their jobs fairly. When I was Commissioner, I emphasized this -- that the good taxpayers deserve it and those that try to game the system will be confounded by fair treatment.

Nevertheless, as you can understand, the job of tax collection is tough and trying. There are many occasions where either or both the taxpayer and the IRS employee's nerves will be frayed, and they will annoy each other. Because an IRS employee occasionally annoys a taxpayer is no reason to give that taxpayer rights any better than any other taxpayer. To treat one taxpayer in a beneficial manner more favorably than another is to prefer one taxpayer over the other. This is unfair and creates hardship for other taxpayers.

Thus, I do not favor the waiving of interest as provided in H.R. 11 for "any assessment of a deficiency attributable in whole or in part to any error or delay by an officer or employee of the IRS..." may be abated. It is hard for me to see why a taxpayer should pay no interest even if the IRS unreasonably delays performing a managerial or ministerial act. The taxpayer had use of the money and could have had it in an interest-bearing account. Thus, I would use a fair interest rate. If you charge no interest, you benefit one taxpayer over the other.

I am troubled by the creation of a new Presidential appointee to serve as Taxpayer Advocate. Since the 1952 Reorganization of the IRS there has only been one Presidential appointee in the IRS, the Commissioner of the Internal Revenue.[1/] Prior to 1952 there were numerous Presidential appointees and each was appointed with the recommendation of the

---

1/ The Chief Counsel is technically an Assistant General Counsel of Treasury assigned as Chief Counsel of IRS.

usual political sources. This lead to problems in the 1950s and lead to the so-called "Blue Ribbon" System we have now. If the Congress wishes to have a Taxpayer Advocate, this can be done, but there would appear to be no necessity to set up a position of such high rank which might become enmeshed in politics. I have enough confidence in this Committee's action over the years to believe it can properly monitor the role of the Taxpayer Advocate.

The Congress has from time-to-time criticized the IRS for its failure to collect all the taxes due. At other times the Congress has criticized the IRS for acting too harshly in collecting the taxes which are due. You must remember we are talking about taxes which are due or overdue and what is really necessary is determining whether the taxpayer has the capacity to pay more quickly or more slowly. Reasonable people may well disagree on these points. Reasonable notice by the government as to the change of an installment agreement may be required but not too much. Please remember the situation is very fluid and delay may cause failure to collect. That burdens the taxpayers who comply.

In regard to the provision regarding possible personal liability by an IRS employee, the House has earlier proposed such a provision. The Senate did not. The Bill as passed had no such provision. I would hope that you would go along with the Senate version again. Otherwise, you will inhibit IRS employees from acting on their best judgment on the threat of possible personal liability. The liability may not be real, but it will inhibit reasonable action out of fear. This will not be constructive for the administration of the tax laws. Likewise, it will not benefit the taxpayer as the law already gives him/her a right of reimbursement against the government.

In regard to retroactive regulations, taxpayers like them when they are favorable but violently disagree with them when they may be tighter than they want. The interpretive regulation is different from the legislative regulation. Assume the Congress passes a new provision and the Treasury issues a notice of rule making a year later -- then waits a year to complete the final regulation. The interpretive regulations merely interpret the law; it should be effective from the date of enactment assuming the courts find it to be a reasonable

interpretation. In most instances where the regulation takes a sharp departure from a prior position of the IRS, the regulations are prospective only. Likewise, most legislative regulations are prospective.

There are problems when a notice has been issued and the regulations are finalized years later. In such cases, then taxpayers often complain that they are harmed by the retroactivity of the regulation. How about the majority of taxpayers who go along with the Treasury's proposed position -- Are they harmed if you had a rule of no retroactivity. I think the compliant taxpayer would be hurt. He has followed the rule the Treasury suggested as right, but the person who pushes the edges gets the benefit of delay. I would not go for such a rule. Regulation can be fair even when applied retroactively. I don't think you can write a statute which gets it exactly right. There is too much judgment involved.

The area of the erroneous 1099, K-1 or the like is troubling. It would be good to work out a system to test these; however, it seems difficult to me to allow any taxpayer to contest the correctness of a 1099 by bringing in other taxpayers. Some system of allowing a taxpayer to prove to the IRS that the information return is in error should be allowed. I am not sure this is a prevalent problem. Certainly, the filing of a fraudulent 1099, K-1 or the like is now subject to penalty under the criminal sector of the law. I'm not sure you need more.

Another item should be raised. Some people have suggested it is inappropriate to have the taxpayer bear the burden of proof in a tax case. They assert that the government shall bear the burden of proof in all tax matters. This suggestion, while sounding nice, is quite illogical. In our self-assessment system, the taxpayer has the records and makes a self-assessment; that is, he asserts his position on his return. If the government disagrees with that position, it asserts a deficiency which the taxpayer can litigate in the courts. Historically, the first right to litigate was by way of refund. That is the

taxpayer was required to pay the tax and sue for a refund. The taxpayer, being the moving party, therefore bore the burden of proof. Next with the introduction of The Board of Tax Appeal and later the Tax Court, the taxpayer was allowed to litigate before paying, but the burden of proof stayed with the taxpayer. Thus since the inception of the first income tax in 1862 (proposed by President Lincoln), the burden has been on the taxpayer.

Now I can tell you as a litigating lawyer in private practice, I would love it if the government always had the burden of proof. But that is not fair nor is it practical. If you enact such a rule, it will dramatically effect the efficiency of the system and will result in lower collections. Think of a system where the taxpayer has all the records and the government has to prove the case. If the government has access to the records, it will demand them all (more than it really needs) just to protect itself. That would be costly and ineffective on both taxpayers and the government. On the other hand, perhaps this rule would deny to the government the records altogether. Then the tax system would be a shambles.

Although I have a personal interest in making it tough for the government (after all, I represent taxpayers now), I do not believe a change in the burden of proof would help the system in terms of fairness or effectiveness.

I have not discussed all the provisions of H.R. 11. If you would like my views on any specific provisions I have not covered, I would be pleased to address them.

Chairman JOHNSON. Well, thank you, Mr. Cohen. I think that is a very wise comment to make to us at this point. And I think every member, when they are first elected to Congress, one of the reasons I am opposed to term limits is that it is hard to understand this issue of equitable implementation nationwide.

And what fell on one of my constituents is clearly it outrageously inequitable. I could see, over time, clearly was better than the inequities that would result if we gave too much latitude in the implementation and the enforcement of tax law.

On the other hand, I do think this issue of what happens in some of these postdivorce situations is serious enough and the inequities that are resulting are serious enough that we need better guidance.

Mr. SHELDON COHEN. Oh, yes. I do not dispute that. I just say that——

Chairman JOHNSON. I would be happy to have your comments on the other side, because I think the recommendation to simply repeal this always has unintended consequences. So if you want to give us your thoughts on that particular issue, feel free to follow-on and do that. And that goes for all of you.

Thank you very much for your written testimony which we have reviewed, at least some of us have already reviewed, and it will be helpful to us as we move forward.

Thank you.

And after this vote there will be then one more vote with no time lag to speak of. So it will probably be about 15 minutes before the members are able to assemble for the final panel. I apologize for the delay.

[Recess.]

Chairman JOHNSON. My apologies for the delay but business is done around here in this kind of fractured manner all the time.

I am going to, in turning to the next panel, ask Mr. Lane to go first on behalf of the National Association of Enrolled Agents. We appreciate your testimony, Mr. Lane, and we know you have to catch a plane. So we will hear from you first and then the others in succession.

I do appreciate, very much, the panel members patience and the fact that you are all still here.

Mr. Lane.

STATEMENT OF JOSEPH F. LANE, ON BEHALF OF THE NATIONAL ASSOCIATION OF ENROLLED AGENTS

Mr. LANE. Thank you, Madam Chairman.

We have submitted written testimony and I am sure the committee has heard a lot today and I would be happy to submit my written testimony and just provide some additional comments rather than to go through all of it, if you would prefer?

Chairman JOHNSON. For all of you, your entire statement will be included in the record, that is our tradition. But we try to limit the opening statements to five minutes, and usually you are better off summarizing, particularly at this point, because you have heard the rest of the testimony, and giving us your thoughts on those other discussions.

Mr. LANE. Ok. Basically with respect to the tax ombudsmen issue, we think that the political culture within the Service would

not really allow a political appointee to effectively work as well as the current problem resolution function does.

And I think if the concern of the Congress is that they are not getting accurate information and they are not getting the types of reporting that they would like to have, then probably the best thing to do would be to address that issue much along the lines that Commissioner Gibbs suggested, that by having open hearings each year, for example, on the number of ATAO's that were issued and the interventions that problem resolution did provide for taxpayers.

But as taxpayer representatives, we feel that PRP functions fairly well and has been able to stop the enforcement divisions in their tracks when we need to have them stopped and most of the time it works.

I think the inclination of having a separate bureaucracy set up outside of the Service that the practitioners would have to deal with just provides another level of interface which I do not think really helps the taxpayers.

Now, we agree on the installment agreement provisions with one exception. We would like to see the bill amended to provide the right to an installment agreement to taxpayers that have even been delinquent in the last 3 years.

Chairman JOHNSON. Excuse me, I did not understand. The right to?

Mr. LANE. The bill proposes a right to an installment agreement.

Chairman JOHNSON. Yes, the installment agreement.

Mr. LANE. But the language in the bill says that the taxpayers had to have paid all the taxes, at least one out of the last three years, on time. There are a lot of people who, because of the withholding tables—for example, a couple that worked for minimum wage, if they both were claiming married and two they would be under-withheld when they file that joint return. And they need an installment agreement to catch up on last year's taxes.

The fact that that is just an accident of the way the tables work I think it unnecessarily penalizes those people to deny them the right to an installment agreement, and subject them to the additional late payment penalty.

Whereas if they had an installment agreement privilege they would not be charged, as the bill now proposes, with the late payment penalty.

So we would like to see that changed.

We agree with Professor Beck's proposals on the joint and several liability. I think that needs to be addressed. Clearly, that comes back to haunt a lot of us, especially out in community property states. We've got significant problems when IRS is trying to go after a new spouse's earnings on that to pay off prior liabilities. That really does complicate things.

On the collection activities, we agree with the ability now to withdraw an erroneously or prematurely filed lien. And we would also like to see additional restrictions put on Service employees who are employed in the automated collection sites, the ACS sites, or their replacement sites, the new taxpayer service sites, from being able to put liens on accounts without some better managerial review than they currently are subjecting them to.

One of the problems we have is we have these people who are trained very, very superficially on the impact that a tax lien has on a taxpayer's credit ratings. And they file these liens. And by the time the case gets to the field, the lien is already on file and it really complicates the ability of the taxpayer and the tax practitioner to be able to resolve that case using commercially available credit resources.

So it forces these people into very much more expensive installment agreements with the Service. And it is not to anybody's benefit to do that. It runs your accounts receivable inventory up and it hurts the taxpayer.

We would like to see the third party recordkeeping requirements extended to enrolled agents, just as CPAs and attorneys now have it.

One of the other concerns that we have is about H.R. 390. We think that is really a mistake. That legislation, which on the surface, appears to be mom and apple pie, really ought to be titled, the Tax Evasion Enabling Act of 1995. I mean it really complicates the process for the Service to administratively resolve these things.

What it does is this. It takes the burden off the taxpayer who files the tax return to provide the documentation, and puts that burden on every other taxpayer they did business with during the year. Because instead of having the intrusion between the taxpayer who filed the tax return and the Service auditing him, the intrusion now involves every other taxpayer that the Service has to involve to document the audited taxpayer's expenses or income. It really is not a fair process.

We have some additional suggestions for improvement and areas of concern. We think that any Taxpayer Bill of Rights ought to address the fears that the Service stirs up with taxpayers when they announce new programs.

There are a couple of changes that they recently announced that obviously are causing a lot of people concern. In the collection function, they have implemented user fees on people that require installment agreements.

As we heard in testimony at the rulemaking hearing, in January at IRS, if you had a taxpayer who worked for minimum wage, this user fee that they are now charging to let this guy have an installment agreement is 2 days pay.

That is an outrage. These are the people who can least afford to pay. When you consider the tax, the interest, and the penalties that they are paying, the interest and penalty charges, in total, would be usurious under state law, anywhere in this country. The only reason they are not is because the Federal Government is charging them.

But to tack on an additional $43 user fee is outrageous and we think that ought to be taken back.

The other program that is stirring a lot of concern up lately, with practitioners and taxpayers alike, is this new announcement that they are going to be pursuing the economic reality, or lifestyle audit. And that has got a lot of people concerned about why IRS needs access to all of their financial data and whether or not they are going to be using credit reports.

Obviously they are concerned about the abuse potential that exists. The practitioners are concerned because one of the key elements——

Chairman JOHNSON. Lifetime audits——

Mr. LANE. Lifestyle audits. In other words, what the Service is going to be looking at is the economic reality of that taxpayer. What they have said in their publications is that they are no longer auditing the tax returns, they are going to audit the taxpayer.

In other words, if you have got $30,000 on your return, how do you have a $400,000 house? Those types of questions. And all of their auditors are going through training right now on that topic. They are going through a 32-hour training course this month and last month.

The concern in the practitioner community—and I think it will probably be voiced by other people on this panel today—is that one of the key elements of the 1988 Taxpayer Bill of Rights Act was the absolute right of taxpayers to have representation and the right of those representatives to stand in the shoes of the taxpayers.

The way that these economic reality audits are being constructed, the advice the Service is giving to their auditors is that when it comes to lifestyle questions, the representatives are really not equipped to answer it and a taxpayer has to be present at the audit.

So that is going to stir up that whole issue we thought we finally had buried years ago. I think everybody probably will reflect the same concern.

Those types of announcements and programs that get introduced get people stirred up. I think that the key element of all of these Taxpayer Bill of Rights proposals ought to be that the Enforcement Divisions of the Service are able to do their job with the least amount of impact and adverse harm on taxpayers that they come in contact with.

That ought to be the over-arching goal of all of these proposals and changes.

I would be happy to take any questions you may have.

[The prepared statement follows:]

TESTIMONY OF JOSEPH F. LANE
NATIONAL ASSOCIATION OF ENROLLED AGENTS

Madam Chair Johnson, Ranking Member Matsui, members of the Subcommittee on Oversight, thank you for the privilege of testifying today. My name is Joseph F. Lane and I am an Enrolled Agent engaged in private practice in Menlo Park, California. Prior to commencing private practice fifteen years ago, I served with the Internal Revenue Service for almost ten years. While with the Service, I served at the District Office, Regional Office, and National Office levels and was the Collection Division Chief for the State of Hawaii, the Taxpayer Service Division Chief for the State of Connecticut, and the Resources Management Assistant Division Chief for the Manhattan District. I am here to testify on behalf of the National Association of Enrolled Agents (NAEA).

NAEA appreciates the opportunity to testify on behalf of its approximately 9,000 Enrolled Agent members and to speak for the individual and business taxpayers whom we represent. Enrolled Agents are professional individuals whose primary expertise is in the field of taxation and taxpayer representation. As the Committee members well know, the Enrolled Agent profession was created by an Act of Congress in 1884 to provide for competent and ethical representation of claimants before the Treasury. We are proud to say we have been diligently fulfilling this role for the American taxpayer for the past 111 years.

Enrolled Agents establish their expertise in taxation and taxpayer representation by either passing the Internal Revenue Service's comprehensive two-day examination on federal taxation or by serving as an IRS employee in an appropriate job classification for at least five years. NAEA members maintain their expertise by completing at least 30 hours of continuing professional education each year. Our members work with more than four million (4,000,000) individual and business taxpayers annually.

It is in our role as the voice for our members and for the general taxpaying public that NAEA submits this testimony on a proposed Taxpayer Bill of Rights 2.

Our testimony is prepared following the outline of the major titles of H.R. 661 for ease of reference and is as follows:

Title I - Taxpayer Advocate

We have reviewed the proposal for the establishment of the Office of the Taxpayer Advocate within the Service and have several concerns about this suggestion. We do not see a clear benefit from replacing the current Taxpayer Ombudsman position with the new Taxpayer Advocate position.

It is our feeling as taxpayer representatives that the Problem Resolution function as currently organized serves the taxpaying public well, is responsive to taxpayer complaints, and is endowed with sufficient ability to effect changes in the direction of action proposed by the enforcement divisions. It is not clear from the proposed language in the Bill if this Taxpayer Advocate would be a political appointee, although the mention that he or she would be compensated at the same level as the Chief Counsel would seem to indicate that this individual would not be a career Service executive.

We believe the organizational culture of IRS would severely inhibit the effectiveness of any political appointee placed in charge of a Service-wide network of career civil servants such as the Problem Resolution function. It would be far preferable to maintain the current structure, which, at least, has the benefit of wide-spread support within the Service and work to improve the reporting mechanisms back to the Congress if that is of concern. With respect to the Annual Reports due the Committee, we feel the Bill's approach is in error when it does not permit the Commissioner's staff to review and comment. If the Congress believes that it is not getting accurate information from the Commissioner, it has the ability to ask the GAO to study the question or verify the data. We question the advisability of requiring an employee of the Commissioner to prepare

"secret" reports to the Congress without coordination within the agency. Any proposal which sets up the Taxpayer Advocate function to be viewed as adversarial to the rest of the Service will be counterproductive to the Bill's intent.

Title II - Modifications to Installment Agreement Provisions

We agree with the proposed changes in the installment agreement section of the Bill with the exception that we believe that the right to an installment agreement ought to be extended to all taxpayers, even those who may have been delinquent in the past three years. Many installment agreement taxpayers are married couples earning minimum wages who discover to their dismay that the withholding tables leave them under withheld when they combine their wages for tax reporting purposes on their joint return. Many of these people have had installment agreements each year to finish paying off their prior year's liability. The fact that they have had taxes due each of the prior three years should not bar them from having the right to an installment agreement, especially since the only really practical way of collecting from these people is by installment agreement. Since this is the case, why make these people subject to the additional penalty charges which will accrue on their account?

We support the proposal to suspend the running of the failure to pay penalty during the period of the installment agreement. This gives real incentive to taxpayers to stay current with their installments, provides very real relief from the "crushing" accumulation of interest and penalties and restores the taxpayer involved to the ranks of compliant taxpayers sooner. The only change we would like to see is that this penalty relief be extended to those taxpayers in notice status after assessment and not just those taxpayers who request an installment agreement on or before the due date of the return. As currently drafted, the Bill provides an advantage to the taxpayers who have professional tax practitioners prepare their returns. They will be advised to request an installment agreement when they file. Those taxpayers who prepare their own returns or who may not be able to afford professional assistance would find out too late that this relief provision was available. This would place taxpayers least able to afford it at a disadvantage.

We also support the proposals which establish a notice requirement and a review process in the event the Service decides not to extend an installment agreement to the taxpayer. We urge the Congress to define what constitutes jeopardy situations wherein the Service can disregard the notice requirements required by the Bill. In our experience, what Service employees define as jeopardy situations often fail to meet any objective understanding of the term, in any judicial sense of the word.

Title III - Interest

We agree with the proposed modifications to the law governing interest due and applaud the extension of the interest free period for payment of tax after notice and demand is given. The ten day provision has long been unreasonable. We would like to see the period extended to thirty days. We would also like to see special provisions for extension of the interest free period beyond the thirty days if it can be demonstrated that the taxpayer had no knowledge of the assessment ever being made and had not received notice and demand.

Title IV - Joint Returns

We endorse the proposal to permit disclosure of collection activity data to the joint parties of the assessment. This is a change which has long been overdue in terms of equity to taxpayers and in terms of permitting the Service to defend its actions on cases.

Title V - Collection Activities

The proposals to permit withdrawal of prematurely or erroneously filed Notices of Federal Tax Lien are excellent. In addition, we would like to see restrictions on the ability of Service employees in the Automated Collection Sites or the replacement Taxpayer Service Centers to file Notices of Federal Tax Lien without proper managerial reviews for appropriateness and suitability. All too often, liens filed by ACS prevent taxpayers and their representatives from utilizing commercial credit sources to retire tax debts thereby necessitating more expensive installment agreements with the Service, a situation from which neither the Service nor the taxpayer derive any benefit.

The increased levy exemption amounts are too low, in our opinion. The amount of personal effects exempt from levy ought to be $2,500.00 with additional annual adjustments as proposed for indexing inflation. The tools of the trade exemption ought also to be $2,500.00, with future indexing. In addition, a business vehicle such as a truck or specially adapted vehicle ought to be allowed to be excluded up to the levy exemption amount. The Service currently maintains that the levy exemptions do not apply to motor vehicles, regardless of their manner of use.

We agree with the modification requiring District Counsel review on Offers in Compromise over $50,000.00. The prior threshold amount of $500.00 was absurdly low and contributed to a backlog in processing cases efficiently.

We agree with the provisions which would increase the limit on recovery of civil damages for unauthorized collection actions.

We would like to see the definition of third party record keepers extended to Enrolled Agents for purposes of the administrative summons provisions.

We would note that under Circular 230, Enrolled Agents have the same professional rights and responsibilities with respect to their practicing before the IRS as do attorneys and certified public accountants.

As I mentioned earlier, an individual does not become an Enrolled Agent without first demonstrating special competency in tax matters. This may be achieved by working for the IRS as a tax specialist for a minimum of five years or by passing a rigorous examination. This demonstration of competency is similar to that imposed on attorneys and certified public accountants. Furthermore, Enrolled Agents are required to maintain their competency through 30 hours of continuing professional education each year. Again, this parallels the continuing education requirements for certified public accountants and attorneys.

Finally, Circular 230 requires persons maintaining records for others to assist the IRS in the agency's efforts to conduct legitimate and effective investigations. Under Section 10.23 of Circular 230, Enrolled Agents, as well as attorneys and certified public accountants, may not unreasonably delay the prompt disposition of a matter before the IRS. Also, to the extent a client of an Enrolled Agent, attorney, or CPA has knowledge that a client has violated the revenue laws of the United States, that professional is required to promptly advise the client of the omission.

This revision would provide fair protection to taxpayers and to their representatives without causing undue restrictions on the Service.

The imposition of Counsel review in the case of corporate summons issuances is a good change, as is the requirement of notice to the corporation of summons issuances to other persons in connection with the corporate audit.

Title VI - Information Returns

The proposal to establish civil damages for fraudulent filing of information returns is long overdue and should be enacted. We have seen many innocent people, both taxpayers and government employees damaged by these fraudulent filings. It is important to insure that these violators are prosecuted to the full extent of the law. Of course, our support for this new provision goes hand in hand with the inclusion of the new proposed subsection which requires the Service to conduct reasonable investigations of information return disputes.

Title VII - Modifications to Penalty for Failure to Collect and Pay Over Tax

The proposed changes relating to proper notification are good changes. We have all seen cases where no prior notice was provided to taxpayers before assessment and taxpayers were ill-equipped to defend themselves years later due to unavailability of records.

We would like to see additional language in the statute providing exactly when the statutory period for assessing the Trust Fund Recovery Penalty commences and expires. For many years, there was common agreement between the Service and the practitioner community that the period for assessment was three years from the presumptive filing date of the employment tax returns from which the liability arose. The Service in recent litigation has tried to make the case that the Trust Fund Recovery Penalty does not arise from any particular employment tax return and therefore is not subject to the three year rule but rather that there is an "open" statute of limitations. Despite a decades long record of representing in court after court and case after case that the three year statute of limitations rule applied to Trust Fund Recovery Penalty cases, the Service is now contending that the Trust Fund Recovery Penalty is a "separate and distinct" liability from the employment tax liability of the employer entity. Taking this position means that there is no Internal Revenue Code Section 6501 (a) limitation period trigger. The Service is maintaining that since Congress never specified that Section 6501(a) or any other statute of limitations should govern Section 6672 assessments, there is no statute on these assessments. We do not believe this was the original intent of Congress and neither did the Service for many years. We urge Congress to put this flagrant ruse to an end immediately by stating in this Taxpayer Bill of Rights legislation that the Trust Fund Recovery Penalty assessments are subject to the statute of limitations provisions and requirements of IRC Section 6501(a).

We support the proposal to permit disclosure of information to other persons assessed the same Trust Fund Recovery Penalty concerning the status of IRS efforts to collect from fellow assessees. We believe that this change will insure a more even-handed collection effort by the Service - which in the past has tended to pursue the easily available parties disproportionately.

Title VIII - Awarding of Costs and Certain Fees

We support the proposed modifications for motions for disclosure of information and for the increase in attorney's fees.

Title IX - Other Provisions

The proposal to grant relief from retroactive application of Treasury Department regulations is acceptable provided that the section providing the taxpayers with the right to elect retroactive application is also approved. This would permit taxpayers to avail themselves of beneficial rulings.

We also support the requirement to notify taxpayers of payments which the Service cannot identify and associate properly with their account.

The new provisions for civil damages for unauthorized enticement of information disclosure appear to be acceptable.

Title X - Form Modifications; Studies

We particularly note the importance of the Congressional oversight of IRS employee misconduct. We urge that the Service be required to report to the Committee on an annual rather than a biennial basis. In addition, we urge that the Privacy Act be amended to permit reports back to taxpayers and their representatives regarding specific allegations of employee misconduct brought to the Service by taxpayers or their representatives once the Service has reached a final determination and personnel actions have been taken. This process insures taxpayers and the practitioner community that the Service follows through on allegations of employee misconduct and subjects employees to disciplinary actions when deemed warranted.

Comments on H.R. 390 : "Burden of Proof"

We have reviewed the provisions of H.R. 390 and find that the proposed changes with respect to shifting the burden of proof in civil cases from the taxpayer to the Secretary are much too radical. If Congress is seriously giving this proposal consideration we believe all taxpayers have serious cause for concern about the stability of our taxation system. **If we only represented tax evaders we would whole-heartedly endorse this proposal!** But we represent millions of compliant taxpayers who diligently maintain their books and records, compile their annual tax return data and self-assess themselves. These taxpayers are the rock-solid base of our entire voluntary compliance system. It is for these taxpayers that we register our concern about the proposed changes sought in H.R. 390.

If this change is adopted, the Congress shifts the burden for proving any one taxpayer's income or deductions not only from that individual taxpayer to the Service but also to every other taxpayer and business entity the individual being audited transacted business with in any given tax year. The record keeping requirements would far exceed anything imaginable under our current system and would cost all taxpayers far in excess of the amount they now expend. Aside from the essential unfairness of expecting everyone else the taxpayer deals with to assist the Service in making proper tax determinations, we also feel that the basis of our system assumes that taxpayers will have records to support the self-assessments they file. They are, afterall, the ones who had the income and the expenses and are best in the position to establish, at the least cost and time, what those items were.

We believe the Internal Revenue Code, as presently structured, provides manifold safeguards for taxpayers to administratively proceed through the Service and Courts to arrive at correct tax determinations. The Congress should be very wary of changing procedures as fundamentally as those proposed in H.R. 390 because the consequences on taxpayer compliance with such drastic change cannot be accurately predicted or measured.

Additional Suggestions for Improvement

We are encouraged by the prompt attention shown to the issue of Taxpayer Rights by the 104th Congress. Many of the areas addressed in the proposed legislation were addressed in H.R. 11 and deserve to be brought back on the table now. We have provided our frank opinions on these issues and made suggestions where we felt the proposed legislation needed additional emphasis.

Whenever we are addressing the issue of taxpayer rights, we think it appropriate to point out that the really serious matters regarding taxpayer interface with the Service occur at the enforcement Division level. Taxpayer concerns run highest when forced to deal with the reality of being audited or owing taxes. We believe any effective, worthwhile Taxpayer Bill of Rights will address concerns about how these Divisions carry out their responsibilities while at the same time inflicting the least possible harm on the taxpayers involved.

By way of illustrating taxpayer fears we feel should be addressed by any Taxpayer Bill of Rights, we offer the following procedures or policies the Service recently embarked upon or announced which have heightened concerns among taxpayers about their vulnerability in dealing with Service employees. For example:

- The Collection Division is in the process of developing new procedures to be employed when evaluating the taxpayer's ability to pay delinquent taxes. These new procedures, which concentrate on determining what are necessary monthly expenses and what constitutes reasonable amounts for those expenses, are an attempt to satisfy GAO criticisms about the Service being "too lenient" when determining taxes are currently not collectible. The new approach basically relies on Bureau of Labor Statistics data about family expenditures to set standard expense levels for taxpayers. We believe this process would be acceptable if the taxpayers could not document their true level of expenditures and the Service relied on the BLS data as a base. We disagree about using these statistics when taxpayers have ample documentation about their family expenditures to offer in their stead.

- The Collection Division has recently implemented a "user fee" charge on taxpayers who require installment agreements to pay off their delinquent taxes. We opposed this "user fee" in our testimony before the Service's committee on the proposed rule making and oppose it again here in our testimony. We think user fees ought to be prohibited for installment agreements. Taxpayers who need to pay on installment already pay interest and late payment penalty charges which would be considered usury under most state laws. To heap on them yet another charge for the cost of servicing their account is an outrage. To put it in perspective for the Committee, if the taxpayer is working for the minimum wage, the user fee is approximately two days pay!

- The Examination Division has recently announced the commencement of "economic reality" audits whereby the taxpayers, not the tax returns, will be audited. This interest in the taxpayer's lifestyle has aroused a great deal of concern among taxpayers. Taxpayers are fearful of their every financial transaction being scrutinized by the Service, apprehensive about their credit files and other financial data being subject to Service review on a wholesale basis, and frankly concerned about Service employees abusing the right to inquire into their financial records. We cannot fault the Service for seeking to make its audits more productive or for its effort to search out undeclared income - after all that is the primary mission of the organization and as taxpayers we support them. But, at the same time, we have grave concerns about the potential misuse of this confidential taxpayer data and concerns about who in the Service gets to decide in what circumstance the expansion of an audit into questions of lifestyle is appropriate. We also would like to see a requirement that the taxpayer be informed at the onset that the audit will delve into lifestyle issues.

- There is a great deal of speculation among the practitioner community that one of the primary motivations of the Service in choosing to 'audit" the lifestyles of taxpayers is that it provides a way to bypass the practitioner and get directly to the taxpayer thereby defeating one of the primary provisions of the Taxpayer Bill of Rights - the right of the taxpayer to secure representation and the right of the representative to "stand in the shoes" of the taxpayer. The IRS training manuals

for economic reality auditing provide guidelines for auditors that suggest that only the taxpayer is able to respond to "lifestyle" issues and therefore their presence at the audit should be required. This viewpoint obviously has taxpayers and their representatives concerned about IRS intentions for these cases.

Again, the members of NAEA thank you for this opportunity to present their views to the Subcommittee on these important issues. We offer our assistance to provide any additiional information raised by these comments or other areas of concern.

Chairman JOHNSON. Are there questions of Mr. Lane since he has to leave?

[No response.]

Mr. LANE. Actually I will have to leave probably sometime during this panel but I do not have to run right now. I will be here probably about another 40 minutes.

Chairman JOHNSON. Well, I will give the members a chance. Your comments have been very helpful and have gone to a lot of things that have been raised.

Mr. LANE. Thank you.

Mr. PORTMAN. Thank you Madam Chairman. First of all, Mr. Lane, I appreciate your testimony. You have seen it from both sides based on your brief bio at the beginning of your statement and therefore, your statement has particular credibility.

Now, just on the burden of proof for a moment, are you saying flat out, the burden of proof should not be shifted in any of these civil cases, and that there is nothing we can do short of an entire shift to address some of the concerns that have been raised earlier?

Mr. LANE. I think the burden of proof properly rests with the government when you have a criminal prosecution. But in a civil matter, common law and I am sure the bar, will lecture us in detail on what the common law is on this, but I mean the statements we have heard already today from the commissioners and from the IRS—it has always been the case that the person with the information should be able to document it.

We have a voluntary assessment system and the easiest and most effective way of auditing those tax returns is to go to the taxpayer who prepared them. Not to shift that burden to the backs of every other taxpayer in the country. We said in our testimony if we only represented tax evaders we would be wholeheartedly in support of this bill. But we represent millions of people out there who, every year, diligently keep track of their records and account for their income and expenses, and prepare tax returns and self-assess themselves.

To shift the burden on those poor people, the 82 or 83 percent of the population that complies, to be able to make cases against the 5, or 10, or 15 percent of the people that do not comply is really onerous. The cost to those people to maintain the records needed to answer all these IRS summonses would be just an outrage.

There is one other thing in my testimony that I did not cover. That is one of the changes that we would like to see included in this bill. Recently with respect to the 100-percent penalty or the trust fund recovery penalty, the Service for decades has maintained that there was a 3-year statute of limitations on the assessments for that penalty. They had 3 years from the presumptive date of filing of the employment tax returns from which that assessment arose, or that liability arose.

They recently have started to take the position that because Congress did not specify that section 6501(a) was the controlling statute of limitations on that 6672 assessment, that they had an open assessment and they had no rule they had to follow.

They have not done that for decades. They have taken the opposite position. We have always taken that position and I think we

should have it mandated, in law, that they will follow 6501(a) for purposes of making that trust fund recovery penalty assessment.

This is only just. I do not know where this ruse has come from lately, but it is an absurd position to take after they have taken this other opposite track for 30 years.

Mr. PORTMAN. Thank you, Madam Chairman.

Chairman JOHNSON. Thank you. Thank you for your testimony. It was really very helpful.

Mr. LANE. Thank you.

Chairman JOHNSON. I did not realize you had served in Connecticut, too.

Mr. LANE. Thank you.

Chairman JOHNSON. Let's start with Mr. Cohen.

STATEMENT OF N. JEROLD COHEN, CHAIR-ELECT, SECTION OF TAXATION, AMERICAN BAR ASSOCIATION

Mr. JEROLD COHEN. Thank you, Madam Chairman. The tax section, of course, has 25,000 members and it is the largest and broadest based group of tax lawyers in the country. I would like, on behalf of the section, as you begin your period of leadership of this subcommittee, to congratulate you and extend to you our commitment to work with this very important subcommittee in the improvement of the U.S. tax system.

We think that this subcommittee's oversight functions are often more important in improving the tax system than the enactment of specific legislation. And in that regard I would like to mention three items that are not contained in the legislative proposals and should not be. But that we would commend to the oversight subcommittee to watch.

The first is the Service's field service advice program. That is a program for advice between attorneys in the national office and the field concerning specific taxpayer audits.

Our concern is that the taxpayers have no input into the factual information coming back to the national office, no way to find out what has come out of that, and no ability to challenge positions being taken.

We are in a dialog with the IRS concerning that, but we do think it is something that the subcommittee should be aware of.

The next is third-party information access. A potentially very attractive source of information for the IRS, especially in cross-border transfer pricing cases, is access to information of third parties who have nothing to do with the audit that is under examination.

These taxpayers are merely in the same business and may even be competitors of the taxpayer under audit. Now, that information may be very important to the IRS but the inquiries, often with summonses, raise real questions of confidentiality, especially when you are after proprietary information from competitors.

That often also can impose a very strong burden of data collection on the third party. So we think this subcommittee should be aware of those inquiries by the Service.

And, finally, we too are concerned about the new user fees on installment agreements. Those fees really should have a limit on them as to the amount of tax involved, and the income of the per-

son seeking the installment agreement. Low-income taxpayers should not be subjected to those user fees.

Now, none of those do we think we need legislation on, but we do think they come within this subcommittee's purview. The comments we filed today on the bill of rights are very detailed on the H.R. 661 and I will not go over those.

I would like to mention two provisions only. Now, the first is section 903 concerning retroactive regulations. It would put further limitations on the Treasury in enacting regulations that have retroactive effective dates.

We think that the Treasury has been very responsive to the need to balance fairness with the need for uniformity and clarity of the tax laws. We are afraid that this would slow down the regulatory process and, thus, we do not support that provision.

The next provision on which I would like to comment is not one that we do not support. It is the 100-percent penalty provisions, section 701 through 703. We do support most of those, but we would like to suggest that there is a real problem that could be handled legislatively here.

That is the right of a taxpayer who has paid the 100-percent penalty, as a responsible officer, to seek contribution from others who are also responsible. That right is not available in many States. They do not afford it for a Federal penalty and we think that the taxpayer fairness requires that taxpayers who have paid that penalty be able to seek contributions from others who are equally responsible for it, and perhaps even more responsible for it.

Finally, Madam Chairman, I would like to mention another matter that is very closely related to taxpayer rights, and on which we are very concerned. And that is the proposal in H.R. 390 to shift the burden of proof.

We think that the current law shifts the burden of proof in the appropriate circumstances. It does shift the burden to the Government in the case, for example, of civil fraud, contrary to what I saw in Mr. Traficant's statement, it shifts it when new matters are raised by the commissioner before the tax court. But to shift it wholesale, we think, would place a tremendous burden on the Government, and it would result in very intrusive audits and would have severe financial consequences for the FISC.

So we believe this single change in the law would have a very significant and very adverse effect on our system.

Thank you, Madam Chairman, for allowing me to represent the section before you today.

[The prepared statement follows:]

TESTIMONY OF N. JEROLD COHEN
ON BEHALF OF THE AMERICAN BAR ASSOCIATION

SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
UNITED STATES HOUSE OF REPRESENTATIVES

March 24, 1995

Madame Chairman and Members of the Subcommittee:

My name is N. Jerold Cohen. I am the Chair-Elect of the American Bar Association's Section of Taxation. The views I will express today are presented on behalf of the Section of Taxation. Unless otherwise noted, they have not been approved by the House of Delegates or the Board of Governors of the American Bar Association and, accordingly, should not be constructed as representing the position of the Association.

The Tax Section of the American Bar Association is comprised of approximately 25,000 tax lawyers located throughout the United States. As you begin your period of leadership of this very important Subcommittee, we extend to you our congratulations and our commitment to work with you, the other Members of the Subcommittee, and the Subcommittee staff in your efforts to further improve the U.S. tax system.

We appreciate the opportunity to appear before the Subcommittee today to comment on legislative interest in a second taxpayer bill of rights. Our comments are divided into three parts: first, I will offer some general comments on taxpayer rights legislation; second, I will comment on H.R. 661, the Taxpayer Bill of Rights 2, introduced in the House by Congressman Thornton; and, third, I will discuss a related matter of interest and concern to our members.

I. **Taxpayer Rights Legislation - General Comments**

Permit me to begin by reemphasizing the Tax Section's strong support for the ongoing work of the Oversight Subcommittee in monitoring the state of U.S. tax administration, including the effectiveness and efficiency of the Internal Revenue Service ("Service"). In our view, the Subcommittee's oversight activities often are more important in improving the functioning of the tax system than the enactment of specific legislation. Subcommittee hearings, such as today's, provide the American people an important forum for the discussion of perceived problems with tax administration and, thus, serve as a constructive mechanism for helping the Service properly carry out its mission.

We have a very strong interest as an organization of tax professionals in fostering a tax administration system that:

- applies the tax laws in a fair and evenhanded manner,
- aids taxpayers in fulfilling their obligations under the law,
- is sensitive to the impact that taxes and tax administration have on peoples' lives, and
- operates efficiently and effectively.

Notwithstanding our view that perhaps the greatest value of this Subcommittee's activities is its public oversight function, we recognize that there are issues of tax administration that cannot be solved merely by talk or administrative action but, rather, require a legislative

resolution. Occasionally, when we raise an administrative issue with the Service, we are told that restrictive legislation or a lack of legislative authority precludes the Service from correcting the problem. In such cases, we will bring the issue to the Subcommittee's attention, and, if appropriate, propose or support the Treasury Department's proposal of specific remedial legislation.

Inevitably there will be instances when we, as tax practitioners, and the Service or Treasury will disagree on a tax administration issue. There also may be legislative initiatives put before you that appear to be very popular with the public but which we believe, if enacted, would damage the tax system by seriously impeding the Service's ability to perform its tax administration obligations. In such cases, in spite of a proposal's public popularity, we will express our opposition.

One of the possible consequences of consideration of further taxpayer rights legislation is the danger that the Congress will attempt to micro-manage the Service. However, micro-management of the Internal Revenue Service by the Congress, in our opinion, is a mistake. As our country's "Board of Directors," the Congress plays a central role in making sure that the tax system is functioning satisfactorily. But as with any large organization, the day-to-day management of the Internal Revenue Service is best left to its officers and key employees.

As I indicated, we think that one of the values of a public discussion of taxpayer rights is the opportunity to identify issues that do not necessarily require a legislative response, but are of sufficient importance that the Subcommittee may wish to encourage a more in-depth analysis by the Service, the Treasury Department, the Subcommittee staff, the staff of the Joint Committee on Taxation or the General Accounting Office. There are four such areas that I would like to mention briefly today.

- **Field Service Advice** - The first matter involves what is known as "field service advice." During the past two years, the Service has adopted procedures governing communications between field and National Office personnel with respect to issues that arise in the audits of specific taxpayers. Although generally the Tax Section recognizes the importance of, and supports efforts to facilitate, interaction between Service field personnel and their lawyers in the National Office, the lack of any taxpayer involvement in the National Office's consideration of taxpayer-specific issues brought to its attention in the field service process and the lack of any ability to challenge positions taken by National Office personnel troubles us. We have expressed our concerns in a July 14, 1994, written submission to the Service, and we hope that the Service will take our comments and those of other interested organizations into account as these procedures are refined. Field service advice is a very sensitive area from the taxpayer's perspective, and it may merit future review by the Subcommittee.

- **Third-party information** - The second matter relates to the Internal Revenue

Service's access to so-called "third-party information." The Service apparently is of the view, perhaps properly, that it needs factual information in addition to that which it can obtain from the taxpayer under audit or from public sources in order to administer a system of arm's length transfer pricing. A potentially attractive source of additional information is third parties engaged in the same or a similar business to that of the taxpayer under audit. However, these third parties may have absolutely no relationship to the matter at issue and often are competitors of the taxpayer under examination. Under such circumstances, an inquiry from the Service into the third party's business affairs, using the Service's administrative summons authority, raises very important issues regarding the confidentiality of third-party information, particularly proprietary information. It also potentially imposes a significant data collection burden on the third party in connection with a matter with which it is not concerned. Because of the sensitivity of this audit technique, the Subcommittee might consider examining the relevant policy issues.

- **Advance rulings process** - A third area that may merit possible review by the Subcommittee is the Service's advance rulings process. Two developments relating to the Service's rulings program are of concern. First, the number of published revenue rulings, revenue procedures, and other advice of general applicability has gone down dramatically over the past 10-15 years.[1/] Second, access by individual taxpayers to advance rulings on specific transactions appears also to have decreased as the Service has expanded the number of areas in which it will not rule.

  Service rulings, both published rulings of general applicability and those that are taxpayer specific, are an important part of a properly functioning self-assessment system. If taxpayers are expected to file accurate returns that correctly apply the law, then the Internal Revenue Service must be given the resources - and it must devote those resources - to provide the necessary advance guidance. Otherwise, not only will taxpayers be frustrated by the lack of guidance, but we also are convinced that in some cases they will be reluctant to undertake desirable business transactions because of the uncertain tax results. In other instances, we fear that compliance levels will decrease.

[1/] This comment excludes an analysis of the issuance of regulations.

- **Installment Agreement User Fees** - On December 26, 1994, the Service issued proposed regulations (PS-39-94) that would impose user fees on taxpayers who enter into installment agreements for paying their tax liabilities. Under the proposed regulations, the fee for entering into a new installment agreement would be $43.00, and the fee for restructuring or reinstating an existing agreement would be $24.00.

  Although the dollar amounts of these user fees might appear minimal to most taxpayers, we are very concerned that they will impose a financial burden on low income taxpayers. We find it particularly troublesome that these fees could be imposed on low income taxpayers who by entering into payment agreements with the Service are attempting to meet their obligations to the Federal Government. Moreover, as a practical matter, requiring payment of a user fee for the privilege of entering into an installment agreement by persons with scarce resources will have the effect in many cases of merely reducing the amount of tax that the Service ultimately would receive. For these reasons, the Section recommends that the Subcommittee urge the Service to exempt low income taxpayers from the proposed installment agreement user fees. If the Subcommittee concludes that legislation is necessary to accomplish this objective, we would strongly support such legislation.

II. Taxpayer Bill of Rights 2 (H.R. 661)

Now, I would like to turn to the second part of our statement, which contains our specific comments on H.R. 661, the Taxpayer Bill of Rights 2.[2/] I will refer only to selected portions of the bill. A more detailed analysis has been provided to the Subcommittee staff.

A. Taxpayer Advocate

Section 101 of H.R. 661[3/] provides for the appointment of a senior Service official to be known as the Taxpayer Advocate, who would report directly to the Commissioner of Internal Revenue ("Commissioner").

Previously, our members opposed the provisions relating to the establishment of a Presidentially-appointed Taxpayer Advocate, for two principal reasons. First, they were concerned about the danger of improper influence within the Internal Revenue Service by a political appointee and second, they thought that, as a Service official, the Taxpayer Advocate should be accountable to the Commissioner. We are very pleased that H.R. 661 has abandoned the prior proposed

---

[2/] The bill also has been introduced in the Senate by Senator Pryor as S. 258.

[3/] Unless otherwise indicated, section references are to H.R. 661.

structure and has made it clear that the Taxpayer Advocate will report to the Commissioner.[1/]

Notwithstanding the changes that have been made in Section 101, we continue to oppose its enactment. It would appear that the provision essentially codifies the present Service position of Taxpayer Ombudsman. In response to prior Congressional oversight activities relating to taxpayer service, the Service has put a taxpayer service management structure in place that seems to be working. If the Subcommittee has specific concerns about that structure, we suggest that these concerns be brought to the attention of the Commissioner and perhaps the Secretary. We do not think a legislatively-mandated management structure is desirable.

As more fully discussed below, we also oppose the provisions relating to Congressional reports and Taxpayer Service Orders.

- Congressional reports - We do not think that the Commissioner or the Treasury Department should be precluded from reviewing and commenting on the Taxpayer Advocate's reports prior to the time that they are transmitted to the Congress. A contemporary review and comment process should result in higher quality reports from the Taxpayer Advocate and more timely and complete commentaries from the Commissioner and Treasury.

- Taxpayer Assistance Orders - We think that it would be inappropriate to prevent the Commissioner from delegating to other senior Service officials the right to modify or rescind Taxpayer Assistance Orders issued by the Taxpayer Advocate. The Service is a very large organization and each year deals with millions of taxpayers in District and sub-District offices throughout the United States and in offices located in a number of foreign countries. It is impossible for the Commissioner to deal on a regular basis with matters involving individual taxpayers, in connection with Taxpayer Assistance Orders or otherwise. Furthermore, because the Commissioner is the Chief Executive Officer of the Internal Revenue Service, with responsibility for all of the management challenges facing the organization, such involvement clearly is not the best use of her time. She must be able to delegate authority to field personnel and should be empowered to do so in the Taxpayer Assistance Order context.

  We also wish to express our strong disagreement with the implication contained in Section 102 that a superior of the Commissioner (presumably the Secretary or Deputy Secretary of the Treasury or the President or Vice President of the United States) would have

---

[1/] We also presume that the Taxpayer Advocate will be appointed by the Commissioner, although Section 101 does not so state.

the authority to become involved in taxpayer-specific matters pending before the Service. In the past, interference by people outside the Agency in matters involving specific taxpayers has created trouble in the tax system. We do not think it is advisable to alter the practice that the Commissioner's superiors have followed over the past 20 years of strictly avoiding any such involvement.

B. **Elimination of joint and several liability (American Bar Association recommendation)**

Under present law, married taxpayers are liable for their spouses' federal income taxes when they file joint returns. In community property jurisdictions, each spouse is liable for tax on one-half of the other spouse's earned income, even if they file separate returns. We recommend that for reasons of fairness and simplicity, both rules be repealed.

In many families today, both spouses work and follow separate business career paths. One spouse may have little or no direct knowledge of the business earnings and expenses of the other spouse. Even in the case of a family in which only one spouse works outside the home, that spouse may have little or no knowledge of the business affairs of the other spouse. Yet, in both situations, the spouse who did not earn the income can be liable for income taxes on the other spouse's income, even years after the couple has separated or divorced.

In most other developed countries, the trend is toward elimination or moderation of joint liability rules holding one spouse liable for the other's taxes. We think that the United States also should eliminate joint income tax liability and, therefore, we recommend that married persons be taxed only on their own individual income, without liability for tax on the income of their spouses, even when they file joint returns or reside in a community property jurisdiction.[5/]

C. **Designated Summons**

As a preface to our comments on the proposals relating to the designated summons procedure contained in Section 505, we wish to note our view that this relatively new procedure, which accords the Service an extraordinary audit tool, should continue to be considered by the Congress as in the experimental stage. We think its future will depend upon how the designated summons process is administered by the Service, and we encourage the Subcommittee to monitor this enforcement area.

Proposed Section 505 would require Regional Counsel to "review" the issuance of every designated summons. We oppose this requirement. Review by the Deputy Regional Counsel already is an administrative requirement, and we see no need to make such a requirement statutory. Such high level internal review has been effective in limiting multiple examinations of taxpayer books and records under Section

---

[5/] In recognition of the sometimes harsh effects of joint liability, Congress enacted the "innocent spouse" provisions of Sections 6013(e) and 66. These rules are restrictive and ambiguous; they are among the most frequently litigated rules in the Internal Revenue Code. Repeal of joint liability would permit repeal of the innocent spouse provisions, resulting in a significant simplification of the tax system.

7605(b) without statutory specificity regarding the identity of the reviewer and should be just as effective in the case of a designated summons. Moreover, the existence of such a statutory requirement easily can lead to litigation regarding whether any "review" occurred in the particular case, and regarding what constitutes an adequate review.

The Service apparently believes that the use of a designated summons serves as an important method to obtain necessary information at the examination level. Under present law, however, the Service can use this method to extend the statute of limitations with respect to a taxpayer that has fully cooperated with the Service during the examination. Although this extraordinary compliance tool was designed to give the Service an additional means to deal with taxpayers who have resisted disclosure of necessary information, procedural fairness to all taxpayers is necessary to eliminate the potential for abuse outside this narrow context. Accordingly, the Subcommittee may wish to consider the following revisions to the statute to ensure the use of the designated summons as originally intended by Congress:

a. Provide that the taxpayer may, within 10 days of receiving a designated summons, file a petition in a District Court or the Tax Court seeking to quash or modify the summons, or seeking a court determination that the statute of limitations should not be suspended. In the event such an action is filed, the statute of limitations would remain suspended unless and until the court determined the existence of one or more of the following circumstances: (i) the Service had not previously requested in writing the information sought in the summons, (ii) the previous information request was not timely, or (iii) the person summoned did not have sufficient time to respond to the previous information request before the designated summons was issued. In order to quash or modify the summons, the taxpayer also would have to establish to the court's satisfaction that the person summoned had not failed to comply substantially with the previous information request. This right of judicial review would discourage the Service from issuing a designated summons in a case in which the taxpayer has cooperated in good faith during the examination and would allow an impartial court to decide whether the Service was attempting to misuse its designated summons authority.

b. Provide that the Service must identify the specific issue(s) and Code section(s) to which the designated summons relates, and that the statute of limitations may be suspended only with respect to the identified issue(s). This provision would ensure that the Service is using the designated summons to obtain only the information that it needs to develop a specific issue and would preserve the relevancy of the statute of limitations as an element of fairness in practical tax administration.

c. In lieu of the current requirement that the designated summons be issued at least 60 days before the date the statute of limitations is set to expire, provide that the designated summons must be issued at least 120 days before the date the statute of limitations is set to expire. This provision would protect the taxpayer against attempts by the Service

to extend the statute of limitations at the very last minute.

D. **100 Percent Penalty Provisions - Right of Contribution**

The American Bar Association previously has recommended legislation permitting a responsible person who has made payment of the 100 percent penalty to the Service to initiate a third-party action seeking contribution from the other responsible persons (Tax Section Recommendation 1981-6, 34 Tax Law. 1409 (1981)). We restate that recommendation today and, on behalf of the ABA, we strongly urge the Subcommittee to include a right of contribution in any legislation reported by the Subcommittee.

Too often the Service is satisfied with collecting the 100 percent penalty in the easiest situations. As a result, more culpable persons often escape liability. Unfortunately, state law does not always provide a remedy. Even states that permit joint tortfeasors to obtain contribution from one another do not permit a right of contribution in Section 6672 cases. These states believe that this is a federal matter and defer to the uniform rule in the Federal courts against contribution by other responsible persons.

The Federal rule against contribution is premised on the common law rule prohibiting wrongdoers from seeking contribution from one another. That common law rule has ceased to be the rule in many jurisdictions, and there is no reason to continue this rule in the case of a Section 6672 penalty. Moreover, we believe that the most effective way to assure that the Service will maximize its administrative collection efforts against all responsible persons is for each potentially liable person to know that contribution can be compelled. We would expect that, under these circumstances, more responsible persons will agree among themselves to contribute all that is necessary to satisfy the entire liability without the need for litigation.

We understand that there has been a reluctance to enact legislation granting a right of contribution because of the concern that it might lead to wealthier and more culpable people seeking contribution from less responsible persons. In our experience, it is more often true that the less responsible people suffer from the absence of a right of contribution. More importantly, however, if contribution were based on the culpability of a person regarding his or her control over the disbursement of available corporate funds, there would be no reason for any such person to be shielded from liability. However, additional protection might be provided by permitting someone in a contribution proceeding who is found not responsible to recover attorney's fees from the person(s) found responsible.

The Tax Section's 1981 Recommendation proposed granting the responsible party a right of contribution by cross-claim or third-party action in any litigation with the Internal Revenue Service regarding the 100 percent penalty, as well as the right to bring a third-party action against the other responsible persons in an independent judicial proceeding. The Association of the Bar of the City of New York Committee on Personal Income Tax also has proposed the enactment of a right of contribution ("New York City Bar Proposal"). The New York City Bar Proposal would require an action for contribution be brought in a separate lawsuit (rather than by cross-claim or third-party action in litigation with the Service) so that the Treasury's ability to collect the 100 percent penalty would not be obstructed by the action for

contribution. Although judicial economy might be fostered by having the contribution issue resolved in the same civil matter as the refund suit over the penalty, we think there is merit to avoiding any new procedure that might delay the Government's ability to obtain a judgment against the multiple responsible persons. Therefore, if the Subcommittee were to prefer the New York City Bar's recommendation of a separate proceeding, we would support that decision.

E. **Attorney's Fees**

The changes proposed in H.R. 661, in our opinion, are appropriate, and we support them. However, we think that there are other far more important changes that should be considered by the Subcommittee.

1. The Subcommittee should consider raising the ceilings on the net worth limitation and on the restriction of number of employees in order to make Section 7430 available to a broader range of individuals and small businesses.

2. The Subcommittee should consider whether taxpayers involved in declaratory judgment tax proceedings, as provided for in the Internal Revenue Code, should be eligible for awards.

3. The Subcommittee should consider whether any dollar limit on attorney's fees is necessary or appropriate. The law already requires that such fees must be reasonable. This reasonableness test could be amplified so as to be applied in light of prevailing levels of attorney's fees for work of similar nature in the geographical area in which the services are rendered. A fixed dollar limit on attorney's fees in any such proceeding also could be imposed.

F. **Retroactive Regulations**

The Tax Section urges the Subcommittee to reject the proposed amendment to Section 7805(b) contained in Section 903. The rules applicable to the effective dates of tax regulations should not be changed without a careful study of what the Service and Treasury have done in the past in establishing regulation effective dates, a determination of how the APA impacts on the promulgation of tax regulations generally, and a determination of the impact of any change on the administration of the law. We believe that a provision similar to Section 903 cannot be justified at least without a clear showing that the abusive cases of retroactivity, if any, are the norm rather than the exception.

In our view, a blanket restriction on retroactivity is unwarranted. Given the limited available resources, the Service and Treasury need a reasonable period of time to issue regulations. If regulations are timely issued, they should apply to all taxpayers similarly situated. If there are abuses resulting from the use of retroactive effective dates, it may be preferable to limit the period of time following enactment during which the Treasury could promulgate a retroactive regulation. Certainly the Congress has the ability to take such action on a case-by-case basis

as part of the consideration of specific pieces of proposed tax legislation.

Just as both Houses of Congress have recognized the unique status of tax regulations in the current consideration of proposals relating to a regulatory moratorium and changes in the regulatory process, we think the Subcommittee must consider very carefully any proposed change in Section 7805(b).

III. **Proposed Shift in Burden of Proof (H.R. 390)**

Finally, I would like to discuss another matter that we think is of extreme importance to future tax administration, namely, the proposal in H.R. 390 to shift the burden of proof in tax cases.

H.R. 390, 104th Cong., 1st Sess. (1995), would amend the Internal Revenue Code to place the burden of proof on the Secretary of the Treasury in all court proceedings involving tax matters.

The general allocation of the burden of proof to the taxpayer is consistent with our self-assessment system of tax administration, which relies on the taxpayer to maintain the necessary records to report accurately his or her income and expenses on a tax return at the end of the year. Accurate records, of course, are critical to resolving tax controversies, whether during the audit and administrative appeals processes before the Internal Revenue Service or in the courts. Because the taxpayer generates and is responsible for maintaining his or her business and other tax records, the taxpayer is in the best position to prove the amount of his or her income. Thus, the allocation of the burden of proof to the taxpayer ensures that taxpayers maintain accurate records and promotes the efficient administration of the tax system and the resolution of tax controversies.

Placing the burden of proof on the Government in tax litigation would require the Government to produce the business records, testimony or other evidence necessary to demonstrate the taxpayer's tax liability. This would place the Government at a fundamental disadvantage and likely would have three distinct effects on tax administration: (1) taxpayers might be inclined to be less forthright in preparing and filing their tax returns and may take more aggressive positions on their returns; (2) the Service would be forced to use its administrative summons power more frequently and intrusively during the audit process to gather the necessary information to support its determinations; more taxpayers would litigate the Service's audit determinations.

The potential consequences of these effects on tax administration could be very dramatic. We would expect that the Internal Revenue Service no longer would be able to assure general compliance with the tax laws, the high level of tax compliance in the United States would decrease -- perhaps substantially -- and the revenues collected by the Federal Government from income and other taxes likely would correspondingly decrease, perhaps substantially. In a nutshell, this single change in the law could further significantly complicate the fiscal condition of the United States.

Madame Chairman, permit me to thank you again for including the Tax Section in this important Subcommittee hearing. This concludes my prepared remarks. I would be pleased to answer any questions.

Chairman JOHNSON. Thank you and thank you for your testimony.

Ms. Walker, chair of the Tax Executive Committee at the American Institute of Certified Public Accountants, would you begin?

STATEMENT OF DEBORAH WALKER, CHAIR, TAX EXECUTIVE COMMITTEE, AMERICAN INSTITUTE OF CERTIFIED PUBLIC ACCOUNTANTS

Ms. WALKER. Thank you, Madam Chairman, for the opportunity to offer recommendations for improving the Federal tax administration process.

I am Deborah Walker, chair of the Tax Executive Committee of the American Institute of Certified Public Accountants. We have 320,000 members. And it is our national professional organization of CPAs.

Let me just summarize some of this in view of the late hour and what we have heard prior to this.

Turning to the taxpayer ombudsmen issues, we see no need to disturb the reporting structure and risk hindering their ability to function effectively within the district. In fact, we think the quality of service provided by this group ranks among the highest in the Internal Revenue Service.

There are two things that we think would significantly help and I know we have heard a lot of concerns about that today. But we think that perhaps the biggest issue is training.

Too often training gets written out of the budget either in the budget process here or when it gets down to the IRS.

And resources that should go to training, resources that could help some of the issues that end up in problem resolution, could help with IRS agents more adequately trained in procedures and the basics of tax law.

The other important thing is that the Taxpayer Ombudsman should report to Congress on a periodic basis the activities of their office, the problem resolution office and the ombudsmen office. Also a response from the IRS on those activities is important. The response could detail what has been done to correct the problems noted. That may get away from the micromanagement that Congress needs to avoid.

Let me turn now to interest. We believe that the statute should be changed to provide that the Secretary must abate interest or refund interest attributable to unreasonable IRS errors and delays. The problem is, as we define it, that the ministerial act limitation is subject to interpretation and is interpreted far too narrowly.

We are concerned, by adding a managerial standard, that we are really just compounding the problem we already have which is we cannot define what a ministerial act is or a managerial standard. And it should basically be, if it is an IRS error or delay, that interest should be abated.

The last issue there is that interest may be abated. Of course, that has been interpreted to does not have to be abated. And therefore, we think that the may should changed to must be abated.

We also believe that there should be a reasonable extension of the 10-day interest free period to a 21-day period. However, we do

not support any dollar limitations with respect to that increased interest-free period.

Another piece of the interest problem is the differential between the interest rate owed to taxpayers on overpayments and the interest rate owed to the government. Congress included specific guidance for the Secretary to implement comprehensive crediting procedures. And those procedures have not been implemented. They are no longer on the business plan for 1995.

We think they need to be on that business plan and there needs to be some guidance for the crediting procedures.

Finally, we think that notwithstanding that we can make a lot of money checking IRS computations, we believe that interest computations should be disclosed to the taxpayers, the rates that are used, the dates that the rates apply, and when the payments and credits were made to various accounts.
